22nd inst., includes many interesting
volumes. The most important is a copy of
Gower's 'Confessio Amantis,' printed by
Caxton in 1483, wanting 18 leaves, which,
though not recorded in Mr. Seymour de
Ricci's 'Census,' was described in these
columns in the issue of May 9th, 1885.
There is also a copy of Caxton's transla-
tion of the 'Vitæ Patrum,' printed by
De Worde in 1495, as well as the 'Poly-
chronicon' of 1495 and a Horæ of 1513 by
the same printer. A Latin Psalter,
printed by Reynault in 1519, in the original
calf binding, was once owned—as recorded
in a contemporary MS. note on the fly-leaf
—by Sir James Boleyn, uncle to Queen
Anne Boleyn, while a copy of the First
Edition of Voltaire's 'La Henriade' has
an inscription in his own hand. There are
also a number of interesting Americana,
mostly collected by Samuel Wegg, Gover-
nor of the Hudson's Bay Company from
1783 to 1799.

THE same catalogue includes the ex-
tremely rare tract, written and pub-
lished (with a map) by Sir William
Alexander in 1624 as an "Encourage-
ment to Colonies." This copy is the re-
issue of 1630, possibly the same text,
but with a new title, 'The Mapp and
Description of New-England,' and without
the dedication to King James I.

THE Reviewer of Dr. Fothergill's book
writes in reply to his note in this column
last week:—

"Dr. Fothergill may easily verify the
statement about the Bannatyne Club by
going no further than Chambers's 'Ency-
clopædia.' He may also consult Mr. San-
ford Terry's 'Scottish Historical Clubs.' As
for the original of Tullyveolan, we have
learnt much since Lockhart wrote. The
view taken by Dr. Robert Chambers that
Traquair House, in Peeblesshire, was the
original is now accepted by the best autho-
rities."

WE point out for the convenience of our
readers that Mr. Frowde, of the Oxford
University Press, is agent in Europe for the
publications of the University of Pennsyl-
vania.

DR. SIDNEY Lee has been appointed
Leslie Stephen Lecturer at Cambridge
this year, and on May 13th will consider
'Methods of Biography.'

THE second Moncure Conway Memorial
Lecture will be delivered at South Place
Institute by Mr. H. W. Nevins next
Friday evening. The subject will be
'Peace and War in the Balance.'

A COLLECTION of M. Edmond Rostand's
poems 'Les Musardises, 1880-93,' in-
cluding several unpublished pieces, is to
appear in Paris in the middle of the
month.

THE death, at the age of eighty, is
announced from Göttingen of Dr. Ferdi-
nand Regelsberger, Professor of Roman
and German Law at the University of that
town, and author of 'Zur Lehre vom
Altersvortrag der Pfandrechte,' 'Die Vor-
verhandlungen bei Verträgen,' and
'Pandekten.'

SCIENCE

OUR LIBRARY TABLE.

Convergence in Evolution. By Arthur Willey. (John Murray.)—Prof. Willey's main object in this interesting essay is to bring into prominence the extent and importance of convergence as a factor in explaining morphological similarities amongst widely separated phyla of the animal kingdom. Incidentally, he brings his guns to bear, trained from this position, upon Dr. Gaskell's hypothesis of the origin of vertebrates from an ancestral arthropod form. He believes, that, if with our present knowledge the theory of vertebrate descent from the Protochordata is unsatisfactory, so also is Dr. Gaskell's attempt to trace it through a series of homologies between the Palæostraca and the Vertebrata. He considers that the apparent topographical coincidence between the infundibulum in the floor of the third ventricle of the vertebrate brain and the appendiculate oesophagus has no functional equivalence, and further that the vertebrate infundibulum can be brought into topographical correlation with a primitive feature of another phylum, viz., the anterior neuropore of protochordates. He believes that the facts can be better harmonized on a broad basis of convergence than by an unrestrained use of homology.

With regard to the corollary to Dr. Gaskell's theory, which necessitates the assumption that what was hypoblast in the arthropod has become epiblast in the vertebrate and *vice versa*, Prof. Willey says that the integrity of the gut throughout the triploblastic animals cannot be assailed without invalidating the continuity of the archenteric cavity throughout the Metazoa: "but this is to strike at the root of the entire fabric of comparative morphology." This proceeding, by the way, some of the speakers who took part in the recent debate on Dr. Gaskell's hypothesis at the Linnean Society seem to regard with tolerable equanimity: so far has opinion progressed since the subject was discussed at Cambridge in 1895.

The author cites the sinistral variation of the shell in Molluscs and the reversed pose of the body in flat fishes as examples of convergent variation. Prof. Bateson has quoted them as instances of discontinuous variation, and no doubt Prof. De Vries would consider them excellent examples of mutation. As Prof. Willey says in referring to another debatable question, "everything depends on the point of view"!

But what, after all, does the author mean by the term convergence? He defines it as resemblances amongst animals not due to direct relationship or genetic affinity, and most commonly seen either as mimicry or as homoplasy. Convergence depends first on divergence and secondly on parallelism, and he illustrates these three principles in operation by a graphic table showing the divergences, parallelisms, and convergences between the Marsupial and the Placental Mammals. His view, in fact, is that the phyla once separated have continued on their own lines of evolution, and that resemblances are more often due to parallelism and convergence than to genetic relationship. He sorrowfully confesses, however, that "it appears that there is more

joy amongst morphologists over one attempt at genealogy than over ninety and nine demonstrations of convergence."

Apart from its controversial side Prof. Willey's book is stored with examples of morphological details and resemblances drawn from his extensive knowledge of the animal kingdom, which will delight and fascinate the reader. He seems sometimes a little old-fashioned, and perhaps hampered by what he describes as "the canons of the art of morphology," but his criticism is always temperate, and arouses interest rather than opposition. The numerous technical terms scattered through the volume may at first sight alarm those unfamiliar with zoological nomenclature, as no glossary is provided, but in most instances their mysteries are sufficiently unravelled in the text. We may note that the frontispiece should be referred to p. 94, not p. 90.

Feeble-Mindedness in Children of School Age. By C. Paget Lapage. With an Appendix on 'Treatment and Training' by Mary Dendy. (Manchester, University Press.)—The care of the feeble-minded is exciting much thought both at home and abroad. The very harmlessness of those affected has hitherto prevented proper steps being taken to shield them from designing persons, both in their own interests and in those of the State to which they belong. The first step in advance was made when it was recognized that children who were infirm of purpose rarely improved as they grew older; the second step when it became clear that the feeble-minded were more likely to beget feeble-minded offspring than those with more stable brains. In other words, feeble-mindedness is an inherent defect of the germ-plasm. It is therefore a variation of the backward or retrograde type in the developmental history of the human species, and is permanent. Such persons need to be shielded and helped throughout their lives as much for their own sakes as because they are a menace to the Commonwealth, since they breed freely, are often not uncomely, and have defects which are not always immediately apparent.

Dr. Paget Lapage's monograph on 'Feeble-Mindedness in Children of School Age' forms a volume of the medical series of the Manchester University publications, and is dedicated to the memory of Henry Ashby. It is written for non-professional as well as for medical readers, and it gives in clear detail what has been done for the feeble-minded, especially in Lancashire and Cheshire, and points out how much still remains to be done. Miss Mary Dendy, M.A., contributes an excellent chapter upon the training and treatment of feeble-minded children, which might be read with advantage by every school mistress and matron of a children's home throughout England. There are some good illustrations and an excellent bibliography for those who wish to make themselves better acquainted with a subject which annually increases in importance.

The Feeble-Minded. By E. B. Sherlock. With an Introductory Note by Sir H. B. Donkin. (Macmillan & Co.)—Dr. Sherlock also deals with the problem of the feeble-minded from the scientific and classifying aspects. His work is introduced by a short prefatory note from the pen of Sir H. B. Donkin the Medical Advisor to the Prisons Commissioners, who points out the great difficulty which exists at present in controlling the large class of slightly weak-minded persons, who are dangerous for the reason hinted above.

Dr. Sherlock speaks with authority on his subject, because he was formerly Superintendent of the Belmont Asylum for Idiots, and in addition to his medical qualifications he is a barrister-at-law and Lecturer on Biology at the Westminster Hospital Medical School. The earlier chapters of the book are mainly psychological. They deal with the nature and basis of mind in its normal and enfeebled states with a thorough knowledge of what has been written of late years upon the subject, both at home and abroad. The general conclusion arrived at is in agreement with the report of the Royal Commission on the Feeble-Minded: "That both on the grounds of fact and theory there is the highest probability that feeble-mindedness is usually spontaneous in origin—that is, not unduly due to influences acting on the parent—and tends strongly to be inherited." Chap. vi. deals with the varieties of the feeble-minded, and a final chapter is entitled 'Handling of the Feeble-Minded.' It gives some interesting details of the methods of testing the faculties and recording the ancestral defects of these degenerates.

"NYARONG" AMONG THE SEA DYAKS.

Exeter College, Oxford.

APROPOS of Mr. Gomes's letter in *The Athenæum* of March 4th (p. 251), in which he states that neither he nor any of his friends have heard of the word *nyarong* among the Sea Dyaks, may I point out that a full account of the word and its meaning is to be found in the *Journal* of the Anthropological Institute, vol. xxxi. ? That volume contains (p. 173) an article by Messrs. Hose and MacDougall on 'Men and Animals in Sarawak.' The *nyarong* is said by them to be a sort of manitou or personal totem—a "spirit-helper" generally in animal form, whose identity is revealed in dreams to a favoured few, perhaps not more than one in a hundred. The rarity of this "spirit-helper" and the natural reticence of the natives on a subject so sacred to their ideas may well account for Mr. Gomes's lack of information; but the belief is so important for the history of totemism that it is to be hoped that more light will some day be thrown upon the subject.

H. J. ROSE.

SOCIETIES.

ROYAL.—March 2.—Sir Archibald Geikie, President, in the chair.—Papers were read as follows: 'Reversal of the Reflex Effect of an Afferent Nerve by altering the Character of the Electrical Stimulus applied,' by Prof. C. S. Sherrington and Miss S. C. Sowton; 'Carbon Dioxide Output during Decerebrate Rigidity,' by Dr. H. E. Roaf; 'The Alcoholic Ferment of Yeast-Juice, Part VI. The Influence of Arsenates and Arsenites on the Fermentation of the Sugars by Yeast-Juice,' by Messrs. Arthur Harden and W. J. Young; 'Experiments to ascertain if certain Tabanidæ act as the Carriers of *Trypanosoma pecorum*,' by Col. Sir David Bruce and Capts. A. E. Hamerton and H. R. Bateman; and 'Experimental Studies in Indian Cottons,' by Mr. H. M. Leake.

GEOLOGICAL.—Feb. 17.—Annual General Meeting.—Prof. W. W. Watts, President, in the chair.—The following were elected officers: *President*, Prof. W. W. Watts; *Vice-Presidents*, Messrs. C. W. Andrews, A. Harker, J. E. Marr, and Prof. W. J. Sollas; *Secretaries*, Prof. E. J. Garwood and Mr. A. S. Woodward; *Foreign Secretary*, Sir Archibald Geikie; *Treasurer*, Mr. A. Strahan.

Feb. 22.—Prof. W. W. Watts, President, in the chair.—The following were elected Fellows: Messrs. A. Hamilton and T. Herdman.—The

following [communication was read: 'The Geology of the Districts of Worcester, Robertson and Ashton (Cape Colony),' by Mr. R. H. Rastall.

LINNEAN.—March 2.—Dr. D. H. Scott, President, in the chair.—The following papers were read in title: 'Dermaptera (Earwigs) preserved in Amber,' by Dr. Burr; 'Report on Marine Polyzoa of the Collection made by J. Stanley Gardiner in the Indian Ocean, 1905,' by Miss L. R. Thornely; which was followed by remarks by the Rev. T. R. R. Stebbing on the terms polyzoa and bryozoa; and 'On the Mysidacea and Euphausiacea collected in the Indian Ocean during 1905,' by Mr. W. M. Tattersall.

INSTITUTION OF CIVIL ENGINEERS.—Feb. 28.—Mr. Alexander Siemens, President, in the chair.—The paper read was 'Modern Railway Signalling: some Developments on the Great Western Railway,' by A. T. Blackall, M.Inst.C.E.

ANTHROPOLOGICAL INSTITUTE.—March 7.—Prof. Gowland in the chair.—Dr. Duckworth read a paper on 'Cave Exploration at Gibraltar in September, 1910.' The object of this research was to gain information on the spot as to the exact conditions in which prehistoric human remains occur on the Rock of Gibraltar. In addition to a general survey of the locality, two caves were explored. The first cave examined is in Forbes Quarry, whence the human cranium, so well-known as the Gibraltar skull, was obtained in 1848. The cave in question proved very difficult work, owing to the great density of ten successive stalagmite strata composing its floor. The latter was exposed over a considerable area, and at a depth of 4 ft. 6 in. solid rock was always present. No animal remains could be detected. Since this excavation Forbes Quarry has been almost completely filled, owing to the fall of many tons of rock from the heights above. The mouth of the cave is now hardly accessible.

The second cave was at a considerable height (800 ft.) above sea-level. The excavation yielded abundant evidence that it had been a resort of prehistoric man in the early neolithic stage of culture. The conditions are best explained by describing them as a cave kitchen-midden. The evidence of human occupation includes the larger part of a human skeleton of the Cro. Magnon type, in addition to stone implements, sherds, and shell ornaments. The associated fauna is varied. To the list of such animals as have been recorded already, the following can now be added: wolf, seal (*Monachus*), and almost certainly chamois, with certain birds and reptiles. Special attention was given to the identification of small mammalian bones, with a view to ascertaining the presence or absence of arctic rodent types: the latter were not identified. Dr. Duckworth intends to seek further permission from the authorities to continue these researches at an early date.

ARISTOTELIAN.—March 6.—Dr. T. P. Nunn Treasurer, in the chair.—Mr. F. H. B. Dale was elected a member.—The Hon. Bertrand Russell read a paper on 'Knowledge by Acquaintance and Knowledge by Description.' There are two sorts of knowledge of objects, namely, knowledge by acquaintance and knowledge by description. Of these it is only the former that brings the object itself before the mind. We have acquaintance with sense-data, with many universals, and possibly with ourselves, but not with physical objects or other minds. We have descriptive knowledge of an object when we know that it is the object having some property or properties with which we are acquainted; that is to say, when we know that the property or properties in question belong to one object and no more, we are said to have knowledge of that one object by description, whether or not we are acquainted with the object. Our knowledge of physical objects and of other minds is only knowledge by description, the descriptions involved being such as involve sense-data. All propositions intelligible to us, whether or not they primarily concern things only known to us by description, are composed wholly of constituents with which we are acquainted, for a constituent with which we are not acquainted is unintelligible to us. When a judgment is rightly analyzed, the objects which are constituents of it must all be objects with which the mind which is a constituent of it is acquainted. This conclusion forces us to analyze descriptive phrases occurring in propositions, and to say that the objects denoted by such phrases are not constituents of judgments in which such

phrases occur (unless these objects are explicitly mentioned). This leads us to the view (recommended also on purely logical grounds) that when we say "the author of 'Marmion' was the author of 'Waverley,'" Scott himself is not a constituent of our judgment, and that the judgment cannot be explained by saying that it affirms identity of denotation with diversity of connotation. It also, plainly, does not assert identity of meaning. Such judgments, therefore, can only be analyzed by breaking up the descriptive phrases, introducing a variable, and making propositional functions the ultimate subjects.—The paper was followed by a discussion.

MEETINGS NEXT WEEK.

- MON. Institution of Mechanical Engineers, 8.—Graduates' Meeting.
— Royal Institute of British Architects, 8.—'The Burlington-Devonshire Collection of Drawings,' Mr. J. A. Gatch.
— Society of Arts, 8.—'Applications of Electric Heating,' Lecture II., Prof. J. A. Fleming. (Cantor Lecture.)
— Surveyors' Institution, 8.—Judicial and Parliamentary Decisions with regard to Rights in Underground Water since 1907, Messrs. H. F. Bidder and W. V. Graham.
— Geographical, 8.30.—'A Pioneer Journey in the Purcell Range, British Columbia,' Dr. T. G. Longstaff.
TUES. Royal Institution, 3.—'Crystalline Structure: Mineral, Chemical, and Liquid,' Lecture III., Mr. A. E. H. Tutton.
— Royal Asiatic, 4.—'Recent Theories on the Origin of the Alphabet,' Dr. H. Hirschfeld.
— Faraday, 8.—'Some Properties of Aluminium Anode-Films,' Messrs. G. E. Baird and R. Mercer; 'The Weight of a "Normal" Litre of Hydrogen Chloride and the Atomic Weight of Chlorine,' Messrs. F. P. Burt and R. W. Whytlaw-Gray; 'A Physico-Chemical Study of Mercury-Sodium Alloys or Sodium Amalgams,' Mr. E. Vanstone; 'On Surface Effects between Mercury and Certain Solutions, and an Electro-Chemical Method of Estimating Dissolved Oxygen,' Messrs. S. W. J. Smith and W. F. Higgins.
— Institution of Civil Engineers, 8.—'The Electrification of a Portion of the Suburban System of the London, Brighton and South Coast Railway,' Mr. P. Dawson.
WED. Colonial, 8.30.
— Society of Arts, 4.30.—'The Adulteration of Food,' Col. C. E. Cassal.
— Meteorological, 7.30.—'What Can We Learn From Rainfall Records?' Prof. H. H. Turner.
— Entomological, 8.
— Folk-Lore, 8.—'Morris Dances and Sword Dances,' Mr. C. J. Sharp.
THUR. Royal Institution, 3.—'Giants and Pygmies,' Lecture I., Prof. A. Keith.
— Royal Society, 4.30.—'Gametogenesis of the Gallfly, *Neuroterus lenticularis*, Part II., Mr. L. Doncaster; 'The Action of the Venom of *Echis carinatus*,' Sir T. R. Fraser and Dr. J. A. Gunn; 'Further Researches on the Development of *Trypanosoma gambiense* in *Glossina palpalis*, Col. Sir D. Bruce and others; 'Spontaneous Cancer in Mice,' Dr. M. Haaland.
— Society of Arts, 4.30.—'Education in India,' Mr. C. H. A. Hill. (Indian Section.)
— Royal Historical, 5.—'The Holding of Cardigan Priory by Chertsey Abbey: the Study of Some Medieval Forgeries,' Mr. H. E. Malden, V.P.
— Numismatic, 6.30.—'The Stamford Find,' Mr. P. A. Walters.
— Institution of Mechanical Engineers, 8.—President's Address.
— Linnean, 8.—'The Brown Seaweeds of the Salt Marsh,' Miss S. M. Baker.
— Chemical, 8.30.—'Apparatus for the Maintenance of Constant Pressures Above and Below the Atmospheric Pressure: Application to Fractional Distillation,' Mr. J. Wade; 'The Interaction of Aromatic Disulphides with Sulphuric Acid,' Messrs. W. G. Prescott and S. Sniles.
— Society of Antiquaries, 8.30.—Ordinary Meeting.
FRI. The Institution of Civil Engineers, 8.—'The Production of Water-Gas,' Mr. A. Meade. (Students' Meeting.)
— Royal Institution, 9.—'Water Supply,' Mr. J. H. Balfour Browne.
SAT. Royal Institution, 3.—'Radiant Energy and Matter,' Lecture III., Prof. Sir J. J. Thomson.

Science Gossip.

LATER in the month Messrs. Macmillan will issue 'The Geology and Geography of Northern Nigeria,' by Dr. J. D. Falconer, with notes by Mr. Arthur Longbottom, and an appendix by Mr. Henry Woods.

THE annual visit to the National Physical Laboratory at Teddington will take place on Friday afternoon next.

THE eminent Professor of Chemistry, J. H. van't Hoff, whose death at the age of 58 is announced from Berlin, was born at Rotterdam, and studied at Leyden, Bonn, and Paris. His extraordinary gifts made his career a rapid one. At the age of 26 he was appointed Professor at the University of Amsterdam, and in 1896 he became attached to the Berlin University. In 1901 he received the Nobel prize for chemistry, and only a few days before his death he had been awarded the Helmholtz medal. His first work, published in 1874, and entitled 'La Chimie dans l'Espace,' dealt with the theory of the spatial disposition of atoms in compounds of carbon, and the originality of his deductions attracted great attention and aroused some controversy. He achieved success in every branch to which he turned his attention, and he is said to have

never made a mistake in his calculations. His last years had been devoted to the study of the saline deposits of the sea, and, in spite of constant illness, he had planned a work on the synthetical processes in green plants. He was entirely wrapped up in his work, and, though always helpful, he was wanting in the geniality which leads to wide influence. Among his works are 'Ansichten über organische Chemie,' 'Stereochemie,' and 'Dynamische Studien.' He was one of the editors of the *Zeitschrift für Physikalische Chemie*.

DR. BERGSTRAND has been appointed Professor of Astronomy and Director of the Observatory at Upsala.

HALLEY'S COMET is now distant from us (according to Dr. Ebell's ephemeris) 4.53 in terms of the earth's mean distance from the sun, or about 420,000,000 of miles, and early in May will be as far from the sun as the mean distance of Jupiter from him. Prof. Barnard observed it with the great Yerkes refractor in January, and hopes to be able to continue his observations for some time longer. It is now situated in the constellation Sextans, moving in a north-westerly direction towards the head of Hydra. Prof. Barnard describes it as "round, slightly condensed, but with no nucleus, and of about the 13th or 14th magnitude." It was observed by M. Gonniesiat at Algiers on the 25th ult., and described as of the 14th magnitude.

THE small planet announced as having been discovered by Dr. Palisa at Vienna on the 29th of January turns out to be identical with No. 379, which was discovered by the late M. Charlois at Nice on the 8th of January, 1894, and afterwards named Huenna.

M. LUIZET, of the Lyons Observatory, has detected variability in a star which is numbered +51°3414 in the Bonn *Durchmusterung*, where it is registered of the 9.5 magnitude. M. Luizet found it of only the eleventh on the 15th, 16th, 20th, and 21st ult.; and as a photograph taken by Prof. Wolf on the 4th of January gives it as 9.4, the diminution of $1\frac{1}{2}$ magnitude must have taken place between that date and the 15th of February. It is probably a variable of long period, and will be reckoned in a general list as var. 9, 1911, Lacertæ.

FINE ARTS

OUR LIBRARY TABLE.

One Hundred Masterpieces of Painting. With an Introduction by R. C. Witt. (Methuen & Co.)—This is far superior to many of the popular books on pictures that have recently been published. The author sketches briefly in the Introduction the special significance of the one hundred works that he has selected from among the public galleries and private collections of the world for inclusion in this 'Anthology of Painting.' Within his self-imposed limits Mr. Witt has treated his subject with considerable success, and has shown a wide knowledge of the history of painting. His general remarks include such safe conclusions as "One man's Salon Carré may be another's Chamber of Horrors," and "pictures are judged by the labels on their frames and stand or fall accordingly." We wonder, therefore, what impression is created on the

mind of the average layman who visits the National Gallery all unconscious of the fact that quite seventy of the pictures, including works by Bellini, Botticelli, Perugino, Filippino Lippi, and others are probably incorrectly labelled.

Mr. Witt has the courage of his opinions, and points out that "religious subjects do not necessarily constitute religious art," while he frankly admits that the literary element and the moralizing tendency seen in the pictures of Hogarth and his successors have always been a pitfall to English artists. Noteworthy are the concise and well-chosen remarks on the pictures of the Venetian School, especially those by Giorgione and Titian. The order in which the paintings are passed in review is somewhat arbitrary. They might with advantage have been grouped according to country, school, and period, and would thus have been more intelligible to many readers who do not pretend to any preconceived notions as to the main currents of artistic endeavour. In a popular, but none the less acceptable, work of this kind it is natural that the names of distinguished critics should be omitted, although their carefully considered deductions are now universally accepted. Thus the transference of the Duchâtel-Trémouille 'Madonna' in the Louvre from Piero dei Franceschi to Alesso Baldovinetti and the solution of the problem of the Caen 'Sposalizio' are duly noted, without any reference to Mr. Berenson.

It is unfortunate that many of the dates should be incorrect. The hat of Jan Arnolfini in the portrait of him in the National Gallery, described as a beaver hat, has long ago been shown to be a "large Italian hat of plaited straw dyed black."

Are we to accept the quasi-Semitic inscription on parts of the Van Eyck 'Three Marys' in the Cook Collection as having any real significance? Again, is it historically accurate to assert that Christina, Duchess of Milan, gave utterance to the remark that "had she two heads, one of them should be at His Majesty's service"?

Mr. Witt and his publishers are to be congratulated on steering clear of colour reproductions, which "still leave much to be desired."

The Story of Spanish Painting. By Charles H. Caffin. (Fisher Unwin.)—The stream of books dealing with the history and characteristics of Spanish art shows no sign of abating. Apparently the contemporary general reader—for it is to him that these volumes are chiefly addressed—has an insatiable appetite for aesthetic discussion of a superficial kind in which Velasquez and Goya serve as principal subjects; and when no new work dealing with either of them is offered him, will even turn a willing ear to the critics of a bygone day who had anything to say about his favourite painters. Mr. Caffin, it is needless to say, belongs not to the past, but to the present; he is of the school which long ago found naturalism old-fashioned, and turned back into the wilderness to seek an ideal more satisfying to its needs. To Mr. Caffin, not Velasquez but El Greco is the prophet bearing a message to twentieth-century man.

He has explained his faith in a book which, though slight, is suggestive, and superior to the mere compilations of fact and guide-book criticism which frequently do duty as studies of national art. The author has held the balance even, not suffering his individual predilections to affect the structure of his "story," in which all the actors have their places fairly

allotted to them. On the characteristics of Spanish painting and the extraordinary fidelity with which it reflects the national temperament he is altogether admirable. If at one moment he seems disposed to treat Velasquez's mastery too entirely as a triumph of pure technique, he makes amends the next, for he finds the painter's sense of beauty in life extending to its every manifestation (so that, for him, what ordinary men call ugliness had no existence), and he recognizes in his "impressionism" a high act of the imagination "giving birth to an act of real creativeness." His chapter on El Greco is not only the best in his book, but also one of the best things that has been written about that seer of genius, who founded no school, "whose pictures... are all visions," but visions founded, as Mr. Caffin shows, on a passionately close and interested study of facts. It is well that, in a book planned for the ordinary reader, there should be set forth in uncompromising terms the truth already known to serious students of El Greco's work: that, where his form is fantastic or distorted, it is so in obedience to the artist's deliberate purpose of expression.

Mr. Caffin is particularly happy in his brief notices of the lesser painters of whom he treats; his three or four pages on Carreño, for instance, well set forth that artist's distinctive quality. Some of the photographs which serve as illustrations are excellent; others convey only a feeble and unsatisfactory idea of the pictures chosen for reproduction. 'The Funeral of Count Orgaz' and 'Las Hilanderas' are in no case possible subjects for a small-page photograph. The latter picture no longer "hangs on the same wall" as 'Las Meninas,' which for some years past has occupied an inner and solitary shrine beyond the Velasquez room in the Prado.

The British Numismatic Journal and Proceedings of the British Numismatic Society, 1909. First Series. Vol. VI. (The Society.)—The high standard of former issues of this Journal is well maintained in the sixth volume. There are two papers of genuine historical value which ought not to escape the serious attention of those students of English history for whom the coinage of particular reigns has not hitherto possessed any particular attractions. These two articles are the 'Histories of the Mints of William I. and II.' (Part II.), by Mr. Carlyon-Britton, and 'A Numismatic History of the Reign of Stephen,' by Mr. W. J. Andrew. In the introduction to the latter article occurs the following passage, the purport of which is amply established by the subsequent pages:—

"There is no rope that cannot be strengthened, and the strands of our early history, gathered as they are from chronicles, records, charters, and deeds, lack that silver thread which has yet to be drawn from the coinage of England. Within the economy of nature no element is wasted; and if the study of numismatics could add but one quota to our knowledge of history that study would not be in vain. It can and is doing far more than this, and the time will come when the two sciences will be read together. Step by step the numismatist is entering the arena of history."

Mr. Andrew proceeds to show, solely from coins, that immediately on the death of Henry I. "Stephen, King of the English," the title used by at least fifty mints, was peacefully accepted as his successor from Carlisle in the north to Dover in the south, and from Ipswich in the east to Launceston in the west; that in 1138 the northern mint fell into the hands of David of Scotland and Carlisle was lost to the English Crown; that

in 1138–9 Bristol was in revolt under Matilda, who eventually bore on her coinage the titles of Empress, Countess, and last of all Our Lady (of England), but never Queen; that Matilda passed from Bristol to Lincoln, thence for election and reception to Winchester, and soon afterwards to Canterbury and London for coronation purposes; that after a time the Empress had to retreat again to the west, Stephen regaining the London and other important mints; that a second revolt occurred in Lincoln, and that a new claimant to the throne, Prince Henry, appeared and made his progress through England. In all this, and a score or so of minor details, the coins, in Mr. Andrew's cunning hands, corroborate, in a striking fashion, documentary history.

"But it is not always so, for chronicles are human, and as such subject to error and prejudice, whereas the little tokens of commerce are ever silent witnesses of the truth. Let us glance for a moment at problems they raise as to which history would appear to be silent. What was the date of Matilda's abandonment of her claim to the crown? Was it directly abandoned in favour of her son, Prince Henry? If so, why when her coinage ceased was it immediately replaced by currency bearing the name of Robert, presumably the Earl of Gloucester? Why, on his first money after landing in England did Prince Henry put forward no claim or title to the throne? Why did his chief supporters among the Barons of the West also issue money in their own names? Why did Eustace, Stephen's elder son, issue money at York bearing his name during his father's lifetime? Why was there a distinctive coinage at York issued in other names than that of either king or claimant? These are but a few of the many problems before us on which history throws no light, and it is their solution that is the charm, and at the same time the difficulty of our task."

For most of Mr. Andrew's methods of dealing with these numismatic problems, we must be content to wait for future issues of the Journal.

Among the minor articles of this substantial and finely illustrated volume may be mentioned the opening paper by Dr. Laver on 'The Coinage of Prasutagus, King of the Iceniens.' We wonder how many of the readers of *The Athenæum* are cognisant of the fact that Prasutagus was the husband of Boadicea.

Another long and interesting essay from the pen of Miss Farquhar is the 'Portraiture of Our Stuart Monarchs on their Coins and Medals, Part II., James II.' Two reflections may, however, suggest themselves to members of this society. Is it a wise piece of editorial policy to allow so much to be spent on reproductions of portraits, &c. (seven in this one article), which have no connexion with numismatics? Is it also wise to admit a number of prolonged reflections on the character and policy of James II. with which not a few of the members may find themselves at issue, and which have no bearing on the technicalities of coins and medals or on the historical incidents they expound?

The Life of Giorgio Vasari, a Study of the Later Renaissance in Italy. By Robert W. Carden. (Philip Lee Warner.)—The unbiassed conclusions at which the author arrives prove his ability to discard the mass of relatively unimportant facts that must have come under his notice, as well as his capacity for marshalling with considerable effect those that are essential to the biography that he has written. From the outset he shows a just appreciation of the part played by Vasari, who was "the first writer to set out coherently the story of the Renaissance of art in Italy," and who "died with the knowledge that all the great old masters were dead, and there were no

younger men fitted to carry on the splendid traditions of the past."

Our author resists the temptation, to which certain writers would have been inclined to yield, of over-estimating the importance of Vasari. He wisely concludes that "Vasari's paintings are so inferior that it would be waste of time to emphasize their demerits. But with this the worst has been said. His literary legacy is of far greater value." He, moreover, gives it as his opinion that the Aretine biographer, had he been living to-day, would assuredly have made his mark in the newspaper world. In view, however, of the heavy debt we owe to the author of 'The Lives of the Painters,' this seems a little unfair.

We pass in review the more important events in the life of Giorgio Vasari, whose family seem to have derived their name from the word *vasaro* or *vasaio*, a potter. At the age of thirty-eight he was still a bachelor. But with a certain lingering reluctance he eventually consented to listen to the unanswerable arguments of Cardinal del Monte and to take to wife Niccolosa, the daughter of Francesco Bacci of Arezzo. As the Cardinal a year later ascended the papal throne as Julius III., and was, when he set out to attend the conclave, so confident that he would be elected to the vacant see that he let Vasari into the secret, enjoining him that if he had any work in hand he should finish it as quickly as possible, and be prepared, as soon as the news reached him, to hurry to Rome without awaiting further instructions, Vasari was doubtless persuaded that he had done the right thing. Mr. Carden suggests that Vasari felt that "whatever time he spent in his own home was time lost, and that the petty matters of domestic procedure proved irksome after the life of the Court," and points out that in a letter to Alberghetti he stated that he was "suffering the penalty" of marriage, and "had a wife tied round his neck like a mill stone." Vasari no doubt shared the opinion of Michelangelo, as related in 'The Lives,' that "I have only too much of a wife in my art, and she has given me trouble enough; as to my children, they are the works that I shall leave; and if they are not worth much, they will at least live for some time."

As Mr. Carden clearly shows, there can be little doubt that when Vasari in the second edition of 'The Lives' wrote, in regard to the biography of Michelangelo, that he was "in a position to tell of many things, and all of them true, which are unknown to any other person," he was making a hit at Condivi. The latter had ventured to enter the field with another life of Michelangelo, and so had incurred the displeasure of Vasari, who regarded this as a direct infringement of his own prerogative.

One of the most interesting passages in the book is that in which is described the death of Michelangelo, who, we may point out, did not die "in January, 1564" (p. 182), but on February 17th. Michelangelo's body was smuggled out of Rome by Lionard Buonarroti, his nephew. For this purpose it was concealed in a bale of merchandize, "for neither the Pope nor the people of Rome would willingly have given up the precious spoil." As Vasari says, in acknowledging the debt of gratitude that Florence owes to Lionardo Buonarroti (whose son, we may recall, subsequently founded the collection still preserved in the Casa Buonarroti at Florence), "no treasure could have been a more welcome gift than these hallowed and peerless remains," while "if you had sent the bodies of both St. Peter and St. Paul you could scarcely have won

more gratitude from their Excellencies, or from the citizens, artists, and people of this city."

Mr. Carden shows an intimate knowledge of the history and social life of Florence in the sixteenth century. Whether he is writing of the injury inflicted on one of the arms of the statue of "David" by one of the stones hurled in 1527 from the Palazzo Vecchio at an attacking party—a supply of such missiles "was always kept on the roof with a view to these amenities of Florentine life"—or is describing the plague which shortly after broke out again, he places before his readers a lively picture of the daily life of Florence at that period:—

"Payment was received in a wooden or iron bowl and immediately thrown into a jar of water to prevent contamination. The inhabitants only went out at night, and even then they carried in one hand a ball of evil-smelling disinfectant, holding it to their noses until they were nearly stifled. Should a miserable individual happen to meet an acquaintance during his nightly prowling, his first words were usually: 'For God's sake don't come near me; let us speak at a distance!' And as soon as he returned home he treated himself internally or externally with a concoction made from the nettle plant to ward off evil results. And when he felt the grip of the disease upon him he was obliged to lie untended till death took him or to submit to the quackeries practised by blacksmiths, cobblers, and other ignorant fellows, as all the doctors had fled as soon as the disorder manifested itself."

When Messer Giorgio Vasari of Arezzo died on June 27th, 1574, he had rendered himself immortal, not, indeed, by his skill as architect or painter, although he considered himself to be a consummate artist and [the worthy successor of Michelangelo and Raphael. In fact, as Mr. Carden well says, if Vasari had been told that

"as a painter he would run the risk of sinking into the realm of the forgotten but that he would live as the historian of the artists; he would have laughed his interlocutor to scorn, or perhaps have boxed his ears as he did Lottino's."

Mr. Carden has acquitted himself well of what must have been an onerous task, and one involving much careful, and at times tedious, research. Where necessary, a detailed and scholarly reference is made in foot-notes to some of the more important works on which certain statements are founded. Nor are we overwhelmed by a lengthy bibliography. The Index seems to stand the test of critical examination, although reference should have been made to Lionardo Buonarroti on p. 182. We have only noted one typographical error (p. 46).

It is stated (p. 275) that Vasari's 'Annunciation' is in the Louvre, but it might have been pointed out that that large and not very pleasing picture has not been exhibited for many years. It is one of the numerous paintings that passed into the Louvre in Napoleonic times, and were not considered to be worth the trouble and expense of transport back to Italy in 1815. The reviewer remembers seeing it some fifteen years ago in one of the rooms in the *grenier*, probably above the Salle Henri II.

The text is accompanied by some thirty illustrations, which are fortunately not in colour, but have been selected with much deliberation. The theatrical 'Coronation of the Virgin' at Città di Castello, and the pompously ineffectual 'Coronation of Charles V.' in the Palazzo Vecchio leave us unmoved, while the frescoes by Vasari and his pupils which deface the walls and cassetted ceiling of the Great Hall of the same palace merely serve to emphasize the loss we have sustained by the non-fulfilment of the commissions given to Leonardo and Michelangelo in 1503. However, the

magnificent staircase in the cortile of the Laurenziana at Florence which was completed by Vasari three years before his death from the designs of Michelangelo merits our unqualified admiration, and has wisely been included among the illustrations.

PICTURES BY GUSTAVE COURBET.

THE collection of Courbet's works at the Stafford Gallery is the most important exhibition we have to notice this week. He was a faulty painter of generous instincts, copious in production, not so much by the extraordinary number of his works as by the ample range and variety of their subject-matter, and this characteristic strikes us more on the present occasion than the splendid virtuosity he occasionally displayed in the narrow field in which his gifts and training made him almost perfect. There is nothing here quite to compare with the prodigious flower piece seen in London at a portrait show of some years back. There is much, on the other hand, to explain why he was a fertilizing influence to a degree out of all proportion to the number of perfect works he left behind him.

Need we, indeed, regard that disproportion as other than normal? The maker of a perfect work closes a chapter—definitely warning off all imitators, and as the innovating power of an artistic period wanes, effort tends to a process of tidying up—recasting into more succinct and handy form themes already provisionally expressed by painters to whom has fallen the strenuous task of breaking in for artistic purposes fresh aspects of nature. The work of these worthies will necessarily seem diffuse, and only vaguely articulate as, with ripening civilization, space becomes more precious and attention somewhat overtaxed. We have come to ask as a right that whatever is said to us shall, above all, be said neatly and as briefly as possible, and probably, if any one of the canvases now appearing in Duke Street were offered to us as contemporary work in a current exhibition, its very fullness of content would make it seem dull besides other work which said something more easily comprehensible and in more arresting fashion. That the world is already too full of pictures we are inclined to complain, and we have only room for what is supreme in its kind.

On the other hand, when we have grown accustomed to its initial incongruity of time and place, the exhibition is full of interest, displaying a richness of observation that might furnish half a dozen modern talents. Courbet's own special gift of execution, with its enamel of rich colour and its creamy paste like a cameo, is felt indeed throughout—notably in the summary, yet subtle modelling of the heads in No. 3. *Les Irlandaises*, and in the spacious serenity of *Les flots à Palavas* (17). Yet, on the whole, far from seeking out fastidiously subjects suitable for the complete display of that special gift, he manifests a miscellaneous receptivity. Every aspect of nature suggests pictorial possibilities—possibilities often which are any artist's affair rather than his own. He takes with both hands, and even in the narrow confines of this small exhibition we are reminded again and again how richly this or that of his contemporaries or successors have benefited by the services of this superb "metteur en circulation." The sombre distinction of Whistler's early work, the luxurious melancholy of Cazin's landscapes, the intimate

and often interesting naturalism of Bodmer—the baking heat which permeated the landscapes of an admirable, if momentarily forgotten painter, Picknell—these things and others occur to us as among the results of his indefatigable research.

There may still be pickings even for our generation. It is more probable, however, that Courbet's example at the present moment will be most inspiring from the side which is here least shown—that of execution. He may serve to remind us in how high a degree a full and vivid presentment of concrete actuality may be combined with decorative sumptuousness and massive design.

PAINTINGS AND DRAWINGS BY MR. C. J. HOLMES.

At the Carfax Gallery the large picture *Summer in the Fells* (5) is a good example of the sanity and simplicity of Mr. Holmes's colour structure. We see the general mass of warm light becoming warmer and lighter as it approaches the foreground, gradually separating from the blue shadows till it becomes possible to insert a third tone of fuller dark without confusing that main distinction. We see the main divisions of plane established by means, apparently elementary, yet sufficient. In the foreground the darkest tones are touched in boldly in the firmly modelled rock forms—tentatively hinted in the grass. When the hill in the middle distance is to be rendered, we are aware that the same element is introduced more delicately in the rock forms, and has vanished from the grass, which is reduced to the two main masses of warm light and cool shadow. In the hill still further away these two tones are the only ones remaining, and are rather more subtly blended. It sounds a simple recipe enough, but it suffices to produce a compactly designed and spontaneous landscape, fresh in colour and just in values. It is perhaps a tribute to the artist's insight that, when he handles them, such subjects appear to have been designed by nature to serve as introductions to the science of chiaroscuro. At the same time we confess to being curious to see Mr. Holmes apply his apparently assured science to subjects in which the tones are not thus crisply divided into categories for the artist's use—or at least where their sorting out lays upon him the onus of a rather more creative insight—that of discerning the steps of a progression more easily missed than that offered by successive ranges of hills. This, perhaps, is a demand for the realistic ambition typical of the Western mind.

OTHER EXHIBITIONS.

At the Chenil Gallery Mr. F. H. S. Shepherd presents a complete change of subject-matter to accompany his change of material from oil to water colour. His landscapes in this medium are sound and accomplished, if less personal and distinctive than the little interiors by which we have known him hitherto. The latter stand almost alone among modern work, in their complete freedom from anything like a display of cleverness, and this in itself suffices to give them distinction. Their principal fault, to which we alluded last week—the absence of any stylistic restraint in the breaking up of form into smaller and smaller details is a little apparent in some

of the water colours—having the odd effect of making the distances look heavy and the foregrounds thin—the very transparent use of the water colour making every notation of detail a darkening influence. This tendency, which is common among the devotees of "direct" water colour, seems to arise from a great sensitiveness to anything like a crisp change of tone, however delicate, and indifference to a much stronger change of tone suavely effected. When, as in a few drawings (No. 1 may be cited as a good example) crispness of interval is to some extent abandoned for the sake of a sequence of washes—each added while the last is still wet—the artist's difficulty seems to vanish, and we get a design of some richness. Nos. 9, 10, 36, 46-49, and 54 are other excellent examples of work which is always thoughtful and well observed.

In the gallery upstairs are two pictures by Mr. Harold Gilman, very fresh in inspiration,

but very carefully wrought. To the few works remaining from Mr. Augustus John's recent exhibition several new studies have been added. One among them in particular, *La Paca*, is fine in character and well designed.

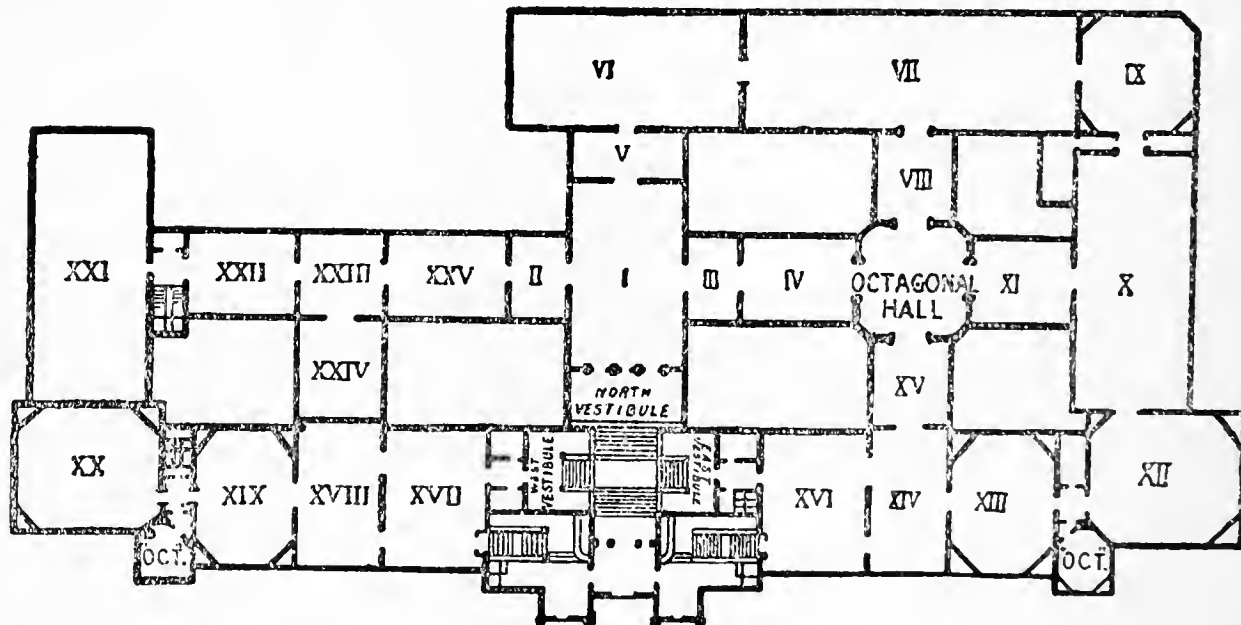

The short space for which the exhibition of the Ridley Art Club was open must excuse our failure to notice it in detail. Two small pictures of very modest pretensions by Mr. Philip H. Padwick (25 and 28) were the most entirely satisfactory among the paintings. Among the important canvases those of Mr. Dacres Adams (3, 21, and 22) showed a good sense of style rather self-consciously applied to familiar motives. Mr. R. C. Peter's two prints were designed in clever and confident fashion, but his large portrait showed that lively, linear design is as yet better within his compass than the treatment of quieter and more plastic form.

THE NEW PLAN OF THE NATIONAL GALLERY.

OVER seventy years ago, when the National Gallery was first opened, it was pointed out (*Athenæum*, April 7, 1838) that the pictures had then more light and room than they had previously enjoyed "in the bins where they had heretofore been packed at their late residence in Pall Mall" and that their beauties were "no longer conjectural." Reference was also made to Reynolds's 'Three Graces' as "a prodigy of colour" and one which "dominated the whole room" in which it was placed. A like remark, curiously enough, was made in these columns last week, when attention was drawn to the principal features in the disposition and hanging of the new rooms at Trafalgar

Academy was removed to Burlington House in 1869, the entire building at Trafalgar Square, as it then stood, was not given up to the National Gallery. The rooms added in 1876 by E. M. Barry, R.A., and in 1887 by Sir John Taylor, do not at present closely concern us. We are, however, able to reproduce a plan of the whole of the present building, a private view of which was held yesterday.

The whole of the National Gallery has been rehung since the issue in 1906 of the eightieth edition of the Foreign Catalogue, for the innumerable inaccuracies of which the present Director is in no way responsible. Only three of the first eleven rooms of the plan included and described in the seventy-seventh edition of the British Catalogue, issued in 1909, have since been rearranged.

Square that will to-day be opened to the public for the first time.

Our last plate was one of De Wet's raids, and in the ordinary way we do not insert plans or reproductions. We have not traced the inclusion in our pages of a plan of an important public building since we published (*Athenæum*, May 21, 1836) a steel engraving and a ground plan of the then new Houses of Parliament from the designs of Sir Charles Barry. The same architect, when examined before a Committee in 1848, gave it as his opinion that, if the Royal Academy were placed elsewhere and certain structural alterations were made, a suitable National Gallery could be obtained on the present site, and one which would afford accommodation equal to the requirements of the country for the national collection of pictures for a great many years to come. Until the Royal

Thus Room II. now contains pictures of the Tuscan School generally, and is not limited exclusively to paintings of the Sienese School. Some of the works of the last-mentioned school are temporarily withdrawn, but will before long, we understand, be placed in the room (V.) lately given up to works by Ferrarese and Bolognese artists.

Rooms XII. to XX. along the front of the Gallery will undergo certain structural alterations when their reconstruction with fire-proof material has been completed, as we pointed out last week in describing the contents of the five new rooms on the first floor (XXI.-XXV.). We have not space to show the exact position of the other new galleries below these. No doubt in years to come three more rooms will be added at the north-west corner of the building to balance those on the other side.

M. W. B.

MR. ARTHUR SKINNER.

WE regret to announce the death of Mr. A. B. Skinner, F.S.A., at one time Art Director of the Victoria and Albert Museum, and lately Keeper in the Department of Italian Renaissance Sculpture. Although he was only in his fiftieth year he knew more of the Museum's history, the provenance of its innumerable art objects and, we may add, the variety of the labels which had at succeeding periods been placed upon them, than any living man. He entered the Museum as a Junior Assistant in 1879, and had as a fellow-worker Mr. Whitworth Wallis, the present Keeper of the Birmingham Corporation Art Gallery.

Mr. Skinner's zeal as Assistant Director under Sir Caspar Purdon Clarke, whom he succeeded in 1905, was indefatigable, and it would be difficult to recall the name of any other Civil Servant who remained on duty at his post so many hours a week or worked more pertinaciously. He had a highly developed sense of detail, and was ever anxious to supervise the execution of the various alterations and improvements which he initiated, so far as his authority permitted, but he was occasionally apt to lose sight of some of the wider issues that from time to time presented themselves.

It was generally anticipated that he would remain Director of the Museum until his retirement in the ordinary course, but, when it was largely reorganized and extensive building operations were undertaken some three years ago, Mr. Skinner seems to have offered no opposition to being superseded and relegated to the position of Keeper of Italian Renaissance Sculpture.

He was, like Mr. J. H. FitzHenry, one of the most intimate friends of the late George Salting, who visited the Museum regularly one or two afternoons a week. He gave much care to the grouping and systematic classification, so far as the limited space permitted, of the various works of art which Mr. George Salting had for many years lent, and rather more than a year ago bequeathed to the Museum, and which will, we understand, shortly be exhibited in the favourable circumstances that the new buildings have rendered possible.

SALE.

MESSRS. CHRISTIE sold last Saturday the following works. Drawings: D. Cox, Crossing the Common, 84*l.*; and Birket Foster, Waiting for the Ferry, 110*l.* Pictures: J. Linnell, sen., Evening: a Landscape with peasants, horses, and cattle at a stream, 152*l.* E. M. Wimperis, Going to the Hayfield, 262*l.*; Crossing a Dartmoor Stream, 210*l.*

Fine Art Gossip.

MR. HEINEMANN announces 'The Biography of John Gibson, R.A.,' edited by Mr. T. W. Matthews, which includes some autobiographical matter hitherto unpublished; and 'Histories of Art,' in France by M. Louis Hortieq, in Flanders by M. Max Rooses, and in Egypt by Sir Gaston Maspero.

MESSRS. PUTNAMS promise 'Sacred Symbols in Art,' by Elizabeth A. Goldsmith, an illustrated volume intended as a guide for visitors to the galleries of Europe.

MR. D. S. MACCOLL, who, during his enforced absence at Fiesole, near Florence,

through ill-health, was appointed to the Keepership of the Wallace Collection in succession to Mr. Claude Phillips, was last Tuesday formally received at Hertford House by Lord Rosebery and the other Trustees and forthwith entered upon his duties.

THE exhibition of sovereigns and other rulers which had been arranged for this spring at Bagatelle, Paris, has been abandoned for this year at least. It has been decided to hold in its place one of 'La Mode à travers les trois derniers siècles.'

M. LOUIS ALEXANDRE BOUCHÉ, whose death at Luzancy (Seine-et-Marne), where he was born, at the age of 73 is announced, was one of the few remaining pupils of Corot; he also studied under Rémy. He was almost exclusively a painter of landscapes, and most of his pictures are of scenes on the borders of the Marne.

M. JULES MACIET, the collector whose death we announced on January 21st, has bequeathed to the State the whole of his collection of pictures and drawings, ancient and modern. One portion is destined for the Louvre and another for the Luxembourg; such as are not retained for either of these museums will go to Dijon. All his objects of art will go to the Musée des Arts Decoratifs, of which he was one of the founders and the most active supporters.

PROF. SOLMI, of the University of Pavia, continues his important researches concerning Leonardo. Some of the results of these studies will shortly be published by him in different Italian periodicals. They deal with the following subjects: 1. The draft of a letter of 1493, showing that in that year Leonardo sought to obtain the commission to execute the bronze doors for the Cathedral of Piacenza and other works there projected by the Bishop, Fabrizio Marliani. This letter sheds a new and curious light upon the character of the master. 2. Certain notes in Leonardo's MSS. as to the Castle of Vigevano. Prof. Solmi is able to show that the works carried out there during the reigns of Gian Galeazzo Sforza and Ludovico il Moro were directed by Bramante, but that during his frequent absences in Central Italy his place was taken by Leonardo, who executed paintings in many of the rooms of the Castle, the subjects of some of the compositions being referred to in his MSS. To Leonardo also is due a large share in the building and decoration of Ludovico Sforza's famous villa near Vigevano, La Sforzesca. 3. The part played by Leonardo in the draining of the Pontine Marshes. The engineer who carried out the work in 1514-16 from drawings and plans furnished by the master was Giovanni Scotti of Como. Prof. Solmi's article, dealing with this question, will be illustrated with reproductions of these drawings.

It is reported that a picture by Lucas Cranach, 'Christ bearing the Cross,' which has been hitherto overlooked by art historians, has been discovered at Sonnenstein above Pirna on the Elbe. It is said to have been originally at Torgau.

THE Venice Academy has recently acquired a signed work, in excellent condition, by Luca Giordano. It is dated 1692.

THE Society for the Promotion of Roman Studies is now in being, and, together with the Hellenic Society, maintains at 19, Bloomsbury Square, a joint library of Greek

and Roman archaeology and history. By permission of the Society of Antiquaries, the meetings of the Society will be held at Burlington House. Those who wish to join should apply to the Secretary at the address given above.

AN exhibition of modern Swedish painting, the first of its kind to be held in this country, will be opened in the Public Art Galleries, Brighton, by Count Vrangél, the Swedish Minister in London, on Saturday, April 22nd. The exhibits will include paintings, etchings, and a little sculpture, and have been selected by a committee in Stockholm.

EXHIBITIONS.

SAT. (March 11).—Mr. Mortimer Menpes's Water Colours of Venice and the Holy Land, Private View, Fine Art Society's Gallery.

MUSIC

THE WEEK.

QUEEN'S HALL. — *London Symphony Orchestra Concert.*

AT the eighth concert of the London Symphony Orchestra, at Queen's hall on March 6th, a very fine performance was given of Berlioz's 'Faust' under the direction of Dr. Richter. In the early days of the Richter Concerts the conductor introduced works by Berlioz, a composer whose music must attract him, if only on account of its clever and brilliant orchestration. At the concert in question there was the choir of the Hanley Glee and Madrigal Society, and their singing was excellent. The tone, whether in loud or soft passages, was of fine quality, while their reading showed life and high order of intelligence, for which their trainer, Mr John James, must claim a share of the praise. In view of Dr. Richter's fast approaching retirement, the London Symphony Orchestra was specially on its mettle; the Hungarian March was rendered with vigour, and the 'Dance of Sylphs' with rare delicacy. The soloists, Madame Donalda and Messrs. Walter Hyde, Robert Burnett, and David Brazell, entered thoroughly into the spirit of their respective parts.

STEINWAY HALL.—*M. Alfred Laliberté's Pianoforte Recital.*

A PIANOFORTE recital was given on Wednesday afternoon at the Steinway Hall by M. Alfred Laliberté, who has studied with Madame Carréno and the Russian composer, M. Alexandre Scriabine. Pianists' programmes are not unfrequently of a stereotyped kind; that, however, cannot be said of the one now under notice. Yet it was not satisfactory. The transcription by Busoni for piano of Bach's Chaconne in D minor for violin alone is exceedingly clever, though only effective when interpreted by Busoni himself. M. Laliberté's performance was in some

respects meritorious, but it lacked the extraordinary technique and strong individuality of the transcriber. Liszt's Variations on a theme by Bach displayed an uncomfortable mixture of styles; the one spoilt the other. A Sonata by Scriabine, composed when he was eighteen years old, proved rhapsodical and diffuse. It is the work of a young and talented composer who has not learnt the art of expressing himself clearly and tersely. The six Preludes by the same hand which followed were little more than vague sketches. M. Laliberté has good technique, but there are no gradations of tone in his playing; it is either soft and delicate or loud.

Musical Gossip.

AT the Barns-Phillips concert, at the Bechstein Hall on March 4th, the programme included a set of six songs with accompaniment of violin and pianoforte by Spohr, all artistically rendered by Mr. Charles Phillips, the violin obligato being played by Miss Ethel Barns. Most of them are smooth and expressive, but they savour too much of the past to appeal to modern audiences. The least satisfactory is a setting of 'Erlkönig,' one of many, all of which, except those by Schubert and Lœwe, are forgotten. The very first was composed and sung by Corona Schröter as early as 1782. Beethoven, by the way, made a sketch, which he never completed; this, however, was done by Reinhold Becker and published in 1897.

DR. HANS RICHTER took leave of the Hallé Choir at Manchester on Tuesday evening. He succeeded Sir Charles Hallé eleven years ago. Mr. R. H. Kenyon, chairman of the committee, who handed the conductor a silver casket as "a token of appreciation and affectionate regard" from the members of the choir, recalled an interesting declaration by Hallé. His words were: "If there is a man in Europe whom I should like to stand in my shoes when I go hence, it is Hans Richter. He is head and shoulders above other conductors."

MR. FRANK LEONI's oratorio 'Golgotha' was performed for the second time at the fourth concert of the Queen's Hall Choral Society on Tuesday evening. Again we heard the whole of it without modifying the opinion first formed. The composer was no doubt in earnest when he wrote the work, and his endeavour to intensify the tragedy of the Cross by depicting in realistic fashion the surging, mocking crowd was what Bach in his day had already done; also his aim to set simple music to the words uttered by Christ was wise. We, however, still feel that the music lacks dramatic interest and emotional power, and, at the most solemn moments, dignity.

THE harp as a solo instrument is seldom heard in the concert room. Signor Mario Lorenzi, however, gave a concert at the King's Room, Broadwood's, at which he played various solos. In his Sonata Fantasia in B flat minor he showed not only thorough mastery of the instrument, but also interpreted the ably written music with marked taste and expression. His other and shorter solos were equally successful. He is still young, and will make a name for himself. Miss Evangeline Florence and Signor Manrico Bacci contributed songs, the former one,

'Potessi diventare un' uccellino,' by C. Maria Pearse.

THE first London Musical Festival was held at Queen's Hall in May, 1899, and similar festivals were given until 1902. This year there is to be one from May 22nd to 27th. British orchestral music will be represented by Sir Edward Elgar's second symphony in E flat, and new works by Prof. Granville Bantock, Dr. Walford Davies, and Mr. Percy Pitt, these novelties being conducted by their respective composers. Two foreign novelties will be Reger's setting of the 100th Psalm, and Debussy's 'Rondes de Printemps (Images, No. 3).'

DR. RICHARD STRAUSS will appear at an afternoon concert and conduct a symphony and Concerto by Mozart. His admirable interpretation of the 'Jupiter' Symphony last year has evidently not been forgotten. The programme will include his tone-poem 'Also sprach Zarathustra,' the 'Dance of the Seven Veils,' and the closing scene from 'Salome'; the last will be sung by Mme. Aino Ackté.

THE following artists have been engaged: the Misses Ellen Beck, Elena Gerhardt, Agnes Nicholls, and Edna Thornton, and Messrs. Thorpe Bates, Herbert Brown, Ben Davies, Gervase Elwes, and Robert Radford; also the Sheffield Festival Quartet. Among the instrumentalists will be Herr Fritz Kreisler, Señor Pablo Casals, and Mr. Harold Bauer.

THE scheme also includes Bach's 'Matthew' Passion and Mass in B minor, and 'The Dream of Gerontius,' in which the Sheffield Choir, the Leeds Choral Union, and the Norwich Festival Choir will take part. British art is described as fully represented. That may be so as regards quantity, but why has no place been found for Sir Alexander Mackenzie, Sir Hubert Parry, or Sir Charles Stanford?

THE King and Queen will open the Festival of Empire at the Crystal Palace on Friday, May 12th. Sir Charles Santley's matinée, already fixed for that day, has been postponed to Tuesday, May 22nd. It will take place at Covent Garden, and the programme will be carried out under the direction of Sir Herbert Tree. Sir Charles will appear in his original character of Tom Tug in Dibdin's opera 'The Waterman.'

THE volume containing the hymns for the Coronation of King George V. (Skeffington) is dedicated by special permission to King George and Queen Mary. It opens with the National Anthem, the piece containing an additional or alternative verse by Mr. Martin S. Skeffington. Sir Frederick Bridge contributes music to the hymn, "Lo, the King in state and splendour," of strong, yet devotional character. A simpler alternative tune by Mr. Skeffington is added. Of the other numbers may be mentioned Sir Walter Parratt's broad setting of "O God, Who in the days of old"; Sir George Martin's expressive music to "Almighty Father! dwelling in the light"; and the effective music, adapted by Sir Frederick Bridge from Mr. Percy Godfrey's Musicians' Company's Coronation March, to "The King, O Lord, in Thee this day rejoices."

GUSTAVE CHARPENTIER, with whose 'Louise' we are now familiar, is said to have written three *pièces*, each consisting of two acts. The title of the first is 'L'Amour au Faubourg'; of the second, 'Commediante'; and of the third, 'Tragediante.' The three form virtually one work.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	Sunday Society Concert, 3.30, Queen's Hall.
—	London Symphony Orchestra, 3.30, Palladium.

DRAMA

Pietro of Siena: a Drama. By Stephen Phillips. (Macmillan & Co.)—Mr. Phillips's new romantic drama is at any rate an improvement on the 'Faust' adaptation, and marks a return to true poetry. There are lines in this play that are worthy of the author of 'Marpessa' and 'Paolo and Francesca.' But the story on which he relies adopts the extravagant conventions of romance—libertines suddenly converted, virgins conquering their would-be ravishers by their purity—and he cannot be said to have arranged his characters' changes of front plausibly. The characters, indeed, are abundantly decked out in tinsel, and furnished with a rhetoric that is eloquent, and sometimes even passionate, yet has a curiously monotonous ring. How artificial is Mr. Phillips's plot will appear even in a mere outline of it.

Luigi Gonzaga, tyrant of Siena, is overpowered by Pietro, representative of the exiled house of the Tornielli. The two families have ruled the city by turns, and Luigi's father ravished Pietro's mother, and brought both her and her banished husband in sorrow and shame to the grave; so that Pietro has other wrongs than his own to avenge when he enters in triumph. Luigi he condemns to suffer death at daybreak, but he falls in love with his rival's sister Gemma, and, by way of gratifying his passion, offers the girl her beloved brother's life at the cost of her honour. She consents to the bargain, but so works upon his feelings by her eloquence that he turns chivalrous and makes her an offer of marriage, which she there and then accepts. Luigi is set free, but, learning at what a price his freedom is supposed to have been bought, breaks in on the lovers and denounces them both, but is pacified on being given news of the coming wedding, and, so, apparently, is Pietro's discontented army.

Apart from the lyrical adornments of its verse, Mr. Phillips's drama is scarcely less bald than this summary. His finest lines are put into the mouth of Gemma as she approaches Pietro at midnight to make her sacrifice:—

Do I now for a moment give myself?
I give you ice for fire and snow for flame

I but endure and listen for the dawn;
And when you clasp me to your breast, I see
Behind your phantom face a rising sun.
You shadow! murmur, kiss, do what you will,
I have forgotten you for evermore!
You ghost, with but the vantage of the grave,
O lover with cold murder on your lips,
Bridegroom whose gift is blood, whose dower is death
Ah, what a tryst! What moonlight ever saw
Such a forbidden rapture as is this?
Then take me in your arms, but never me!

Fool, can you understand in your wild blood
That never shall you reach me on these terms?

THE INTERLUDE OF JACOB AND ESAU, &c.

ON Monday, March 6th, there was a matinee of this old play at the Little Theatre. As a literary production the piece is of great interest, showing the transition from the old monkish miracle plays, the moralities, and allegorical devices. Its latest possible date is 1553, and it was licensed to Henry Sutton to print in 1557; the text is taken from a later edition of 1568. The form is classical, the unities being observed, and acts and scenes being used. The plot is the simple Bible story of Jacob's schemes to deprive Esau of birthright and blessing, heightened by the introduction of neighbours and servants with some humorous traits. The language is wonderfully modern.

There was no precedent to guide Mr. Poel in setting the piece on the stage, and he followed the lines which, he believed, would be used in an early sixteenth-century Court representation. The stage was hung entirely in purple, providing for exits and entrances. The dresses were gorgeous—rather overlaid with jewels, however, even for early popular imagination. But they were effective, and each group seemed like a picture taken from an early master. The characterization scheme was interesting but unequal. Isaac, by Mr. Clifton Alderson, rose to the conception of an ancient patriarch, and Rebecca in the representation of Miss Kathleen Nesbitt developed a managing mother's interference with the ways of Providence sufficiently to wing justice in the final banishment of her darling from her side. Esau took one by storm somewhat, and after the Satan of 'Paradise Lost,' he hardly seemed "less than archangel ruined." His active, headstrong, selfish ways, redeemed by his love for his old father, were well brought out by Mr. Reginald Owen. But in the matter of get-up he was rather more out of keeping with his part than the others. He had long golden curls and delicate complexion, white and pink, smooth face and slender hands, with no suggestion of the "hairiness" which is the pivot of the plot, and he wore a coat-of-mail "to go a-hunting in the woods" with one man and two hounds. Jacob was in dress and appearance more natural for a tent-dweller. Mr. Campbell Cargill rather outdid the author of the play in presenting him as a prig, descending at times to the level of a simple Simon. He gave grounds for Esau's description of him as hypocrite and hedge-creeper. The servant of Esau, unwilling to go to the chase so early without food, was a little too harshly rendered by Mr. H. Brewer, who missed some good points. The two charming children's parts, of Mido who led Isaac, and Abra who served Rebecca, were represented by Miss Mercia Towers and Miss Grace Seppings. Bright, saucy chapel boys in the old days they would have been, and even on this occasion, with their parts somewhat cut, and a slight lack in study, they infused an atmosphere of human interest into the solemnity of the Interlude. Abra, *apropos* of Esau, rendered, while she swept with her broom, the song,

It hath been a proverb before I was born,
Young doth it prick, that will be a thorn,

and she gave the first literary list of kitchen vegetables in the supply she brought in for "good broth and farcing" for the fatal meal. This list yields one of the arguments on which this play has been claimed for William Hunnis in our columns (April 28th, 1900). Literary students owe Mr. Poel a debt of gratitude for thus elucidating the

history of the early drama, and it is satisfactory to note that the general public also enjoyed the representation.

It was followed by a scene or two from the drama of Edward III. The Elizabethan Stage Society had previously presented the play as a whole, but on this occasion Mr. Poel boldly cut out and gave as Shakespeare's what he considered to be the master's share in the work. It was well set on in the Society's manner, though there was not sufficient manliness in the King's part as rendered by Mr. Arthur Wontner. Mr. Kenyon Musgrave was fine as Warwick, and Miss Helen Haye rose admirably to the part of the Countess of Salisbury, his daughter. The character of Lodwick the poet was played effectively by Mr. Reginald Williams in both scenes. But it would have been better to play the Interlude alone. S.

MESSRS. BELL'S BOOKS.

IMPORTANT NEW WORK BY
DR. J. HOLLAND ROSE.

Illustrated. Medium 8vo, xii-632 pp. 16s. net.

READY WEDNESDAY NEXT.

WILLIAM PITT AND NATIONAL REVIVAL.

By J. HOLLAND ROSE, Litt.D.

In this work Dr. J. Holland Rose (well known as the author of what has been pronounced by a reviewer in the *Times* as "the best life of Napoleon yet published") has produced the first portion of what may eventually prove to be the best life of Napoleon's great political antagonist, the younger Pitt. Dr. Rose has made diligent use of the hitherto unexplored archives in the Public Record Office, and has had the advantage of numerous unprinted letters in the possession of private owners whose ancestors were connected with Pitt.

LITERATURE

Sir William Butler: an Autobiography.
By Lieut.-Gen. the Rt. Hon. Sir W. F. Butler. (Constable & Co.)

SIR WILLIAM BUTLER wrote in the old days 'Red Cloud; or, the Solitary Sioux,' which is not only a capital story for boys, but also to all intents and purpose a chapter of autobiography. These larger *Memoirs*—more alive and more alert than almost any other life-record of recent years—have perhaps a less delightfully ingenuous account of his boyhood than the work of fiction supplies. But it is not this feature of the smaller book, nor the telling of the Irish lad's adventures in the North-West of Canada in a manner which the graver memoirs cannot surpass, that now brings it to mind. Rather is it that one word of the title—the word *Solitary*—better befits Sir William Butler than any other word in the language. He was himself more of a *Solitary* than even his *Sioux*. 'The Great Lone Land' was the place of his perpetual sojourning. This was not because he had "all the world for cell" by any set rule of detachment, but because he was first and frankly an alien. Out of Ireland, an Ireland he had left in early youth, an Ireland of dreams, he was in a strange land, and the strangest of all was England. Other men among us, Disraeli the Oriental for example, have had the amused outlook of a bystander; or, like Meredith the Celt, in some particulars, a partially perturbed outlook. But Butler

was an alien in heart and in mind, and his heart and mind were in perpetual activity. He smiled, indeed, but with a smile that "hurt half of his mouth." Wherever he was—at Aldershot, or "Far Out," in the North-West, in Egypt, in the Soudan, among the Zulus or the Ashantis—he was still inhabiting a legendary Ireland, the Ireland of his boyish imaginings.

To trace this spirit of alienation through the pages of this brilliant 'Autobiography' is to find cumulative evidence of its dominating action. It is also incidentally to master one of the subtlest of the problems of an Imperialism that is shrewd and magisterial and confident and confiding enough to attach to its service men to whom its aims are either futile or abhorrent. In the good old days Butler would have forfeited his head, as some of his less famous fathers actually did forfeit theirs. As it was, he could inspect at Aldershot, a very martinet, insistent beyond others on efficiency in the tactics at which he was only mocking. "A dismal failure," he calls them. "Never," he wrote after the Boer War,

"was the child more absolutely father to the man than was the Aldershot school of tactics the parent of Magersfontein, Stormberg, Nicholson's Nek, and Spion Kop. The Basingstoke Canal was the true source of the Tugela River, and batteries were lost in the Long Valley years before Long's guns fell as easy prey to the Boers at Colenso."

George Eliot, greatly daring, delimited the lines of cleavage between the man and the official in the person of Savonarola, a task much easier in literature than amid the multifarious complexities of modern life. In Butler's case the love of travel, of adventure, of soldiering—that is to say, the romantic sort of soldiering present to a boy's fancy—determined his choice of the military profession; and, once in it, he, of all soldiers the most charged with a stern sense of duty, realized the poet's line, "theirs not to reason why." If the isolation of a General among his staff at make-believe manœuvres may pass as immediate comedy, such isolation on the actual field of battle must surely rank among human tragedies. Butler's intrepid activities in the campaign against Arabi have their sequel in the characteristically generous and able letter on behalf of the "rebel," threatened with instant execution, in which he urged on the military authorities that policy of delay, leading to mercy, which Mr. Wilfrid Blunt was preaching at home; and the soldier, hot from the pursuit, was equally at one with that civilian in his cry, "Give me the valour of the beaten host!" To that valour, by the way, so often disputed, Butler bore witness:—

"Complete surprise as it was to the Egyptian soldiers, they nevertheless fought with the greatest determination against overwhelming odds. The assault fell upon them as a thunderbolt might fall upon a man asleep. Few among them knew anything of war. Yet they fought stoutly wherever ten or twenty or fifty of them could get together in the works, in the angles of

the lines, and in the open desert between the lines. The heaps of dead lying with and across their rifles facing the up-coming sun bore eloquent testimony to that final resolve of these poor fellows. Peace be to them, lying under these big mounds on the lone desert—ten thousand, it is said. No word should soldier utter against them; let that be left to the money-changers. They died the good death. Dust to dust. They did not desert the desert; and Egypt will not forget them."

As one of "the Wolseley gang," Butler had doubtless a certain soothing sense of segregation; and his defence of "the gang"—of the men who did know how "to go," and whose graves, as he enumerates them, are scattered like those of the Household in familiar nursery verses, will never pass unquoted by the historian. But even in a gang there may be one aloof from the rest; and this was he. The telegrams to "the Chief" when war was in the air; the setting-forth, to Toronto for instance, on far quests before formal appointments had been gazetted—indeed, when there was "no berth vacant" for the Red River Expedition, alike indicate Butler's resource when the hour for action struck and the comparative lack of intervening association between him and his brothers in arms. For like reasons Butler could never have been a party man as some who think in parties, and are concerned with the South African situation before the final war, have supposed him to be. He was equally against the Government of Westminster whether red or blue were the colour worn.

Towards Gordon, a man in the world, but not of it, Butler was instinctively drawn. The two men first met at dinner in a London Club, and it was the duty of the porter that night to warn off the premises two men, very unlike revellers and no experts at cards. When Lord Ripon went to India as Viceroy he named Butler as his Private Secretary, but Gladstone thought that a Roman Catholic Viceroy could more prudently be Protestantly attended, and Gordon went instead, an incident which at once significantly divides and associates these two men. The Gordon Relief Expedition, with the Nile flotilla under Butler's creation and command, was perhaps the one piece of active service wherein his heart and his will were united. Into the saving of the Solitary of Khartoum, all kinship of opinions apart, Butler put the efforts of a few weeks that would have meant the efforts of a few months for any one else, and the passion of a lifetime. The foiling of his efforts by the delays of others did not perhaps diminish the accidental satisfaction that attends most failures; it gave him the opportunity of standing apart once more to throw—shall we say Nile mud—at the War Office and at nearer authorities, mud that may yet prove fertile even where, with so sure an aim, it was flung. Soldiers more commonly than other classes are labelled comrades; but the vivid story of Butler's "Campaign of the Cataracts" and of his subsequent deten-

tion at Wady Halfa proves once more how little comradeship was the characteristic of this always impenitent idealist, in perpetual friction with the movement of slower human mechanisms. Parnell's final isolation was the seal of Butler's attachment to him; and had it been true, as Praed's rhyme has it, that "John Bull was beat at Waterloo—they swear to that in France," it may be doubted whether Napoleon had become the master admiration, growing in intensity, of all Butler's life. The very inaccessibility of St. Helena flattered his passion for the remote, and it was a pilgrim's devoutest feet that climbed "the ridge of Longwood above the tomb."

Had Butler been infected by the prevailing worship of success, his almost superstitious aversion from Cecil Rhodes might have been mitigated. The two men jostled shoulders, but never met. There is something almost mediæval in Sir William's chronicle of the single occasion on which they silently confronted one another with an impact of the eyes:—

"Almost on the last day of the old year [1898] I went to the Docks to see some friends away by the outgoing mail steamer to England. Mr. Rhodes and many of his intimates were passengers. As I was leaving the steamer I passed Mr. Rhodes near the gangway. Our eyes met for an instant. He was speaking to somebody in what seemed to me a sharp falsetto tone of voice. The expression of his face struck me as one of peculiar mental pain. I seemed to have seen it once before.

"That evening there was a remarkable eclipse of the moon. The face of the moon seemed to have been washed over with a blood-stained cloth, and the old garden round 'Charlie's Hope,' with its lofty cypress trees, looked in the sombre light like a nocturnal graveyard."

Rhodes was about to pay the visit to England which preceded the war of the appalling nature of which Sir William, almost alone among his countrymen, prophesied in vain. Of the vexed questions which these events raised, and which it would be vain to suppose that the Memoirs will settle, this is no place to speak. But it is pleasant to recall the creditable offer of a home command to the officer whose action at the Cape had seriously embarrassed the Government, an offer only accepted when it had been tendered a second time by Lord Lansdowne in particularly amiable terms.

This was one of many amenities attending the career of one of the most active and independent intelligences of his time. He could not idle like others. Reynolds's despairing saying about Gainsborough, "D— him, how various he is!" was repeated in effect about Butler by more than one Commander-in-Chief. When he was not on a campaign or a far journey, he was sure to be writing a book, a thoroughly readable and effective book, about the one or the other; and his contributions to military biography—his Lives of Colley and Gordon and Sir Charles Napier—are models of their class. Equally well has he written his own memoirs, a task nobody else could have

attempted. The 'Foreword' and 'Afterword' of his daughter, Miss Eileen Butler, are exactly what they should be. The proofs have been read with unusual care; and the excellent Index has failed us only in three minor particulars.

A Book of Cambridge Verse. Edited by E. E. Kellett. (Cambridge, University Press.)

So much has been written of late about Oxford that we owe Mr. Kellett and the Cambridge Press a real debt of gratitude for giving us a volume on "the other place." That Cambridge far exceeds Oxford in the list of poets who sheltered beneath her wing as young men is by this time a commonplace. None of them, however, produced such sustained and splendid eulogies of his "alma mater" as Matthew Arnold in 'Thyrsis' and 'The Scholar-Gipsy'; and, after a few poems have been collected, the Cambridge anthologist must admit, as does his Oxford predecessor in 'The Minstrelsy of Isis,' "verses of intrinsic interest, even though deficient in poetic quality." This, indeed, is natural, for it would be idle to expect full-blown genius in undergraduates, while dons, as a rule, are too busily employed otherwise to give scope to the talents for verse which they may possess. Mute Miltons are sacrificed, perhaps, to the exigencies of University business. Of one don, indeed, Cambridge can boast who has gone far in the lyric world, and the phrase we have used may suggest the limits which musical comedy imposes on its votaries. "Adrian Ross" is well known in theatrical circles, and the author of numerous lyrics which are sung by popular favourites. His Muse is equally happy on Cambridge ground, as may be seen in four sets of verses here printed which embody the romance of the place as well as the easier reflexions of the parodist of Tennyson. We fancy also that the excellent commemorative verses on the *Cambridge Review* signed "X" are from the same hand. Here is a stanza:—

We must change as the seasons that vary,
We must fall as the leaves that are brown,
As the facings of classic canary
From W-ldst-n's doctoral gown;
And the feet that outran Atalanta
No longer our cinders may crunch,
While the wits that were great on the *Granta*
Are punsters in *Punch*.

We cannot always be attuned to the high passion and simple fervour of the lyric in *excelsis*, and in the region of the *Musa Jocosæ* Cambridge can certainly claim the pre-eminence. The father of modern light verse is Calverley, and in the pages before us the reader will find that description of the ever-recurring undergraduate, "Hic *Vir*, hic est," which remains without a peer as an exposition. Calverley has produced a school of writers which continually adds to the gaiety of to-day, while maintaining a standard of technique beyond earlier bards of fashion and of mirth, who hymned society and

dress, and, while they left their souls on earth, displayed a casual cleverness.

In this book we find J. K. S., Mr. Owen Seaman, and Mr. R. C. Lehmann, and that strange talent of exquisite parody which flowered for a brief while in A. C. Hilton. Who can forget the Heathen Pass-ee?

On the cuff of his shirt
He had managed to get
What we hoped had been dirt,
But which proved, I regret,
To be notes on the rise of the Drama,
A question invariably set.

Before all these came the elegance of Praed with the sort of classic concinnity which one would expect scholars to show, but which, oddly enough, has not been much practised by the modern Cambridge man. What Tennyson could have achieved in this way is shown by 'Will Waterproof's Monologue at the Cock,' with its teasing, self-rebuking poise of a mood between fun and seriousness, between sentiment and the rigours of a workaday world. The glimmering of college friendships is less prominent, however, in this volume than the elaboration of suitable sentiments in an excellent style which does not carry conviction, or the commemoration of local worthies and curiosities long since gone to the dust of oblivion. With access to the collections of Cambridge matter in the hands (lately alas!) of J. W. Clark and of Mr. Robert Bowes Mr. Kellett has been able to cover the field of academic history with remarkable success, though we must protest against the style which in a Preface otherwise admirable in matter and point of view, allows him to speak of verse as "topical to a degree." We can well believe that Mr. Kellett has waded through acres of matter only suitable for rejection, and done far more work than his inclusions would indicate to the casual reviewer. He does not include in his text Latin poetry—naturally enough, for it would be Greek to the present generation of readers—but he has managed to make a representative collection of verse which will be largely new to the constant student of Cambridge. He has indeed discovered so much that is essentially local that we think he might have done without the snippets in which Mr. Alfred Austin and Canon Rawnsley refer to Tennyson at Cambridge, and omitted those lines on the college cat equal to a Senior Fellow in discrimination which without the help of the notes we are able to ascribe to Corpus College, Oxford. The author, Sir Frederick Pollock, like other excellent men and scholars, has belonged both to Oxford and Cambridge; but, while we appreciate that interchange of talent between these two seats of learning which is hardly forwarded by the leisurely interposition of the L. & N. W. Railway, we are of opinion that Cambridge can show of herself enough of the Spirit of Place to need no help from outsiders.

The rage for being comprehensive leads the anthologist of to-day to include matter which really adds little to his book except in bulk. Wordsworth wrote, perhaps, the best sonnet, alike on Oxford, Cambridge,

and London. 'The Prelude' is largely pedestrian, like 'The Excursion,' but tolerable in its University reminiscences; and better than the flowery extract from an 'Installation Ode' by Christopher Wordsworth. George Dyer's Ode on the Cam was as good or as bad.

If the classics in the original are not allowed—and we notice that some Latin pieces figure in the Notes at the end—the book offers some adequate translations, Cowley, whose work has real charm, being well rendered by Richard Wilton, the pleasant Muse of Vincent Bourne by Cowper and Lamb, and the inscription on the Peterhouse Cup presented by Sir William Browne in 1773 by the new Cambridge Professor of English.

Of original poems which will be new to the average reader the most striking are perhaps the pieces of Amy Levy, who has at her best a singular poignancy. In the opening verses of 'Cambridge in the Long' she has paid tribute to that charm of abundant greenery which is specially characteristic of Cambridge:—

Where drowsy sound of college-chimes
Across the air is blown,
And drowsy fragrance of the limes,
Lie and dream alone.

A dazzling radiance reigns o'er all—
O'er gardens densely green,
O'er old grey bridges and the small
Slow flood which slides between.

The illustrations of the volume are well chosen, and the notes show Mr. Kellett's good taste and knowledge. We should have been glad to see more of them, for we feel that they "err on the side of brevity rather than that of flourish." Byron, whose lines in 'Thoughts suggested by a College Examination,'

Shall hoary Granta call her sable sons,
Expert in science, more expert at puns?

now approach the dignity of successful prophecy, supplies the note:—

"'Into Cambridgeshire the Emperor Probus transported a considerable number of Vandals' (Gibbon's 'Decline and Fall'). There is no reason to doubt the truth of this assertion; the breed is still in high perfection."

That was the easy petulance of a poet and a lord spoilt from the beginning. Mr. Kellett's notes show that a good deal of instruction can be combined with amusement, and that in earlier days dons were as satirical in print about each other's deficiencies as the author of 'English Bards and Scotch Reviewers.' At the present day such freedom of speech would keep the lawyers busy.

A Cyclopædia of Education.—Vol. I. A—Chu. Edited by Paul Monroe, with the Assistance of Departmental Editors and more than One Thousand Individual Contributors. (Macmillan.)

MR. PAUL MONROE has already made his bow to an English audience. *The Athenæum* reviewed a book of his ('A Text-book in the History of Education')

towards the end of 1905. The present is a great undertaking that will tax his powers, especially his sense of proportion. The first volume, of some 650 pages, only reaches Chu; so that we may assume the whole will run to at least eight volumes. It is essentially an American enterprise, and of the fifteen departmental editors assisting the editor-in-chief no fewer than ten are American. France is represented by M. Gabriel Compayré, Germany by Dr. Wilhelm Münch, and England by Messrs. A. F. Leach, J. E. C. de Montmorency, and Foster Watson. To Vol. I. some 130 specialists contribute, among whom are Prof. John Burnet, Mr. A. F. Leach, Prof. M. E. Sadler, Monsignor B. N. Ward, and Dr. Foster Watson.

These facts may give some idea of the general character of the work; but, before we look into this more closely, it should be said that it is a happy sign of the times that education should at last be thought worthy of a cyclopædia in English. The Preface rightly appraises the need for such a work: the literature of education is vast and varied; its ideas and practices differ widely; as a social process it grows in importance; and teachers are legion, a legion whose soldiers change rapidly. The educational profession, it is here stated, is the largest of all in point of numbers. It is true, also, that there is a tendency to throw upon the school an increasing weight of responsibility. The morals of the young, their home duties, their social amusements and graces, their spiritual needs, their general health; even their food and their equipment for work in farm or workshop—all these problems fall upon the shoulders of the overburdened teacher.

Upon the teacher! Let us our lives, our souls,
Our children, and our sins lay on the teacher!
He may well cry:—

We must bear all. O hard condition!

The Editor finds that the importance of the teaching profession is growing. His outlook is essentially American, for advance in this respect in England is so infinitesimal as to be appreciable only under the microscope. Still on both sides of the Atlantic the following remarks, which we quote from the Preface, are equally true:—

"Society is laying all of these tremendous responsibilities on a profession for which it makes no adequate provision, either in the way of remuneration or by other inducements, to attract the best talent to the profession, to train such talent adequately, or to retain it for any length of time. The teaching profession is a rapidly changing one. Probably twenty-five per cent of the entire profession in the United States is renewed each year."

The bearing of these remarks on the work before us appears to be that, if the new recruits are to be quickly raised to a respectable standard of efficiency, both they and their trainers must have within their reach a thoroughly systematized body of educational knowledge. The editor's aim is to include a concise discussion of all topics of importance and

interest to the teacher. "Completeness of treatment is not designed. Completeness of scope is attempted."

Such being the general design, what is to be said of its execution? We cannot, of course, do justice to the thousand entries of this volume, but a few of them may be noticed. Mr. Leach is vigorous in his article on Abbey Schools. His conclusion is that "the importance of abbeys and monks in the advancement of education has been much exaggerated." Prof. E. N. Henderson, of Adelphi College, writes well on psychological subjects such as 'Ability,' 'Acquired Characteristics,' and 'Apperception.' The conclusion reached on the second topic is that non-inheritance of acquired characters spells progressiveness. 'Academic Costume' is treated at length and illustrated by coloured plates. There is an exhaustive article on 'Architecture for Schools,' occupying some 15 pages. 'Athletics' occupies a like space, the English side of the subject being treated (2½ pages) by Mr. D. G. Schulze, of Uppingham. We were struck with Prof. M. E. Sadler's article on Thomas Arnold. 'Abbotsholme,' 'Bedales,' 'Boarding Schools,' and many another entry that we have read critically, proved satisfactory.

There are weaknesses, however, to be noted. To an English reader the book will certainly appear a strange mixture of the important and the unimportant. The want of proportion will strike him as odd. Thus there are many entries like the following:—

"Blue Mountain College, Blue Mountain, Miss.—A proprietary institution for the education of young ladies, opened in 1873. Preparatory, collegiate, and musical departments are maintained. The 4 years' course for the degree is based on about 4 points of high school work."

This reads like an advertisement. At any rate in England we should relegate it to an educational year-book or directory. It is a pity that such matter should be allowed to jostle with articles of universal interest. There seems to us to be a great quantity of American "small beer" in the work, apart from American spelling and American turns of phrase, for which one is prepared. The fact is that there is little attempt to make the perspective anything but American. English education appears to be admitted incidentally. Thus Charterhouse receives a third of a column, a somewhat smaller space than is assigned to Bryn Mawr Womens' College: and Christ's Hospital, which Americans used to love, is not mentioned at all.

To those who can brush aside this strongly American bias the book will appeal by reason of a wealth of well-informed and well-written general articles, such as that on 'Apprenticeship and Education.'

We congratulate the editor and his staff on a good beginning, and hope that the progress of the work will be steady.

In America it should sell well. For England we recommend the publication of an English edition, which could easily be arranged with suitable omissions. Here we already have, as we have said, year-books which deal briefly and adequately with such institutions as Blue Mountain College.

Mary Wollstonecraft, a Study in Economics and Romance. By G. R. Stirling Taylor. (Martin Secker.)

THIS work does not profess to contain any information not already before the public, repeating as it does some details given by Kegan Paul's excellent book 'William Godwin, his Friends and Contemporaries,' but its author has at least one essential qualification for the task of biographer—enthusiasm for his subject. We cannot help thinking, however, that his admiration for Mary Wollstonecraft's theories on the marriage question has led him unconsciously to misrepresent the degree in which they influenced her actual practice. We admit that Kegan Paul in his consideration of the subject has made too little of the part which Fuseli played in her life. But we should require something more than the hear-say evidence offered by Knowles before believing that she seriously suggested to Fuseli's wife the inauguration of a *ménage à trois*, even on the understanding that her own position therein was to be on a strictly "Platonic" basis. If Fuseli, in accordance with her earnest entreaties, returned her letters to him, it is plain that the passages purporting to be taken from them must, like the supposed quotations from her conversation, rest on no surer foundation than Fuseli's after recollections verbally transmitted to Knowles. The accuracy of this oral tradition may be gauged by Knowles's statement that Mary had lived "chiefly at Bath," where she only spent two years. So far as we know only one authentic letter from Mary Wollstonecraft to Fuseli has as yet been discovered. It dates from the terrible period of her desertion by Imlay, and is mentioned by Kegan Paul, vol. i. p. 207 (though this reference has escaped Mr. Taylor), with the comment that it "most certainly does not refer to any attachment" on her part to her correspondent—a conclusion with which we agree.

In the light, again, of the undoubted fact that Mary was afterwards legally married to Godwin, we see nothing absurd in the suggestion that only circumstances (happily, as it proved) may have prevented a similar ratification of her connexion with Imlay. In any case it is plain that the most conventional bride who ever wore orange blossoms could not have looked forward with more absolute confidence than she to a life-long union with the man introduced by her to her sisters as "a brother" from whom they might unhesitatingly accept pecuniary help. We believe that her mental attitude towards the marriage

rite is best defined by that of her heroine Maria, of whom she says "her conduct would be just the same without the ceremony as with it." This is not quite the impression which Mr. Taylor's comments convey, and we are half amused by his spirited though not over successful attempt to whitewash the man who "like the base Indian threw a pearl away, richer than all his tribe." No new light is thrown in this process on the baffling personality of Gilbert Imlay, whose character seems in no degree to have descended to his blameless and unhappy daughter—"a Wollstonecraft" like her more famous sister.

Mr. Taylor's remarks on the eighteenth-century English woman are sound in the main, but savour a little of conventionality and exaggeration. Is it fair to lay such stress on Dr. Burney's alarm when his daughter turned novelist, and to say nothing of the unanimous and almost exaggerated applause which welcomed the appearance of her first book? And surely the "bobs and curtesies" of female authors to "the sex in possession" had their counterpart in the extravagant encomiums bestowed upon such literary ladies by literary men.

NEW NOVELS.

Adventure. By Jack London. (Nelson.)

MR. JACK LONDON, who has recently taken to the exploitation of the South Seas in fiction, has contributed a racy story to Nelson's two-shilling series. The opening is astonishingly good and also, one must think, curiously veracious in its picture of a Melanesian island, swept by a plague. The hero is a stark, virile figure of a man with whom the reader's sympathies necessarily go in his battle against primitive savage nature. The story is so good that one rather resents the interposition of the feminine element, which seems out of place in such violent conditions. Moreover, the heroine displays a certain lightness in the face of the tragedies to which we are introduced. However, perhaps the feminine element was inevitable; and on the whole it is handled skilfully. The story itself is brisk and bright and individual.

Splendid Zipporah. By Maud Stepney Rawson. (Methuen & Co.)

MRS. RAWSON is so pleasant a storyteller that we could wish less qualified commendation were possible for this, her latest novel. But, in spite of her often picturesque diction, and a fine, although intermittent, note of romance, the book lacks restraint and just proportion, while its *longueurs* and mannerisms become almost oppressive. The heroine is a young lady whose unusually generous proportions are insisted upon to the verge of monotony. To be sure, we are also told of

her rare musical talents, but such phrases as "the big girl," "the big woman," "the big frame," recur so frequently as to leave us with an undesirable impression of ponderosity rather than ability or charm. Moreover, we could wish her better manners, especially upon the occasion of the dance, when, to discourage an unwelcome partner, she seizes an "Armada chair" and careers round the ball-room holding it in her arms. Surely a most ungente giantess! The consciousness of genius and feminine emancipation should not necessarily impose such a sacrifice as this.

The Old Dance Master. By William Romaine Paterson. (Chapman & Hall.)

THE difference is considerable between the grim, truthful art of 'The Destroyer,' the best of Mr. Paterson's early novels, and the ingenious romanticism of his present fiction. Here he caters for the popular palate with admirable dexterity. His talent for the portrayal of morbid operations of thought peeps forth in a baronet whose happiness is blighted by the reflection that his wealth was originally derived from negro slavery, and his freakish inventiveness is seen to advantage in an absurdly odious woman who tyrannizes over his heroine, a cab proprietor's ward. His plot is artificial and improbable, but it is little needed to stimulate a curiosity which is sufficiently nourished by the excellence of his characterization. His hero is an Austrian nobleman who presides over an academy of dancing and dwells in a Bloomsbury boarding-house. The inhabitants of the boarding-house are cleverly sketched, and the humour and kindness displayed in the book make one reluctant to remind the author that he has not on this occasion combined the elements of popular success with justice to his powerful individuality.

The Bermondsey Twin. By F. J. Randall. (John Lane.)

THIS farcical story is another comedy of errors, for it turns on the ancient complication of long-parted twins, but in other respects is modern in its atmosphere of slang and practical jokes. Mr. John Holdaway is a house-furnisher at Balham, of sombre mien and rigid respectability, a martinet among his clerks, a shining light in the local societies for regulating the conduct and curtailing the enjoyment of the masses, and an aspirant to social advancement by means of a rather faded gentlewoman. To him enters brother Jack, the Dromio of Bermondsey, supposed to have been drowned at five years old, whose strange fate has brought him up a wag instead of a prig, and who is now accepted, grudgingly, on no evidence but his likeness, by his formal brother. From the time of his arrival a rapid flow of errors provides the fun, which is ended

by two good-natured women who take the twins in hand. The story seems to suggest an effective piece of farce on the boards.

Rosamund. By Beatrice Whitby. (Methuen & Co.)

THE return of a widowed sister from India to her family circle in Devon, with the ensuing results and complications, form the theme of Miss Whitby's new novel. The story is tedious and rather loosely constructed, while the characters presented are all more or less lifeless and unimpressive. Rosamund's tragic silence and her unnecessary remorse fail to engage our interest; she is too shadowy a figure for sympathy, even when untimely death ends her perplexities and clears the way for the ultimate marriage of her faithful admirer and a younger sister. At the same time it is only fair to add that we recognize here a conscientious, however unsuccessful, effort to portray a psychological problem, and to hold the mirror up to life. A sketch of a faithful old servant is perhaps the best thing in the book.

The Soundless Tide. By F. E. Crichton. (Edward Arnold.)

THIS study of a seaside district in Ulster has a pleasing quality and many convincing touches. The Protestant working people, their habits of speech and thought, their fierce religious intolerance and counterbalancing virtues are drawn with sympathy and evident familiarity. The more aristocratic sections of the community are represented by a few, rather unusual, types, the more interesting because they differ fundamentally from conventional ideas of what an Irish lady or gentleman should be. The author's quiet humour is at its best in the descriptions of a clerical household and a church bazaar.

Perpetua; or, the Way to Treat a Woman. By Dion Clayton Calthrop. (Alston Rivers.)

HERE the author has deliberately set out to make a charming, whimsical, and prettily sentimental book, and he has fully succeeded. The story is about a little girl, Perpetua Mary, who "adopts" an artist as her father. The artist has a number of clever friends, all of whom are in love with Perpetua and given to indulging her. These people do not know who Perpetua's parents are, but her father is introduced to the reader, and proves to be a picturesque swindler. It is impressed upon the reader that Perpetua is a remarkable child, but the chronicle of her doings and sayings grows somewhat tedious: her villainous father is much more interesting; indeed, the story becomes the more entertaining the more fully his villainies are unfolded. The relation of

the young artist to his ward arouses the reader's expectancy. The author is at his best when he writes in a plain, "undistinguished" style.

A Gentleman of the Road. By Horace Bleackley. (John Lane.)

THOUGH this is somewhat a conventional romance, it has plenty of spirit and incident in its pages. One must on behalf of the ordinary tender reader take exception to the tragedy of the conclusion, but up till then or rather up till just a little before that catastrophe the narrative is bold, and sweeps one along. With the defeat of the arch-villain, a well-drawn character, the story is naturally at an end; but Mr. Bleackley drags it on to an anticlimax. The persons of the drama are such as we have often met, and like to meet, a gallant lover, a rich heiress and beauty, a reckless and debonaire blade, a lady of frail morals and good heart. Add the flavour of country inns and highwaymen, and the atmosphere is charged with the romantic excitement of older days.

OUR LIBRARY TABLE.

A Saga of the "Sunbeam" (Longmans) is rather an ambitious title for the little book in which Mr. Horace G. Hutchinson describes the voyage of Lord Brassey's famous yacht, the Sunbeam, from England to the Orkneys and Iceland, across the Atlantic to Newfoundland, up the St. Lawrence to Quebec and Montreal, and thence home again. The book, fashioned very much in the form of a log or diary, is written in a vein of almost exaggerated simplicity, suggesting a story deliberately told for children. Yet it makes really very pleasant and wholesome reading for any one who can appreciate the flavour of salt air and clean sunshine.

There is on the opening page a sentence which does not quite satisfy the expert. This tells us that the Sunbeam's spread of canvas has been reduced, but that it "still makes her lively in a sea." Experience teaches that the effect of a good spread of canvas on a ship in a heavy sea-way is rather steadying than livening. The descriptions of bird life and scenery in Iceland and Newfoundland are excellent. Canada is but briefly touched. We like best the notes made at sea, while the particulars of the ship and the crew are interesting.

THE second title given by Sir Andrew Fraser to his book *Among Indian Rajahs and Ryots* (Seeley & Co.) is "A Civil Servant's Recollections and Impressions of Thirty-seven Years of Work and Sport in the Central Provinces and Bengal," and it is satisfactorily descriptive. Work, and the author's sentiments on a variety of subjects connected with government and administration fill the greater part of the volume, some twenty-three out of twenty-six chapters, 'Sport' has two chapters, and one is devoted to a description of the doings and sayings of the Amir Habibulla when he visited Calcutta in January, 1907. The Amir made an excellent impression, was very cheery, and on his way home delivered an admirable speech at the Islamia College,

Lahore. After giving thanks to God and praise to his Prophet, he paid a compliment to the Government of India, and came

"to the pith and marrow of my message to you and to the millions of Muhammadans whom you represent."

"In a single sentence I give you my whole exhortation. Acquire knowledge. Do you hear me? Acquire knowledge. I say it a third time! Acquire knowledge. Oh, my brothers, remain not ignorant, and, what is worse, remain not ignorant of your ignorance. There are those who utter solemn warnings in your ears, who urge that Muhammadans have nothing to do with modern philosophy, who declaim against western sciences as though they were evil. I am not among them....; but this also I declare with all the emphasis at my command, science is the superstructure. Do not mistake it for the foundation. The foundation is, and must always be, religion. Begin then at the beginning. Ground your children, before everything else, in the eternal principles of their glorious faith. Start with the heart. When that is secure go on to the head."

More follows which seems to stamp him as a wise, fluent, and beneficent ruler. All the same his dispensation of Afghan justice is after the old fashion which has at any rate the merit of not wasting time over appeals. As to 'Sport' the description of the capture of a herd of wild elephants is attractive, and there are adventures with tiger, buffalo, and Gaur, misnamed as usual, bison.

The rest of the book cannot to any great extent be examined in this journal, for it consists largely of matters of policy and controversy. European and native officers are discussed, their judicial and executive functions are described, and there are chapters about riots and risings. The important matter of financing the cultivators, which means, if thoroughly carried out, making a clean sweep of the *baniyas*, or money lenders, is sensibly discussed; the police are criticized and their action defended; education, Christian missions, unrest, and the Partition of Bengal, are dealt with according to the author's views, which are not extreme, unless perhaps in the direction of optimism regarding the policy of extending the employment of natives in high office. Many persons whose opinions are entitled to great weight believe that England has gone, and is going too far and too fast, in that direction.

The author uses the word "Indian" in a way which sometimes is apt to mislead. Thus p. 283 he states: "Before I came to India, in 1871, there were no members of the Indian Civil Service in Bengal at all." He means, of course, that there were no native members of that service, but the sentence reads strangely, for all know that there are both European and native members in the I.C.S. The expressions European and native army are in use, and the word Indian is not a correct substitute for native in that case, for, as in the Civil Service, so in the Indian army there are Europeans and natives. On p. 133, first line, there has been an unfortunate shuffling of letters, but a little ingenuity will show that the unintelligible word should be resolved into "led away."

The book is full of the most amiable sentiments, the majority of which are beyond question; but it must not be forgotten by those who aspire to rule that the old combination of "snaviter in modo, fortiter in re" is best, and that in emergencies the second half of the adage is the more useful.

The Language of the Annals of Ulster. By Tomas O'Maille, Professor of Irish at University College, Galway. (Manchester, University Press.)—Cathal Mac Maghnusa

Mac Uidhir, or as the name is now written MacGuire, at the end of the fifteenth century collected and arranged the historical work known as 'The Annals of Ulster.' He died in 1498, and the annals were continued by later hands till 1588. Prof. O'Maille's book deals with the Irish which is used in the entries recording the events of the period from A.D. 431 to A.D. 1050. A great part of these entries are in Latin, but the proper names are not Latinized, and fragments of Irish verse occur from time to time. By evidence discovered in a minute examination of the grammatical forms it is shown that the earliest writings from which Mac Uidhir constructed his 'Annals' belonged to the seventh century. A book of Cuanu is quoted as an authority for events up to 628 and Cuanu himself quotes an earlier writer named Mochta. At and after this date a book of Dubdalethe is occasionally mentioned up to 1002. Mac Uidhir himself in transcribing from these early writers sometimes preserves their original grammatical form of a name and sometimes alters it to the form of his own time. Names which had become obsolete were less liable to alteration than those which remained in daily use, and so took the dress of later times. The positive date of each form is determined by its occurrence in manuscripts of known date. After dealing with the sources of the 'Annals,' their orthography and phonology are discussed. The illustrations of the several declensions which occur and of the verbal forms are elaborately treated. The incidental remarks show much close study of Irish texts, and here and there modern forms are mentioned. Thus there is an interesting, but incomplete paragraph on modern Irish surnames in O. They may be classified, says Prof. O'Maille, into "(1) those to which *ach* can be suffixed as Ruairceach. (2) Those to which it cannot, e.g. Niall. (3) Compounds with Mael." It ought to be added with much more that the form in *ach* is used in the rendering into Irish of names such as Blake, Joyce, and Burke, which were introduced into Ireland in the Middle Ages. The book is a painstaking and accurate piece of work, and does honour to its author and the University which has printed it.

Canterbury and York Society: Diocesis Lincolnensis, Rotuli Roberti Grosseteste, Pars Prima. (The Society.)—The present issue of this important record society contains a transcript of the register, or rather rolls, of Robert Grosseteste, Bishop of Lincoln 1235-54, so far as the Archdeaconry of Lincoln is concerned. It is in the main a list of institutions to the various rectories and vicarages as vacancies occurred. The patronage of these parochial benefices was chiefly in monastic hands. Thus in the first three years of his episcopate, Grosseteste instituted 61 times on the presentation of religious houses, and only 31 times on the presentation of laymen. During the same period 2 incumbents were presented by the King, 3 by bishops, and 2 by rectors. There are also institutions of the superiors of the following abbeys or priories: Bourne, Covenham, Croyland, Greenfield, Grimsby, Kyme, Legbourne, Markby, Minton, Newstead, Stainfield, Stamford, Stixwold, and Wilsford.

Three examples occur of licences granted to manorial lords to have a chapel *in curia sua*, with the assent of both the incumbent and the patron of the parish. In the next century such licences for chapels and oratories were of much commoner occurrence throughout England. The first of these specifies that John Haunsard might build

and provide for a chapel at his own expense, without a bell or font, for the use of himself and his successors, his guests and household. The chaplains were to be presented and admitted by the bishop, and were not to marry, "church," hear confession, or exercise other special functions within the chapels. All oblations and customary dues were to be paid to the rector of South Kelsey, and the household were to attend the mother church on Christmas Day, the Purification, Easter, All Saints', and the Assumption, as well as on the dedication festival. A liberal number of excuses for such attendance are, however, expressly mentioned, namely, infirmity, inclemency of the weather, reverence due to distinguished guests, or other reasonable and manifest cause; but such excuses were always to be stated to the rector or his proctor.

Folk Tales and Fairy Lore, in Gaelic and English. Collected from Oral Tradition by the Rev. James Macdougall. Edited, with Introduction and Notes, by the Rev. George Calder. (Edinburgh, John Grant.)—The late Mr. Macdougall's lines were cast in pleasant places, at the Manse of Duror in Appin, hard by the cottage of James Stewart of the Glens, and in the very centre of Allan Breck's country. Some years ago a Lowlander who had landed from a yacht met a white-haired minister, who directed him to the abode of James Stewart, entered into conversation, found that the Lowlander knew various things that only Celts ought to know, and asked with some asperity, "Who are you, sir?" The minister was Mr. MacDougall, whose collection of *Märchen* and anecdotes of superstitions is edited—the Gaelic facing the English version—by the Rev. George Calder. The folk-lore is perfectly genuine, but not very fresh or abundant. The best *Märchen* are 'The King of the Bens, Glens, and Passes,' and 'The Swarthy Smith of the Socks.' The former is a mixture of 'Cupid and Psyche,' 'Beauty and the Beast,' and 'The Black Bull o' Norroway,' with some pleasant and rather unusual formulæ of the narrator's art. The second is one of the popular tales in which the sturdy commonsense of the Swarthy Smith proves too strong for the magical arts of the subtle enchanter. In 'Two Fairy Arrow Stories' we have a first-hand account, from an observer, of the fairy artillery of Neolithic arrow-points. The brief anecdote of 'MacCrimmon and the Banshee of the Cave of Gold,' seems, for reasons too long to be explained, to refer to what is usually called "Mackinnon's Cave" on the west coast of Mull; but on this point consultation of the local learned is desirable. The right translation of the Gaelic generally rendered "second sight" appears (p. 183) to be "the vision of the two worlds," which is intelligible. We hear of "the divining stone," unusual in the Highlands, where the ancient polished crystals are commonly placed in water, which is used as medicine. The *Glastic* appears to correspond more or less to the Nereids of modern Greek folklore, but is not so romantic. The Urisks are a dull kind of fauns, easily deceived by a variant of the trick which Odysseus played on Polyphemus. We conceive that there is plenty of richer folk-lore in Duror; certainly there is abundance of it in Glencoe.

Book of Common Prayer in the Brass Language, S. Nigeria, with Volume containing Hymns. (S. P. C. K.)—The Brass language, called by the natives Nembe, is spoken in the central part of the Niger Delta—a district lying on both banks of the Rio

Nun, and embracing the branch known as the Brass River, on which is situated the town of the same name, whose proper designation, however, appears to be Nembe. Mr. Adebiyi Tepowa, a native of the district (author of a paper on the history of Brass appearing in the African Society's *Journal* for October, 1907), says this name was given to the country "presumably by the Portuguese"; but the etymology he suggests from "the word Ba-Ra-Sin, meaning in the Brass language 'Hands off,' 'Let go,'" as used in bargaining, seems much less likely than a derivation from *braco*, applied to the "arm" of the river. Cust considered the language to rank only as a dialect—"if indeed it rises even to the importance of a dialect"—of Idzo. Apparently, however, it has been thought to require a special version of the Prayer Book.

Idzo appears to possess many characteristics in common with Ibo; it belongs to the "Nigritian" or "Sudanese" group, on which so much light has been thrown by the recent studies of Prof. Westermann. These languages, which are very remotely related to the Bantu family, are characterized by the prevalence of monosyllabic roots and the use of the tonic accent, as in Chinese.

St. John, with Commentary, in Luganda. (S. P. C. K.)—It says much for the intelligence and application of the native Christians in Uganda that the experiment of translating the 'Cambridge Bible' commentaries should apparently have been attended with such satisfactory results as to justify the addition of Dr. Plummer's 'St. John' to the fairly extensive body of vernacular literature in existence, completing the four Gospels in this well-known series. It seems as if the labour of translators and printers could hardly keep pace with the zeal of native students, whose greed for books recalls the days of the Venerable Bede, or the first stirrings of the Renaissance in Northern Europe.

Old-Latin Biblical Texts.—No. VI. *The Four Gospels from the Codex Veronensis (b), being the First Complete Edition of the Evangelium Purpureum in the Cathedral Library at Verona.* With an Introduction descriptive of the MS. by E. S. Buchanan. (Oxford, Clarendon Press.)—Codex Veronensis is a manuscript of great importance both artistically and textually. It is one of the few surviving manuscripts written on purple-stained vellum, with silver and occasionally gold lettering, the full effect of which cannot be represented by ordinary photography. It is at the same time an important member of the group of surviving Old-Latin or pre-Vulgate textual authorities for the Gospels, being the best existing representative of the fourth-century "European" type of text. According to Prof. Burkitt, it was such a MS. as *b* that Jerome employed as the basis of his revision of the Latin Gospel which we know as the Vulgate. The text of the MS. was published by Bianchini in 1749, and most scholars have used the careful reprint of this edition in the twelfth volume of Migne's *Latin Patrology*. The small edition by the enthusiastic, but rather inaccurate Norwegian scholar Belsheim, which appeared in 1904, seems to be little known in this country.

Mr. Buchanan was amply justified in undertaking a fresh edition of the manuscript, as the result of his work abundantly shows. For not only has he deciphered some columns towards the end of Mark which are entirely absent from Bianchini's edition, but

throughout Luke he has discovered a large number of readings of the first hand of the MS., afterwards altered with remarkable skill, of which also Bianchini shows no knowledge. For example, in the Lord's Prayer (Luke xi. 4) the first hand wrote *ab inimico*, which was afterwards altered to *a malo*; and the first hand of *b* is now to be added to the other authorities which read "seventy-two" in chap. x. verses 1 and 17. Mr. Buchanan dates the MS. earlier than 425 A.D. In this we can hardly follow him, being of opinion that the whole character of the MS. points rather to a date a century later.

Beowulf and the Finnsburg Fragment: a Translation into Modern English Prose. By John R. Clark Hall. (Sonnenschein & Co.)—This is a new edition, with considerable improvements, of a work which was reviewed in *The Athenæum* of July 13th, 1901. The translation, while corrected in many details, is unaltered in general character. It is obviously intended primarily as a help to not very advanced students in reading the original text, and for this purpose it will be found useful. As a necessary consequence, it can hardly convey to unlearned readers an adequate notion of the literary quality of the poem. The repetitions, periphrases, and recurrent epithets characteristic of the Old English epic must inevitably seem insipid, and often grotesque, in a prose version, unless the translator, by a felicitous choice of diction, is able to make the reader feel throughout that what he has before him, in spite of the absence of metrical form, is really poetry. Dr. Clark Hall has not attempted to do this. The literal accuracy at which he has aimed is no doubt incompatible with any close approach to representing the tone of the original, but many of his renderings are much more prosaic than they need have been. The Introduction, notes, and appendix have been greatly enlarged, and show careful study of most of what has been written on the subject. The number of illustrations is increased from twelve to twenty-five, and the bibliography has been brought down to 1910. Notwithstanding some obvious faults, this volume contains so much useful matter that 'Beowulf' students will do well to add it to their library, even if they already possess the first edition.

The Clergy List, 1911, published by Kelly's Directories, is worthy of the high standard we associate with the work of the publishers. We have tested the book carefully, and in every case found it accurate. We specially commend the alphabetical List of Benefices, which forms an excellent guide to places sometimes difficult to find, for it includes the distances from the post town and railway station.

The Mariner's Mirror is a happy description of the *Journal* of the Society for Nautical Research, No. 2 of which is before us. There is a good supply of interesting articles, e.g., on 'The Union Flag,' 'Eminent Marine Artists,' 'Mediæval Ships,' and 'Some Notes on Marryat,' which suggest further articles on points in novels obscure to the ordinary reader. Mr. H. B. Wheatley asks where Pepys's considerable collection of models of ships is now, and the sections of Notes, Queries, and Answers should lead in time to the compilation of a new nautical dictionary at once learned and entertaining.

The Newspaper Press Directory for 1911 (C. Mitchell & Co.) comes to us with its usual accurate information on matters relating to the world's press. On all sides progress is

indicated; especially is this the case with Canada, where trade is very prosperous according to the article on the Dominion. The total in 1909-10 was upwards of six hundred and ninety million dollars; of this over two hundred and seventy-seven millions represents trade with the British Empire. The article on British South Africa shows the imports to have increased in every article. Books which in 1909 amounted to 84,884*l.* reached last year a total of 107,005*l.* The statistics of Australian newspapers are remarkable; the number of daily papers is 15.82 per million of the population, and weekly papers 182.85 per million; while in the United Kingdom they are only 5.04 and 59.95 respectively in the same ratio. There are papers by Mr. Alfred F. Robbins on newspaper ideals, and by Mr. J. R. Charter on the past year's advertising, while Dr. Hugh Fraser contributes his usual useful article on the legal year in relation to the Press. The obituary record is heavier than usual, and includes Frederick Greenwood, the founder of *The Pall Mall*, Mr. Elkington of *The East Anglian Times*, Sir William Agnew, the chief proprietor of *Punch*, and Mr. Arthur Fraser Walter of *The Times*, of whom excellent portraits are given.

The Green Book of London Society, edited by Douglas Sladen and W. Wigmore (J. Whitaker) has reached its second issue. It shows a wide range and an advance in accuracy, but could still be improved materially by a man with a keen eye for detail. Some of our criticisms of the first issue appear to have escaped notice.

The Victorian Year-Book, 1909-10, comes to us from the Government Printer at Melbourne, and is again edited by Mr. Laughton, the Government Statist. Among new features in the present volume we note an account of steps taken by the Government to encourage immigration and to obtain settlers for the irrigation districts; fuller information than in former years with regard to insurance; more complete statistics in regard to properties in municipalities; and tables showing the amounts paid in wages and the values of materials used and articles produced in leading industries. There are two useful maps; and the facts and figures appear to us to be as accurate as usual.

Thackeray's Centenary Biographical Edition: Contributions to 'Punch' (2 vols.), and *Barry Lyndon*. (Smith & Elder.)—Readers of that wonderful book, the 'Memoirs of Barry Lyndon, Esq.,' must often have said to themselves, 'How thoroughly the writer possesses his material!' 'How he must have enjoyed his task!' But hear Thackeray himself in his 'Diary,' quoted in Lady Ritchie's Introduction:—

"Aug. 10 [1844]. Read for 'B. L.' all the morning at the club."

"Aug. 14. At home all day drawing and dawdling; with 'B. L.' lying like a night-mare on my mind."

"Maita, Nov. 1. Wrote 'Barry,' but slowly and with great difficulty."

"Nov. 3. Finished 'Barry' after great throes late at night."

Nevertheless, it is a great work, and, some think, his greatest. It is certainly the best of the new instalment (three volumes this time), though that includes the 'Snob Papers' and 'Novels by Eminent Hands.' Among the illustrations are the *Punch* table, and a copy of Thackeray's initials carved upon it, also Leech's 'Fancy Ball' and Tenniel's 'Punch Cricket Team,' both of which contain pictures of Thackeray. There are also four beautiful designs to 'Barry'

by Millais. They have lost something in the transference to the wood, for the original drawings, if perhaps a little over-serious, were remarkable among the artist's illustrations for books, and made one wish for more. The portraits this time are by Frank Stone, D'Orsay, and Maclise.

Ignes Fatui: a Book of Parodies, by Philip Guedalla (B. H. Blackwell, Oxford), will scarcely commend itself to other than a generously critical Oxford audience. So finished a product is the average modern parody that tentative trifles like these, uneven in execution, uncertain in touch, and often too local for the outside world, will only command attention for the sake of such promise of better things as they may contain. That promise is, in the present case, discernible in three "variations" on the theme of 'Antigone'—in the respective manners of Shakespeare, Mr. Bernard Shaw, and M. Maeterlinck—where a wider humour is indicated which time and experience may well turn to account. For the rest, Mr. Kipling, the parodist's chosen quarry, has inspired the most successful of the verses; but the author is less happy in his emulation of other modern poets, and an attempt in the ballad style, 'The Lass of Wimble Down' is not effective.

THE TERCENTENARY OF THE AUTHORIZED VERSION.

An exhibition of Bibles and documents illustrating the history of the English Bible will be open to the public on Monday next in the King's Library at the British Museum, for which an exhaustive catalogue has been prepared under the direction of Dr. Kenyon. The exhibition is in two parts, the first comprising the chief Biblical manuscripts of the Museum, including the Codex Alexandrinus, some early Hebrew and Latin codices, the Bosworth Psalter, and the famous Lindisfarne Gospels, one of the finest examples of Celtic art dating from about 700 A.D. Most of these are permanently on view, but the collection of printed books in the King's Library, and sixteenth-century documents connected with them will be largely novel to the public. The first case on the left contains a number of fifteenth-century Bibles printed in the vernacular, including German, Low German, Italian, Dutch, and Bohemian, showing that the objection to the Bible in the vernacular in English was a matter of local policy arising from the Lollard movement. A still more important evidence of the popularity of the vernacular Scriptures is found in the issue of illustrated Bibles, examples of which are the Low German Bible of 1480, the Italian one of 1493, the Malermi Bible, and the French Bible of 1510. A copy of Lyndewood's Provinciale is open at the decision of the Synod of Oxford in 1433 forbidding the circulation of the Bible in the vulgar tongue, with a note to the words "noviter compositus" pointing out that ancient versions were not forbidden, a point afterwards made by Sir Thomas More.

The second case contains a number of priceless treasures: the only known fragment of Tyndale's first New Testament, the printing of which was interrupted at Cologne in August, 1525; the only complete copy known of the second New Testament, printed at Worms in the same year; two copies of Tyndale's version of the Pentateuch, printed in 1530, and his translation of Jonah, printed before June, 1531. The volume containing this last lies open at a

woodcut, which is at present unidentified, possibly intended to represent the first Scottish martyr, Patrick Hamilton.

In the same case are shown Joye's unauthorized edition of Tyndale's New Testament of August, 1534; Tyndale's edition of November, 1534; Joye's second edition of January, 1535; and Tyndale's of 1535. Anne Boleyn's copy of the November, 1534 edition shown is on vellum. Of six reputed editions of the New Testament printed in 1526 no copy is known to exist, unless, indeed, the fragment in the Durham Cathedral Library prove to be one. It is to be hoped that during the present exhibition some attempt will be made to settle the question. The editions used by Tyndale—Erasmus's Latin-Greek New Testament and Luther's German version—are also shown.

The next case contains the first complete English Bible printed, that of Coverdale in 1535; Matthew's Bible of 1537, printed at the expense of Richard Grafton and Edward Whitchurch; Taverner's Bible of 1539, and two out of the three editions of the Vulgate with the English translation of Coverdale.

The next case contains five out of the seven editions of Cranmer's Bible of 1540, together with the Royal Proclamation of May 6th, 1541, enforcing its use. The history of the popular Geneva version, of which first editions of the New Testament (1557) and the Bible (1560) are shown, is fully illustrated, and copies of the Bishops' Bible, the Rhemish New Testament, and the Douai Old Testament fill the next case. A folio edition of the Geneva version shows that it was used in churches for some years from 1578, and the last edition in folio, issued in 1644, fixes the date when it began to be superseded by the Authorized Version.

The cases devoted to the Authorized Version show the two versions of 1611 (the "He" Bible and the "She" Bible), the 1613 and 1617 editions, and the first quarto and octavo editions in 1611, while a last case contains some curiosities, such as the "Wicked" Bible of 1631, which omitted the "not" in the seventh commandment, and the "unrighteous" Bible of 1653, which printed 1 Cor. vi. 9 as "know ye not that the unrighteous shall inherit the kingdom of heaven." Some further revisions are shown, including the Cambridge ones of 1629 and 1638; Baskett's "Vinegar" Bible, which was called "a basket-ful of errors"; and an Amsterdam Bible of 1643, containing the text of the Authorized Version with the notes of the Geneva issue.

The cases of documents affecting the history of the English Bible are of the highest interest, and the transcripts in the Catalogue will make them intelligible to the ordinary reader. They include the first mention of Tyndale's translation, in a letter of Lee to Henry VIII. in December, 1525, from Bordeaux on his way to Spain. Lee had probably learnt of the printing of the Testament at Calais, where Roye, Tyndale's assistant, had friends and relations. Other items shown are the Bishop of Norwich's subscription to the fund for buying up Testaments to burn them, Monmouth's petition giving the history of his relations with Tyndale, Grafton's correspondence with Thomas Crumwell, licences for printing the Great Bible, the Welsh Bible, and the Geneva Bible.

The exhibition testifies to the great wealth of the British Museum in early printed English Bibles; and, while congratulating the authorities on this, we should add special thanks to the Bristol Baptist College for allowing Londoners an opportunity of seeing their most valuable treasure, the first complete English New Testament.

DICKENS AND MARIA BEADNELL.

11 March, 1911.

I SHALL be grateful to be permitted to draw attention to the omission—doubtless quite unintentional, but not the less unjust—of any reference to the services rendered by an accomplished English expert in literary curiosities, my friend Mr. J. H. Stonehouse, in connexion with the correspondence between Dickens and Maria Beadnell, recently published in America by its fortunate possessor, Mr. W. K. Bixby of St. Louis, Mo., notices of which appear in some of the morning papers of this date.

The title of Mr. Bixby's book suffices to describe it:—

"Charles Dickens and Maria Beadnell ['Dora']. Private Correspondence between Charles Dickens, and Mrs. Henry Winter [née Maria Beadnell], the original of 'Dora Spenlow' in 'David Copperfield,' and 'Flora Finching' in 'Little Dorrit.' Edited by Professor George Pierce Baker of Harvard University. Privately printed for William K. Bixby, St. Louis, Mo. MDCDVIII."

This addition to the private annals of our time has, however, as I found to my great relief, a double justification, for it not only deals with a scandal about Charles Dickens which he himself forced into publicity, but at once and for ever decisively demonstrates that it had no foundation of fact whatever, beyond the exaggerations of domestic infelicities resulting from incompatibilities of temperament. It is, in short, an exoneration of all the parties to the story, and completely exonerates Dickens as a thoroughly respectable "father of a family" of the exemplary and pre-eminently laudable British middle-class—or, so stigmatized, Philistine type; which is everything for the British "general reader."

But the present publication has a yet more legitimate claim on our gratitude. The writer in *The Contemporary Review* for January, 1880, of the notice of some letters of Dickens then published observed: "We have not yet the true key to his [Dickens's] interior [i.e. spiritual] life." We now have it put into our hands in this volume in the letters from Charles Dickens to Mrs. Winter written twenty years after his courtship of her, as Maria Beadnell, was so painfully brought to an abrupt termination, and extending over the years 1853-8. The correspondence is indeed of the liveliest and healthiest interest, and will add lustre to the name of Dickens, not only as an honest and true gentleman, but also as a great creative genius in English literature, standing in the popular appraisal next after Shakespeare.

The book also is in every way worthily produced as to paper, type, "forwarding," and editing, and the preface by Mr. H. Harper; and there are only two faults attaching to it—the deep offence of the imaginary portrait of "Dora" facing p. xxx.—a great blot on the book; and this—of omitting from the title-page the name of Mr. J. Harrison Stonehouse, who is well-known to all lovers of literary litter to be, in a secondary sense, the true begetter of these present charming and truly heartening and illuminating letters. As an expert in such researches, Mr. Stonehouse collected these letters, and spent two laborious years in reading the text of them, confirming the facts, and identifying the dates set down in them—to this purpose collating the letters with every 'Life' and every collection of 'Letters' of Dickens previously published; and reading over once again every work by Dickens, and every notable review of his works: thus not only confirming the

popular supposition that 'David Copperfield' and 'Little Dorrit' were in certain incidents autobiographical, but also proving that the same autobiographical elements were to be found in 'Sketches by Boz,' 'Great Expectations,' 'Our Mutual Friend,' 'Hard Times,' &c.; all of which taken together enable us to reconstruct with some circumstantiality the four years of the life of Dickens of which nothing was previously known "to the general." In the circumstances, the omission of any mention of the name of Mr. J. Harrison Stonehouse from the volume cannot but give pain to his many friends, and seems to me, as one of his oldest friends, and under the deepest "professional" obligations to him, to call for special notice; and by your indulgence I would mark it with this striding "caret."

GEORGE BIRDWOOD.

THE ENCLOSURE RIOTS OF 1549.

Savage Club.

THE riotous destruction of enclosures in May and June, 1549, followed, it is known, the publication of a proclamation enforcing the law against enclosures; but up to the present this proclamation has only been known by a reference in Holinshed (p. 1002). I have, however, come upon a fragment of the original printed proclamation in the Bagford Collection, which gives the exact date—April 11th, 1549—and allows the tenor of the proclamation to be inferred. A general pardon for all offences against the Enclosure Acts up to March 31st, 1549, had been passed in Parliament (2 and 3 Ed. VI. c. 39), subject to the laying open of the lands wrongfully enclosed. The proclamation recalls this condition, and instructs all the king's officers and ministers to enforce it. The recovery of this proclamation fills an important gap in the history of the period.

...did now begin to amende that that was passed, was contented and pleased, that all peines, los
[ses and forfeitures, for euey suche thyng, contrary to the said statutes, that was passed before the last daie of
[the last S]essions, of his highnes Paliament, should bee pardoned by his maiestie, to his most louyng
[subiectes]: Not that therby, thei should be more animated, to do euill still, and to hurt the kynyes maiesties
[] people, and common wealth, but that men so gently therunto prouoked, should obediently again,
[observe his] noble, godly, and wholesome lawes: Or els, if gentlenes will not now prouoke, and cause that
[those things] bee amended, which dutie should do, and lawes maie compell: His highnes, of his moste royall
[bountie an]d loue, whiche his maiestie bereth, to this his region and coutrey, and to the main-tenaunce of the
[common weale] thereof, is fully mynded from hencefurthe, by aduise aforesaid, to put in vrs all the saied penall
[laws he]retofore made for the repressyng of suche offences, and straightely to se them executed, against all
[. . .] that shalbe founde culpable, without pardon or remission.
[AN]D therefore straightly chargeth and commaundeth, all his highnes officers and ministers, whoso-
[ever they] bee, to whom, by statute or otherwise, the redresse or repressyng of suche offences, maie appertein,
[to take] informations geuen vnto them, and to make diligent enquiry, and with all spede and earnest
[labour], see to the redresse and punishement of all suche offenders, as by the lawes and statutes of the

[realme t]hei maie and ought to doo, as thei tender
this his maiesties will and pleasure, and will
answere to
[the contrjary, at their vttermost perilles. Geuen
at Westminster, the. xi. daie of Aprill. 1549.
God saue the Kyng.
Excusum Londini, in ædibus Richardi
Graftoni Regij Impressoris.
Cum priuilegio ad imprimendum
solum.

ROBERT STEELE.

'THE SERVIAN PEOPLE.'

New York, Feb. 28th, 1911.

WHILE thanking you for your courteous review in your issue of February 4th, 1911, and words of commendation of the two volumes on 'The Servian People,' I would beg leave to call your attention to one or two erroneous ideas put forth by your reviewer.

His expression of "an ancient village land tenure" as applied by him in common to both Servian and Russian organizations is indefinite, and conveys an incorrect impression, as it confuses the Servian "Zadruga" with the Russian "Mir." The only common characteristic of these two institutions is the communistic principle upon which each is based. The Russian "Mir," whose dissolution, provided for by the new Russian laws, is so justly deplored by your reviewer, is a community of ownership of which the unit is the village, a formation tending in certain cases to become unwieldy and not easily adaptable to changed economic conditions. But granting these inherent faults—not necessarily ineradicable—the Russian "Mir" still demonstrated practical methods of co-operation in advance of what has been attained by western sociologists. The Servian Zadruga, in which not the village, but the family or organized group is the unit, is adjustable to the economic exigency of the time, and steadfast to its main aim, the highest good and the greatest measure of justice to the individual.

To this characteristic of malleability in the Servian Zadruga is due, no doubt, the fact that while in Russia the economists were brought to the opinion that the abolition of the old order was more feasible than readjustment, the matter has quite another history in Servia, where the Zadruga formations are undergoing a virtual evolution and adapting themselves to the developments of the age.

The facts that in Servia to-day, alone of all European countries, there is no pauper class, no workhouse or almshouse, no necessity for poor-relief laws, or any form of public charity relief, that the phenomenon found always elsewhere as a pendant to the pauper, namely, the millionaire, is also lacking in Servia, where the whole population has sufficient means of subsistence, would appear to suggest that the time-tested Zadruga system of Servia deserves a closer consideration by western sociologists than it has hitherto received.

In regard to your reviewer's doubt anent the word "blato," he may read on p. 99, vol. i., of 'The Servian People': ".... deep valleys walled in by mountain steepes through which there is insufficient escape, cause the waters to dam up and become sinks where streams disappear in morasses. These places are called 'blatos.'" Any Servian-foreign dictionary will give him the definition of "blato" as "morass" or "bog." In all Servian or other maps of that country the term "blato" is always accompanied by the topographical sign indicating a morass.

Further, your reviewer's ideas concerning the Slavonic title "Knez" are erroneous; On p. 191, vol. i., of 'The Servian People,' a foot-note states the matter clearly as follows: "The only nobiliary title of purely Slavonic origin is the title 'Knez' (Serb), 'Kniaz' (Russian and Polish), 'Knizhe' (Tcheck), the equivalent of Clanschief or Prince (princeps)."

In Russia not only is "Kniaz" prince, but "Velko-Kniaz" is the Russian title which is translated into English as "Grand-Duke."

Your reviewer, in disputing the statement that Kniaz or Knez is the only purely Slavonic nobiliary title, and in his contention that "in Russia the title is never used except by Slavs in addressing or speaking of Mohammedans," appears to be misled by a species of wit to be observed no less at Russian fairs and shops than in Paris cafés, where the wily waiter, with a view to the prospective tip, and shrewdly sophistical as to human nature, addresses the "client" in a scale of "Monsieur le Prince!—Monsieur le Duc!—Monsieur le Comte!—Monsieur le Baron!"—to plain "M'sieu!"—ending only too often, alas, in a contemptuous shrug as he pockets the incommensurate result, and says to a camarade, "V'là c' que m'a donné c' type là!" &c.

If there is in Russia a point of originality in the attempt made by bargainers the world over to profit by certain phases of human vanity, it lies in the circumstance that it is apt to be the buyer of rank or superior social status who banteringly wheedles a lower price out of the Tatar seller by apostrophizing him as "Kniaz" (Prince), the Russians, like other Slavonics, setting but slight store by the mere title.

LAZAROVICH-HREBELIANOVICH.

** Our reviewer, who is now beyond reach, took "blato" to be a corruption of "plateau."

SALE.

ON Wednesday and Thursday, March 8 and 9, Messrs. Sotheby held a sale of books, which included the library of Lord Ronald Sutherland Gower, removed from Hammerfield, Penshurst, Kent. The few lots of note included: Horæ, in English, translated by Robert Copland, 1528, 28l. 10. Lyndewoode, Constitutiones Provinciales, printed by Richard Pynson, n.d., 52l. Shirley, eleven plays, all first editions but two, 54l. Linschoten, Discourse of Voyages, 1598, 50l. Harris, Portraits of the Game of S. Africa, 1840, 14l. 5s.; another copy, 12l. 15s. The Huth Library, 29 vols., 1881-6, 19l. Antonio Canal, Vedute, 68l. J. C. Smith, British Mezzotint Portraits, 5 vols., 1878-1882, 13l. The total of the sale was 1,030l.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Coptic Version of the New Testament in the Southern Dialect, otherwise called Sahâdic and Thebaic, with Critical Apparatus, Literal English Translation, Register of Fragments, and Estimate of the Version: Vol. I. The Gospels of S. Matthew and S. Mark, Vol. II. S. Luke, and Vol. III. S. John, Register of Fragments, &c., 84/ net.
Churchman's Guide: a Handbook for all Persons, whether Clerical or Lay, who require a work of Reference on Questions on Church Law or Ecclesiology, 3/6 net.
Edited by Arthur Reynolds.

Davison (W. T.), The Indwelling Spirit, 6/
Foxell (W. J.), A Mirror of Divine Comfort, 2/6 net.
With foreword by the Bishop of London.

Glasgow University Library: Catalogue of an Exhibition of Bibles in Commemoration of the Centenary of the Authorized Version, 1611-1911, 3d.

With a prefatory sketch and notes by George Milligan.

Holy Bible: an Exact Reprint in Roman Type, Page for Page, of the Authorized Version published in 1611, 8/6 net.

With an introduction by Alfred W. Pollard.
Johnson (Ethelbert), The Altar in the Wilderness: an Attempt to Interpret Man's Seven Spiritual Ages, 1/6 net.

Lincoln (Edward, Lord Bishop of), Counsels to Nurses, 1/ net.

Address and letters to the Guild of S. Barnabas for Nurses, edited, with preface and biographical note on Bishop Sailer, by E. F. Russell.

Littleton (Rev. Hon. Cecil J.), The Handmaid of the Lord, 2/ net.

Magee (Rev. A. V.), Alone with Christ, 1/ net.

Addresses.

Payne (Rev. J. D.), The English Bible: an Historical Survey, from the Dawn of English History to the Present Day, 2/ net.

Reade (Robert C. L.), Spiritual Healing and the Anointing of the Sick: a Simple Explanation, 1/6 net.

Originally read as a paper in the summer of 1909.
Sherlock (Frederick), Testimonies to the Book, 1/6 net.

Winnington-Ingram (Arthur F.), Death in the Light of the Epiphany, 6d. net.

A Sermon preached before their Majesties the King and Queen, in the Private Chapel at Windsor, on Sunday morning, January 29th.

Wordsworth (Elizabeth), Onward Steps; or, the Incarnation and its Practical Teaching, 2/6 net.

Addresses originally given on Sunday evenings to the students of Lady Margaret Hall, Oxford.

Law.

Bentwich (Norman), The Declaration of London, 5/ net.

With an introduction and notes and appendices.

Fine Art and Archaeology.

Bahr (A. W.), Old Chinese Porcelain and Works of Art in China, 30/ net.

Description and illustrations of articles selected from an Exhibition held in Shanghai, November, 1908. The book contains a frontispiece and 120 plates, 12 being in colour.

Baker (Capt. B. Granville), The Danube with Pen and Pencil, 15/

With 99 illustrations, some of which are in colour.

Calvert (Albert F.), Spain, 2 vols.

With over 1,700 illustrations, including 46 coloured plates.

Foley (Edwin), The Book of Decorative Furniture, Section X., 2/6 net.

Fothergill (George A.), British Fire-Marks from 1680, 7/6 net.

With 60 illustrations by the author.

Memorials of the Counties of England: Old Surrey, 15/ net.

Edited by Rev. J. Charles Cox, and illustrated with 35 plates and 42 line drawings.

Moorehead (Warren K.), The Stone Age in North America: an Archaeological Encyclopedia of the Implements, Ornaments, Weapons, Utensils, &c., of the Prehistoric Tribes of North America, with more than 300 full-page plates and 400 Figures Illustrating over 4,000 Different Objects, 2 vols., 31/6 net.

Poetry and Drama.

Baring (Maurice), Collected Poems, 5/ net.

M'Iver (Iver), Caught on the Wing, 3/6 net.

Consists of poems, ballads, love lyrics, and sonnets.

Northrop (W. B.), Contrasts: Poems of Poverty 6d. net.

Though the author rightly disclaims any pretension to the titles of poet or prophet, yet the verses contain some lines of high intrinsic merit, and the sentiments expressed show a profound sympathy for the oppressed and indignation against their oppressors. With 7 illustrations.

Richardson (Frank), Shavings, 2/6 net.

A collection of verses with comic elements attached thereto.

The Open Window, No. VI., 1/ net.

Includes some striking pictures and letter-press.

Music.

Hossfeld's Educational Works: French Songs and German Songs, 6d. net each.

Both edited by John F. C. Boyes.

Rodgers (J. A.), Dr. Henry Coward, the Pioneer Chorus-Master, 2/6 net.

With 8 illustrations.

Philosophy.

- Arnold (E. Vernon), *Roman Stoicism: being Lectures on the History of the Stoic Philosophy, with Special Reference to its Development within the Roman Empire*, 10/6 net.
- Taylor (Henry Osborn), *The Mediæval Mind: a History of the Development of Thought and Emotion in the Middle Ages*, 2 vols., 21/ net.

History and Biography.

- Hodson (T. C.), *The Nāga Tribes of Manipur*, 8/6 net.
With 17 illustrations.
- Ker (W. P.), *Thomas Warton*, 1/ net.
No. 1 of Warton Lectures of English Poetry, from the Proceedings of the British Academy, Vol. IV.

- Treherne's Nature Series: *Animals, Wild and Tame, Butterflies and Moths, and Minerals*, 8d. net each.
All arranged by W. F. Kirby, with numerous illustrations.
- Tutton (A. E. H.), *Crystals*.
The book contains 120 illustrations, and is part of the International Scientific Series.
- Wright (Walter P.), *Popular Garden Flowers*, 6/ net.
With 6 illustrations in colour and 48 reproductions from photographs.

Fiction.

- Adcock (A. St. John), *A Man with a Past*, 6/
The heroine lives with two maiden aunts, who do not approve of her fiancé. She marries him nevertheless, and he justifies the aunt's suspicions by being arrested by the police just as he is starting for the honeymoon.
- Bell (J. J.), *A Kingdom of Dreams*, 6/
The kingdom is a community which has neither money nor property, being self-supporting and composed of picked beings who have ideals of eugenics.
- Beresford (J. D.), *The Early History of Jacob Stahl*, 6/
An intimate study of a personality from boyhood to about thirty.
- Boulestin (X. Marcel) and Toye (Francis), *The Swing of the Pendulum*, 6/
Introduces a party in a fishing village in Brittany, and a wife's escapade with a fascinating American.
- Calthrop (Dion Clayton), *The Harlequin Set*, 2/6 net.
These papers originally appeared in various magazines.
- Castleton (Robert), *Adventures of an Actor*, 6/
The record of some hilarious adventures of a young actor from the period of his first engagement to the time when he wins some success.
- Chambers (Robert W.), *Ailsa Paige*, 6/
A story of the war in the United States in the sixties.
- Channon (E. M.), *The Real Mrs. Holyer*, 6/
Contains plenty of incident and a mystery unsolved till the end.
- Crawford (F. Marion), *Uncanny Tales*, 6/
The scenes of two of these stories are laid at sea; another has a Welsh, another an Irish, and a third an Italian setting, while one is an English tale.
- Day (Holman), *The Skipper and the Skipped*, 6/
The shore log of Cap'n Aaron Sproul.
- Dickens Centenary Edition: *Dombey and Son*, 2 vols., and *Great Expectations*, 3/6 each.
- Griffith (George), *The Lord of Labour*, 6/
Another tale of invasion and new and terrible agents of warfare.
- James (Andrew), *Ninety-Eight and Sixty Years After*, 3/6
A book of short tales, two of which have appeared in *Blackwood's Magazine*. Most of the incidents related in 'Ninety-Eight' occurred in the Rebellion in Ulster of that date.
- Meade (L. T.), *Mother and Son*, 6/
A dramatic story of human interest.
- Mendl (Gladys), *The Straight Road*, 6/
The Straight Road is the path of rectitude as it concerns a man and a woman.
- Patterson (Marjorie), *Fortunata*, 6/
A story of society intrigue in Italy and England in which an adventuress plays a chief part.
- Rushden (Patrick), *The Sea-Lion*, 6/
The story of a man who makes use of another's brains to pose as a successful author, and who supplants his half-brother in fame and love. A double love interest runs through the book, the scene of which is laid in England and Italy.
- Stuart (Henry Longan), *Fenella*, 6/
The love-story of a dancer, the scenes of which are laid in France, in London, and in English country.
- Winter (John Strange), *The Luck of the Napiers*, 6/
The luck is nearly lost through the machinations of enemies, but in the end abundantly achieved with wealth in coal at home, and a Mexican treasure abroad.

General Literature.

- Barnett (Annie) and Dale (Lucy), *An Anthology of Modern English Prose (1741-1892)*, 4/6
- Betts (Arthur), *The Sorrows of a Sheriff in the Fifteenth Century; or, How John Paston (Paston Letters) Won the Last Innings*, 1/ net.
With translated extracts from Year Book, 5 Ed. IV. (Long Quinto). Reprinted from *The Juridical Review*.
- Burton (The late Sir Richard F.), *The Sentiment of the Sword: a Country-House Dialogue*, 2/6 net.
Edited, with notes, by A. Forbes Sieveking, and a preface by Theodore A. Cook. Reprinted from the *Field*.
- Everyman's Library: *Anson's Voyages, with an Introduction by John Masefield; Charles Austerlitz, by E. S. Sheppard, with an Introduction by Jessie A. Middleton; Autobiography of Edward Gibbon, with an Introduction by Oliphant Smeaton; Essays on Education, by Herbert Spencer, with an Introduction by E. W. Elliot; Plays of Beaumont and Fletcher, with Introduction by Prof. Baker; Toilers of the Sea, by Victor Hugo, with an Introduction by Ernest Rhys; The Old Yellow Book, with an Introduction by Prof. C. W. Hodel; The Ring and the Book, with an Introduction by the same; and The Virginians, 2 vols., with an Introduction by Walter Jerrold*, 1/ net each.
- Fiennes (Gerard), *The Ocean Empire: its Dangers and Defence*, 6/ net.
With 6 illustrations.

- Laughton (A. M.), *Victorian Year-Book, 1909-1910*.
- Maeterlinck (Maurice), *The Buried Temple*, 2/6 net.
Republished essays, translated by Alfred Sutro.
- Sheehan (Canon), *The Intellectuals: an Experiment in Irish Club-Life*.
- Speech for Special Occasions*, 5/ net.
With specimens and analysis. Edited by Ella A. Knapp and John C. French.
- Trobador Poets: Selections from the Poems of Eight Trobadors, translated from the Provençal, with introduction and notes by Barbara Smythe*, 5/ net.
- Women's Suffrage and Militancy*, 6d. net.
Edited by Huntly Carter.

Pamphlets.

- Brown (Basil), *Supposed Caricature of the Droeshout Portrait of Shakespeare*.
No. 1 of Notes on Elizabethan Poets. Printed for private circulation in New York. The head in question appears in the illustration to a metrical tract called 'Heads of All Fashions' put forth in 1642 by Taylor the Water Poet. Mr. Brown assumes that Taylor knew Shakespeare personally, and, when the First Folio came out, was so disgusted with the Droeshout picture that he made, or got his nephew to make, a caricature of it.

FOREIGN.

Theology.

- Grisar (H.), *Luther, Vol. I. Luthers Werden*, 12m.
- Mathiez (Albert), *Rome et le Clergé Français sous la Constituante*, 5fr.

Fine Art and Archaeology.

- Krauss (Dr. Samuel), *Talmudische Archäologie, Vol. II.*, 20m.

Poetry and Drama.

Literary Gossip.

IN his volume entitled 'The Religious Aspects of Disestablishment and Disendowment,' which Messrs. Smith & Elder will publish on the 30th, Bishop Welldon endeavours to deal with his subject in as impartial a spirit as possible. The volume consists of three lectures which the Bishop delivered in Manchester Cathedral.

Two novels due from the same firm at the end of this month are 'Brazenhead the Great,' by Mr. Maurice Hewlett, and 'The Case of Letitia,' by Miss Alexandra Watson. Mr. Hewlett's book consists of episodes from the career of a splendid and boastful swashbuckler; whilst Miss Watson tells the story of a girl's careless love, followed by cruel disillusion, and a struggle to recover the true love.

MESSRS. MACMILLAN have in the press a new novel by Mr. B. L. Putnam Weale, entitled 'The Unknown God.' It is the story of a young and enthusiastic English missionary in the interior of China.

IN church history and theology the same firm will publish shortly 'The Origin and Development of the Christian Church in Gaul during the First Six Centuries of the Christian Era,' the Birkbeck Lectures for 1907 and 1908, by Dr. T. Scott Holmes; 'Divine Transcendence and its Reflection in Religious Authority,' an essay by Dr. J. R. Illingworth; and 'The Trial of our Faith' and other papers, by Dr. Thomas Hodgkin.

MESSRS. HURST & BLACKETT announce 'The King over the Water,' a novel by Mr. Justin Huntly McCarthy. The book has the alternative title of 'The Marriage of Mr. Melancholy,' who is the Old Pretender.

MESSRS. HUTCHINSON promise 'Parodies Old and New,' by Mr. Stanley L. Adam, who has spent several years in making an extensive collection of poetical imitations of the kind; 'Sixty Years: Travel and Adventure in the Far East,' by Mr. John Dill Ross, which is the account of a father and son, both adventurous in trade; and cheaper editions of 'Land's End' and 'Afoot in England,' by Mr. W. H. Hudson, one of the few living writers who possess a distinguished style.

AMONGST the articles in the April issue of *Chambers's Journal* are 'The Town of Stupidity,' by Miss M. Loane, bearing on the cost of idleness, laziness, and ignorance of the laws of health to the nation; 'The Sorrows of Heinrich Heine,' by Mr. Henry Leach; and 'The Port Wine of Portugal,' by Mr. Charles Edwardes.

Harper's Magazine for April will include 'The Desert Laboratory' in Arizona, by Dr. Ellsworth Huntington; 'Reminiscences of George Du Maurier,' by Mr. T. Armstrong, who was a fellow-student with him in Paris; 'An Inland Gibraltar,'

an account of Ronda in the mountains of Spain, by Miss L. Closser Hale; 'The Spring Maid,' a poem, by Mr. Le Gallienne; and 'Self-Sacrifice,' a farce, by Mr. W. D. Howells.

Scribner's Magazine for April will include some new letters of Stevenson selected by Sir Sidney Colvin; 'Shooting in France,' pictures by Mr. A. B. Frost; 'The German and the American City,' a contrast by Mr. F. C. Howe; and an analysis of the 'Unrest in India,' by Mr. Price Collier.

THE principal contents of the forthcoming number of *The Dublin Review* will be: 'The Decree "Ne Temere,"' by Monsignor Bidwell; 'The Political Situation,' by Mr. D. C. Lathbury; an article on 'Charlotte and Emily Brontë,' by Mrs. Meynell; a poem by the late Father Tabb, 'Speculum Amoris'; 'Church and State in France,' by the Marquis de Chambrun; and an article by Mr. W. S. Lilly on Acton's Lectures on the French Revolution.

MR. ERNEST LAW, who recently wrote on 'Shakespeare as a Groom of the Chamber,' is publishing with Messrs. Bell & Sons a book on 'Some Supposed Shakespeare Forgeries.' Certain documents which have been used as evidence for the date of several of the greatest plays are here subjected to an exhaustive critical analysis, besides microscopical and chemical tests.

MR. ROBERT SCOTT announces a new novel by Mr. Archer Philip Crouch (author of 'A Wife from the Forbidden Land'), entitled, 'Dick Comerford's Wager.' The scene of the story is laid in the country amidst the hunting gentry of a hundred years ago.

HE has also in the press 'The Commonwealth of the Redeemed,' by the late Rev. T. G. Selby, the fourth volume of the "Preachers of To-day Theological Library"; and a cheap edition of 'The Use of the Eyes in Preaching; or, Preaching and Speaking Without Notes,' by the Rev. J. Neville.

MISS ALICE WERNER will deliver a public lecture on 'African Languages' at King's College, London, on Friday afternoon next. The chair will be taken by Sir Godfrey Lagden.

MESSRS. WILLIAMS & NORGATE have in preparation 'The Home University Library,' a series of original volumes specially written by authorities in various departments of modern knowledge, and issued at a shilling. A hundred volumes have been designed, and the first ten will be issued next month. The general editors of the library are Prof. Gilbert Murray, Mr. Herbert Fisher, and Prof. J. A. Thomson.

MESSRS. LONGMANS have in hand two noteworthy biographies of politicians: 'The Life of George Goschen, First Viscount Goschen,' by Mr. Arthur Elliot, which will appear this spring; and 'The Life of Spencer Compton, Eighth Duke of Devonshire,' by Mr. Bernard Holland, due

in the autumn. Both Lives will include some important correspondence.

CLIFFORD'S INN is now in process of demolition, so that Messrs. Stanley Paul & Co. have to give up residence there. They will, however, commemorate the Inn by publishing a History of it at their new address, 31, Essex Street, Strand.

THE BIBLIOGRAPHICAL SOCIETY will hear next Monday afternoon a paper by Mr. Henry Thomas on 'The Bibliography of Amadis of Gaul.'

THE probable sale by auction of the Townshend manuscripts from Raynham, for which an order was granted on Tuesday by Mr. Justice Swinfen Eady, is attracting much attention. The collection is said to fill 30 or 40 large boxes, and, while much is of purely local or family interest, there are some thousands of documents of literary, social, and historical value. A summary of the more noteworthy documents filled over 400 pages of one of the Reports of the Historical Manuscripts Commission.

AFTER the Huth library the great sale of the season will be that of the late Mr. Charles Butler's books. These will be divided into several portions, the first of which Messrs. Sotheby will sell from April 5th to 12th. This portion contains over 1,200 lots, and includes many fine early illuminated manuscripts and early printed books.

NEXT Wednesday at 20, Hanover Square, a paper will be read to the Royal Society of Literature on 'The Misfortune of Being Too Clever,' a Russian comedy by Alexander Griboyedoff, by Prince Bariatinsky.

THE death is announced of the Rev. Dr. William Walker, formerly Dean of the Episcopal diocese of Aberdeen and Orkney at the age of 94. Dr. Walker made several contributions to theological literature, but his most notable work was a life of the Rev. John Skinner, the author of 'Tullochgorum,' which Burns described as "the first of Scottish songs."

AN exhibition of the Bibles preserved in the Library of Trinity College, Dublin, has been arranged there in commemoration of the Tercentenary of the Authorized Version. They include copies of Wyclif's and Coverdale's translations, and of most of the other early versions.

THE ANNUAL REPORT of the Booksellers' Provident Institution for last year states that forty-three new members had joined, including fifteen ladies. The amount of assistance granted was 1,315*l.*, and the invested capital is valued at 34,603*l.* The receipts include 25 guineas provided by Mr. Hugh Spottiswoode from 'Printers' Pic.'

RECENT Parliamentary Papers of some interest to our readers are: Universities, Scotland, Court Ordinance No. 32 (post free 2*d.*); Hertlet's Commercial Treaties, Vol. XXV. (post free 15*s* 7*d.*); and Statistical Abstract of the British Empire (post free 1*s* 7*d.*).

SCIENCE

OUR LIBRARY TABLE.

The Trisection of the Angle by Plane Geometry; Verified by Trigonometry, with Concrete Examples. By James Whiteford. (McKelvie & Sons, Greenock.)—This remarkable book opens with quotations from Prof. De Morgan of which the most characteristic is the following:—

"The trisector of an angle, if he demand attention from any mathematician, is bound to produce—from his construction—an expression for the sine or cosine of the third part of an angle in terms of the sine or cosine of the third part of any angle in terms of the sine or cosine of the angle itself, obtained by help no higher than the square root. The mathematician knows that such a thing *cannot be*; but the trisector virtually says it *can be*, and is bound to produce it to save time. This is the misfortune of most of the solvers of these celebrated problems, that they have not knowledge enough to present those consequences of their results, by which they can easily be judged. Sometimes they have the knowledge and quibble out of the use of it."

Dr. Whiteford proceeds to claim that his book contains the solution of the problem, whilst he makes no attempt to produce a single formula of the type which is demanded by De Morgan. His method is virtually to take the equation

$$\sin \psi = \frac{\sin \theta}{2 + \cos \theta \sec \psi},$$

which is satisfied when ψ is the third part of the given angle θ , and to solve it by successive approximation.

A glance at this equation shows that the formula is well chosen for the purpose, the approximation converging very rapidly. Dr. Whiteford has actually computed the sine and cosine of the third part of a given angle in no fewer than fifty-one cases, and the arithmetic is set out in his book. The fourth approximation usually gives seven decimal places. What is wanted, however, is a construction or a formula which depends on a distinct finite number of steps, but gives absolute accuracy, not mere seven figure accuracy. This is what according to De Morgan was impossible, and this is what Dr. Whiteford has failed to do. We trust that the next problem to which he devotes his attention will give a better return for his energy and enthusiasm.

An Elementary Text-Book of Physics.—Part I. *General Physics.* By R. Wallace Stewart. (Charles Griffin & Co.)—The impression left by the volume on 'Sound' in this series was such as to lead to the expectation of a series of useful and carefully written text-books dealing with the various branches of physics. This impression is fully confirmed by a perusal of the volume on 'General Physics' which has just been published, and forms the first part of the series. Written in a clear and simple style, and without treating the subjects merely as branches of applied mathematics, it covers just the ground in mechanics and hydrostatics, an understanding of which is indispensable to a profitable study of other branches of physics. There are many students who must feel the want of such a treatment, and to them this volume should exactly supply their need. By introducing elementary discussions of such matters as elasticity, viscosity and capillarity the author has probably gone beyond what will generally

be required by the class of student for whom the book is primarily intended; but these portions of the book should present no serious difficulties to those who wish to carry their studies a little further. The text is amply illustrated by well-executed diagrams excellently chosen to demonstrate the various apparatus and phenomena considered. It is a matter for sincere regret that the author of this work has not survived to complete the series of text-books to which this volume forms an admirable introduction.

"NYARONG" AMONG THE SEA DYAKS.

140, Beulah Hill, Upper Norwood, S.E.
March 13, 1911.

I HAVE seen the article by Messrs. Hose and MacDougall on 'Men and Animals in Sarawak.' I have it on good authority that the word *nyarong* in that paper is not correct, and that it is a misprint for *ngarong*. I think this word *ngarong* is not used by all Sea Dyak races. It is not known among the Sebuyau, the Balau, the Undup, and the Saribas Dyaks. The idea of a "spirit-helper" certainly does exist among the Sea Dyaks, who have often told me of their belief in such a thing. This idea is mentioned several times in 'Seventeen Years among the Sea Dyaks of Borneo,' e.g., on pages, 161, 165, 199, and 205.

EDWIN H. GOMES.

RESEARCH NOTES.

MR. S. R. WILLIAMS, in the *Proceedings* of the American Physical Society, addresses himself to a solution of the problem of magnetism from a new point of view. Starting from the fact that an iron rod, when placed in an increasing magnetic field, first lengthens and then contracts, he argues that this must be "due to some mechanical orientation of particles within the substance whose dimensions vary in different directions." These conditions are satisfied, he argues, by the assumption that the magnetic atom, which appears to be equivalent to that which Continental physicists have lately named the "magneton," consists of a positive nucleus in the shape of an oblate spheroid to which one or more negative electrons are attached, these last revolving about the nucleus in such a direction that their plane of revolution coincides with greater or less exactness with its equatorial plane. A mental figure of this may be obtained by imagining the atom to be the earth, flattened like it at the poles, and the revolving electron to be the moon.

On this assumption, there will be two forces acting upon the atom when it is placed in a magnetic field. One of these arises from the tendency of the nucleus to set itself so that the magnetic resistance is reduced to a minimum; the other from the magnetic field of the revolving electrons striving to set themselves parallel to the external or magnetizing field. This "planetesimal [*sic* /] theory" of magnetism, as Mr. Williams describes it, is confirmed, according to him, by experiments on iron, nickel, and certain crystals, by the Kerr effect, and by Faraday's experiments on these iron films, while the idea that there are such things as molecular magnets is on the same authority untenable.

Prof. O. von Baeyer and Dr. Otto Hahn give, in a recent number of the *Physikalische*

Zeitschrift, an account of some experiments made by them to determine whether the Beta rays of radio-active substances, when absorbed according to an exponential law, are all marked by the same velocity. In order to ascertain this, they required, as the subject of their experiments, a substance with as few groups of Beta and secondary rays as possible; and this they found in the active deposit of thorium. By photographing the magnetic deviation of the rays of this substance under different circumstances, they arrived at the conclusion that during the disintegration of a radio-active substance the Beta rays quit the substance producing them with a velocity peculiar to each product. This confirms the recent theory of Dr. Hahn and Fräulein Meitner that the Beta rays, when absorbed according to an exponential law, are homogeneous.

This conclusion has interesting consequences. Its authors are of opinion that every substance giving off Beta rays probably emits only one group of typical rays. Hence, if more than one be noted, it is evidence of the presence of a substance not simple, but compound. Moreover, the process by which they photograph the magnetic deviation of these rays enables them, it is claimed, to study the Beta rays of low penetrating power from radio-active products which have hitherto been considered rayless, and even to question whether any such exist. The study of these "magnetic spectra" also can be applied to the exact determination of the velocity of each Beta ray, and, as this in certain cases comes pretty near the velocity of light, they hope by its means to make further and more exact experiments in the increase of apparent mass with increase of velocity.

In the current number of the *Proceedings* of the Physical Society of London is a paper by the Hon. R. J. Strutt, dealing with the afterglow often observed in vacuum tubes of low exhaustion some time after an electric discharge through them has ceased. Mr. Strutt considers this to be due to the mutual reaction of the nitric oxide and ozone formed in the tube by the discharge, and he has verified the exactness of this idea by allowing nitric oxide chemically prepared to mix with a stream of oxygen passing through a vacuum tube at low pressure. He has now varied these experiments by substituting various gases and vapours for the nitric oxide with curious results. He finds that the glow is in every case where it is present due to a true flame, and is accompanied by an increase of temperature. Sulphuretted hydrogen, for instance, gives a sky-blue glow with a temperature of 70° C., as does carbon dioxide. Iodine gives an orange glow like that of the nitric oxide in the original experiment, but somewhat redder. Cyanogen gives a perfectly white glow with a purple tinge at the poles only, and acetylene vapour a blue-green with a temperature of 100° C.; while benzene had only yielded a faintly perceptible glow when the tube exploded. On the other hand, sulphur dioxide, arsenic vapour, methane, ethylene, vapour of petrol, ether, naphthalene, and vapour of camphor gave no reaction of the kind, and selenium only afforded a very faint glow. It is much to be wished that Mr. Strutt would prolong his investigations into an examination of the glow produced in tubes of high exhaustion after exposure to a high-frequency current upon being touched with the hand some time after the stoppage of the current—a phenomenon which up till now is unexplained.

In the last number of *Scientia*, the place of honour is occupied by an article by Prof.

K. Bohlin[†] (of Stockholm) entitled "Was ist die Milchstrasse?" He quotes the experience of Prof. Kapteyn that the stars of the Milky Way have more actinic effect, i.e., a greater influence on a photographic plate, than other stars, from which he deduces that they are in a different relation to us than those of other systems. He also shows that the "globular clusters" of Herschel occupy as nearly as possible the centre of a circle of which the Milky Way is the circumference, our solar system being a little to one side of this centre. He argues that the Milky Way was once a planetary nebula, that is, a brilliant envelope in rotation formed from a substance (star-dust?) of very fine distribution. Later, it was transformed in the course of evolution, which he describes, into an annular nebula with a nucleus in the centre formed, in this case, of the globular clusters. Hence, he says, all the planetary nebulas should be looked upon as the individual members of a system with limits hitherto unknown, and a band-shaped circumference of considerable width and thickness. This remarkable article, if its conclusions are accepted by astronomers generally, goes further than has hitherto been attempted towards introducing order into our conception of the star-world. It should be noted, however, that Prof. Bohlin thinks there is some evidence of a concentration of the circumference in the region of the Swan, which hardly appears to be accounted for in his theory.

A useful means of solving one of the commonest problems in practical acoustics is described by Mr. F. R. Watson in the *Proceedings* of the American Physical Society quoted above. The auditorium or lecture hall of the University of Illinois proved, he tells us, to be haunted with a most annoying echo, and all efforts to detect its source failed, until a committee of physicists was formed for its investigation. After experiments lasting over two years, they discovered that the most certain indications were obtained by an arc light fed by an alternating current and placed at the focus of a parabolic reflector. This was found to give out two sets of sounds, one a humming noise due to the alternations of the current, and the other "a successive spitting" of the arc. This last proved to be of very short wave-length, and therefore experienced but little diffraction. It was also of such intensity as to allow the reflected sound to be easily heard. "The bundle of light rays," in Mr. Watson's words, "included also a bundle of sound-rays, the sources of both being at the same place and subject to the same law of reflection. The path of the rays was easily found. The observer could see where the sound-rays struck by noting the position of the spot of light. To trace successive reflections, small mirrors were fastened to the walls, and the path of the reflected light followed." The explanation does not appear to be above criticism, but if Mr. Watson's view of the phenomenon be confirmed by the result, it is evident that we have here a valuable means of overcoming a very frequent difficulty in the construction of places like lecture theatres.

In the number of *Scientia* quoted above is a plainly written article by Prof. W. M. Bayliss (of University College, London) on the 'Functions of Enzymes in Vital Processes.' He goes at some length into the nature of "catalysts," or bodies which appear to act by their presence alone, since they do not appear as constituents of the final products of any reaction in which they are employed, and are generally recovered unchanged and in undiminished quantity. Although he defines enzymes

as "catalysts produced by living cells," he points out that there may be a distinction between them in the last-named respect, as one enzyme, namely trypsin, does seem to diminish in quantity if the reaction be greatly prolonged. In other matters there appears to be no difference between the two classes, enzymes, like catalysts, being always found in colloid form, and acting in excessively minute quantities, colloid platinum, for example, being capable of decomposing one million times its own weight of peroxide of hydrogen. The physiological importance of enzymes arises from the fact that most food stuffs of animals, and even of the lower order of plants, such as yeasts and other fungi, cannot be utilized by the organism until acted upon by enzymes. Although Prof. Bayliss considers it is going too far to say that all bio-chemical reactions demand the presence of an enzyme, he says that they enter into both anabolic and catabolic processes, and gives a curious example of this in the case of the sugar found in the chloroplast of the green leaf by day, and formed from the formaldehyde produced by light energy. This is due to the presence of an enzyme called amylase, and results in the diurnal storing up of starch as the product of sugar within the leaf. In the night the process is reversed, and the stored-up starch is retransformed into sugar and disappears from the leaf to go to other parts of the plant.

Sir Edwin Ray Lankester's Priestley Memorial Lecture last week was notable, were it only for the fact that this was the first time, if we are right, that the work of the ultra-microscope of Herren Siedentopf and Szigmondy has been publicly exhibited in this country. The living microbes which formed the subject of the lecture were first of all subjected to the ultra-microscope and then photographed on a cinematograph film, 2,500 instantaneous photographs being taken, it was said, of each object. Then when passed through the usual cinematograph projection apparatus the microbes were shown in movement, and the audience had the advantage of seeing the dreadful *Spirochaete pallida*, several of the trypanosomes, and the microbe of relapsing fever, actually at work among the blood-corpuscles. The effect was striking, the microbes generally appearing as rod-shaped bodies, occasionally with some resemblance to the fish known as whitebait, wriggling with great energy between the red corpuscles of the blood, which displayed themselves on the screen as white discs. Whether they gave a very vivid picture of the evil caused by pathogenic microbes may be doubted, because in the vast majority of cases the corpuscles seemed none the worse, and in only one case did it appear that one of them, which had previously, as it appeared, undergone hæmolysis, was actually entered by a microbe, which seemed from its motions to be extremely anxious to get out. Sir Ray Lankester may be trusted to have seen that the microbes in this case were those they were represented to be; but in the last *Compte Rendu* to hand of the Académie des Sciences MM. A. Laveran and A. Thiroux draw attention to the extreme difficulty that exists in distinguishing between the different varieties of trypanosome, and give reasons for thinking that the property lately attributed to the trypanosomes of Nagana of adhering to the leucocytes when heated cannot be implicitly trusted.

In the same month's *Compte Rendu* MM. R. Logendre and H. Piéron give details of some experiments made by them on the physiological effects observed in a dog which had been systematically deprived of

sleep. Neither muscular fatigue, loss of appetite, nor important diminution of weight could be detected; while the temperature remained normal, there was no regular variation in the respiratory exchange, and there was little increase in the quantity of carbon dioxide in the blood. The only marked changes were shown in cellular alterations of the brain, especially in the frontal lobes, where the cellular body was seen to be in many cases deformed and vacuolized, and the nucleus and nucleolus of the cell to be in some cases out of the centre. Injection of the cephalo-rachidian liquid into the fourth ventricle of an animal not suffering from insomnia at once produced the desire for sleep shown by inability to keep the eyes open and frequent stretching of the fore-paws, together with corresponding changes of the brain cells. All the special symptoms noted vanished as soon as sleep was permitted. One would gather from this that, contrary to what has been said elsewhere, the recuperative effects of sleep are limited in great measure to the brain and nerves.

F. L.

SOCIETIES.

SOCIETY OF ANTIQUARIES.—March 9.—Prof. W. Gowland, V.P., in the chair.—Mr. R. Garraway Rice, in presenting his Report as Local Secretary for Sussex, dealt with the various subjects in chronological order, and consequently began by mentioning the Palæolithic Period. The river gravels in West Sussex had not yielded any recorded palæolithic implements until Mr. Rice discovered some in the terrace gravels of the Arun and the Western Rother in 1904. He was now able to record the finding of at least six more examples; one from Coates, where some were previously found, also a flake from a pit in Sutton parish near Bignor Park, and others from Coldwaltham. These were exhibited together with a fine sharp-rimmed implement, said to have been picked up at the latter site, and lent for exhibition by Mr. C. R. Haines. From East Sussex seven palæolithic implements were shown, mostly of the sharp-rimmed type, all from the valley of the Cuckmere. Mr. J. Allen Brown had called attention to implements from this locality in 1892. The Neolithic Period was illustrated by several implements, mostly of more or less unusual types, from both East and West Sussex. Amongst these was a triangular polished knife, a polished flake with the edge bevelled by grinding, and a chipped flake with a similar ground edge; also some ground celts rechipped, and fifteen flint arrow-heads. A curious piece of tabular flint, found near Cissbury, was also shown, sculptured by nature with what might be aptly described in heraldic language as two hafted stone celts in saltire. The flint had been chipped into circular form, and it was very tempting to think that it may have been regarded as a totem or charm by some pre-historic man, representing, as it does, his most important weapon. Among the exhibits from East Sussex was a series of long hollow scrapers of uncommon form. Capt. A. J. Wade's discovery and excavation of some "flint mines" at West Stoke near Chichester was described. They appear to be of similar character to those at Cissbury.

The Bronze Age was represented by a find of four palstaves at Beacon Hill, Elsted, Sussex, one of which was exhibited, as were also some pieces of an urn, found at Pulborough, which appeared to be of that description of pottery commonly assigned to the Late-Celtic Age.

The useful work done by the officers of the Ordnance Survey, who were revising the map of the county last year, in inserting earthworks previously omitted, and correctly describing others previously assigned to many periods, was mentioned, in which work they had solicited and received the assistance of local antiquaries. The Roman Period was dealt with at some length, including an account of the excavation at Holme Street Farm, Pulborough, of 780 feet of walling and the tracing of a drain 535 feet in length. The former were probably the walls of the stock-yard of a Romano-British farm of which the house has not yet been located, the latter a drain in connexion therewith. These excavations had been carried out in the autumn of last year by Mr. Rice, with the consent of Sir Walter B. Barttelot, the owner, and by arrangement

with the tenant, Mr. George H. Christmas, who discovered the wall. Numerous Romano-British remains had been found in the same locality, including a supposed mausoleum, in the first half of the last century. The discovery of some Romano-British remains in West Dean Park by the owner, Mr. William James, which had been reported to the Sussex Archaeological Society, was mentioned, as also some further discoveries at the Romano-British Cemetery and Camp at Hardham, and an urn found there was exhibited. A complete quern, found at Hardham within the last few days, was also exhibited. In concluding the Roman Period, the satisfactory character of the repair of the Bignor pavements in 1905 and 1907 at the cost of the Society was commented upon. Mr. Richard Tupper, the owner, who had been devoted to the pavements all his life, died last August in his 85th year.

The condition of Treyford and Elsted churches was next reviewed. In consequence of the union of benefices, and the building of a large church in 1849 to serve both parishes, Treyford church has fallen into a ruinous condition for want of an available fund to keep it in repair. It is now roofless and overgrown with ivy. For the same reason the nave of Elsted church has to a great extent been taken down, and presents the appearance of a most formal looking ruin, the tops of such portions of the walls as remain having been rendered in cement. The chancel has been put in a good state of repair.

A palimpsest brass at Northiam was next dealt with. It was to one John Sharp, who died in 1583. Having become loose, it was discovered that on the reverse was a portion of the border of a Flemish brass, bearing the words "deyhem die staerf," the last two words meaning "who died." Mr. Mill Stephenson, who contributed the facts about the brass, thinks that the first word was perhaps part of a name. Mr. Rice gave some items from the will of John Sharp, but there was no allusion to the memorial.

The next subject taken was sixteenth and seventeenth century cottages, which the writer said were fast disappearing. Slides of three were shown, viz., one formerly at Fittleworth, another at Pulborough, which was taken down about 1902, and a third at Bignor, which is still standing. In the garden of the Pulborough cottage the fore portion of a dug-out boat, probably of prehistoric date, was found in 1901. Finally the repairs in progress at Amberley Castle and Cowdray ruins were discussed: the former are being carried out at the cost of the Duke of Norfolk and the latter by Lord Cowdray. These repairs had been criticized by artists in consequence of the removal of ivy and other growth and the repairing of the walls, which gives them a new and more regular appearance. Mr. Rice was of opinion that the right thing was being done, and that the life of both of the buildings by these judicious repairs, which are not in any sense "restorations," would be increased by a considerable period, probably centuries. He then put on the screen upwards of thirty photographs showing both of the buildings as they were ten years ago, and the appearance they presented in September last, calling attention to the more important points.

ZOOLOGICAL.—March 7.—Dr. A. Smith-Woodward, V.P., in the chair.—Dr. Karl Jordan and the Hon. N. Charles Rothschild communicated a paper 'On some Siphonaptera from Northern China,'—Mr. F. E. Beddard read a paper dealing with certain points in the anatomy of the Frog *Megalophrys* (*Leptobrachium*) *fee*, based on specimens which had been exhibited in the Society's Gardens, and also a paper on the Spermatophores in Earthworms of the genus *Pheretima* (= *Pericheta*),—and Mr. R. Lydekker communicated two short papers entitled (a) 'A Rare Beaked Whale' and (b) 'Age Phases of the Rorqual.'

MATHEMATICAL.—March 9.—Dr. H. F. Baker, President, in the chair.—Prof. P. J. Heawood was elected a member.—The following paper was communicated: 'On the Reduction and Classification of Binary Cubic Forms which have a Negative Determinant,' by Mr. G. B. Mathews.—Informal communications were made as follows: 'On the Theory of Partitions,' by Major P. A. MacMahon, and 'On the Theory of the Transmission of Earthquake Waves,' by Prof. A. E. H. Love.

FOLK-LORE.—Feb. 15.—Mr. W. Crooks, President, in the chair.—Miss Moultray-Read read a paper on 'Hampshire and its Folk-lore.' The author had gathered many previously recorded customs from old writers, and had added instances collected by her of surviving customs and beliefs.

Starting with the suggestion that topographical conditions have much to do with character and customs, Miss Read considered that the valleys, forests, marshland, and moors of Hampshire had left traces on their present inhabitants of succeeding invasions as shown in the existing types of people and in the legends and customs. Much was due to the woodlands and forest surroundings and traces of the old foresters were left in the people. Instances were given of the election of the Lord of the Manor of Pamber of Ibthorpe, where the commoners are lords of the manor; of Borough English and of the hearth right tenures still obtaining in the New Forest; of the annual erection of arbours and bowers of oak mentioned by Gilbert White and May Day customs survivals still linger in the villages, though now managed by school authorities. Shick Shack Day (Royal Oak Day) customs the writer regarded probably as part of the May Day observances and the old Woodland life. Weyhill Fair customs were given, and many interesting examples of local legends and beliefs in connexion with earthworks, cromlechs, and stone circles, devil-lore and witch and ghost stories. Discussion followed in which the President, Miss Burne, the Vicar of Weyhill, and others took part.

Mr. A. R. Wright exhibited some interesting ancient Mexican figures and objects.

HUGUENOT.—March 8.—Sir William Portal, President, in the chair.—Five new Fellows were elected and M. Frank Puaux, President of the Société de l'histoire du Protestantisme Français, was elected an Honorary Fellow.—A paper was read by Mr. Charles E. Lart on the Huguenot regiments. These regiments, which were five in number, were raised in England after the revocation of the Edict of Nantes, but previously to that many French refugees and their descendants of earlier immigrations had taken service in the army. At the revocation three thousand officers, in addition to those who had quietly left before, were driven out of the French army. These consisted for the most part of seasoned men who had seen service under Turenne. Of the four Huguenot regiments, distinctively so called because the rank and file as well as the officers were French refugees, four were raised in 1689, namely Schomberg's French Horse, now the 7th Dragoon Guards, and three regiments of infantry, Melonière's, de Caillemote's, and Cambon's. Another regiment of cavalry, de Mirmont's dragoons, was raised in 1695 and disbanded in 1698 in Ireland. Huguenot troops seem to have done most of the fighting under Marlborough. Although refugee officers continued to serve in the English army to a very great extent, no distinctive Huguenot regiments existed after 1712. In England the hopes of the refugees of being reinstated in France appear to have died out sooner than in Germany, where they were not finally extinguished until after the victory of Jéna.—Mr. Lart gave a short account of the Huguenot regiments in Holland and Germany, especially in Brandenburg, and noted the very high percentage of officers and men with Huguenot names in the German army at the siege of Paris. A discussion followed in which Mr. W. Minet, Mr. C. Poyntz Stewart, Mr. S. W. Kershaw, Mr. G. Boileau Reid, and the Rev. G. W. Minns took part.

MEETINGS NEXT WEEK.

- MON.** Society of Arts, 8.—'Applications of Electric Heating,' Prof. J. A. Fleming. (Cantor Lecture.)
- TUES.** Royal Institution, 8.—'Explorations of Ancient Desert Sites in Central Asia,' Lecture I., Mr. M. A. Stein.
- Colonial Institute, 4.
- Royal Statistical, 5.—'Some Statistics of Japan,' Mr. C. V. Sale.
- Institution of Civil Engineers, 8.—'The Electrification of a Portion of the Suburban System of the London, Brighton and South Coast Railway,' Mr. P. Dawson.
- Anthropological, 8.15.
- Zoological, 8.30.—'On the Amphipod Genus *Leptocheirus*,' Mrs. E. W. Sexton; 'On Colour and Colour-pattern Inheritance in Pigeons,' Messrs. J. L. Bonhote and F. W. Smalley; 'Notes on Marine Ostracoda from Madeira,' G. Stewardson Brady.
- WED.** Society of Arts, 8.—'The Manufacture of Portland Cement,' Mr. A. C. Davis.
- Geological, 8.—'On some Mammalian Teeth from the Wealden of Hastings,' Dr. A. Smith Woodward; 'Some Observations on the Eastern Desert of Egypt, with Considerations bearing on the Origin of the British Trias,' Mr. A. Wade; 'Faunal Horizons in the Bristol Coalfield,' Mr. H. Bolton.
- THURS.** Royal Institution, 8.—'Giants and Pygmies,' Lecture II., Prof. A. Keith.
- Royal Society, 4.30.—'A Theory of Asymptotic Series,' Mr. G. N. Watson; 'The Ionization of Heavy Gases by X-rays,' Mr. R. T. Beatty; 'The Variation of the Ionization with Velocity for the β Particles,' Mr. W. Wilson; and other papers.
- Institution of Electrical Engineers, 8.—'Electricity Meters with Notes on Meter Testing,' Messrs. H. A. Ratcliff and A. E. Moore.
- Society of Antiquaries, 8.30.—Ordinary Meeting.
- FRI.** Institution of Civil Engineers, 8.—'The Uses of Chemistry in Engineering,' Lecture I., Mr. J. Swinburne. (Students' Meeting.)
- Royal Institution, 9.—'The Sidereal Universe,' Sir D. Gill.
- SAT.** Royal Institution, 3.—'Radiant Energy and Matter,' Lecture IV., Prof. Sir J. J. Thomson.

Science Gossip.

MESSRS. HUTCHINSON are publishing this spring for Mr. T. Kassner 'From Rhodesia to Egypt,' including an ascent of Ruwenzori, and a short account of the routes from Cape Town to Broken Hill, and Lada to Alexandria. Mr. Kassner travelled on foot through Eastern Congo, and discusses the development of that region and other parts of Africa.

THE death, at the age of 72, is reported from Florence of Gustavo Uzielli, Professor of Mineralogy and Geography, and author of a number of valuable works on these subjects.

A LIST is being circulated of British naturalists who have joined the British sub-committee appointed by the International Zoological Congress at Graz last August to promote an International Memorial to the late Prof. Anton Dohrn. All who respect the work of the Naples Zoological Station should help in this excellent object.

THE Natural History Society of the Royal College of Science has commenced the production of 'Occasional Publications'; the first of these, containing an admirable address by Prof. Adam Sedgwick on 'Natural History and Morphology' was published recently.

THE Medical Report of the Local Government Board has just been issued as a Parliamentary Paper (price 4½d. post free.)

MR. ELGIE'S 'Night-Skies of a Year' (Chorley & Pickersgill) forms an excellent guide to the study of the constellations, many of which are depicted not merely in groups as in a terrestrial map, but also as they appear at different hours of the night in the successive seasons. There is, further, subsidiary information of a useful kind in accordance with the sub-title 'The Journal of a Star-Gazer.'

A VERY elaborate discussion, by Herr Redlich of Kiel, of all the observations which have been published of comet I, 1886, appears to show that the orbit of that body was hyperbolic and its motion nearly perpendicular to the plane of the ecliptic, the inclination amounting to 82° 37'. It was discovered by M. Fabry at Paris on the 1st of December, 1885, and passed its perihelion on the 6th of April, 1886, soon after which it became visible for some time to the naked eye, being nearly equal in brightness to a star of the second magnitude; the last observations were obtained at the Cape of Good Hope about the end of July.

A NEW small planet was discovered photographically by Herr Helffrich at the Königstuhl Observatory, Heidelberg, on the 22nd ult.; and two visually by Dr. Palisa at Vienna on the 28th ult. and the 1st inst. respectively.

DR. DOBERCK publishes in Nos. 4479-80 of the *Astronomische Nachrichten* the results of a large number of measurements of double stars obtained by him last year with the Elizabeth Thompson micrometer (the scale value of which has been carefully determined) at Sutton, Surrey.

FINE ARTS

The Benedictional of Saint Æthelwold, Bishop of Winchester 963-984. Reproduced in facsimile from the Manuscript in the Library of the Duke of Devonshire at Chatsworth, and edited, with Text and Introduction, by George Frederic Warner and Henry Austin Wilson. (Roxburghe Club.)

THANKS to the munificence of the late Duke of Devonshire and the piety of his successor, the Benedictional of St. Æthelwold is now made known to scholars with all the fidelity at present possible to photographic art, and in a handsome volume admirably edited.

Sir G. F. Warner's is perhaps the more apposite and felicitous of the Introductions. It is rich in various, but strictly relevant information, and its description of the famous miniatures has the charm of sympathy and clearness. Mr. Wilson, in the briefer dissertation, is characteristically learned, cautious, and accurate; but much that he says would be as appropriate to any other Benedictional as to this. Perhaps, too, he would have been well advised in so far scrutinizing formulæ which he dismisses as "common-place" and "not of much special interest" as to cull from them aids to the construction of a consistent and probable hypothesis of the literary history of the several items of the collection.

Some, if not all, of the seven ill-arranged miniatures which precede Godeman's introductory verses may be of a provenance entirely separate from that of anything in the body of the work. Two of them invite notice. Although the central figure in the first miniature is adorned with the pallium, it bears the legend "Sanctus Benedictus abbas"; from which we are to infer that the miniature itself is either a spoilt original or an unfaithful copy, but with a preference for the second alternative. The central figure in the sixth calls to mind the once warmly discussed subject of the tonsures. As pictured in this preliminary series, only two of the Apostles are represented as shaven, St. Peter and St. Paul. It therefore is worthy of remark that, whereas in a tenth-century Winchester book St. Peter's tonsure is of the "Petrine" type, circular and on the crown of the head, St. Paul's, as clearly defined as a horseshoe, would seem, not unlike one in shape, to pass obliquely over the skull from temple to temple. It is but right to add that Sir G. F. Warner does not appear to take this view. What to the present writer is the "Pauline tonsure" of controversy is, in his opinion, a "broad bald patch." In the Benedictional itself, however, and on fol. 95 v., the Apostle is not thus depicted. The contrast would

seem to be significant and worthy of study.

Even in a long notice of so prolific a volume as the present much must be left unsaid. Let it suffice, therefore, to mention a few details that seem to invite consideration. In the design for Advent Sunday (fol. 5 v.) the Virgin appears seated, not "under a domed portico," but under a domed and curtained baldacchino; and, as a further attribute of dignity, her feet rest on a footstool. On the only side of the baldacchino which the artist has left accessible to view the curtain is plainly visible. In only one miniature of the collection, that representing St. John the Divine (fol. 19 v.), does a curtain hang from the upper side of the enclosing framework of a design; and, since in this instance it is a withdrawn curtain revealing a distant view in which there is nothing of man's doing, we ought perhaps to see in it a symbol of the "revelation" of which St. John was the inspired agent. Sir G. F. Warner recognizes a symbol of the Trinity in the three interlaced segments of circles in the summit of the design (fol. 34 v.) for the Feast of the Purification, and no doubt he is right; but we should perhaps see in the fourfold repetition of the symbol a reference to the Evangelists, and, in their aggregate number, to the Apostolic College. Puerile as the idea may be regarded by some, it has the authority of the Leonian Sacramentary; indeed, the immediate successor of Leo the Great would seem to have erected, and under the shadow of the Lateran itself, two groups of sacred architecture in illustration of it (see Muratori, 'Liturgia,' i. 341). In the Palm Sunday miniature (fol. 45 v.) our Lord's mantle is described as "floating out behind." We shall reach a higher level of interpretation if we say that it is supported by one of the Apostles, as by the trainbearer of a king. Can it be that the representation of St. Etheldreda (fol. 90 v.) is the replica of some design executed in the first instance for one of the altar books of the Abbey Church of Ely, which Æthelwold himself had saved from ruin? Be the true answer to this question what it may, the grace and richness of the foliage which revels in the frame of this design are in such striking contrast to the poverty and meanness of the miniature for St. Swithun (fol. 97 v.)—another English saint, another of Æthelwold's spiritual patrons, and a predecessor of his in the see of Winchester—as to suggest yet other queries. Which is the older of the pictures? Which, if either, of them was sketched and finished at Winchester? Which, if either, of them is solely of English design and execution? Which, if either, of them is of foreign inspiration and foreign workmanship? For if, after examining the portrait of St. Swithun, we turn our thoughts to the Abbey of Fleury, whose influence on Æthelwold is a highly necessary condition, though a somewhat neglected one, to a just estimate of the man and his work, and direct our attention to the portrait of St. Benedict on fol. 99 v., we feel that we

are under the spell of something like genius. And when we read the description of the original, the conviction is intensified that, for unity of purpose, for careful distribution and balance of detail, for studied harmony of colour—above all, for dignity, repose, and a distinction that eludes analysis—this miniature of St. Benedict may be pronounced the gem of the collection. What it commemorates is not the day of the patriarch's death, but the memorable summer's day in the second half of the seventh century on which his bones, filched from a neglected grave at Monte Cassino, were with fearful joy brought by a Fleury monk safe home to their new resting-place.

When, therefore, Sir George says that the buildings in the background represent the Abbey of Monte Cassino, we think that he is mistaken. No love was ever lost between the monks of the two foundations after this exasperating "translation"; and we hold with some confidence that the two architectural groups are meant, one for the abbey church of Fleury, the other for the "vicina Sancti Petri basilica" of which we read in the Fleury annals.

We have a further point to raise. How is it, we would ask, that Sir George declares the distant buildings in the last miniature (fol. 118 v.) in the volume to be "obviously conventional" (p. xxx)? To us they have a more realistic look than those which in the design just mentioned he is disposed to treat as representations of fact. And on what theory of perspective is it that he conceives the little timber bell-cote in the middle of the near distance to be the great tower of the Old Minster at Winchester? This bell-cote is perched on the roof of a comparatively small church, the interior of which faces the spectator; in the bell-cote there are three bells; in the roof of the church there is a hole, and through that hole the ropes for ringing the bells drop into the interior of the building. Nothing could well be more manifest than this; and the bird on the summit of the bell-cote, so far from being the gigantic weathercock of the Old Minster, is a mere fledgeling.

But if Sir G. F. Warner will examine the distant towers to the left of the central design, and unless his copy of the photograph sustained injury when in course of development, he will see what eluded his notice when he dismissed them as "obviously conventional." The towers are four in number, and belong to a church of considerable size and dignity. The highest of them has a pyramidal roof, from the apex of which a tall staff rises perpendicularly; and on this is poised as lordly a weathercock as ever faced the wind, lifelike in pose, faultless of outline, and measuring from comb to tail half as much again as the diagonal diameter of the tower itself. In this last detail there is the exaggeration that usually attends efforts to particularize distant objects in a drawing; but the bird thus pictured, and not the little bantam in the

foreground, is the *gallus aureus* of the stammering poet's inspiration:—

Despicit omne solum, cunctis supereminet arvis;
Signiferi et Boreæ sidera cuncta vident.

* * *
Imperat et cunctis evectus in aera gallis,
Et regit occiduum nobilis imperium.

Nor need we doubt that, as here represented, he surmounts a fairly faithful view of the Old Minster consecrated by Æthelwold in 980, or that the sketch in the right distance is meant for the New Minster.

We must, however, be careful not to infer from this that the MS. cannot have been finished before 980, for these two sketches may have been copied from builders' or architects' plans.

But graver problems await scholars than the question in what year of the decade 971–80 the Benedictional was completed. They are: 1. To determine the place and time of the genesis of the successive items, or the *aliæ* forming the successive items, of the Benedictional of Æthelwold, and to trace the literary history of each of these; 2. To determine the genesis and subsequent fortunes of the several miniatures and their originals.

WATER-COLOUR DRAWINGS AT MESSRS. AGNEW'S GALLERIES.

THE two hundred or more works crowded into this small gallery are fairly representative of the copious production of water colours which has gone on in England for the last hundred years, and, although copious production is not in itself a bad thing, yet the vision called up of generation after generation of artists industriously turning out little landscapes tempts us to recall the saying of a certain veteran Academician who had been asked over to see the picture of a younger confrère: "You have been painting all day without thinking," he said, shaking an admonitory finger. "Why, yes," responded the other, "that is quite true; how did you know?" "Because," said the veteran solemnly, "I have done it myself." It is not from every one, perhaps, that the genial confession suffices to soften the sting of so damning a criticism, nor could it be said without exaggeration that British water-colour art as represented in the present collection showed no signs of thought. But we feel that in addressing themselves to the numerous little handbooks on 'The Principles and Practice of Water-Colour Painting' which linked each generation to the last the students skipped the principles and started at once with the practice. By this characteristically British conduct they ensured a continuance of the traditional method of water-colour painting—a method originally rather scholarly and philosophic, but ensured also that its repetition should become more parrot-like at each remove. The logical use of the medium which we may admire in the careful and admirably structural drawing of E. Dayes, *The Market Place and Town Hall, Salisbury* (45), in the more confident mastery of Girtin's superb *Fountains Abbey* (44), or in Dewint's swiftly spontaneous *Lincolnshire Farm* (21), is externally very like the method which in the less inspired works of the last artist, such as Nos. 26

and 27, is dull enough. In the numerous examples by David Cox, the washes are largely and confidently laid, but fail so to group themselves as to express the true structural relations of foreground, distance, and sky. There are examples of W. Callow which remind us that for whole periods he was apt to forget why he was doing what he was doing, and, although an occasional burst of lucidity from the hand of Thomas Collier, such as No. 63, *A Berkshire Common*, gives evidence of vitality, we can well understand from the general level of the traditional water-colour method as it is shown here that by the time Walker appeared upon the scene almost any change seemed like a liberation, even though at bottom it was an exchange of a well ordered intellectual method for an impulsive and unsystematic one.

It is doubtful if many of the exponents of the more classical methods had a clear idea of the nature of the issue. A characteristic preoccupation with the practice of their *métier* made them think of it as in some way bound up with the use of body colour, and as, in spite of the spread of critical inquiry and a general tendency to vague depreciation of Walker's painting, there is still some inclination to account for such changes of fashion on mere grounds of temperamental preference, we may offer a brief sketch of what appear to us the elementary differences of the two schools.

The painter of the older school realized that in water colour (which dries very rapidly and is rather uncontrollable while wet, except at a certain point of wetness difficult to maintain) it is almost impossible nicely to join one's flats—that moreover technical beauty is lost when a very large number of washes are added one above the other. He held, therefore, that in this medium he must proceed in a crisp series of relatively few washes stroke upon stroke, and that thus even more than in oil painting the continuity of modelling which nature maintains through an infinite range must not be represented by a great multitude of perfectly blended tones, but symbolized by the uniformity of interval maintained in a short scale of tones and by the just apportionment to the more or less boldly modelled portions of the picture of one, two, or three tones, as the case might be. The colour schemes of nature were transposed to suit a restricted palette. From her infinite play of line were disengaged, in obedience to the same doctrine of relativity, the main groups of angles. It was recognized that, since by hypothesis the whole must be generalized, any passage of a picture which looked in itself just like nature had failed to share in the sacrifice and *must* be wrong.

This, the underlying argument of the older water-colour painters, is the basis of all modern painting, and is as sound as it is commonplace. Apparent protesters against its canons are really only protesting against the baldness and want of subtlety which inevitably attend any attempt at formulating such canons verbally, and which as unavoidably awaits the imitation of methods of painting originally prompted by them by later painters who have not grasped their significance. The method of the best of the water-colour men very soon became a recipe—the restricted palette a monotonous use of dull colour. The habit of selecting only subjects which lent themselves easily to crisp divisions of tone (which we prophesied last week as a possible danger for Mr. C. J. Holmes) settled upon them till they became hunters of handy compilations of such objects as windmills and churches and over-lapping lines of hills—things which

supply neat profiles. The inevitable restriction of the rendering of textures and the flutter of surface modelling to the few objects nearest at hand or taking the light most brilliantly became the representation of all surfaces in the same way.

Walker was a man gifted with an extraordinary sensitiveness to surface, and had the illustrator's initiative, which regards the whole of life as his subject-matter within the limits of strong personal preferences which, once shared, make us love him. He is momentarily depreciated, as a rule, for no better reason than because these illustrative ideals happen to be out of fashion. In the well-known drawing of *Spring* (95) we see him fingering his way over the foreground of primroses with so strong a feeling for variety of surface that a due regard for values forces him to render the girl's cheek as more like plush than the delicate down of youth. This, again, is an unimportant matter to which we are somewhat unduly sensitive to-day. What is unsatisfactory is his blindness to any form of an abstract character. Drawing is purely a matter to him of surface description, so that he over-models his objects, but fails to render the distances between them. His pictures are made up of strongly realized passages adroitly grouped so as to mask, as far as possible, the want of relation between one and the other. They have the unpardonable fault in design that the part is stronger than the whole. *Autumn* (84) shows this meretricious lack of structure more strongly than the other work.

Lewis, represented here by his excellent *Greeting in the Desert* (88), is an example of an earlier artist largely dependent like Walker on a faculty for feeling his way over the surface of his subjects—more dependent for his modelling than Walker even on the little wrinkles and corrugations which express the lie of the planes. His camels are thus much better drawn than his figures, which are, as usual, wooden and lacking in internal structure and inferior in this respect to those of Walker. He excels that artist, however, in his sense of linear and aerial perspective, so that his pictures are space compositions, while those of the younger man were only arrangements of laboured curves. He has an advantage, too, in his calm and impartial record of facts, which is infinitely fuller and more interesting than the other's narrow idealism.

THE GEORGIAN SOCIETY.

Trinity College, Dublin
March 18th, 1911.

I KNOW no better way of informing those interested in the work of the Georgian Society, and disappointed at not having secured Vols. I. and II. of its *Publications*, than to say that we are going to press with Vol. III., which is quite independent of its predecessors, and complete in itself. It will give, as they did, pictures of several great houses, a history of the building and occupation of the principal mansions in Sackville Street, and an essay on the manners and customs of the Irish gentry in 1710–70. There will be nearly 100 illustrations. Those who intend to secure a copy must send me their names within the next two or three weeks, as we do not publish the work, but only print for those who are our members.

The former 2 vols. are now only to be had at sales, and command prices from 5*l.* each upward. The subscription is 1*l.* 1*s.*

J. P. MAHAFFY,
President of the Society.

SALE.

MESSRS. CHRISTIE sold on Saturday last the following pictures: B. Canaletto, A View on the Grand Canal, Venice, 661*l.* Raffaello di Karlis, Tobias, the Angel, and Saint Catherine and Saint Stephen, Saint Appollonia, and a Saint with a Violin (a pair), 504*l.* Bernardino Luini, The Virgin and Child, 231*l.* School of Pesellino, The Madonna, in red dress, holding the Infant Saviour, 141*l.* Gian Pettrini, The Madonna, in red and green dress, holding the Infant Saviour on her lap, 199*l.* Bernardino Pinturicchio, The Dismissal of Hagar, 714*l.* Martin Schongauer, Three Saints in a Garden, 1,680*l.* Corneille de Lyons, Portrait of a Gentleman, in black dress and cap with lace collar, 210*l.* C. de Vos, Portraits of a Nobleman, his Wife, and his Family in a landscape, 189*l.*

Fine Art Gossip.

THE second volume of 'The Herkomers,' by Sir Hubert von Herkomer, which deals especially with the career of the author himself, may be expected soon from Messrs. Macmillan.

MESSRS. HUTCHINSON & Co. include in their spring list 'John Opie and his Circle,' by Ada Earland, author of 'Ruskin and his Circle.' An appendix will contain a list of Opie's pictures.

LORD BROWNLOW, one of the Trustees, has lent the National Gallery the 'Flying Angel,' which was some four years ago exhibited at the Burlington Fine Arts Club as a work by Pesellino, after having been shown at the New Gallery in 1893 with an ascription to Masaccio. It has long been recognized as part of the dismembered altarpiece of which the 'Trinity' (No. 727) in the National Gallery originally formed part. About two years ago (*Athenæum*, January 30th, 1909) we gave in detail the history of the now separate parts of this altarpiece.

A NEW publishing firm at Berlin has recently brought out 'Denkmäler der Kunst in Dalmatien,' edited by Georg Kowalczyk, with an Introduction by Cornelius Gurlitt, the veteran authority on European Architecture. This in itself would be a guarantee of the value of the publication, and the two portfolios of admirable illustrations constitute a notable addition to our limited knowledge of the treasures of Dalmatia, a country "ripe for discovery," as a German writer has observed. The interest of this region, as there set forth, will certainly appeal in a high degree to students.

THE *Monatsheft* for March contains an important article by Prof. Flechsig on the 'Hausbuch Meister' as a designer for wood-blocks. The woodcuts in question are met with in the edition of the 'Speculum Humanæ Salvationis,' printed at Spire by Peter Drach. The date of publication is not known, but Prof. Flechsig gives his reasons for considering that it was probably 1482-3, and the drawings for the blocks would therefore fall between 1481 and 1482. He draws attention to an Almanach of 1483 in the Library at Brunswick, which he also ascribes to the 'Hausbuch Meister,' and his studies enable him to prove that this too was printed by Drach of Spire. A similar Almanach was in the possession of Gotthelf Fischer in 1801; by 1804 it had passed out of his hands into a private collection in England, which, Prof. Flechsig conjectures, may have been that of Lord Spencer. He recommends these facts to the notice of

English connoisseurs in the hope that the Almanach may be brought to light and reproduced. Prof. Flechsig's article is to be continued, and the second instalment will doubtless contain data of equal interest.

Dr. W. Storck, in the same periodical, writes on Early French influence as shown in the work of English illuminators of the fourteenth century, with special reference to the Arundel Psalter II. (Brit. Mus. Arund. 83). Among miscellaneous contributions are a note by Dr. Baum referring to Hans Schüchlin's altarpiece painted for the Benedictine Monastery at Lorch; and a new document published by Dr. Simon relating, he believes, to the painter Conrad (Faber?) of Creuznach, who was some time ago identified with the master of the Holzhausen portraits (as we then noted in *The Athenæum*). Judging from the document, we should certainly infer that the "Conrad Maler" there referred to was merely a decorative artist whose attainments would scarcely be on a level with those of the master who produced the Holzhausen portraits. That this Conrad is identical with Conrad of Creuznach does not appear to us to be proved.

PROF. OTTO PUCHSTEIN, Assistant Director of the Royal Museum, whose death in his 55th year is announced from Berlin, ranked high among German archæologists, and was an authority on the Hittites. He studied archæology at Strasburg. The report which he was commissioned by the Berlin Academy of Sciences to write on the tombs of the Kings of Antioch led to his being sent out to undertake further investigations, and he was subsequently sent to study the sculptures at Pergamum. The results of his various expeditions and of his theories on the position of the stage in the Greek theatre were embodied in several valuable works, among them 'Reisen in Kleinasien und Nordsyrien,' written in conjunction with Humann, 'Pseudo-hethitische Kunst,' 'Beschreibung der Skulpturen aus Pergamon,' and 'Die griechische Bühne.'

A MONUMENT to the memory of Tony-Noël, the sculptor and professor at the Paris École des Beaux-Arts, was erected last week at the Père-Lachaise cemetery. The work is by M. Paul Gasq, one of Falguière's pupils, and consists of a granite *stèle* surmounted by a bronze bust.

MUSIC

OUR LIBRARY TABLE.

Brahms. By J. A. Fuller-Maitland. (Methuen.)—Enthusiasm is a good thing, yet it is apt to beget mistrust. The writer of this book asks in his Introductory Note, "Can no opinion be at once favourable and dispassionate?" There is, however, a difference between a favourable and an enthusiastic opinion; the former may be dispassionate, but the greater the enthusiasm the less likely is it to be impartial. When Mr. Fuller-Maitland asserts that Brahms's power of handling his materials was surpassed by "none of the older masters, not even by Beethoven," or when he states that "all the themes of Brahms have the finest melodic curves that were ever devised in music," we cannot help feeling that his

admiration for the composer has affected his judgment. The biographies of great men ought to be written not only by those who are in thorough sympathy with their art-work, but also by those who, if not actually hostile, belong to a different school of thought. The one would correct the other. Anyhow, the author writes as he feels, so we can easily make allowance for what seems excessive praise. At times he becomes duly critical. As regards the orchestral colouring of the first Symphony "there is some ground for adverse criticism." We read, too, of the "admittedly thick scoring" in the Pianoforte Concerto in D minor. Other specimens of reasonable criticism could be named. Brahms, owing to the injudicious Declaration, to which he, Joachim, Grimm, and Scholz appended their signatures, naturally caused ill-feeling and unpleasant remarks from the leaders of the New School. Now Liszt, one of the chief leaders of that School, was, we believe, honestly seeking to extend the boundaries of his art, and his clear perception of Wagner's genius from a very early period proves him to have been a man of exceptional acumen. Mr. Fuller-Maitland, who does not approve of the tenets of that School, seems to take pleasure in uttering, let us say, unfriendly things concerning Liszt. We name only one instance. Of the principle of transformation of themes, Liszt, he says, "supposed himself the inventor." Surely such an idea cannot have entered the head of a pianist to whom Schubert's 'Wanderer' Fantasia and Beethoven's Sonata in A flat (Op. 110) were perfectly familiar. But the principle of transformation in any case dates back to the sixteenth century and even earlier.

Mr. Fuller-Maitland, although he terms the 'Triumphlied' a "glorious" work, finds it difficult to assign reasons for its unfrequent performance at English Festivals. One, he thinks, may possibly be the great difficulty of the vocal parts and the strain upon the two soprano voices. Some of our northern choirs could, however, grasp the compass required. Another reason named is the fact of its first section being built on the theme of 'God Save the King,' for English audiences, unacquainted with the historical facts, and "constitutionally reluctant to think that anything good in music can be of English origin, are induced to believe that we adopted our national anthem from Germany"! The difficulties of the vocal parts may count for something; but are not the real reasons—first, that it is clever music which appeals more to the head than the heart; and again, that the composer assumes the style of Handel, but lacks the strength and sincerity of the old Saxon?

At a recital given by Madame Schumann at Hanover Square Rooms in June, 1856, she played a Sarabande and Gavotte (in the style of Bach) by Brahms. They are mentioned by our author, who adds, "whatever these may have been." What they were probably would be difficult to find out now. It may, however, be interesting to quote what the writer of the notice in the *Musical World*, a few days after the recital, said about the Gavotte: "This piece of the 'new man' is extremely difficult, extremely uncouth, and not at all in the style of Bach." The Sarabande he attributes to Domenico Scarlatti.

We note a useful list of the compositions of Brahms arranged in order of opus numbers, also a List of first lines and titles of vocal compositions. Further, there are many interesting illustrations, which include six views of Brahms from drawings by Prof. W. von Beckerath.

Catalogue du Fonds de Musique ancienne de la Bibliothèque Nationale. Par J. Écorcheville. (Publications Annexes de la Société Internationale de Musique: Section de Paris.)—This first volume of a catalogue of ancient music in the Bibliothèque Nationale will indeed be welcome to writers and students. The musical treasures in that great library are for the most part an unexplored mine. The real founder of the present library was Louis XI., who died in 1515; but it probably contains books collected already by St. Louis (d. 1270).

This Catalogue includes works in print or manuscript, theoretical or practical, in score or in parts—which are in the “Département des Imprimés de la Bibliothèque,” in Series V. (Fine Arts) and V_m (Music), but not the musical works (mediæval, foreign) in the “Département des Manuscrits.” To those unacquainted with the library it will no doubt appear strange that manuscripts should be in the “Département” for printed books, but such is the case.

The order in this *thematic* catalogue now begun will be strictly alphabetical; anonymous manuscripts will be placed under headings, such as *Airs*, *Motets*, *Masses*, *Sonatas*, &c. For the moment the object is merely to indicate books or manuscripts as briefly as possible; later will follow a methodical classification and definite description of them. This first volume is marked “A—Air,” but the long list of works under ‘Air’ will run into the next volume.

This Catalogue is being drawn up by Dr. Jules Écorcheville, who is well known for his erudition, and his interest in old music.

Musical Gossip.

MR. EMIL SAUER gave his annual piano-forte recital at Queen's Hall on Tuesday afternoon. His programme opened with Beethoven's Sonata in A flat, Op. 110, and the reading, so far as concerns technique, was perfect. The difficult passages in the middle section of the second movement were played *sans peur et sans reproche*, while all the points in the final fugue were made absolutely clear. But there was little or no display of emotion. Very different in that respect were the performances of Schumann's ‘Faschingsschwank aus Wien’ and some Chopin solos. Mr. Sauer must respect the old, so-called classical masters, but, unless we greatly err, he is far more in sympathy with modern music.

A VERY interesting performance of Bach's B minor Mass was given at the Queen's Hall by the Bach Choir on Tuesday evening. The work had evidently been carefully rehearsed under the able direction of the conductor Dr. H. P. Allen. There was some fine choral singing, which, had the tone of the sopranos been stronger, would have been still more impressive in such choruses, for instance, as “Cum sancto spirito” or “Et resurrexit.” On the other hand, the “Et incarnatus” and “Crucifixus” were rendered with beauty of tone and rare expression. Of the four solo singers, Madame Le Mar and Miss Dilys Jones and Messrs. Gervase Elwes and J. Campbell McInnes, the last two proved the best interpreters. Sir Walter Parratt was efficient at the piano-forte, also Dr. W. H. Harris at the organ.

ON Monday evening Dr. Hans Richter conducts a London Symphony Concert for the last time. The programme includes Wagner's ‘Meistersinger’ Overture, a Haydn

Symphony in E flat, Brahms's Violin Concerto (soloist Herr Bronislaw), Beethoven's Eighth Symphony, and Mr. Hamilton Harty's tone-poem ‘With the Wild Geese,’ which will be given under his own direction. Dr. Richter will conduct only once more in London, as he has kindly offered his services for the concert at Queen's Hall on March 30th, in aid of the British Musician's Pension Society.

THE first volume of the correspondence of Richard Wagner with his publishers, edited by Dr. Wilhelm Altmann, has just been issued by Messrs. Breitkopf & Härtel. Although these letters deal with purely business matters, they contain many interesting details concerning the origin and publication of Wagner's works. This volume includes the correspondence with Breitkopf & Härtel, the firm which in 1832 printed the Piano-forte Sonata, composed when Wagner was nineteen years old, and dedicated to his teacher, Theodor Weinlig. This was the first published work of Wagner. It is interesting to note that in the previous year he had not only offered to the same firm a piano-forte arrangement of a Haydn symphony, but had also declared himself ready to arrange all that master's symphonies. The second volume of the ‘Correspondence’ will follow shortly, and the third and last in 1912.

AN excerpt from ‘Westward Ho,’ an opera by Mr. Napier Miles, the libretto of which is based by Mr. E. F. Benson on Kingsley's novel, was given at an orchestral concert at Queen's Hall last Monday evening, and under the direction of a new-comer, Mr. Nigel Harington Balfour. The music shows, and very strongly, both in its themes and orchestration, the influence of Wagner, but the treatment of the former is symphonic rather than dramatic. The workmanship, however, if somewhat formal, is sound. Mr. Balfour gave a vigorous reading of the Overture to ‘The Flying Dutchman.’ He also conducted Beethoven's c minor Symphony. There were good moments, but neither the mystery nor the power of the music was revealed. Madame Ilma Adowska, also a new-comer, who sang “Dich, theure Halle” from ‘Tannhäuser,’ and “Vissi d'arte” from ‘La Tosca,’ has a dramatic soprano voice, and is evidently accustomed to the stage.

DR. HANS RICHTER's successor at Manchester has not as yet been appointed. Herr Ernst von Schuch, Prof. Julius Butts (former municipal conductor at Düsseldorf), and Prof. Reuter-Müller (who recently conducted a London Symphony Concert) are named as possible candidates for the post.

Le Ménestrel of March 11th mentions three composers, in addition to Liszt, the centenarians of whose birth occur this year. Of these, Ferdinand Hiller and Wilhelm Taubert, as composers, are almost forgotten. The third, Ambroise Thomas, lives by virtue of his opera ‘Mignon.’ Produced in 1866, it was performed in Paris for the thousandth time in 1894, two years before the composer's death.

DR. STRAUSS's ‘Der Rosenkavalier’ was produced at Dresden on January 26th, and soon after that event Mr. Fred C. Whitney acquired the performing rights of the opera for Great Britain and America. The contract, which expires on October 31st, 1912, gives the right to perform the work twenty times in London.

MESSRS. SOTHEBY will sell by auction on the 22nd inst. some interesting autograph letters

and music by Haydn, Beethoven, Rossini, Meyerbeer, Mendelssohn, Donizetti, and Spohr.

MR. MURRAY is adding shortly to his “Music Lovers' Library” a work by Mr. H. E. Krehbiel on ‘The Piano-forte and its Music.’ In this work Mr. Krehbiel traces the development of the popular instrument from its beginnings.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	Sunday Society Concert, 3.30, Queen's Hall.
—	London Symphony Orchestra, 3.30, Palladium.
—	National Sunday League Concert, 7, Queen's Hall.
MON.	London Symphony Orchestra Concert, 8, Queen's Hall.
—	Miss Marie Hela's Vocal Recital, 8.15, Aeolian Hall.
TUES.	Miss Rhoda von Glehn's Vocal Recital, 3, Bechstein Hall.
—	Marcian Thalberg's Piano-forte Recital, 3.15, Aeolian Hall.
—	Miss Helene Hurner's Song Recital, 8.15, Aeolian Hall.
—	Miss Lillian Shimbarg's Piano-forte Recital, 8.15, Bechstein Hall.
WED.	The Classical Concert Society, 3, Bechstein Hall.
—	Mr. Wesley Weyman's Piano-forte Recital, 8.15, Aeolian Hall.
—	The Edward Mason Choir, 8.15, Queen's Hall.
—	Mr. Cyril Scott's Concert, 8.15, Bechstein Hall.
—	Miss Jessie Field's Piano-forte Recital, 8.15, Steinway Hall.
THURS.	Mr. Theodore Byard's Vocal Recital, 3.15, Bechstein Hall.
—	Mr. Byndon Ayres' Vocal Recital, 3.15, Aeolian Hall.
—	Miss M. Cunningham's Lenten Matinée Musicale, 3.30, Claridge's Hotel.
—	Messrs. Maurice Farkoa and Hayden Coffin's Matinée Musical, 3.30, Steinway Hall.
—	Mr. K. Maitland and Mr. N. Swainson's Song and Piano-forte Recital, 8.15, Bechstein Hall.
—	Broadwood's Chamber Concert, 8.30, Aeolian Hall.
FRI.	Miss Floyd Ariston's Concert, 8, Bechstein Hall.
SAT.	Lamond's Piano-forte Recital, 3, Bechstein Hall.
—	Messrs. A. Cortot's and Jacques Thibaud's Sonata Recital 2, Aeolian Hall.

DRAMA

THE WEEK.

LITTLE THEATRE (MISS LILLIAN MCCARTHY'S SEASON).—*Anatol*. Dialogues of Arthur Schnitzler. Paraphrased by Granville Barker.

IT is rather late in the day for Londoners to be making the acquaintance of ‘Anatol’ many years after its Viennese vogue, but then our stage is often behind the times. Now the opportunity is offered, thanks to Mr. Granville Barker's having taken enough interest in Herr Schnitzler's dialogues to paraphrase them and act in them, and his wife's starting her season at the Little Theatre with a programme made up of five of the series. Three of them, it is true, have been produced already at the Palace, but a large variety house hardly provides the right medium. For the effects of glancing wit and delicate analysis to carry, they seem to need that close contact between audience and actors which can only be secured in a *théâtre intime*. Mrs. Grundy will not approve of them, but to the playgoer who is more anxious to understand phases of life than to censure what is unfamiliar or opposed to his conventions they should furnish very palatable, if highly seasoned fare. The very lightness of the entertainment may disconcert some people; listening to no fewer than five of these dialogues is rather like dining off a succession of the most unsubstantial of viands. They are varied enough in their small way, but, as the possibilities of variation are bounded by the personality of Anatol himself, and his sole interest is the pursuit of sex-adventures and the examination of his own and his lady-

love's states of mind, there is a strong family resemblance between them all, and the hero's curious mixture of cynicism and self-deception, of libertinage and hectic sentimentality, tinges the entire group. But their wit is undeniable, and several of them show the philanderer paid out in his own coin very amusingly.

The pieces selected by Miss McCarthy begin with the sketch in which Anatol mesmerises his beloved Hilda on purpose to make sure of her fidelity or infidelity, and is then afraid to put the decisive questions. Then follows 'A Christmas Present,' picturing a chance encounter between the amorist and a former flame of his, who, as he talks of the humble sweetheart he worships for the moment and her delight in love, almost laments the caution which made her hold on to her position of a virtuous wife. Next comes 'An Episode' in which we see Anatol chagrined to find that he is not even a memory for a girl to whom, as it were, he has erected a monument in his mausoleum of dead amours. The two latter of these three sketches are the novelties of Miss McCarthy's programme, and the one introduces a pleasant touch of sentiment into the series, while the other gives a delightful comic surprise at Anatol's expense. But far and away the most dramatic and vivacious of the sequence are the dialogues of the 'Farewell Supper' and the 'Wedding Morning.' Anatol, robbed of the chance of being the first to break loose from an entanglement or almost deterred by his sentimental folly from attending his own wedding, is a spectacle to make even the most bored of playgoers laugh, and these two scenes go best at the Little Theatre.

Anatol's five sweethearts are neatly differentiated by Miss Gertrude Robins, Miss Katharine Pole, Miss Dorothy Minto, Miss Lillah McCarthy, and Miss Alice Crawford. The greediness of Mimi over her last experience of champagne and oysters is happily indicated by the actress-manageress, while Miss Crawford's Lona smashes the furniture of her lover's flat with a hysterical recklessness that makes the onlooker fearful for the safety of the more valuable stage properties. Mr. Granville Barker hits off, as might be expected from a man of his brains, the intellectual and introspective side of Anatol, but the light-heartedness and love-sick fervour of the philanderer he never seems able to suggest. Mr. Nigel Playfair as the hero's commonsense confidant, Max, gets much nearer the author's meaning.

OUR LIBRARY TABLE.

IN the "Pocket Edition" of "The World's Classics" we have received the first three volumes of a *Shakespeare* (Frowde) which is to occupy nine. The type is good and clear, though necessarily small, and the little books are meant to be read in the open air, as Mr. Watts-Dunton explains in a note on their special typographical features. They are therefore light and small enough to go into the pocket, and the page has

been arranged with a view to easy reading, the stage directions being printed in small roman characters, and the names of the characters throughout in full. The absence of all foot-notes, and the use of "an ideal eclectic text" without hints of corrupt passages or emendations, are justified by the use for which the volumes are designed, and with a multitude of other editions equipped with the annotations of commentators within our reach, we are well content to turn to the late Mr. Craig's Oxford text, his Preface being reprinted here to explain the principles he followed in his recension.

Besides these details, we notice that the general 'Introduction' is by Swinburne, being a reprint of the booklet published in 1906, which is a rapture rather than an appreciation, yet embodies essential points of criticism in the plays. To each of these Prof. Dowden supplies an introduction dealing briefly with matters of date and sources, and including illuminating comments both by himself and various critics. In his short space the Professor manages to put readers fairly in the way to enjoy and comprehend. We are glad to see that he lends no support to the heresy—as such we regard it—that Falstaff in 'The Merry Wives' is equal to his incomparable self elsewhere. On 'Measure for Measure' Pater is quoted, but the passage does not deal with the startling "convention" which allows a mismatching at the end, and on which Coleridge and Swinburne (see his Introduction, vol. i. p. xxvii) have written strongly. Altogether we have found these Introductions very suggestive and full of pertinent matter.

Beaumont and Fletcher: The Sea-Voyage, Wit at Several Weapons, The Fair Maid of the Inn, Cupid's Revenge, and The Two Noble Kinsmen. Edited by A. R. Waller. (Cambridge University Press.)—The Cambridge edition of 'Beaumont and Fletcher' is fast nearing completion. With the issue of this, the ninth volume of the series, only one more has to be published for the most ambitious enterprise Mr. Waller has undertaken in the Cambridge English Classics to become a reality. The editor adheres to his practice of giving, as far as common sense permits, a reprint of the text of the Second Folio. Only the most glaring mistakes of spelling are corrected; otherwise the system of that edition is faithfully followed. Since at the same time the appendix contains in this as in other volumes every textual variation which is of the smallest significance, it may be said with justice that the student of 'Beaumont and Fletcher' has here everything he can possibly want except a critical and interpretative commentary. For the latter it is necessary to turn to the splendid 'Variorum' Edition, which still lags far behind and seems unlikely to be completed for two or three years to come.

Apart from one notable exception, the plays contained in this volume are but of average merit. 'The Sea-Voyage,' generally now attributed to Fletcher and Massinger, is one of those stage-romances or fantasies with which the older playwright and his colleagues gratified sentimental playgoers of their day. Its theme deals with the way in which the passion of love invades and breaks up a colony of Amazons, and all the conventions of coincidences, strange meetings, and the discovery of long-lost relatives, are freely employed.

In 'Wit at Several Weapons,' if we may judge by an epilogue delivered at a revival of the play, Fletcher had no very large share, and authorities of to-day describe it as a recension of an earlier Beaumont and

Fletcher piece made by Rowley and Middleton. It is a comedy treating of a single eccentric humour, rather in the style of Ben Jonson, its leading character being a knight who attaches an extravagant importance to wit, and its methods are broadly farcical and often coarse. 'The Fair Maid of the Inn,' apparently a composition of Fletcher's which Rowley may have helped Massinger to revise, ranks a little higher than the two plays already mentioned. It belongs to the genre of mixed comedy and romance, and, along with passages of a brisk and lively humour, contains a plot, somewhat like that of 'The Winter's Tale' which is worked out with no little poetic feeling: but it does not reach the level of Fletcher's best efforts in this style, e.g., 'The Elder Brother.' As for 'Cupid's Revenge,' in which not only the titular authors, but also Massinger, and even perhaps Field, had a hand, it is a tragic burlesque which not all Swinburne's enthusiasm could think redeemed from contempt by more than a scene or two pointing to Beaumont's authorship.

Last of all in this volume comes 'The Two Noble Kinsmen,' in which, if we can put any faith in the title-page of the quarto, and the judgment of a number of scholars, no less a person than Shakespeare collaborated with Fletcher. That in this dramatization of the 'Knights Tale' of Chaucer there are marked discrepancies of style pointing to a partnership of authors the most casual of observers may discover for himself. But we feel that Shakespeare would never have sanctioned the vulgarization of Ophelia which is contained in the underplot, and, even though he may have mapped out one or two scenes, tests supplied by metre, similes and parallel situations suggest a wholesale revision in which Massinger was concerned.

Anatol: A Sequence of Dialogues. By Arthur Schnitzler. Paraphrased for the English Stage by Granville Barker. (Sidgwick & Jackson.)—Mr. Granville Barker declares that in a faithful translation of these vaudevilles, their peculiar charm must disappear, and that only another Schnitzler could recreate it in English. How far the lyrical quality of the author's style has suffered in this paraphrase, and to what extent Mr. Barker has overdone his attempt to be colloquial by the employment of slang, only a German or Austrian reader can perhaps decide. At all events, we obtain here the general sense, and the drama and "psychology" of these sprightly dialogues, and for this, which is a great deal, we owe Mr. Barker thanks. It is an odd picture which Herr Schnitzler offers here of the life, morals, and point of view of a Viennese man of fashion. Anatol is an idler whose whole existence is made up of a succession of love-affairs. An incurable sentimentalist, he is morbidly analytical of love. He is an amorist turned philosopher, a valetudinarian who is always feeling the pulse of his affections. He has fierce momentary passions, and he is capable of the most acrid and brutal jealousy; yet anticipations or retrospects are more to him than the actual caresses of the woman he loves. He almost savours disillusion with the first kiss, and he is never more penitent than when he is on the verge of a fresh intrigue. As a friend tells him, "All you think of to-day is your yesterday's remorse for the sins that you mean to commit to-morrow." He is an obvious decadent with something of a poet in him and glimpses of humour that set off happily his incurable vanity and volatility, but a man bound to be unhappy in his frivolous way because to the instincts of a

libertine he adds the curiosity of an inveterate and self-torturing introspection. His creed is purely antinomian, and his notions of women are Sultanic; his hedonism is shameless, yet amusing. That is why he should make so interesting a figure—he turns himself inside out for his audience's delectation. But of course such a hero must be shown in action, if he is really to reveal himself; not all his philosophizings can explain him so well as one instance of Anatol really in love. Herr Schnitzler artfully shows us now and then the cynic and the infidel beaten with his own weapons. There is no droller dialogue in this sequence than that which describes Anatol's angry amazement when, on arranging to part with a girl of whom he has tired, he is anticipated by her in the announcement of her farewell, just as there is none uglier than the episode in which, having committed an outrageous lapse on the very eve of his wedding, the philanderer is confronted next morning with the hysteria of a scorned mistress, and is almost prevented from meeting his bride in time for the ceremony.

These little plays, it will be seen, do not idealize the life of which they treat; they let us see it for what it is—ignoble, vicious, and sordid, despite its superficial aspect of gaiety. Their merits consist in fidelity of observation, insight into the subtler moods of sentiment and jealousy, an unflinching wit, and a very pretty turn of humour. What we say here may be supplemented by our notice of the little plays this week.

The Open Window.—February. (Locke Ellis.)—This tiny magazine, which tries to keep, and succeeds in keeping, up well the tradition of *belles-lettres*, provides in its February issue a "special dramatic number." Among its contents are a charming little one-act play by Mr. Hugh de Selincourt entitled 'St. John and the Orphan,' and "a rough note on staging" by Mr. Herbert Trench. The play ought to find its way into the bill of some theatre; the rough note deserves quotation at some length, so interesting are Mr. Trench's descriptions of the possibilities of stage-lighting to-day. Here are a few extracts from his paper:—

"The modern stage is much more than a picture. It is a world of air which can be charged in every corner, from the keyboard of the electrician, with emotional light and emotional shadow.... Lit by arc lights, the five side battens in the wings, the five top battens in the roof of the scene, are so many potentialities of illumination, in twenty-four shades of delicacy and difference.... Between and within the layers of scenic colour can be interposed layers, or intervening wands, of illumination. We have but begun to measure the range of the puissant artist's opportunities. He has a vast brushwork, spraying light, wielded from the manual of the electrician. He can ring innumerable changes of lovely rays on mobile and sensitive faces, on the shifting and shimmering textures of the robes of his players, arrayed and patterned at his choice. Among his pigments are the moving limbs of dancers and actors, and the warm lineaments of all the passions.....

"And what soft immensities of suggestion may he not impart by means of veils, be they steams or gauzes? Diffused glows through purple roof canopies or velarium; veils of silk, white gauzes, or fine and black gauzes well-nigh invisible; veils behind veils; painted cloud-gauzes of forest-trees that become translucent, and as it were non-existent, when suddenly illumined from behind, yet again resume solidity when the screened blaze behind is withdrawn and a front light breathed upon them. Each gauze has its quality of added atmosphere, its degree of mystery.... Out of the depth of dark velvet background, wavered in shadow, can be shaken the delicate frosty sparkle of thousands of stars, producing an amazing dense blue infinity, such as in the zenith of the deep sky of Venice dwells, on an

August night, in the shadow shot up above the summit of her Campanile."

Are not all these, asks Mr. Trench, kingdoms for the painter, lures for any born designer to assault the boards of the theatre? What a field, he suggests, for skill, for patience and imagination!

Dramatic Gossip.

ON Monday next Mr. Matheson Lang and his wife (Miss Britton) will make their first appearance in the West-End since their return from Australia at the Palladium in a costume play entitled 'The House on the Heath.' This is based on a quarrel between Col. Blood and the Duke of Ormond in the reign of Charles II. The heath is Hounslow, and Mr. Matheson Lang takes the part of the famous Claude Duval.

MR. JOHN S. FARMER is making steady advance with his series of "Tudor Facsimile Texts," of which sixty-six volumes have been issued. Special attention may be directed to the Apocryphal Shakespearean plays, nearly all of which, except four, have now been published.

IN the press are 'Everyman' in the Skot edition, together with the B.M. fragment by Pynson; 'Ralph Royster Doyster,' 1552; 'The Three Lords and Ladies of London,' 1588; and 'The Cobler's Prophecy,' 1594, from the Dyce copy at South Kensington.

LITERATURE

A PASHA ON THE SOUDAN.

FEW men so well qualified as Artin Pasha to appreciate and criticize the position of affairs have visited the scene of the Anglo-Egyptian Condominium. As Minister of Education in Egypt for a quarter of a century he has been in close touch with native thought and opinion, whilst as one of the Armenian race, which has played so important a part in Egyptian administration since the days when Bedr el-Gemali founded the great gates of Cairo in the eleventh century, he has never lost sight of the interests of the Christian minority. Trusted and esteemed by Lord Cromer, Artin Pasha has long been one of the most popular figures in the European society of the capital, and his numerous friends have delighted to welcome him on his frequent visits to England. That he should be predisposed to view with favour the work of Sir Reginald Wingate and his administrative staff in the Sudan may easily be surmised, but if any reader imagines that the Pasha is one to subordinate his judgment to official flattery, he is entirely mistaken. Artin Pasha is too honest and too frank to play the sycophant. He is also too clear-sighted to be imposed upon, and his facile power of cross-examining witnesses in their own

England in the Sudan. By Yacoub Pasha Artin. Translated from the French by George Rebb. (Macmillan & Co.)

language gives him exceptional means of arriving at something near the truth. His unpretentious account of what he noticed in his journey, accompanied by Prof. Sayce, up the Blue and the White Nile, written in simple, unaffected letters to his wife, may therefore be taken as testimony of unusual significance.

Naturally the Pasha took particular notice of the machinery now being set up for the education of the Sudanis, and it was no small pleasure to him to be recognized and thanked by many an official who had studied under his Department at Cairo. But education is in its infancy in the Sudan, and, though he inspected many schools, including some for girls, well founded and even prospering, he observes that the teaching staff is a difficulty, "inasmuch as teachers must, for a long time to come, be drawn from Egypt, and the abhorrence felt by Egyptians for the Sudan is only equalled by their love of money." Egypt cannot as it is provide enough teachers for her own schools; and, if teachers are induced to go to the Sudan, their salaries are not large enough to prevent their trying to get into more lucrative branches of the public service. The results are a too frequent change in the teaching staff and a consequent lack of continuity in the work; but in spite of this, we are glad to hear, "the progress already achieved is most encouraging."

As to the general administration, the Pasha, writing from Khartum, says, "the people here detest the Turks and, above all, the Egyptians... Towards the English there is a feeling of reserve." They still reverence, and well-nigh adore, the memory of the Mahdi and the Khalifa; and the murderer of Mr. Scott Moncrieff, who was executed for his crime, is held to be a martyr. As others have previously reported: "the English inspectors complain that the respect of the Arabs for Government officials is disappearing." This is, no doubt, partly owing to the carelessness of English officials in exacting marks of respect, which merely bore them. Artin Pasha offers no explanation of the change, but adds the comment: "My own personal opinion has always been that East and West will never understand each other; Oriental democracy is uncompromising; that of the Occident is compliant"—which is, perhaps, a matter of opinion.

How far English officials may be prejudiced by the co-operation of Egyptians is another question. The Pasha remarks that "the Egyptians are of great service to the English in the administration of the country, but the Egyptian never loses an opportunity of getting the better of the Sudanese, by reason of his superior education, and the Sudanese, fearing reprisals, seldom takes action against him." When the Arabs and negroes learn to go behind the Egyptian official and appeal direct to the Englishman, then "I venture to say that the Egyptians must either mend their ways or leave the country."

Artin Pasha has seen too much of Egyptian officials to be under any illusions. Except under strict English control, they are not, in the opinion of good judges, to be trusted with power over natives. The peasant, according to the sheikh of Al-Tayyiba, "prefers the English official," and Artin Pasha himself pays many warm tributes to the wise and humane government of the Sirdar and the district administrators, whose characteristics he depicts in a frank and humorous way which might be disagreeable to the subjects if it were not so obviously appreciative and good-natured. The curt, silent, decisive promptness of one English official was softened by his consideration in lunching in his shirt sleeves in the midst of his properly coated staff, in order to set his travel-stained guests at their ease; and another "amiable, thoughtful and calm young man" displayed all those qualities of decision and self-reliance which excited the Pasha's unbounded admiration whenever he came across English officials working in their solitary posts in the Sudan.

The Pasha was captivated by the simple life as practised by the artless Sudanis. "They go about stark-naked, full of the joy of life," he exclaims in rapture.

"At night I found myself wondering whether, the day they become more civilised, their gaiety and contempt for the comforts of life will not vanish. They will not laugh then as now, nor will they prove so attractive to strangers, so amiable and confiding as they are at present... Matthews Bey said that the code of morals of these tribes is such as ought by contrast to bring a blush of shame to the cheeks of people both in the Christian West and in civilised Moslem lands. Liars, thieves, and murderers are unknown."

As Prof. Sayce remarks, with fine irony, "from the days of Homer downwards, the 'blameless Ethiopians' were to the Greeks a symbol of a people that could be civilised and nevertheless virtuous." The civilization is not exactly conspicuous at present, but the virtue is undeniable. It is, of course, absurd to generalize, nor does the Pasha attempt it, about a vast number of different tribes, whose customs and morals vary, but let us quote some idyllic customs of a people of the southern part of Kordofan, as described by an official who had long lived among them:

"One girl may have as many as from seven to fifteen wooers, who court and flirt with her for a whole year, in the sight of... her parents. They not only visit her in the daytime, but remain at night near her dwelling to mount guard outside her room, going so far even as to keep watch within her room in order to be at her service in case she should awake. If she asks for water, as many calabashes of water are offered to her as there are lovers in attendance. Should she desire to pay calls on her friends, the whole of her lovers offer to carry her palanquin, and again it is the aspirants to her hand who undertake to anoint her with butter every morning. The period of courtship lasts for a year, at the end of which period the beauty must make her choice. When she does so the unsuccessful wooers go off to repeat their performance with

another girl, but . . . one never hears of a case of immorality.

"The girls are perfectly free before marriage. If a man on horseback passes a group of girls at the entrance to the village, they stop his horse and compel him to choose one of them. Under pain of being discredited in the country, the young man is compelled to do as requested, and the girl he selects takes him completely in hand, guarding her virtue the whole time they remain together . . . during which the young man is obliged to satisfy the thousand and one whims of the mistress he has chosen."

These maidens are black and (nominally at least) Mohammedans, but in the matter of rights and liberties they have little, it is clear, to learn. The Shilluks of the White Nile, on the other hand, are as far as possible from being Mohammedans, yet their women have similar privileges :

"With the Shilluks it is the women that rule the household, the young women themselves that choose their husbands and that, once married, assume the post of command. The strongest and most hot-headed man dare not beat his wife, for he would be looked down upon immediately, and would be unable to find a second wife to succeed his first. No missionary effort affects the Shilluk woman: it is practically impossible to convert her either to Christianity or to Islamism, for she is the guardian and depository of the Shilluk traditions, religion, and historical customs."

The Pasha remarks that these dames "seem to have passed the limits of even American women," and naively adds that but for the distance from Cairo and the wildness of the country he "would willingly pass several months in the midst of these good folk in order to learn the meaning of virtue in both the ancient and the modern sense of the word."

The "burning" questions in the Sudan are, as is well known, slavery (i.e., the labour question) and railway communications, to which must be added increased storage of water for irrigation. But railways are of the first consequence to enable the small army to strike efficiently where needed, and bring the products of the Sudan to market. Artin Pasha comments very favourably on the forests and rare and valuable kinds of wood up the Blue Nile, which he says will be "an agreeable surprise" when the transport difficulty is overcome. On slavery and on mission work he writes like the man of sense he is, and the opinions of Monseigneur Geyer, which he cites, are specially noteworthy. We have no space in which to discuss Artin Pasha's ethnological views or the curious historical traditions he mentions. He has long made a study of negro face-marks, and his notes on these may be compared with Dr. Kumm's recent table.

Mr. Robb, of the Khedivial Training College, Cairo, has translated the Pasha's French into fair current English, but he should not have passed the astronomical absurdity "in the zenith shone Mercury" at 4 A.M., or invented the double plural form *zagharites*. "Opt" for choose is

really only "journalese," and we do not like "deviate" as a transitive verb. Ockley is misprinted "Oakley." There is neither an Index, nor a Tableau Raisonné of Contents, a serious omission. The illustrations are numerous, but rather small.

Annals of a Yorkshire House, from the Papers of a Macaroni and his Kindred.
By A. M. W. Stirling. 2 vols. (John Lane.)

MRS. STIRLING is fortunate in her ancestors. And her ancestors, we may add, without undue flattery, are fortunate in Mrs. Stirling. In her biography of Coke of Norfolk she was able to give us a social and historical study of unusual interest. Now, thanks to the praiseworthy habit of the Spencer-Stanhope family, who, so far from following the example of a neighbouring Yorkshire Squire, and employing an attorney to destroy the old family papers at three guineas a day, seem to have made a point of preserving letters and diaries through succeeding generations, she presents us with a voluminous instalment of the annals of that Yorkshire House. This book is not of the same importance as 'Coke of Norfolk,' and it is far too long, but it contains much that is amusing, much of varied interest, and not a little that is important for the student of family histories. It is compiled and edited with the same painstaking attention to detail and lively and skilful use of biographical episodes to point a moral and portray a character which distinguished Mrs. Stirling's previous work. Nothing, for instance, could be better in its way than the narration of that lesson to the superstitious which hangs upon the peg of the discovery of Little John's thigh-bone at Hathersage; of the series of accidents which befell when it was exhumed, and of the cessation of such misfortunes when the dead man's bones were ordered to be restored to the grave, but, as it afterwards proved, were *not* so restored!

The story of the owners of Cannon Hall is ushered in by a cruel and treacherous feud, which rivals in horror many tales of a Southern Vendetta, and invests the records of the house with something of the remote and tragic dignity of an Æschylean drama. But though Mrs. Stirling delays us over long on the road, the two figures who stand out, amidst a host of minor characters, as the leading actors in this play of eighteenth-century life are John Stanhope of Horsforth, "t'owld Lawyer," as he was affectionately termed in the North, and his nephew, Walter Spencer-Stanhope, the "Macaroni" and politician. The former is by far the more interesting character of the two. Mrs. Stirling describes *con amore* the record of the vigorous and successful lawyer who sacrificed a great career at the Bar for the sake of his wife's love of the country, and contrived to combine frequent triumphs at the local

assizes with a leading position as a country gentleman, famous alike for his setters, his hounds, his fighting-cocks, and his race-horses. It is curious and instructive to see this shrewd and vigorous Yorkshire Squire of the olden days leading the Northern Circuit and at the same time ruling the primitive community of weavers at Horsforth with a sway as primitive as the rough folk he dominated.

His power was arbitrary and undisputed; it awoke an answering chord in the rough natures with which he had to deal, and bred a fealty which never faltered. Through the long street of the little town he strode, when leisure permitted, with a stout hunting-whip, without which he never stirred abroad; and, where he saw an idler, he fell upon the culprit and belaboured him soundly. To evil-doers he was a terror, to the poor and oppressed a helper whose beneficence never failed; in both cases he was backed by the power of the Law, which, it is said, he interpreted, wielded, or distorted in a manner before which England herself bowed.

With the advent of newspapers, railways, and universal education, this type of beneficent tyrant has almost disappeared from the countryside. Sir Roger de Coverley is as extinct as the arbitrary and eccentric figures who used to distinguish and astound the Universities.

Stanhope's nephew and heir, Walter Spencer-Stanhope, whose figure lives in Reynolds's picture of the Dilettanti Club, was a less exciting person; from first to last a shrewd and canny man; an immaculate youth, an ideal pupil at school and college, with a turn for poetry which he soon repressed, without any great loss to the world, we fancy, though Mrs. Stirling thinks otherwise. Nobody ever lived in more difficult and exciting times, and nobody ever kept his head better. One of the first and most accomplished of the Macaronis, and a member of the Society of Dilettanti, he drank and gambled, of course, but with a steady and studied moderation that might have roused the envy of Clive himself, and must have been incomprehensible to Charles James Fox. Nobody, we should imagine, ever better realized the ideal of his kinsman, the fourth Earl of Chesterfield, and it may be worth suggesting that the worldly wisdom of that accomplished cynic had much influence in shaping the course of this shrewd Yorkshireman, who, though he gratified scheming mothers by teaching their daughters the minuet which he danced as perfectly as Lord Chesterfield had done, was proof against temptation until he met the greatest heiress of the North.

Introduced to the world of politics by that amazing "tyrant of the North" Sir James Lowther, he bore with his relative's teasing humours until even he must have been satisfied that this was indeed a man qualified by his servility for a seat in Parliament as one of his "Ninepins." Yet, though cautious always, Spencer-Stanhope showed later that he was capable

not only of independence, but also of enthusiasm and moral courage. His enthusiasm he showed plainly enough in his speeches and his action in the early days of the Volunteer movement, when Napoleon was at our doors and England was studded with Militia camps; his moral courage and good sense alike on the question of the American War and in facing a Yorkshire crowd single-handed and cheating it of its legal right to bull-baiting. He was a poor shot and no great horseman, but that last incident gives him better claim to the reputation of a sportsman than the fact that his gamekeeper has the credit of having introduced grouse-driving into England. Yet the exact and colourless diaries of this intimate friend of Pitt and Burke and Wilberforce leave us cold and unsatisfied, and produce something of the same sense of disappointment as does the whole career of the man who by birth, wealth, ability, and sense seemed marked out for a career of the highest achievement.

"Heard Lord Chatham's speech in the Lords....Dined at Johnstone's with Burke and Fox. Agreeable." Such are the typical, laconic entries which pique us with the thought of lost opportunities, and compel us to wish that the diarist had spared a few hours from the social life he loved so well for the purpose of recording his memories and impressions more fully. Our disappointment is the sharper because Stanhope was both keenly alive to the supreme excellence of the orators to whom he listened, and yet able to keep his head in spite of their rhetoric. This was clearly shown after Sheridan's great speech on introducing his motion respecting the Begums of Oude. Stanhope then and afterwards declared it to be the finest speech he ever heard. So completely absorbed was he during its delivery that he could not even change his position. But at the close his head was clear enough to prompt him to move the adjournment of the House, in order "to calmly consider the truth and justice of what had been stated." Yet Stanhope, who was no mean orator himself, who had the *flair* to make a wager in 1780 that William Pitt would be Prime Minister, and who remained the intimate friend of that statesman, exercised little influence in the political world. Probably the taste that made him a Macaroni and a Dilettante conflicted with the serious business of politics. Nothing perhaps here recorded of him quite comes up to the pleasurable anticipations roused by the delightful miniature of him, done in Paris in 1770, which forms the frontispiece of these volumes. We note that Mrs. Stirling makes a slip in describing the plum-coloured hat which the Macaroni holds in his right hand as black.

There are several points of personal history upon which these volumes throw new light. Mrs. Stirling quotes a direct statement made by Boyd the banker to Stanhope's daughter that the money for which Lord Melville refused to account,

and so brought about his retirement from public life and helped to shatter Pitt, was advanced by him, for political and national reasons, as a loan to save the firm from bankruptcy. Boyd had been a prisoner in France at the time of the catastrophe, and this subsequent statement of his confirms the universal opinion of Lord Melville's contemporaries that he was, as the editor of the *Arncliffe Memoirs* has put it, personally innocent of anything in the shape of speculation. A letter from Stanhope after the Carlisle election of 1774 makes it clear that Antony Storer was brought in by the Lowther interest, but as the result of a compromise with Lord Carlisle. This explains Storer's attitude in the ensuing Parliament when he voted regularly against Sir James Lowther's party, siding with Lord North, whom Lord Carlisle favoured. On these grounds historians have been led to think that that leader of fashion could not have received the support of the "tyrant of the North."

Elsewhere Mrs. Stirling refutes Mr. Gathorne-Hardy's denial, lately put forward in his life of the first Earl of Cranbrook, as to the identity of John Hardy, the steward of Cannon Hall, with John Hardy of Bradford. The story of the honourable rise of that family to wealth and importance through the investment of Walter Spencer-Stanhope's honest and sagacious agent in the property of the Low Moor Iron Company, is shown to be correct. Mr. Gathorne-Hardy dismisses Mrs. Pickering's version of the matter as idle gossip which, for some reason, had proved painful to his family.

The work is well seasoned with anecdotes, and such curiosities of literature as a "Jesuitical" Cavalier-Roundhead poem, and a prescription for gout, which, with its foundation of six gallons of French brandy, seems to have forestalled the days of homœopathy.

The printing is good, and there is a serviceable Index. In another edition the author will probably prefer to print Orange for "Grange," where a certain traveller notices "a tolerable triumphal Arch" (p. 126).

Across the Roof of the World: a Record of Sport and Travel through Kashmir, Gilgit, Hunza, the Pamirs, Chinese Turkistan, Mongolia, and Siberia. By Lieut. P. T. Etherton. (Constable & Co.)

LIEUT. ETHERTON in the preface and introductory chapter explains how, when quartered at Chitral in 1906-7, he formed the wish to investigate the lands beyond our boundaries; to perform a journey never previously essayed by penetrating to the heart of Asia; and to combine with travel the interest of sport. Of these objects the most difficult by far is to find a country which has never been visited by travellers or sportsmen. Indeed, to

be able to assert that any locality has never been so visited implies an acquaintance with the records of sport and travel appalling to contemplate. However that may be, preparations for the intended journey were made providing for difficulties so far as the author's experience could forecast them, and the necessary permissions from the Governments concerned (India, China and Russia) were obtained. Stores and outfit, arms and ammunition, were procured, and a man from the 39th Garhwal Rifles, named Giyan Sing, was selected as orderly. The Garhwalis are little sturdy men like Gurkhas, but of a distinct race; and Giyan Sing worthily upheld the good name of his race and regiment. He was the only man of the various attendants who went through the whole expedition:—

"His experiences throughout so extensive a field of travel, and the marvels they brought in their wake, culminating with our arrival in London, the hub of the mightiest Empire the world has ever seen, were indeed a revelation to him. Until we reached Flushing, 11½ months after leaving Lansdowne, he had never set eyes upon the sea, whilst the area of vast London, the wonders of tube railways, the ceaseless stream of people encountered in the streets, and numerous other astounding sights left upon him a profound and lasting impression."

The wanderings began on March 15th, 1909, from Lansdowne, a cantonment in the Himalaya 6,000 ft. above sea-level, and ended at a station on the Trans-Siberian Railway on February 17th, 1910. Thence London was reached just within a year. The route followed was by Amballa, Lahore, Rawalpindi, and Murree to Srinagar, where the special kit for hill travel was got; thence to Gilgit, before the road was properly open for the season and consequently dangerous on account of avalanches. Here the author was a guest of the Agency and rested comfortably for ten days; on April 20th, 1909, he continued his journey by the Kanjut Valley, emerging thence, by the Mintaka pass, on the roof of the world. The Mintaka, though steeper, has less snow than the Kilik pass, by which travellers usually ascend.

Arrived at the Pamirs, the author sought to shoot *O. poli*, whose head is a coveted trophy. He suffered much tribulation, but did not come empty away, and eventually reached the upper waters of the Yarkand River. So far his route does not seem to have been different from that usually followed, except that from the Mintaka pass he travelled eastward to the river, instead of northward by Tashkurgan to Yarkand. This part of his journey was, as is stated, by an unknown route over a pass he calls Qogoi Qotchkor, a place as forbidding as its name is grotesque. Here there was serious trouble; a Yak, carrying the "most important kit, negatives, uniform, and presents destined for Chinese officials," lost its footing, and gathering impetus as it slid, fell some 2,500 ft., where it was found next day wedged between blocks of ice, and as may be imagined, in a mutilated

condition, with no vestige of its load except the ropes by which it had been bound. The advantage of selecting this route is not evident, for no sport to speak of was got, nor does any addition to geographical information appear in the shape of maps, whilst the risks of the route were entirely disproportionate to any probable gain.

At Yarkand Mr. Etherton was again on the beaten path which he followed to Kashgar, proceeding thence by Maralbashi, Aksu, and Kuchar (Kuchê of Younghusband, and Kutcha of Church) towards the happy hunting-grounds of the Tian Shan. At the various places of any importance he dressed in full uniform and called on the Chinese authorities, by whom he was well received, occasionally overfed, and materially assisted on his way. There is no question of the wisdom of taking uniform on such journeys; the compliment to foreign officers in wearing it on state occasions and the advantages resulting therefrom more than outweigh the trouble and cost of carriage, though both are considerable.

Some reward for the author's enterprise was reaped in the shape of sport in the Tian Shan; he secured fine trophies of the maral or Asiatic wapiti, roe-deer, and ibex, his best horns of this magnificent goat being 55 in., and he had four heads between that and 47½ in. He left the Agiass Valley on October 25th, as his contemplated journey to the Altai range required time, and winter was approaching, and advanced to Kulja and Chuguchak, a town on the boundary of China with Russia at the foot of the Tarbogatai mountains. Thence he proposed to travel eastwards in Mongolia, and, turning north, to strike the Trans-Siberian Railway and return to India by Peking and Shanghai.

The programme was, however, too extensive, and his final mishap came in an attempt to cross the Altai in midwinter. Trouble followed trouble, culminating in frostbite, from which Giyani, the orderly, and his master suffered severely. Relief was found, after much tribulation, at Zaisan, a small Russian military post with a hospital. Here the camp was virtually broken up, the leader and his orderly making their way by Baraul to the railway, and thence to Moscow and England.

The volume is more agreeable to read than easy to review; it is very heavy to handle, doubtless from the use of glazed paper for the numerous illustrations. It is well printed. At p. 313 Father Schmid is mentioned and the letters suggest Schmidt, but the unpronounceable form is elsewhere repeated and may be correct; and at p. 344 we are told that some Chinese soldiers carried smooth-bore rifles, which is ordinarily a contradiction in terms; small bore is probably intended, for, though a smooth-bore rifle does exist, it is unlikely to be found in the hands of the garrisons of the Russo-Chinese frontier.

Anglo-American Memories. By George W. Smalley. (Duckworth & Co.)

THESE reminiscences bear signs of their origin; that of weekly contributions to a well-known American newspaper. That is to say, they are frank journalism, and make no pretensions to be connected autobiography. Still, Mr. Smalley has enjoyed such varied experiences, and has known so many interesting people, that even his unstudied outpourings have a certain value, though that value is slight. He is, perhaps, best worth reading when dwelling on the fast vanishing New England of his youth. Some of his lawyers and professors cannot be said to have attained more than local celebrity, but he gives a capital account of a visit to Emerson—when the sage thundered forth the advice, "Keep your mind open: read Plato"—and tells a good story or two about Richard Henry Dana, the author of 'Two Years Before the Mast.' Mr. Smalley also writes with some authority on the beginnings of the Abolitionist movement, assigning to Wendell Phillips a far greater measure of authority than to Garrison, of whom he says:—

"To look at, he was neither soldier nor saint. He had not, on the one hand, the air of command, nor, on the other, the sweetness or benignity we expect from one of the heavenly host. His face was both angry and weak. His attitude on the platform was half apologetic and half passionate. His speech at times was almost shrewish. It was never authoritative though always self-complacent. So was the expression of his face, with its smile which tried to be amiable and succeeded in being self-conscious. There was no fire in his pale eyes: if there had been his spectacles would have dulled it."

The personal magnetism of Daniel Webster, "an august, a majestic figure from which the blue coat and buff trousers and the glitter of gilt buttons did not detract," is well brought out; and we get a glimpse of Charles Sumner, not long before his death, enjoying himself in France like a boy.

Mr. Smalley conducts his readers into the interiors of newspaper offices, and we cannot honestly state that his English public is likely to be arrested by his revelations. Over here, whether rightly or wrongly, we do not concern ourselves as to how things get into the papers, and, except when a war is in progress, take little stock in the proceedings of our journalists. In the United States, no doubt, a larger amount of curiosity exists about the purveyors of news and comment. To his own country Mr. Smalley makes appeal as his triumphant figure swings to the front on a mission to determine if Hooker or another was good enough to command the Army of the Potomac, or as he imposes with all-embracing foresight on the management of *The Daily News* a joint partnership in correspondence with *The New York Tribune* during the hostilities between France and Germany.

Sir John Robinson seems to have been annoyed when in later years Mr. Smalley stated in print his view of the merits of the case, and we cannot agree that his grumbling was "without reason."

During his residence in this country Mr. Smalley stored his memory with facts and anecdotes, and the highest in the land came under his observant eye. He met King Edward, when Prince of Wales, at Homburg (where we are given to understand that he was always addressed as "Sir" or "Your Royal Highness"), and conveyed a photograph signed by the royal hand to an American girl who was staying in the place. "I was just going to leave it for her at the hotel," were the august words. "But I am afraid to. I don't know what she may not ask me next." The Empress Frederick, on the other hand, disappointed Mr. Smalley; she talked the whole time, and her views on American affairs were erroneous. While travelling by train with Lord Kitchener, Mr. Smalley noted that he did not appear to advantage in his grey clothes, none too well fitting, but when the evening came he was another man. Trivialities of this sort do not, of course, make up the whole of these 'Anglo-American Memories,' but there are too many of them. In the columns of a newspaper they may pass, but they are hardly worthy of book-form.

Mr. Smalley rises too seldom above foibles of manner; he belittles Lowell because he was "donnish" in society, and considers him to have lacked the qualities essential to a Minister. Yet, if Lowell was overbearing in conversation, his literary addresses were of a fine quality, and much appreciated by humble people who never rub shoulders with ambassadors.

Lord Randolph Churchill, we are told, was fascinating as a host; still he could tell Mr. Chamberlain across his own table that the Indian Civil Service was no longer composed of gentlemen, but you got men "from—Birmingham and God knows where." Most of those whose careless table-talk Mr. Smalley committed to memory are dead, no doubt. Still they were alive not so very long ago, and it could be wished that he had made a more serious effort to sum up their characters.

NEW NOVELS.

Demeter's Daughter. By Eden Phillpotts. (Methuen & Co.)

ONE is inclined sometimes to wonder if Mr. Phillpotts's world as depicted in his stories is not a world of his own rich imagination rather than the world of Dartmoor. He has certainly the vernacular of the Forest to a nicety, and he knows every tor, knoll, upland, and valley within the confines of the moor. In this setting the folk are more interesting, we dare contend, than the ordinary denizens of the Forest would be found to be in a psychological census. The fact is that Mr. Phillpotts undoubtedly idealizes some

of the characters in his tragi-comedies, and he has also probably created more *dramatis personæ* than there are people in Dartmoor.

In his latest volume he has expended a great deal of his genius on the elaboration of the character of a weak, vain man. Aaron Cleave is not specially characteristic of the moor; he stands rather for a type of human nature which may be found everywhere. The development of his character under the novelist's hands is masterly. The woman, his wife, is equally well limned; indeed the whole history of the Cleave family is set forth with the inevitableness of Greek tragedy. The humours of the Dartmoor folk are, as always, depicted with a lively appreciation and a familiar knowledge of Devon ways. We have no hesitation in ranking 'Demeter's Daughter' as among the ripest fruit of the author's genius.

Mothers and Fathers. By Mrs. Maxwell Armfield. (Chatto & Windus.)

THERE are those who would cry fire in Noah's flood, but we should not have thought that there was pressing need just now to preach the desirability of young people taking their own course in life, irrespective of their parents. Be this as it may, our author, like her heroine, is "a flame-like apostle of progress," whithersoever it may lead. That being so, we may discount her estimate of her political opponents, and set ourselves to enjoy the story. Mr. Maddox is an agnostic house-agent. He has broken with his particular blend of Nonconformity because the minister prayed for the success of the British arms. He could no longer believe in a God who did not strike the minister dead. Thenceforth he concentrated his breadth of view on the education of his children. Both he and their mother are pathetic in their earnestness, but their excessive surveillance drives the family apart, not to be reunited until knowledge of the world corrects youthful intolerance. The book is able and readable.

Knight Checks Queen. By Mrs. L. Lockhart Lang. (Alston Rivers.)

MRS. LANG'S humour is effervescent in its spontaneity, and her story is of the kind which awakens at the start a piquant sex-interest. Her heroine has scarcely reached the marriageable age when she goes through a form of marriage with a man of science in order to have liberty to train her voice. The passionless character of the marriage is maintained until the wife has nearly blossomed into a prima donna. Then her husband's financial breakdown causes her, without his consent, to earn money by performing as a gymnast in tights. His attitude to this adventure is conventional; and when he has succeeded in obtaining a husband's privileges, he is indifferent to her operative aspirations and requires to have his duty to her genius

pointed out to him. A feature of the story is the fun which it extracts from hideous discords in family life. The heroine, despite her high temper, is decidedly likeable, and an aunt, profuse in imbecile conversation, is really funny.

The Leech. By Mrs. Harold E. Gorst. (Mills & Boon.)

MRS. GORST'S work has always shown a strong inclination to the morbid, which in the story before us seems to be indulged without restraint. Her heroine, rather a conventional type of imbecility combined with angelic goodness and beauty, is, by the folly of a mother much resembling herself, thrown as a young girl into the power of a diabolical aunt and cousin. Henceforth her life is a series of tortures, physical and moral, the only mitigation being provided by a singularly futile lover, who arrives too late on the scene to be of any effectual service. A tragic picture is drawn of the hardships and temptations besetting the career of a London shop-girl, but the very luridness of colouring tends to obscure the underlying basis of grim reality.

A Weak Woman. By W. H. Davies. (Duckworth & Co.)

IT is not easy to find the *raison d'être* for the title of Mr. Davies's book, as the figure to whom it is applied plays but a subordinate part in the action, and in no way influences the main issues. As a matter of fact, she is an elder sister of the narrator who has abandoned herself to alcoholic and other deplorable excesses. Many of the episodes concerning the underworld of London seem to have been written from personal experience, and, as such, have the qualities of their defects, together with a certain *naïveté* which is not without its pleasing side. But we cannot say that Mr. Davies's fiction is equal to the rest of his work in prose.

Oil of Spikenard. By E. M. Smith-Dampier. (Andrew Melrose.)

THIS is a remarkable achievement. Although he deals with Georgian times the author has avoided artificiality: his characters are living persons, each being nicely observed and skilfully delineated. The chief character is a pretty girl, living as a dependent with a vulgar aunt and hoydenish cousins. Corinna is something of a prig (the word "love" upon a woman's lips she regards as an impropriety!), and disapproves of a certain boyish parson who is in love with her but will not flatter her. Another lover comes on the scene who dazzles the young lady with his elegance, and gratifies her with homage to her intellect. Out of this situation the means are provided to discipline Corinna's pride. The narrative

parts are written in an excellent modern style; the dialogue is of the fashion of the age, but natural and lively; and the interest is well sustained.

A Wilderness of Monkeys. By Frederick Niven. (Martin Secker.)

IN 'A Wilderness of Monkeys' Mr. Niven again shows himself to be one of the few novelists who can convey a sense of the country in their prose. He tells of an author, Bliss Henry, who goes to a small town on the Border to find peace for his work, and finds no peace, but, what is more important, a woman of like tastes with his own, and professing similarly unconventional views of the relations of the sexes. The increasing antagonism between Bliss Henry and a censorious society is shown in a diverting and skilful manner; the incidents are small, but significant and of much interest; and the portrait of Bliss Henry is masterly. The style of this writer is intimate and remarkably virile. He is naturally frank where most writers are reticent.

Leila. By Antonio Fogazzaro. (Hodder & Stoughton.)

THE gradual yielding of the wayward, impetuous Leila (who was, we believe, dearer to her creator than any of his other heroines) to the love of Massimo Alberti is the occasion for perhaps the most charming of Fogazzaro's love-stories. The fact that she inherits her fortune a few months before coming of age gives him ample opportunity for describing with all his old humour her disreputable, grasping relations and the scheming "archpriest" and his companions. Massimo was a favourite disciple of the Saint, but numerous allusions show that our author valued the unity and authority of the Church above any private opinions, and that he was absolutely sincere in his submission. It is fitting that Fogazzaro's career should close with the description of Benedetto's burial in the little Valsolda churchyard and the death of the brave, large-hearted, humorous Donna Fedele, the good angel of the young couple, who possesses the very qualities that made Fogazzaro himself so dear to his many friends.

Fogazzaro is not an easy author to translate, and the present version, though accurate and conscientious, does not do justice to the original.

EGYPT AND THE NEAR EAST.

The New Spirit in Egypt. By H. Hamilton Fyfe. (Blackwood & Sons.)—Any one who wishes to get large views in a nutshell about the serious problems now being discussed in Egypt might easily do worse than read Mr. Fyfe's vivacious little book. It is journalism, but a journalist like Mr. Fyfe sometimes sees things accurately, and it is his business

to put them in a clear light. In this case the "things that matter" in Egypt are set forth with unusual clearness and moderation, and without the straining after epigram which is becoming general.

Mr. Fyfe, like better informed authorities, does not believe that the Egyptian has been materially changed by the influences of the last thirty years: "Beneath the surface there has been almost no change at all." That is obvious to any intelligent observer: a uniform and a smattering of Western schooling do not change the Ethiop's skin. Indeed, "we shall never do any good in Egypt or any other country by Western methods." Indian "unrest," it is argued, is largely due to Macaulay's initiation of the educational system which has evolved the Babu; the "National" movement in Egypt was bred by imposing Western education, of a superficial kind, upon Oriental character—putting new wine into old bottles, with the inevitable consequence. It produced the Effendi, who is the Egyptian replica of the Babu, and, like many replicas, a caricature. By the way, Mr. Fyfe seems to consider that "effendi" means "gentleman." Going by etymology, he might be justified, since "effendi" is merely the Greek *αἰθέριος*, modernly pronounced; but in Egypt an effendi is nothing more than a government clerk, and, instead of "gentleman," the description should be translated, after the manner of the British workman, "mister." It is to this "mister," whom Mr. Marmaduke Pickthall described to the life in his novel, that "Nationalism," i.e., the desire for a good post, and, if possible, a sinecure, is due. The syllabus of the Cairo higher schools is an example of attempting the impossible. They do these things better in the Sudan, where the Sirdar has a free hand, and aims at simple teaching and useful technical training, without introducing the methods of the late English Board school.

Mr. Fyfe is very severe on Sir Eldon Gorst, whom he holds responsible for the liberty of the "Nationalist" newspapers and agitators that "egged on poor wretches of the Wardani type to silly, fruitless crimes," like the assassination of Boutros Pasha; no one in Egypt, it appears, has a good word for Sir Eldon, and all attribute to him "the decline of British prestige and influence during the last two years." It is easy to make a scapegoat, and our own impression is that the decline began some time before the resignation of Lord Cromer, though the withdrawal of that tactful master undoubtedly hastened the crisis. At all events, we should prefer to abstain from attacks on a responsible officer who is not allowed publicly to defend himself. On the other hand, Mr. Fyfe has our approval in his demolition of Pierre Loti's sentiment in 'La Mort de Philæ,' and in his demonstration of the incalculable benefits conferred on Egypt by the construction of great dams. In saying that "as yet the fellah does not even understand what representative government means," that elections are "a farce," and that the fanaticism of the populace is exploited by "Nationalist" leaders who are themselves without religion, owing to the desiccation of old faiths caused by a varnish of Western education, he is within the truth; and his ridicule of the National Assembly which Lord Dufferin created in a weak moment—whilst holding up the ideal of the "Resident's masterful hand"—is well deserved. It is ill tinkering Eastern pots with Western patches.

There are slips in Mr. Fyfe's clever chapters, venial enough in one who makes no

pretence to special knowledge. The "brass nose-piece to the yashmak" is not of brass, nor is that kind of veil called a yashmak in Egypt. There are not two "Colossi of Memnon." Akhnaton did not reign "nearly fifty centuries ago," but only thirty-two. Mr. Fyfe has a humorous eye for scenery, for on the Sudan *train de luxe* he notes that "the only sights to take our attention away from the mirages are the empty beer-bottles, pathetic emblems of civilisation, which lie on each side of the track almost at regular intervals for hundreds of miles." It is refreshing, by the way, to find a correspondent of *The Daily Mail* deploring the violent exaggeration of the Egyptian newspapers and the fact that the ignorant native has become "a victim to the tyranny of the printed word." At home, apparently, it is not tyranny, but a safety-valve, and "the East does not understand the safety-valve principle." Some of us wish it were less understood in England.

The Danger Zone of Europe: Changes and Problems in the Near East. By H. Charles Woods. (Fisher Unwin.)—Mr. Woods has not been happy in his choice of a title; otherwise, we have little but praise for his book. It is unfortunately one of many that have been prompted by the Turkish revolution of 1908, and it can therefore hardly be said to "supply a long-felt want"; but it has qualities which justify its publication. The author has travelled a good deal in the more accessible districts of Turkey during the past two years, and has used his opportunities for observing the results of the revolution in the provincial administration. We apprehend that he is unable to converse in Turkish or Arabic, and therefore we find no such revelations of the mind of the people as rewarded Miss Gertrude Bell's linguistic fluency (see *Athen.*, Feb. 11). Mr. Woods's information comes chiefly from officials, merchants, missionaries, and men of position. It is not to be despised on that account, for his informants seem to be well chosen and to speak honestly and with authority. Probably, had he been in a position to talk with the peasantry in their own language, they would have filled him with lies, for it takes more than a brief tour to gain their confidence, and the travelling Englishman is inevitably associated in the vulgar mind with the powers that have to be prudently conciliated by appropriate fables.

Whatever Mr. Woods learnt he sets down without malice. We have seldom read a more fair-minded book. If he is perhaps a little carried away by the miseries of the Armenians of Cilicia, what is more natural? for he was at Adana a few months after the massacres, saw the desolation of the once flourishing and populous city and district, and heard the harrowing tales of the terrible days of April, 1909, from the lips of survivors. His account of these massacres forms the original part of his book, for no narrative equally detailed has before come under our notice; and the heroic work of Major Doughty Wylie, the Vice-Consul, and his plucky wife, the American missionary Mr. W. N. Chambers, and the brave Mother Superior of the Jesuit girls' school, well deserved a chronicler. But Mr. Woods enters upon even this debatable subject of Armenian massacres with no marked prejudice. He is able to perceive that the Muslims may have really believed that a Christian revolt was to be apprehended, and he does not disguise the fact that the Armenians drew the first blood and did their full share of the shooting till they allowed themselves to be disarmed under

promise of protection. He does not believe there was any idea of a rising among the Christians, but he sees how easily the new situation created by the Constitution of 1908 may have alarmed the Turks. He does not believe that the ex-Sultan or the "Yildiz clique" had anything to do with the massacres, or that the legendary telegram from Constantinople was or could have been sent. Nor does he credit the Young Turks, as a party, with any hand in the matter, though one prominent member of the Committee, it seems, took part in the massacre. But he denounces the Turkish local governor and the Turkish commander of the troops for cowardice and neglect of their plain duty, and he believes that the absurdly inadequate punishments awarded to them by the Court of Inquiry were due to the Young Turks' fear of public opinion among the Muslims. In all this he appears to us to take an eminently sensible and well-informed view of a most lamentable episode. Such troubles, it must be said, are almost inevitable when a revolution, implicating changes in religious status among an ignorant and fanatical populace, is suddenly brought about. Probably we have not heard the last of them.

The same fairness of presentation strikes us when Mr. Woods deals with the Cretan problem. He sees both sides of the question, and states them impartially. Whilst admitting the obvious claims of kinship with Greece, and the encouragement given the Cretan Unionists by the Four Powers, he perceives clearly that for the Young Turks to surrender what is legally Ottoman soil to an unfriendly Christian State would be to put a formidable weapon into the hands of their opponents, the Reactionists, besides supplying Greece with a fine new recruiting field for her next attack on her ancient enemy. He is perhaps a little over-severe on the unfortunate Powers who undertook the ungrateful task of "pacifying" Crete; for it is not easy to get Four Powers to work together as one, especially when two other Powers ostentatiously withdraw from the task and presumably do not labour to make it easier. Mr. Woods prophesies nothing as to the end of this and other problems discussed in his volume, and therein he shows commendable wisdom.

Other chapters treat of the Turkish army and navy; the incipient reforms—not many so far—in Asia Minor; the military revolution in Greece; the independence of Bulgaria; and the position in Serbia, Bosnia and Montenegro; and each contains useful and suggestive observations, though the Macedonian and other serious subjects are somewhat slightly discussed. The Albanian question is rightly seen to be of vital importance to Turkey, and now more than ever; for the Albanians are not a negligible asset in Ottoman politics or military organization. As Mr. Woods says truly,

"Whilst a well-governed Albania would be to Turkey a precious reserve of men, this tract of country, if badly administered, will remain an obstacle in surmounting which the Young Turks may yet be doomed to encounter disaster. By conciliating these warriors, instead of by endeavouring to denationalise them, the Young Turks will not only be assured of the support of a race who will form an invaluable bulwark against the encroachment of more than one influence diametrically opposed to the development of a strong Turkey, but they will obtain the assistance of a people whose help will be invaluable to them as each new internal or external crisis arises."

Whether the Albanians can ever be made loyal subjects of Turkey may be doubted. Their history hardly encourages the belief,

and it may be argued that it is too late to begin now. Mr. Woods's chapter, however, will help towards the understanding of the difficulties. His illustrations—especially the portraits of prominent statesmen, and views of the desolated Armenian quarters of Adana—are interesting and apposite.

OUR LIBRARY TABLE.

UNLIKE the vendor of the typical basket of strawberries, Mr. Edgar Jepson in *Captain Sentimental, and other Stories* (Mills & Boon), does not put his best at the top; for though the title-story, descriptive of a bad-tempered army captain's care for a motherless baby during the Boer War, is a well-written sketch, the chief interest of the book lies in the seventh and last two tales, which illustrate uncanny superstitions. In the former tale, 'The Raising of Crissingham,' the scene of which is laid in the West Indies, a love-sick girl is responsible for the sacrifice of a "goat without horns" (a baby) in order to summon the ghost of a man who cared nothing for her. In one of the other tales a highborn English girl finds her future husband in a sheep-shearer who is "the living image of Bacchus Bicorniger," and who takes part with her in a superstitious rite of which the consequence is nearly fatal to him. In the last story an English clergyman is deified by some undesirable aliens, who try to murder him when they discover his vulnerability. Mr. Jepson produces a strong effect in a tale of a child who lost her life in helping a highwayman who had befriended her; and his sympathy with the poor beams brightly in 'The Noah's Ark,' a tale in which sixpence is heroically expended in the service of Santa Claus. The weakest tales in the book are intended to be comic, but Mr. Jepson occasionally cracks a good joke.

Living Speech in Central and South Africa: an Essay introductory to the Bantu Family of Languages. By A. C. Madan. (Oxford, Clarendon Press.)—Interest in the languages of Africa—too long confined to a few specialists—is steadily growing. The grammars, vocabularies, and translations produced by English-speaking workers probably equal in bulk, if not in average scientific value, those emanating from Germany. But it is to the latter country that we have hitherto had to look for works of a more comprehensive grasp and a more strictly scientific character, bringing these languages within the scope of general philology. Father Torrend's 'Comparative Grammar,' learned and laborious as it is, and valuable to those who know how to use it judiciously, is overweighted with unsound speculation, and Sir Harry Johnston's still awaits publication. At present Prof. Meinhof's 'Lautlehre' and 'Vergleichende Sprachlehre' easily hold the field as far as the Bantu languages are concerned; and the credit of perceiving the true relationship between these and F. W. Müller's chaotic group of "Negro" tongues rests with him and Prof. Westermann, in conjunction, it must be said, with Sir Harry Johnston, who has come independently to the same or a similar conclusion.

Mr. Madan, who was long resident at Zanzibar, and has now for some years held the appointment of Government Linguist in Rhodesia, has spent much of his life in the useful spadework which forms the basis for the labours of the scientific philologist. His Swahili dictionaries, and his more recent Senga, Lala, and Lonje grammars, have

earned him the gratitude of theoretical and practical "Bantuists," and entitle him to a respectful hearing when he formulates some general conclusions on Bantu grammar as a whole. The space at our command precludes an adequate discussion of his book, which we commend to the attention of linguistic students, premising that its value will be more apparent to the reader acquainted with some one form of Bantu speech than to one who needs an introduction to the subject in general.

The chapters in the section headed 'Word Birth' are extremely interesting and suggestive, and we believe the author is right in laying stress on the interjections which play so large a part, e.g. in Nyanja and Yao. But Mr. Madan (p. 28) surely exaggerates the extent to which this interesting phenomenon of speech has been disregarded. M. Junod, for instance ('Grammaire Ronga'), discusses it at some length, and it has more than once been insisted on in these columns. Bishop Colenso noticed it long ago, though he thought these particles were often "fragments of verbs" ('First Steps in Zulu,' p. 128). Though the converse is more probable, at least in most cases, Mr. Madan admits (p. 34, last paragraph) that interjections are sometimes formed from verbs, and what he says on this head coincides curiously with a remark of Colenso's on p. 129 of the work just cited. Many other interesting points might be mentioned, but we have said enough to show that the book is one which students of African languages cannot afford to neglect.

Heroic Spain. By E. Boyle O'Reilly. (Burns & Oates.)—On the strength of a few months' tour in Spain, Miss Boyle O'Reilly has ventured not only to compete with Théophile Gautier and M. Maurice Barrès in the art of picturesque description, but also to form decided opinions on difficult questions of Spanish literature, art, and politics. Her intrepidity may be admirable, but the results are not encouraging. The 'Cantar de mio Cid' is not identical with the 'Romancero' (p. 50); Vives was not "imprisoned" (p. 29), but confined to his house for six weeks; Cervantes did not go "to Rome in the suite of a cardinal," for Acquaviva did not receive the hat till 1570, and he left Spain in December, 1568. It is now tolerably certain that Cervantes did not fight at the Azores (p. 76), though no doubt his brother did; it is proved that his daughter was not "a religious" (p. 77): she was married once, if not twice, and died in the Calle de la Sartén at Madrid in 1652. The story concerning Luis de León (p. 155) is altogether apocryphal; the only authority for it is Crusenius, and it is now established that León's chair was filled before he was released by the Inquisition. It would be interesting to know why "La Cava" is called "Florinda" (p. 230), a name first applied to her by the forger Miguel de Luna in 1589. The writer is scarcely more happy in dealing with the present condition of affairs, but we must forego the temptation to discuss her political views.

The Past at our Doors; or, The Old in the New Around Us. By Walter W. Skeat. (Macmillan & Co.)—This little work amply justifies the title of the series in which it occurs; it is eminently readable, and full of just such information as would interest the ordinary person without making too great a demand on his previous knowledge. Mr. Skeat tells the story of our food, our dress, and our homes, tracing the past in the present, and explaining each by the other.

We have noted some points in which further notes are desirable; thus ploughing by the horse's tail was forbidden by statute in Ireland in Henry VI.'s time, and was still common under Wentworth's rule. His proclamation against it was made a grievance at his trial. The "toothed hook" is still in use in the North of Ireland as well as in the Shetlands. The chapters on dress are full, in view of the scale of the book, and the familiar two buttons on the back of the coat are traced back to usefulness. Umbrellas, it seems, were introduced fifty years before Hanway, and a "parish umbrella" was used in 1717 to shelter the clergy at funerals, &c. Mr. Skeat remarks that the present national colour of Ireland, green, is of modern origin. We have always heard that it took its rise with the United Irishmen, who at a public ceremony solemnly buried two flags, the Orange and the national Blue, and assumed scarves of green, the colour produced by their union, to typify the future union of all parties. We heartily commend Mr. Skeat's little book to all who wish to make the study of the past interesting, especially to young people.

Bibliotheca Celtica (Aberystwyth) is, as described by its sub-title, "a register of publications relating to Wales and the Celtic Peoples and Languages for the year 1909." It has been compiled for the National Library of Wales by its Librarian, Mr. J. Ballinger, and is the first of a series to be continued annually in accordance with the provisions of the statutes of the Library. The work has been printed at the private press of the Library, which is to be congratulated on the excellence of this its first production. Though the volume extends to 122 pages, there are necessarily many omissions in a first issue of this kind, e.g., the reports of local authorities and their officials (such as medical officers of health), the publications of the various Labour Societies of South Wales, and even the catalogues of the annual art exhibitions of Cardiff and Swansea. A list of the periodical publications of Wales would also have been a welcome addition.

It is announced that printed catalogue cards of the standard size can be supplied, at a nominal price, for all the entries in the volume, so that individual collectors, and even public libraries elsewhere, can in future have all their new books catalogued for them by utilizing the Aberystwyth cards, provided, of course, such books get into the register of the National Library of Wales.

BESIDES the "Centenary Biographical Edition" of Thackeray now well on its way, another with special claims is offered to readers, *The Harry Furniss Centenary Edition de Luxe*, which is published by Messrs. Macmillan, and is to occupy twenty volumes, including bibliographical notes by Mr. Lewis Melville and a large array of illustrations. *Vanity Fair* and *Pendennis* in this issue are not only "illuminated with the Author's own candles," but also by a series of elaborate studies from Mr. Furniss. His sketches for 'Major Gahagan' have already appeared in the other edition, and we spoke (Feb. 11th) of the rollicking bravura of his own which he added to Thackeray's presentation of the great Goliath.

Mr. Furniss has, indeed, plenty of spirit, and is best, we think, in characters which approach burlesque or oddity. He does not hesitate to depart widely from the artist-author's conceptions of his own characters, and may well conquer the prepossession in favour of types fixed in the

public mind by his new and intimate studies of such men as Foker, Major Pendennis, and Capt. Costigan. He has at any rate taken great pains to show us Thackeray's figures in their habit as they lived, and his 'Artist's Preface' to the novels is at once a novel and a highly interesting feature. Recognizing the temerity of his project, he justifies it by explaining the carelessness of the novelist in putting, for instance, the characters of 'Vanity Fair' into the dress of 1845, when that of the Waterloo period is correct, and to our present ideas more becoming. The details of this misconception are explained with convincing thoroughness by Mr. Furniss, and his well-written prefaces really afford the best kind of notes on the novels. He wisely avoids, as a rule, using the faces of the real people Thackeray had, or may have had, in his mind. We give as an instance of his research the following:—

"Although I avoid portraiture, in the scene at Vauxhall, where Jos creates a sensation after the effects of Rack Punch, the old gentleman I show dancing up with a cane in one hand, and raising his hat in the other, is Mr. C. H. Simpson, the famous M. C. of Vauxhall at that period. He was the Beau Nash of this Cockney place of amusement, but Thackeray does not refer to him. The Vauxhall Thackeray describes in 'Vanity Fair' is quite different from the Vauxhall he describes in 'The Virginians,' but I have taken care to give the Vauxhalls as they were at the time of the story in which the famous Gardens are mentioned."

Mr. Furniss anticipates disappointment concerning his conception of Becky Sharp, and we certainly fail to see the abundant spice of wickedness in the lady which Thackeray gave in the curl of her mouth. Thackeray was inconsistent in his picturing of her, but he seems to us to have made a type in this case as dominating as that of the original Mr. Pickwick, from which later illustrators cannot free themselves. All good Thackerayans should, however, read what Mr. Furniss has to say.

The type of the edition is a little disappointing, being similar to that of the earlier "Biographical Edition," though the page is much larger.

The Two Religions of Israel, with a Re-examination of the Prophetic Narratives and Utterances. By the Rev. T. K. Cheyne. (A. & C. Black.)—There is a significant passage in the Introduction to this book:—

"Arālu is one of the Babylonian names," Dr. Cheyne says, "for the world of the dead, and I have ventured to conjecture that it is a short and corrupt form of the N. Arabian divine name Yerahme'el, carried far to the north, with Adad (=Yahweh?), Ashtar, Asherah (Ashratu), and other names, in an early Arabian migration."

The significance lies in the frank admission of conjecture, and the book itself might be described as an exercise in the use and abuse of conjecture. Yet every page which Dr. Cheyne has written reveals scholarship, though his judgments are not above suspicion.

The explanation of the title is that the religions of Israel were associated with Yerahme'el and Yahweh, and that the prophetic narratives and utterances indicate the influence of a North Arabian kingdom rather than that of Babylonia. The stories of Moses, Balaam, Samuel, Elijah, and Elisha are examined, as are the writings of certain of the prophets, such as Amos, Isaiah, Jeremiah, and Nahum. Dr. Cheyne's method is illustrated by his treatment of the Moses narrative. He affirms, and tries to prove, that the names of Moses and Aaron are North Arabian, and that the two men represent North Arabian culture. Moses was neither sign-worker nor priest, much less prophet, but was a mythical, semi-divine

personage who acted as culture-hero and "Heilbringer" to Israel. He represented the higher style of priest who reported divine oracles, while Aaron represented the lower who attended to worship. A commission was given to Moses "to bring the benê Israel who were in Misrim (the N. Arabian Musri), that they might worship God on 'this mountain,' and to make known this gracious purpose to his people." But what name was to be used? Then "God said to Moses, *Ehyeh asher ehyeh*: and he said, Thus shalt thou say to the benê Israel, *Ehyeh* has sent me to you" (Ex. iii. 14). After giving this version of the text, Dr. Cheyne, surprised himself at the result, finds that "*Ehyeh* should be *ashhur*, and *asher* should be *asshur*. *Ashhur* and *Asshur* are equivalent; the latter is a gloss on the former, and the second *ehyeh*, i.e. *Ashhur*, is a ditto-graph." Here as elsewhere Dr. Cheyne, with a scholar's prerogative, determines the text, and interprets it with the divine right of a critic. It is *Asshur* who commissions Moses, and *Asshur* is N. Arabian. Moses and Elijah—God-men Dr. Cheyne calls them—as presented in their portraits, may be creations of the imagination, but such creations, we are told, "are precious heirlooms which religious humanity will never cease to venerate."

By the help of textual emendation and interpretation, both enlisted in the cause of Yerahme'el, the prophetic writings are made to show that Israel's religious history reveals a contest between the older Yerahme'el and the younger Yahweh. Apart altogether from Dr. Cheyne's innumerable excursions into the land of conjecture, there is no violation of historical probability in the conception that a highly developed religion may show traces of one less developed. Dr. Cheyne helps once more to draw attention to the question of the signs in the religion of Israel of the existence of an older religion, and those who have looked to Babylon may again turn their glance to North Arabia to discover if anything can have come out of it. But this may be said, on the other hand, that there will be at least a prejudice among scholars against the idea that the contest between the old and the new religions could have continued down to the times of Isaiah and Jeremiah.

English-Greek Dictionary, a Vocabulary of the Attic Language. By S. C. Woodhouse. (Routledge & Sons.)—As a rule, dictionaries of this kind are of little value, and full of traps for the unwary beginner. It is almost impossible to state definitely the Greek equivalents of modern words and phrases, because the meaning of such depends almost entirely upon their context, except in the case of names of natural objects or works of art like "tree," "rat," "picture," or "statue." The dictionary before us has not solved this difficulty, which is, indeed, insoluble, but it is well arranged, and, if used in conjunction with Liddell and Scott by an intelligent student, will be of considerable service to young composers. The long quotations from classical authors are distinctly useful, especially as chapter and verse are usually added. We have tested the book by carefully examining the equivalents suggested for certain very difficult English words, such as "conscience," "reflection," "substantial," and generally the result is satisfactory.

Of course, the great objection to an English-Greek dictionary is the danger lest the learner should trust to it, instead of storing in his mind phrases and passages

from the classical authors he is reading. However, help from such a dictionary is sometimes necessary, and Mr. Woodhouse's laborious compilation is the best we have seen. Misprints are rare.

The Eagle for March, the magazine of St. John's College, Cambridge, contains several interesting notices of the late Prof. Mayor, and reprints that which appeared in our columns. There is also a list of his contributions to *Notes and Queries*, which began in the First Series.

DUBLIN UNIVERSITY FRENCH TEXTS.

March 15, 1910.

My successor in the Romance Chair at Dublin, Prof. Rudmose-Brown, disclaims, in your last issue, all responsibility for this series. I have no fault to find with his disclaimer, but I cannot allow his suggestion that the title of the series is misleading to pass unanswered. The scheme was originally planned at Trinity College, Dublin, some two years since, and a detailed announcement appeared in the literary press at that time. Accordingly, I did not see any reason why the subsequent transfer of the general editor to another University should affect the published title. I may add that when, in January, 1910, Dr. Brown took up his residence at Trinity, I wrote almost immediately, requesting the pleasure of his collaboration, which offer he declined in a seemingly amicable spirit, alleging his lack of personal interest in the authors with whom we were dealing. It would now appear, however, that he was actuated in his refusal by a desire to obliterate all memories and traditions of the past—not excluding that of courtesy towards a friendly predecessor. *Sed de gustibus....!*

MAURICE A. GEROTHWOHL.

SALE.

Hartman; 1801, *On Calamine Crystals from Mexico, &c.*, by Joseph E. Pogue; 1802, *The Recent and Fossil Mollusks of the Genus Diastoma from the West Coast of America*, by Paul Bartsch; 1806, *Bees in the Collection of the Museum*, Part I, by T. D. A. Cockerell.
 Walter (A.), *The Sugar Industry of Mauritius: a Study in Correlation*, 12/6 net.
 Includes a scheme of insurance of the cane crop against damage caused by cyclones.

Juvenile Books.

Baker (Emilie Kip), *Out of the Northland: Stories from the Northern Myths*, 1/ net.
 The purpose of the book is to give to children, in simple form, the stories from Scandinavian mythology which have now become familiar in literature and music.

Fiction.

A Babe Unborn, 6/
 The story of a wife who becomes a Feminist and deserts her husband.
 Bindloss (Harold), *His Master Purpose*, 1/ net.
 New edition.
 Casey (W. F.), *Zoe, a Portrait*, 6/
 Zoe is left happy at the end after narrowly escaping ruin.
 Clayton (Joseph), *The Under-Man*, 6/
 Deals with the life of a man who is beset by ill-luck from the beginning of his career.
 Compton (C. G.), *The House of Bondage*, 6/
 Describes an unfortunate marriage, and analyzes some of the failures of civilization.
 Donovan (Dick), *The Trap, a Revelation*, 6/
 A story founded on the crimes of the Camorra now exciting special attention in Italy.
 Doyle (Arthur Conan), *Round the Fire Stories*, 3/6
 New edition.
 Forsyth (May), *Peter of Gunneroy*, 6/
 A novel of Australian life.
 Fox (Alice Wilson), *Love in the Balance*, 6/
 A simple story in which a poaching affray in England and a trip to Sicily play a part.
 Gallon (Tom), *Dead Man's Love*, 6/
 A story of an escaped convict.
 Gallon (Tom), *The Great Gay Road*, 1/ net.
 New edition.
 Graham (Mrs. Henry Grey), *An Odd Situation*, 6/
 A doctor is accused of poisoning a patient by whose death he becomes possessed of a large sum of money.
 Hamilton (Cosmo), *The Princess of New York*, 6/
 The heroine, daughter of a Steel King, comes to Europe for the first time, and meets a charming young Oxford man on board ship, who afterwards goes to her rescue when she has fallen into the hands of a family of titled cardsharps.
 Heath (Christopher), *Peter's Progress*, 6/
 Peter's progress ends with his choice of a wife.
 Henderson (R. W. Wright), *The Recluse of Rill*, 6/
 The hero is a man of reserved and introspective habit of mind. The story deals with his misfortunes in both love and speculation, and with his troubles, fears, and torments of mind when he is striving to repair what he believes to have been a crime. A small English town is the opening scene, but the setting of the story is mainly on the Continent and in Egypt.
 Hichens (Robert), *The Dweller on the Threshold*, 6/
 A tale of psychological research.
 Hill (Headon), *A Rogue in Ambush*, 6/
 One of the author's well-known sensational stories.
 Hume (Fergus), *The Rectory Governess*, 6/
 A story of troubles ending with marriage.
 Lee (Georgina), *Inhaling*, 6/
 Deals with the emotional experiences of a married woman.
 Masefield (John), *The Street of To-day*, 6/
 The author tries to present a picture of modern England as she appears to a young man of science.
 Masson (Rosaline), *Nina*, 6/
 The story of the daughter of a pretty French singer.
 Nicholson (Meredith), *The House of a Thousand Candles*, 7d. net.
 New edition.
 Ouseley (Mulvy), *The Jewess*, 6/
 A sensational story of crime.
 Prower (Nelson), *Freddy Barton's Schooldays*, 2/ net.
 A story of school life, which is also intended as a study of conditions of life in a private school.
 Reade (Charles), *Peg Woffington*, 6d. net.
 New edition.
 Service (Robert W.), *The Trail of '98*, 6/
 A Northland story.
 Silberrad (Una L.), *Sampson Rideout, Quaker*, 2/ net.
 An historical romance.
 Swinnerton (Frank), *The Casement, a Diversion*, 6/
 A comedy of sentiment, which deals with a single series of closely-connected incidents in the lives of five people. The scenes are laid in the West End of London and in the country.

Thomson (Mungo), *Mark Ransom*, 6/
 Mark Ransom eventually finds happiness with a girl in his office.
 Turner (Reginald), *King Philip the Gay*, 6/
 A story of Mollavia in the Balkans, a make-believe kingdom.
 Vynne (Nora), *The Priest's Marriage*, 2/ net.
 The priest has a son, but finally gives up the mother to whom he owes his child.
 Warner (Anne), *Leslie's Lovers*, 6/
 Depicts the escapades in England and Germany of an American flirt.
 Whisper (A.), *The Sinister Note*, 6/
 The sinister note is not unduly prominent in this romance of modern Spain, which introduces Susan Willoughby to a man who in the penultimate chapter makes her the Marquesa de Azucenas.
 Ystridde-Orshanski (G.), *An Exile's Daughter*, 6/
 The characters are Russian and include an anarchist.

General Literature.

Chapman (Cecil), *Marriage and Divorce*.
 The first volume of the Woman Citizen Series. A criticism of the institution of marriage based upon the author's daily experience as a metropolitan magistrate, written with the object of showing that the evils connected with it are purely artificial; that, however sacred its character, marriage is a civil contract; and that divorce is not an evil in itself, but an index of evils which it is calculated to remove.
 Childers (Erskine), *German Influence on British Cavalry*, 3/6 net.
 Great Oil Octopus, by 'Truth's' Investigator, 5/ net.
 A review of the history and operations of the Standard Oil Trust in the United States, the British Empire, and foreign countries, from its foundation to the present date.
 Lawson (W. R.), *Canada and the Empire*, 6/ net.
 Deals with the relations between Canada and the Empire at the present time.
 Miles (Mrs. Eustace), *The Ideal Home and its Problems*, 3/6 net.
 Murray's Shilling Library: *Character*, by Samuel Smiles; and *Our English Bible, the Story of its Origin and Growth*, by H. W. Hoare, Revised Edition.
 Nankivell (Constance), *The Making of Men: Motherhood, its Mystery, Opportunity, and Sanctity*, 1/ net.
 A "Reader" for mothers.
 National Women's Social and Political Union, *Fifth Annual Report*, 3d.
 Pascal, *Pensées Choiesies, Préface d'Emile Boutroux*, 1/6 net.
 In Les Classiques Français.
 Rafiqi (A. S.), *Inversion of Times*, 1/6 net.
 Edited by Yehya En-nasr Parkinson. Relates to the tombs of Bahadur Shah and his wife.
 Shirley (Ralph), *The New God, and other Essays*, 3/6 net.
 Waite (Arthur Edward), *The Book of Ceremonial Magic, including the Rites and Mysteries of Goëtic Theurgy, Sorcery, and infernal Necromancy*, 15/ net.
 With many illustrations.
 Wegener (Hans), *We Young Men*, 2/6 net.
 With an introduction by Sylvanus Stall. Translated from the German.
 Willett (Clara), *Her Boys' Home*, 3/6 net.
 A story of a lady's efforts to establish a holiday home for boys. The book contains 14 illustrations by Will Owen and facsimile letter from G. F. Watts.
 Women's Suffrage and Militancy, 6d. net.
 Edited by Huntly Carter, and contains the results of an inquiry undertaken to discover the opinion prevailing amongst a large number of distinguished persons on the questions of woman suffrage and militant tactics.

Pamphlets.

Molesworth (Sir Guilford), *The Sham of "Christian Socialism"*, 2d.
 With introduction by W. Lawler Wilson.

FOREIGN.

Fine Art and Archaeology.

Fitzler (K.), *Steinbrüche und Bergwerke im ptolemäischen und römischen Aegypten*, 5m.

Literary Gossip.

GEORGE A. BIRMINGHAM'S story 'The Major's Niece,' which has been running in *The Cornhill Magazine*, will be published by Messrs. Smith & Elder on April 4th. It consists of a series of breezy and mirth-provoking adventures in the household of an Irish bachelor, invaded for a fortnight by a small tomboy of a niece; while "J. J."—the moving spirit of the author's former work 'Spanish Gold'—manages everybody by his unflagging "blarney" and "bluff."

IN *The Cornhill* for April Mr. Arthur Benson gives a vignette portrait of Frederic Myers. 'Telling the Bees' is a study of folk-lore by Sir Laurence Gomme. Mr. Alfred Noyes contributes a poem, 'The World's Wedding,' and Mr. Horace Hutchinson a short story of Anglo-American kin-feeling, 'The Home of their Fathers.' 'A Country Practice,' by a Doctor's Wife, relates a chapter of real experience. Sport is represented by Sir Edmund Cox's 'Pig-sticking in India,' and popular science by Mr. Julian S. Huxley's paper on 'The Meaning of Death.' 'At the Sign of the Plough' gives the answers to the Lewis Carroll paper, and questions on Dickens by Mr. G. W. E. Russell, together with Mr. Seaman's supplementary questions on Browning.

THE April *Blackwood* will contain a poem by Mr. Alfred Noyes. 'Tales of the

Mermaid Tavern: IV. The Companion of a Mile'; 'The Oxford Book of Italian Verse,' by Moira O'Neill; two short humorous stories—'Expeditus,' by Mr. St. John Lucas, and 'The Little Compton Sensation,' by Mr. Herbert Ives; a satire on a recent Army order, entitled 'A Sweep of the Pen,' by Robert Augustin; 'Damascus,' by Miss Gertrude Lowthian Bell; 'An Incident in the French Invasion of Egypt,' written in 1814 by Capt. Henry Light, R.A.; and 'An Elizabethan Pamela,' by Mr. Sydney Waterlow.

MR. WINSTON CHURCHILL, author of 'A Modern Chronicle,' &c., is engaged on a new novel, entitled 'The Greatest of These,' which will be published in the autumn by Messrs. Macmillan.

THE Tercentenary of the Authorized Version has called into existence a book by Dr. John Brown on 'The History of the English Bible,' which will be published immediately by the Cambridge University Press as a volume of "The Cambridge Manuals of Science and Literature." Dr. Brown's narrative ranges from Cædmon to the Revision of 1881.

MR. GEORGE EYRE TODD has written a popular book on Glasgow, which Messrs. Blackie will publish shortly.

THE REV. J. P. MAHAFFY, C.V.O., has been elected President of the Royal Irish Academy.

ON the last day of this month Mr. John Lane will publish 'The Speakers of the House of Commons from the Earliest Times to the Present Day,' with a topographical account of Westminster at various epochs, brief notes on the sittings of Parliament, and a retrospect of the principal constitutional changes during seven centuries, by Mr. A. I. Dasent, author of 'The Life and Letters of Delane.' This volume has engaged the close attention of its author for many years.

THE Report of the Selden Society, which will be presented next Wednesday, shows that the number of members remains about the same. The publication for 1911 will be another volume of the 'Year-Books of Edward II.,' edited by Mr. G. J. Turner. The work adopted for 1912 is a volume on 'Select Charters of Trading Companies,' edited by Mr. Cecil T. Carr. Provisional arrangements have been made for other volumes of the 'Year-Book of the Eyre of Kent,' by Mr. Bolland, and the 'Year-Books of Edward II.' by Mr. Turner; and a volume of 'Select Ecclesiastical Pleas,' by Mr. H. D. Hazeltine.

WE regret to notice the death at Luxor, Egypt, of Mr. James Robertson Blackie, a director of the publishing firm of Messrs. Blackie & Son. He was the only son of Mr. Robert Blackie, who with his two brothers developed and extended the publishing business founded by Mr. John Blackie in 1809. Mr. Blackie, who was

in delicate health, had a great love of travel and was often abroad.

THE death is also announced, at the age of 83, of Mr. James Parlane, founder and principal partner of the firm of J. & R. Parlane, publishers, Paisley. Mr. Parlane was an enthusiastic musical amateur and a pioneer in the advocacy of Tonic Sol-fa, and musical publications of various kinds were prominent in the firm's productions, which were otherwise devoted mainly to temperance and religion. He served on the Committee which prepared the Free Church of Scotland Hymn-Book, since superseded by the 'Church Hymnary.'

MAJOR G. S. BEECHING writes from 3, Castlebar Crescent, Ealing, W. :—

"I should feel very grateful if any of your readers who possess records of the early days of the Philological School would communicate with me. The School was founded, under the title of the Philological Society, in 1792, by Mr. Thomas Collingwood of St. Edmund Hall, Oxford, and with him were associated William Wilberforce the philanthropist, the Rev. Basil Woodd, and Sir Rowland Hill."

THE sale of the first portion of the Hoe Library is provisionally fixed for the first ten days following Easter at the Anderson Auction-Rooms in New York, but copies of the sale catalogue have not yet reached this country.

IN the remark mentioned in our review last week of Sir William Butler's 'Autobiography' as made by Reynolds on Gainsborough, the position of the two painters should have been reversed.

WE are sorry to notice the death, on Wednesday last, in his 77th year, of Sir Richard Rivington Holmes, who was an accomplished writer and artist. Librarian at Windsor Castle from 1870 to 1906, he wrote *Lives of Queen Victoria and King Edward*. He was archæologist to the British Abyssinian Expedition in 1868, and well known alike as a designer and a painter in water colours. His other books include 'Specimens of Royal, Fine, and Historical Bookbinding' and 'Naval and Military Trophies.'

THE recent death of the Swedish poet Gustav Fröding, which was mourned as a national calamity by all, from the Crown Prince down to the peasant, has placed at the disposal of the University students the fund which was raised among them to relieve the necessities of the popular writer in his long illness. The principal remains untouched, and henceforth the interest (about 75l.) will serve as a prize to be awarded to a Swedish poet, selected annually by University students, those of Upsala forming the central committee.

AMONG recent Parliamentary Papers of interest we note: Parliamentary Constituencies Return (post free 3½d.); and Scotch Education Code, 1911 (post free 4d.).

SCIENCE

Cliff Castles and Cave Dwellings of Europe.
By S. Baring-Gould. (Seeley & Co.)

THE title of this book gives an inadequate description of the contents. It includes buildings of the kind in Egypt, Syria, and even in Tibet, and there are long digressions on mercenary warfare in the middle of France and elsewhere which have little to do with cliffs and caves except that some of them were temporarily occupied by warlike men. These stray additions and amplifications are not due to want of genuine material, since many important rock and subterranean dwellings are passed over in silence. Indeed, a complete enumeration would be impossible without many years of travel, for such things are often ignored or forgotten in local histories.

The author's intimate knowledge of Central France enables him to tell us many curious facts about chalk cliffs still inhabited, but in this region only does he appear to us to have complete mastery of his subject. Far the greatest cave monastery in Greece is Megaspilion (as its name implies), yet this the author passes over in silence. Indeed, we cannot but feel that his knowledge of Greek things must be scanty, judging from the cluster of misspelt names when he comes to speak of cave oracles in that country. We find "Apulæus," "Beotia," "Cheronese," "Cithæra," "Erythæa," "Lebedes," "Pausanius," and the like, which are significant to a scholar's eye.

To go back to the prehistoric remains, there is a cluster of them on the mainland of the Orkneys known as the Weem of Scale, which is quite peculiar, being almost on the level of the high tide, made not in rocks, but soil, and covered with sea sand. In these and all such retreats, as Mr. Baring-Gould rightly says, the long low *dromos* or entrance passage is designed to admit only one person at a time, and on his hands and knees, so that when he puts his head inside the chamber within it can be chopped off before he can fight. The author reports a dreadful case from the year 1802, when at a cave in Ariège a detachment of soldiers was sent into such a place to dislodge a band of ruffians. "To reach the great hall you must crawl through a narrow passage, and here the robbers murdered as many as 146 of the soldiers one by one."

In the year 1325 some 500 Albigenian heretics had already been walled in by their more prudent foes, and starved to death. But things not unlike it, as Mr. Baring-Gould tells us, were done in the French wars in Algiers, when Lamoricière (was it not Bugeaud?) suffocated a crowd of Arab men, women, and children by lighting great fires at the opening of their cave. The present habit of walling up an anchorite in a cave in Tibet, so

that he lives in the dark, and can only get his miserable food by reaching out through a chink, seems nearly as horrible. Dr. Sven Hedin recently saw a creature who had been immured in this way for over six years.

These few details will show both the great variety and interest which may be found in Mr. Baring-Gould's book. We will add a word in praise of the full account of St. Patrick's Purgatory at Lough Derg in Co. Donegal, Ireland. But the author should have cited the curious letter which the cardinal, sent to visit it by Pope Alexander VI., wrote to Isabella d'Este, and which Mrs. Cartwright prints (in part) in her fascinating life of that great lady. There is too much quoting from guide-books, which are not always trustworthy, and the volume has but poor illustrations; so, in spite of all its interesting matter, we feel that it is a picture in patches, and not an artistic whole. The style is often ambitious, but not always clear. Thus, in the account of the terrible burden of Napoleon's conscriptions for his wars, we are told: "The number of young men who reached the age of 18 annually in half a year, more than the entire generation, had been swept off," &c. This reads as though some words had been accidentally omitted, making two sentences into one. Elsewhere the author says: "The population of the north *saw appear* among them mercenary soldiers," which is clearly French English. In describing the outrages of the Calvinists on sacred buildings he says "there were defections everywhere"—to us a new use of the word. We are reminded by it of the "defenestration" of two public men by the Bohemian nobles about 1620. They were thrown out of a window in the Hradschin of Prague, and fell 50 feet into such a heap of refuse under the castle wall that they lived to take vengeance upon their "defenestrators." The word appears in all the guide-books about that place; but is that any reason why it should be imported into English?

The enormous number of tombs in rocks, caves, and beehive houses in many parts of the world tempts us to say a word more on the general human principles which seem to underlie such a widespread practice of hiding the dead. Originally this underground beehive house was simply a house, probably that occupied during the man's life, and abandoned to him when he died, except that his children brought him food and drink to appease his spirit, and avoid its vengeance. Even when the actual house was not left or provided for him, and they buried him in a grave, there was an aperture into it, and libations were poured into this only access to the dead. In every case he was supposed to live on in his sepulchre, and generally the form adopted was that of the most stately sort of subterranean building which had survived from the remotest times. This was the beehive or circular house, with its *dromos*, as in Mycenæ and New Grange, or without it, as in Hadrian's tomb (now the Castle of

S. Angelo), and even down to the tomb of Queen Victoria and Prince Albert at Frogmore. So persistent is the tradition of the circular house of the dead through the ages! When we learn from Mr. Baring-Gould what an immense number of rock and cave dwellings are still inhabited, we feel that we are not so far from the days when it was the simplest and safest shelter for men, and the best concealment from their enemies.

OUR LIBRARY TABLE.

A Star-Atlas and Telescopic Handbook. By Arthur P. Norton. (Gall & Inglis).—This is an exceedingly clear and elegant celestial atlas; and as the title indicates, it is not intended merely for the ordinary amateur who desires to be able to recognize the constellations when out at night, but is also adapted to the needs of students possessed of telescopes, principally such as are mounted on ordinary stands. The maps contain over 7,000 objects, comprising virtually all those which are given in Mr. Espin's edition of Webb's 'Celestial Objects,' including stars down to the seventh magnitude, and indicating remarkable double stars, variable stars, and nebulae. For the guidance of young observers, notes on the sun, moon, and planets are given; also selected lists of various interesting telescopic objects, mostly such as are within the range of a 2½-inch or 3-inch refractor. Another useful feature is a sketch map of the moon, showing a hundred of the principal craters and other formations.

Great pains have evidently been taken to secure accuracy in the star-places (which are more than brought up to date, being adapted to the epoch 1920), both in the lists and in the maps. The size renders the atlas convenient for handling, and the price should bring it within the reach of an increasing number of amateur observers.

Wild Flowers as they Grow, Photographed in Colour direct from Nature by H. Essenhugh Cooke, with Descriptive Text by G. Clarke Nuttall (Cassell), is an attractive volume which may well put beginners in the way of appreciating some of the miracles of structure which offer themselves to the seeing eye in our common plants. The twenty-five plates are pictures which any one can recognize, though we think it rather odd to include so rare a wild flower as the monkshood among them. We are pleased, however, to find the beautiful meadow cranesbill, which is unknown in many places, and common in others.

Mr. Nuttall's text is frankly anthropomorphic. He represents flowers as cleverly doing this or that to attract visitors, and, with the aid of Kerner, brings forward many interesting details of fertilization. We cannot endorse all his philology and mythology. "Paralisos, son of the goddess Flora," for instance, is an odd mixture of Latin and Greek; while a knowledge of the latter tongue would show that the violet of ancient Greece was nothing like that of England.

WE are pleased to see the thirty-third edition of *Flowers of the Field*, entirely revised by Prof. G. S. Boulger (S.P.C.K.). Sixty-four coloured plates by Miss Grace Layton add to the attractiveness of a volume which has been the first book in botany of many a boy since its appearance in 1853. To the

present edition Prof. Boulger has not only added details of plants which the expert will appreciate, but also, at the suggestion of Sir Joseph Hooker, a memoir of the Rev. Charles Alexander Johns. Johns was second master of Helston Grammar School under Derwent Coleridge, and helped to form the tastes of Charles Kingsley for natural history. His little book 'A Week at the Lizard' showed his gifts as a botanical Rambler.

Since the first publication of 'Flowers of the Field' much has been done to revise and enlarge it. Prof. Boulger's revision in 1899 was thorough, and last year the coloured plates were added. Now we have a fresh revision, bringing names "into accordance with the rules of the Vienna Congress, as endorsed by that held at Brussels in 1910."

SOCIETIES.

ASTRONOMICAL.—*March 10.*—Mr. F. W. Dyson, President, in the chair.—Mr. Stratton gave an account of a memoir by the late Mr. Bryan Cookson, entitled 'A Research on the Aberration Constant and the Variation of Latitude by means of the Floating Zenith Telescope.' The paper, left unfinished on account of the illness and death of the author, had been completed and prepared for publication by Mr. Hinks and Mr. Stratton.—Mr. Eddington gave an account of a paper by Dr. de Sitter on the bearing of the principle of relativity in gravitational astronomy. The author was of opinion that the hypothesis of an ether may be dismissed, the motion of matter relatively to ether being impossible.—Mr. Davidson communicated a note on the eighth satellite of Jupiter, and showed photographs taken at the Helwan Observatory, Cairo.—Prof. Turner read a paper on the determination of the positions of reference stars and fundamental stars by photographic processes, and compared the gradual supersession of visual by photographic observations to the substitution of the telescope for sight instruments in the time of Hevelius and Halley. Sir David Gill recommended caution, and the Astronomer Royal spoke of the necessity of continuing the present transit observations, though the moving wires might be replaced by photographic methods.—Mr. Reynolds showed photographs of Halley's Comet taken at Helwan Observatory by Mr. Knox Shaw. He pointed out that when the comet was near the sun the tail seemed to be formed from the envelopes about the nucleus. As the comet receded from the sun, the tail appeared to proceed from the nucleus itself—the dark streak in the former case being replaced by a bright streak in the latter.

GEOLOGICAL.—*March 8.*—Prof. W. W. Watts, President, in the chair.—Mr. J. Ford and Mr. T. Harris Burton were elected Fellows.—The President announced that the Council had awarded the proceeds of the Daniel Pidgeon Fund for 1911 to Mr. Tressilian C. Nicholas, who proposes to investigate the relations of the older rocks in the Lleyn Peninsula (Carnarvonshire).

The following communications were read: 'Contributions to the Geology of Cyrenaica,' by Prof. J. W. Gregory and others: (i) 'The Geology of Cyrenaica,' by Prof. Gregory; (ii) 'Notes on the Kainozoic Mollusca,' by Mr. R. Bullen Newton; (iii) 'Foraminifera, Ostracoda, and Parasitic Fungi from the Kainozoic Limestones of Cyrenaica,' by Mr. F. Chapman; (iv) 'The Fossil Echinoidea of Cyrenaica,' by Prof. Gregory; and (v) 'The Foraminiferal Limestones of Cyrenaica,' by Mr. D. Paterson MacDonald, and 'On the Teeth of the Genus *Ptychodus*, and their Distribution in the English Chalk,' by Mr. G. E. Dibley.

ASIATIC.—*March 14.*—Lord Reay, President, in the chair.—Dr. H. Hirschfeld read a paper entitled 'Recent Theories on the Origin of the Alphabet.'

The lecturer began by pointing out that few people were aware that many letters have scarcely altered in form in the last 3,000 years. In spite of this element of finality in the alphabet, the question of its origin was still a mystery. Many famous scholars had endeavoured to solve the same, but the results hitherto were only divergent opinions and contradictory theories. It was Tacitus who first reported ('Annales,' ch. xi.) that the Phœnicians derived their alphabet from the Egyptian hieroglyphics. The endeavour of Egyptologists to confirm this report culminated

in the labours of De Rougé, who tried to prove that the alphabet was developed from hieratic rather than hieroglyphic writing. The weakness of this theory was laid bare by scholars like Legarde, Robertson-Smith, and others. Joseph Halévy returned to the hieroglyphs, from which he derived eleven out of the twenty-two Phœnician letters, alleging that the remaining ones were evolved from several of the first group. In 1877 Dr. Deecke, rejecting all previous theories, sought the origin of alphabetic writing in Babylonian cuneiform writing, but without success. Prof. Friedrich Delitzsch took it to be a blending of Egyptian and Babylonian characters. Prof. Hommel of Munich gave the letters an astral origin and Chaldaean parentage. Lidzbarski, on the other hand, considers it to be based on the Egyptian system of writing, but the creation of a Canaanite man who had some knowledge of Egyptian writing. Five years ago Prof. Prætorius advanced quite a new theory, viz., that the alphabet was developed from the Cypriote epichorean writing, and that the Phœnician consonants were in reality syllables. The lecturer showed at some length the weak points of this theory. The most recent theory is that of Prof. Sayce, reproduced in the *Proceedings* of the Society of Biblical Archaeology, November, 1910. He maintains that we must recover the primitive forms through the names, that the characters are of pictorial origin, independently invented by persons who were acquainted with Hittite hieroglyphs, that these persons were a West Semitic tribe of semi-nomads who knew the ox and the camel. In conclusion, the lecturer remarked that in his opinion the creation of the consonant pure and simple was suggested by the guttural. Closing up the windpipe produced the *aleph* (*spiritus lenis*), but if the air is allowed to pass through he was produced. The graphic expression of the former was given by the outline of the open mouth looked at sidewise, whilst the point on the left side represented the shut throat. On the other hand, the sign for he showed an opening to let the air through. From these small beginnings the other gutturals, then palatals, sibilants, and liquidæ developed. The Phœnician alphabet did not, perhaps, have at once the full complement of 22 letters. Gradual development should take the place of deliberate invention. The names of the letters, many of which defied philological treatment, were of later origin and partly fashioned at random.

A discussion followed in which Prof. Hagopian and Prof. Margoliouth took part.

SOCIETY OF ANTIQUARIES.—*March 16.*—Dr. C. H. Read, President, in the chair.

Mr. P. W. P. Carlyon-Britton read a paper on 'Treasure Trove and the Preservation for the Nation of Objects of Antiquity.' After quoting the legal authorities on the subject, the author argued that to constitute anything treasure trove four conditions must obtain: (1) the objects must be intentionally concealed in the earth or other private place; (2) such objects must be either of gold or silver; (3) the owner (that is, the depositor or his legal representative) must be unknown and not ascertainable; (4) the Crown must not have parted with its franchise of treasure trove by grant. Conversely, it is clear that the royal prerogative of treasure trove does not apply when the above conditions are not fulfilled, or when the objects, even if of gold or silver, are laid in a place of sepulture and are adjuncts of an interment. Mr. Carlyon-Britton was also of opinion that objects not fulfilling the conditions of treasure trove are the property of the owner of the soil, unless found on the surface of the land, or beneath the sea or in the bed of a tidal river, when they would be regarded as the lawful property of the finder.

The practice of the Treasury with regard to the position of the finder had been modified by the minute of 1886. Originally the Treasury paid the bullion value only of the object found, but since the issue of the 1886 regulations the Treasury has paid the antiquarian value (less a percentage) of all objects required by national institutions, and returned to the finder those that were not wanted. This practice, however, is not widely known, and until it is, and a feeling of confidence in the Treasury has been inspired, many objects of antiquity will still be consigned to the melting-pot.

Mr. Reginald Smith exhibited on behalf of the Dean and Chapter a bronze panel recently found near the south-east angle of the south transept of Winchester Cathedral. This relic of the Viking period had been brought to his notice by Mr. Nisbett, and consisted of a thin rectangular plate 11 in. by 1½ in., with several rivet holes, for attachment probably to wood. The depth suggested a coffin, but it might have belonged to a book-cover. The engraving was in the style

of the early eleventh century, and closely resembled the Vang gravestone in Norway. The St. Paul's Churchyard slab now in the Guildhall Museum, which had been dated about 1030, was in the same style, and virtually contemporary with the bronze, which was almost entirely free from the animal motive, and displayed the interlacing bands and union-knots of the period, an Oriental origin being suggested for the latter device.

METEOROLOGICAL.—*March 15.*—Dr. H. N. Dickson, President, in the chair.—Prof. H. H. Turner gave a lecture on 'What can we Learn from Rainfall Records?'

The origins of a large number of phenomena, of the most diverse kinds, are indicated by the periods of certain vibrations or oscillations. The familiar advertisement of a terrier hearing "his master's voice" in a gramophone, and the identification of the substance causing the light of a nebula far away in the depths of space provide us with two examples: in the first the periodicities are those of waves of sound, in the second of waves of light. The periods of vibration are very different, that of sound being roughly a billion times that of light. If we lengthen that of sound in a similar ratio, we come to the longest periodicities hitherto studied by our limited experience, viz., those of the planets and variable stars. Here again we can recognize causes by their periods; but the machinery for recognition is very different. In the case of light-waves a simple apparatus (viz., a prism) performs the analysis for us; in the case of sound we have the proper delicate apparatus in our own ears; in the case of the longer periods we must use calculation, but the underlying principles are the same: in the calculations there are strict analogies to the "resonance" which the ear employs and the "bright lines" of a spectrum.

The method of calculation was indicated long ago by Fourier; but a noteworthy new departure was taken some years ago by Prof. Schuster in insisting that the calculations must be made, not merely for specially selected or suspected periods, but for all periods between certain obvious limits. The result can then be displayed as a "periodogram," which is strictly analogous to a spectrum. This method has been applied under the superintendence of Prof. Schuster and the lecturer to the rainfall records of Padua (175 years) and Greenwich (90 years), besides Klagenfurt and Oxford (50 years), all periods between 20 months and 5 months having been examined, as well as some others. The resulting indications are not very positive, but include several features well worth further study, especially in the Greenwich rainfall, where periodicities of 597 days and 150 days (possibly a quarter of the former) seem to be fairly persistent, as well as a short one of 25 days; but these are not reproduced in the Padua records—at any rate, not exactly. There are doubtful periods of 591 days and 147 days, which again are possibly related by the ratio 4 to 1. (The shorter periods near 25 days have not been investigated, as daily records are required.) It is possible that the periodicities change slowly with the latitude, in a manner suggested by the cloud-belts on Jupiter.

HISTORICAL.—*March 16.*—The Rev. W. Hunt in the chair.—A paper was read by the Hon. Secretary, Mr. H. E. Malden, on 'The Holding of Cardigan Priory by Chertsey Abbey: a Study in some Mediaeval Forgeries.' The President, Mr. H. Hall, Sir Henry Howorth, Mr. Frederic Harrison, and Miss Graham took part in a short discussion.

Mr. F. B. Davis and Mr. H. D. Littler were declared elected Fellows.

MEETINGS NEXT WEEK.

- | | |
|--------|---|
| Mon. | Institute of Actuaries, 5.—'State Insurance against Invalidity and Old Age—the Actuarial Basis of the Austrian Method,' Mr. G. W. Richmond. |
| | — Surveyors' Institution, 7.—'The Housing and Town Planning, &c., Act, 1909,' Mr. H. S. Stewart. |
| | — Society of Arts, 8.—'Applications of Electric Heating,' Lecture IV., Prof. J. A. Fleming. (Cantor Lecture.) |
| Tues. | Royal Institution, 3.—'Explorations of Ancient Desert Sites in Central Asia,' Lecture II., Mr. M. A. Stein. |
| | — Institution of Civil Engineers, 8.—Discussion on 'The Electrification of a Portion of the Suburban System of the London, Brighton and South Coast Railway,' followed by two Papers on Highways and Road Traffic. |
| Wed. | Society of Arts, 8.—'Art Education in Jewellery, Goldsmithing, and Allied Trades,' Mr. G. B. Fleming. |
| Thurs. | Royal Institution, 3.—'Surface Combustion and its Industrial Applications,' Lecture II., Prof. W. A. Bone. |
| | — Royal Society, 4.30.—'The Chemical Dynamics of Serum Reactions,' Capt. A. G. McKendrick; 'Preliminary Note on a Method of measuring Colour-Sensations by Interferent Light,' Dr. G. J. Burch; 'Variation and Adaptation in Bacteria,' illustrated by Observations upon <i>Streptococci</i> , Mr. E. W. A. Walker; 'The Inter-relations of Genetic Factors,' Mr. W. Bateson and Prof. R. C. Punnett; and other Papers. |
| Fri. | Institution of Civil Engineers, 8.—'The Uses of Chemistry in Engineering,' Lecture II., Mr. J. Swinburne. (Students Meeting.) |
| | — Royal Institution, 9.—'Travelling at High Speeds on the Surface of the Earth and Above It,' Prof. H. S. Helle-Shaw. |
| Sat. | Royal Institution, 3.—'Radiant Energy and Matter,' Lecture V., Prof. Sir J. Thomson. |

Science Gossip.

WE regret to hear that a learned correspondent has received the following notice from the Indian Museum, Calcutta :—

"For financial reasons we have been obliged to curtail the distribution list of our publications very considerably, and I am sorry that for the present we will not be able to send them to you as they are issued."

It is a great pity to do anything to hinder or curtail the usefulness of the publications of curators of museums.

PROF. TURNER has been appointed Halley Lecturer at Oxford for the present year.

THE moon will be full at 2h. 37m. (Greenwich time) on the afternoon of the 13th prox., and new at 10h. 25m. on the night of the 28th. She will be in perigee on the morning of the 2nd, in apogee on that of the 18th, and in perigee again on that of the 30th.

THERE will be a total eclipse of the sun on the 28th, the central line of which will pass from the south-east coast of Australia in a north-easterly direction till it nearly reaches the western coast of Mexico. The only places where the totality will cross land will be on some small islands in the Pacific Ocean, Samoa and the group formerly called Friendly, but now usually the Tonga Islands; the latter are thought by most of the intending observers to be the most eligible.

MERCURY will be at greatest eastern elongation from the sun on the 15th prox., and will be visible in the evening from about the 6th to the 22nd, situated in Aries. Venus sets later each evening; she will be in conjunction with the moon on the 1st prox., near the Pleiades on the 16th, and due north of Aldebaran on the 25th. Mars rises earlier each morning, and will pass in the course of next month from Capricornus into Aquarius. Jupiter is in Libra, and approaching opposition to the sun; he will be in conjunction with the moon on the morning of the 15th prox. Saturn is in Aries, and before the end of next month will set too soon to be visible.

ON the evening of the 4th inst., when the crescent moon was in conjunction with Saturn, the earth-shine upon her was particularly conspicuous, and Mr. Elgie of Leeds says that many persons ignorant of astronomy fancied that an eclipse was in progress. He notes that the glow was of ashen hue, which deepened into olive-colour as the darkness increased.

ATTENTION will be again attracted to the moon on the 1st prox., when Venus will be in close conjunction with her a little before sunset, the crescent being much smaller than at the conjunction with Saturn just mentioned, so that the earth-shine will probably be even stronger.

M. JONCKHEERE gives in No. 4484 of the *Astronomische Nachrichten* the places of one hundred new double stars (in continuation of previous lists) observed at Hem (Département du Nord, to the east of Lille) during the latter part of last year. He states that most of the measurements were made by M. Vanderdonck.

THE small planet announced as discovered by Herr Helffrich at Heidelberg on the 22nd ult. turns out to be identical with No. 489, which was photographically discovered by Prof. Max Wolf on September 3rd, 1902, and afterwards named Comacina.

FINE ARTS

THE WOMEN'S INTERNATIONAL ART CLUB.

AT the Grafton Gallery the twelfth exhibition of this Club is as good as any show confined to the works of women artists which we have seen. There is a reasonable level of capacity displayed, and evidence of study often not ill directed; and, if few of the artists have a very definite idea of what to do with such powers as they have developed, that is only to say that, like other painters of to-day, they are in an unfortunate period of transition. Private patronage has declined almost to extinction, and the employment of painters in the interests of the general public, which to many of us appears the hope of the future, has not as yet brought into being an art fine enough to tempt recruits from the more cultured class of art students. The latter are thus left almost without definite objective in a commercial sense—painting having for the moment lost its place among the applied arts; and from this point of view the *Egyptian Dancers* (71), by Miss Ann Estelle Rice, if not the finest painting on the walls, is perhaps the most hopeful, because of the frankness with which it accepts modern conditions, and fulfils the demands (if any) made by the present day upon the painter. The large canvas is well enough fitted to be a nine days' wonder as the decoration of a popular restaurant—to tour from town to town to advertise a music-hall turn. Its appeal is shallow, but, promptly delivered, it communicates a facile thrill.

Of course, to the conservative critic these will seem vulgar achievements. When the day of patronage by the Church and nobility passed by, and Art, constrained to cater for the bourgeoisie, sank to the production of little pictures crammed with intimate observation and patient craftsmanship, we lamented the death knell of the Grand Style, only half comforted by the demonstration that these little pictures on their lower plane developed certain fine and distinctive qualities. We are converted to wholehearted admiration of them just about the time when their day is passed. So attractive, indeed, is the old ideal of delicacy and finish and concentration of effort on a small space, that we are tempted to shut our eyes to the facts, and declare that these qualities are not old-fashioned—that the zeal with which old pictures of this sort are collected proves that if a modern painter painted as well, he would enjoy the same success. The plea may be granted to this extent—that possession of fine old pictures may breed a small class of collectors who will recognize a ripe master in the same art; but this by no means implies the steady demand for intrinsic merit which sustains the artist until reputation is won. Occasionally an obstinate man will persist in face of discouragement, but hardly a woman with her more impressionable mind and livelier observation of the circumstances of the time; and thus, while we find several exhibitors well embarked upon the study of the niceties of representation which equips a painter of cabinet pictures (Miss Maud Button, 15 and 39; Miss N. Labouchère, 33 and 212; Mrs. Caspar-Filser, 89; Miss Muriel Fewster, 187 and 190; Miss B. Digby, 188; and Miss E. M. Lister, 298 and

300–302, are typical examples), we find them, like most of their contemporaries, demoralized by the patent fact that for excellence of performance unbacked by reputation there is no steady demand. People do not live at home enough to wish to be surrounded by pictures which give them any lasting satisfaction. They may buy the pictures which are most talked about, but for this purpose a promising sketch serves as well as a sustained performance. There are enough promising sketches exhibited in current exhibitions to fill all our lumber rooms when we have got through with their obvious attractions, and women painters are evidently able to do them well enough to catch the notice of the attentive journalist. Miss Gabell Smith, whose excellent landscape (58) is somewhat spoilt by its sky, and Miss Christabel Dennison, whose firmly modelled figure (107) we have admired in a previous exhibition, are, on the other hand, almost the only instances of that dogged determination to give the public more than it cares to look at in a passing picture show, which is a sign at once of character and—of provincialism. Woman as a rule is too practical to make such a mistake, and the fact that private patronage has followed upon a newspaper verdict ever since she has had a reasonable chance of equipment as a painter, has thus weighed upon her more heavily than upon her more stupid confrère.

Miss Rice's picture suggests that before very long we may see women painters, with an instinctive recognition of the decadence of the cabinet picture as the field of painting, renouncing the claim to private patronage, and invading the realms of semi-commercial art, presided over by Mr. Jack Hassall and Mr. Joseph Harker, and in less artistic fashion by Mr. Sigismund Goetze. However great might be the practical difficulties to such an extension of her sphere of activity, we recognize any tentative efforts towards the art of public entertainment as indicating the direction which painting must somehow follow if it is to escape the domination of the press, and find again a sound basis by performing other service to the public than that of providing something for journalists to write about. There is no painting of such intrinsic quality that we would pay to possess it. There may be painting worth looking at as a spectacle, and, although inevitably the newer art must lack many of the qualities of the old, it will need qualities of succinct statement and direct draughtsmanship—of invention and of suitability to environment—which may healthily tax the powers of the next generation.

PICTURES BY MISS CLARE ATWOOD.

Madame Ponchard and Madame Prie. No. 1 of Miss Atwood's exhibition at the Carfax Gallery, and *The Balustrade, Covent Garden*, No. 19, may be taken as the two poles between which her practice oscillates. The former is a deftly brushed essay in the old technique of contrasted transparent and opaque paint, which has such rich possibilities of subtle modelling of the thing represented, and which is so exacting in its demands upon the designer. Miss Atwood shows an admirable delicacy of touch, but the picture is a little diffuse and wanting in massiveness. 'The Balustrade' is an example of the use of a monotonous impasto which readily gives a certain stylistic uniformity of material, and to that extent makes design easier, while it makes representation more difficult by depriving the

artist of the tactile suggestiveness of the older technique. It is the method of a whole school of younger painters like Mr. Spencer Gore and Mr. Harold Gilman—subconscious decorators with realistic principles, and it is perhaps the consciousness that there is a small contemporary public which understands this idiom that makes Miss Atwood paint with more confidence than when she handles the other method, which nevertheless we believe to be more native to her. There can be no question, however, that 'The Balustrade' is the best picture in the show. The scale of tones is excellently maintained through the passages of subtly rounded modelling in the foreground, which a less scrupulous painter might easily have failed to sustain at a proper crispness of interval. Only the group of figures are a little out of the picture. The whole collection is careful and conscientious, and grapples with the difficulty of fresh and untried subject-matter in commendable fashion.

MR. CHARLES WATSON'S ETCHINGS.

AT Mr. Dunthorne's Gallery Mr. Watson's gift for discerning picturesque subjects and setting down their more evident charms is pleasantly displayed. He weaves lacelike patterns of tracery with a delicate hand and with something of the popular idea of beauty as consisting above all in lavish decoration. His drawing of structure is careful, but it is decoration, not structure, which he stresses—as when, in *La Chapelle du St. Esprit, Rue (28)*, his interest so promptly ceases with the ornament that, although the crowd hides all but one of the plain buttresses which form the base of the building, that one is vignettied—as when, in *The Clock Tower, Venice (19)*, he allows the bronze reliefs upon the base of the flagstaff to arrest the free sweep of the eye to the ground, which gives the loftiness of the scene. *San Petronio, Bologna (14)*, is the most entirely satisfactory of the plates because of the steadiness of the square lines of the flight of steps—carefully set in perspective so as to give some idea for once of the solidity of the ground necessary to bear the weight of a cathedral.

We could wish that Mr. Watson made us feel rather more keenly the qualities of mass and solidity in architecture beneath the incrustation of filigree work in which he takes so evident a delight.

MR. ERNEST CROFTS, R.A.

As in the case of MacWhirter, the task of estimating the art of the late Ernest Crofts, well known as a designer of historic scenes, is especially difficult at the time of his death, because it is probably not the best work of the painter which has been shown for some time past. Inevitably the popular painters of one generation seem insufficient to the next, and we are inclined to think that the public which admired Crofts must have been blind to the finer qualities of colour, and must have set a value on the superficial continuity of modelling of surfaces which forbade space composition. If a careful selection of his work should appear at the next Winter Exhibition at Burlington House, we should, perhaps, find in it something of the refreshing decision of stroke which gave raciness to the pictures now in the same galleries from the brush of Frith. Like that of all popular artists, Crofts's work has an historic value as indicating the taste and ideals of the time.

REMBRANDT'S 'MILL.'

AT the present juncture, when every one is entertaining the apparently forlorn hope that Lord Lansdowne's Rembrandt may be housed permanently in the National Gallery, it may be advisable to clear the ground of all such obstacles as may at some future date be urged by the Philistine against this picture.

I am tempted to make this point as Lord Redesdale, one of the Trustees of the National Gallery, in his recent speech at the opening of the Northern Photographic Exhibition in Liverpool, made a statement which, if accurately reported in the daily press, would be very difficult to substantiate. He affirmed that the mill depicted in Rembrandt's picture is

"the mill in which Rembrandt's father earned his living, and in which the great painter gathered his first impressions."

However, this does not accord with the conclusions arrived at by Vosmaer some thirty years ago in his authoritative work entitled 'Rembrandt: sa Vie et ses Œuvres.' He writes as follows (p. 14):—

"L'assertion erronée que celui-ci serait né dans le moulin n'aura plus besoin de réfutation. Je ne crois pas que les annales de l'obstétrique fournissent l'exemple d'une femme allant faire ses couches au milieu du bruit d'un moulin, quand elle possède une bonne maison. Mais comme on l'a longtemps répétée, il fallait en faire mention. La carte de Bastius et la carte manuscrite nous mettent à même de nous orienter parfaitement à l'égard de tous ces détails."

Vosmaer then deals with the two mills shown in the plan, and adds:—

"Nous avons sous les yeux une quantité de notices ayant trait au moulin. Comme la légende aime toujours à accoupler Rembrandt et son moulin, il n'est pas entièrement oiseux, quoiqu'il n'y soit pas né, qu'il n'y ait point habité, et qu'il n'y ait jamais peint, de débrouiller une fois pour toutes l'histoire de ce détail inséparable de sa vie."

He goes on to show that

"il résulte clairement des pièces authentiques, actes et cartes, que le moulin qu'on croyait être vraiment celui des parents de Rembrandt, le moulin qui figure sur le dessin de Bisschop, reproduit par l'eau-forte de M. Cornet (que M. Flameng a copiée), n'est pas encore le vrai moulin des van Rijn. Je vais donner les preuves de cette assertion";

and he proceeds to do so.

The supreme authority on the life and achievements of Rembrandt is, assuredly, the voluminous and exhaustive work by Dr. Bode, in which (vol. viii. p. 161) the eminent German critic fully endorses Vosmaer's view in the following words:—

"There was formerly a good deal of uncertainty as to the situation of Rembrandt's paternal mill. Relying upon Houbraken's statement that Rembrandt was born on the banks of the Rhine outside Leyden between Zouterwoede and Koukerk, enquirers fixed upon a mill in this situation, which still bears the proud title of Rembrandt's Mill. In the Amsterdam Print Room there is a drawing by Johan de Bisschop, showing the ramparts of Leyden to the north of the Wittepoort. The mill in this drawing was etched by Cornet as Rembrandt's Mill."

"Since it was finally demonstrated by Vosmaer that the first mill was not the one in question, that no member of Rembrandt's family ever had anything to do with it, and that the Bisschop-Cornet mill had only belonged to Rembrandt's grandmother in part, and for no more than a year, the documents relating to the mill have lost much of their importance. They are accordingly given above merely in the form of an abstract, with an indication of the place where they are preserved."

I should not for a moment wish to challenge Lord Redesdale's assertion on my own authority only, but in the light of the latest research and the quotations I have given

above it would seem advisable that he should, in his capacity as a Trustee of the National Gallery, either amplify his statement made at Liverpool and quote his authority, or base his appeal to the public on the superlative æsthetic and technical qualities of the picture, rather than on any false sentiment in regard to its reproducing the mill "in which the great painter gathered his first impressions."

In point of fact the year in which the mill referred to belonged to Rembrandt's grandmother, and that only in part, was 1574-5, or thirty-one years before the great painter was born! MAURICE W. BROCKWELL.

JOHN OPIE, R.A.

I NOTICE in the Fine-Art Gossip in last week's *Athenæum* an announcement of a book on 'John Opie and his Circle,' and that an appendix will include a list of Opie's pictures. I should like to be allowed to repeat what was stated in *The Times* last year, in a letter written by a colleague and myself, that we have had in preparation for several years an exhaustive book on John Opie. Illness has compelled my associate to relinquish his share in the task, which now devolves entirely upon me. I write therefore to state that, whilst I am not in the least disturbed concerning a rival book on Opie, my own work is being actively carried on. A trustworthy and exhaustive book on an artist such as Opie cannot be produced in a few months, and my object has been, and continues to be, to examine (as far as possible) every picture which I describe, and not to depend on second-hand information, which experience has taught me is nearly always either insufficient or entirely misleading. W. ROBERTS.

ARCHÆOLOGICAL NOTES.

THE statement of Berossus that Babylonia was always inhabited by many peoples of different nationality has been a standing puzzle to Assyriologists, most of whom have now come to the opinion that the Sumerians were the first settlers in the country, and that it was afterwards invaded and partly conquered by the Semites. In the excellent 'Restitution matérielle de la Stèle des Vautours' of MM. Heuzey and Thurcau-Dangin, the first-named scholar gives a different explanation of the matter. He says that the land of Babylonia is in effect a natural basin or oasis of cultivable land formed by the delta of the Euphrates and the Tigris, but is isolated on either side by a large tract of desert. Hence it was naturally fitted for the occupation of a sedentary race such as the Sumerians, who provided for its irrigation by engineering works, and grouped themselves in cities founded at convenient spots. The borders of this favoured land—which he, like most others who have examined the subject, looks upon as the cradle of the earliest civilization recorded—were, however, the abode of Semitic tribes of shepherds and herdsmen, whose need for pasture forced them to adopt a nomad life, and finally gave them the command of the sea-coast.

It may be noted that the same phenomenon may have taken place in Egypt, where the town-dwellers on the fertile banks of the Nile, coming possibly from the heart of Africa, were girt in by the nomads of the Libyan and Nubian deserts. If similar facts can ever be established in the case

of the Yang-tse-kiang, the third great river whose delta has formed an early seat of civilization, we shall be entitled to say that geography has a more important influence upon man's progress in culture than has hitherto been supposed.

In one of these informing reviews in the *Revue Critique* which form apparently Sir Gaston Maspero's chosen mode of imparting his views upon points of research to the learned world, the Director of the Service des Antiquités gives quite a new idea of Demotic literature. In reviewing Prof. Spiegelberg's recently published '*Der Sagenkreis des Königs Petubastis*,' Sir Gaston points out that the papyrus in question is a fair sample of the popular traditions of the Assyrian and Ethiopian wars, which form nearly all the material to which we can look for the reconstruction of their history. That they are intermingled with long speeches, letters, and stories of magic, or the personal intervention of the gods in mundane affairs, is only what we might expect from our knowledge of the mental equipment of the Egyptian scribe of the period. Sir Gaston also shows that it is from these popular tales, half history and half folk-lore, that writers like Hecataeus of Abdera and Diodorus Siculus took the framework of the histories that they built up in such laborious manner. This particularly applies to their description of the manners and customs as well as the constitutional duties and rights of the king and the ruling classes of Egypt, which has been accepted as authentic by all subsequent historians. As he epigrammatically puts it, "the Pharaohs of the Demotic romances have been used as models by the Alexandrine historians," with what effect upon the conceptions of future ages any one may judge. As another French Egyptologist has reminded us, the Pharaohs, even in the time of the greatest splendour, were a good deal more like Mtesa of Uganda, Cetshwayo of Zululand, or Lobengula of the Matabeles than any European or Asiatic king.

In the current number of the *Revue Archéologique* M. Salomon Reinach expresses his opinion that M. A. de Zogheb has really proved that both the splendid Sema or tomb of Alexander the Great and the burying-place of the Ptolemies are to be looked for under the hill called Kom-ed-dik at Alexandria. Unfortunately, the hill in question is crowned by a Mohammedan mosque and a fort used by the English military authorities; and, according to M. Reinach, the occupiers of both mosque and fort forbid all excavation on the site. One does not know at present on what authority M. de Zogheb bases his statement, but, if it can be substantiated, it would seem that a case is made out on which the English Government might for once interfere in the interests of archæology. If, on the other hand, M. de Zogheb is only trusting to stories like that which M. Reinach quotes from the history of the Greek Ambrosios Schilizzi, a native of Alexandria, to the effect that he once managed to tunnel under the mosque in question, and saw there a corpse crowned with a diadem and surrounded by books and rolls of papyrus, there is not much use in pursuing the subject further. Such stories, like those recently made public at the "copper city," and, in past generations, of the strange events which happen nightly within the Gizeh Pyramids, seem to need more substantiation before being accounted worthy of serious investigation.

A more valuable contribution to history is made by M. Adolphe Reinach, the nephew of the learned Secretary of the Académie

des Inscriptions, in the current number of the *Revue des Études anciennes*. He sets himself to trace the wanderings of the Gaulish bands which crossed the Balkans in the winter of 278 B.C., and, uniting with the relics of the other horde which had been driven away from Delphi, fell upon the rich cities on the European shores of the Hellespont. That they were defeated with heavy loss by Antigonos Gonatas, who drove them out of Lysimacheia in the spring of 277 B.C., is matter of history; but the defeat cannot have involved extermination, for we find Gauls among the armies of most of the Diadochi, and it must have been a strong body of them which established itself in the middle of Asia Minor in the province called after them Galatia. M. Reinach thinks that it was Antigonos Gonatas himself who persuaded the beaten Gauls to enter into the service of Ptolemy Philadelphus, and to give him efficient aid in the war which he was then waging against the house of Seleucus. He describes with much historical insight how the Gauls thus came to disembark at Alexandria in the winter of 277 B.C., accompanied, after their manner, by their women, children, and wagons, and the astonishment which this invasion caused among the busy inhabitants of the city. The blue-eyed, long-haired giants that the Alexandrians thus saw for the first time, according to him, found a new inspiration for Alexandrian art, and it is to this date that he would assign the marble Gaul of the Museum of Cairo, and several smaller figures still at Alexandria. Their subsequent revolt, and their cutting-off by Ptolemy on an island in the Sebennytic mouth of the Nile, again failed to bring about their extinction; and M. Reinach shows how quickly the survivors became absorbed by the Greek population of Alexandria, and adopted Greek manners and customs.

The Gaulish mercenaries found after this in the armies of the Lagides were, he thinks, recruited in Galatia itself, and he points out that it was they who formed the backbone of the insurgent army which besieged Julius Cæsar at Alexandria, and nearly suppressed the Dictator, as they had previously done his rival, Pompey the Great. The whole article is well worth reading, and full of information.

In the *Mélanges d'Archéologie* issued by the French School of Rome appears an article by Prof. d'Anziani on Etruscan demonology, which brings to light a very difficult question. There is in existence a set of cinerary urns of Etruscan origin and style, which all bear in relief the representation of a scene in which a composite monster issues from a pit or well to attack different groups of personages, of whom some seem to fight, and others to fly from him. The monster itself has in every case a head which appears to be that of a wolf, with in most cases a man's body, but in one that of a horse. The fore-limbs, however (all that are shown), even when they come from the body of a horse, terminate in claws. The neck of the animal is in every case encircled by a cord or chain held by one of the assistants, of whom two at least are attacking the monster with swords or stones, while others are unarmed, and either lying prone as if just overthrown or raising their hands in fear. In all the reliefs a priest occupies a position in the centre of the composition, and seems to be pouring a libation on the head of the monster; while in two of them a winged genius appears. Gallant attempts have been made by earlier writers to bring this scene into line with the current Greek mythology, by assuming that the monster is Lycaon, King of Arcadia,

who according to Ovid was transformed into a wolf; but why he should be emerging from the earth in the manner described, no one seems to have been able to explain. Another interpretation of the scene is that it represents the transformation by Circe of the companions of Ulysses; but the attack by the two armed warriors is in this case similarly inexplicable. It does not render matters easier that in one of the examples the head of the monster is clearly a mask, from which a human face is emerging. Finally, Prof. d'Anziani comes to the conclusion, after examining these and other conjectures, that the monster represents Pluto or Orcus, lord of hell, whom the Etruscans represented on their tombs with a wolf's head above his own.

One does not see that this accounts for the cord round the neck of the figure; and Prof. d'Anziani's suggestion that the two armed warriors who are attacking it are two heroes so far removed from the common weakness of humanity as to be capable of vanquishing the lord of hell seems rather far-fetched. Altogether this series of urns begets in one's mind the suspicion that all the features of the Etruscan religion and mythology cannot be explained by reference to those of the Greeks.

In the *Revue* last mentioned are also some remarks by M. Georges Radet in continuation of an earlier study by him on the Lydian goddess Cybebe, whom he does not apparently admit to be quite the same as the Cybele of Phrygia. That she was worshipped chiefly at Sardis seems, however, to be admitted, and M. Radet has already given excellent reasons for thinking that, under the Achæmenid kings of Persia, her worship became merged in that of the Persian Anahita or Anaitis, and after Alexander's conquest in that of Artemis. He now says, however, that he has discovered in the old Museum of the Evangelical School at Smyrna (which is, he says rightly, a magazine of treasures of which very little use is made) an ex-voto from Chios, inscribed by one Trophimas. The last name seems from its mention by St. Paul to have been common in Asia Minor. The inscription is made to "the unconquered Kore Urania who hears prayer," and M. Radet—who adopts from M. Cumont, in his '*Mystères de Mithra*,' the identification of Urania, "the great Syrian goddess," with the Persian Anahita—now declares that Kore is to be identified with Artemis. He is thus of opinion that the "Kore Urania" of his new inscription is but another way of writing "Artemis Anaitis," an expression that he has found frequently in Asia Minor inscriptions, and therefore, in his own words, a late avatar of Cybebe. "Urania," "coelestis," or "heavenly" is about the last epithet that one would expect to find attached to the always Chthonian or infernal Persephone; but M. Radet gets over this by declaring that the Kore of Sardis differs essentially from her Greek namesake. A better explanation would be, perhaps, that in post-Alexandrine times nearly all the goddesses of Greece, Asia Minor, and even of Egypt, were treated as varying forms of the earth goddess.

An interesting account by M. A. Mezières which recently appeared in *Le Temps*, and which the editors have thought worthy of being transferred bodily to the *Revue Archéologique* quoted above, deals with the stormy life of Reginald de Chatillon, one of the robber-counts who attached themselves to the Latin kingdom of Jerusalem. He was made, for his valour, Prince of Antioch, and defended himself successfully there against all the forces of Saladin, whose two provinces

of Syria and Egypt were effectually kept apart by the long line of strong fortresses which the Crusaders had erected soon after the taking of the Holy City. Yet Chatillon's greed was so insatiable that no consideration of good faith or loyalty could ever induce him to cease from the pursuit of booty, which led him at different times to put the Patriarch Amaury of Antioch to the torture and to sack the whole island of Cyprus. The Emperor Manuel Comnenus once led an army against him and compelled him to make submission, and he spent sixteen years as the prisoner of the Mussulmans at Aleppo. On being delivered from this, he prolonged the agony of the moribund kingdom of Jerusalem by his energy as prince of its trans-Jordan province; but his contempt for treaties was so flagrant that Saladin swore to kill him with his own hands. The threat was duly carried out in the circumstances narrated by Sir Walter Scott in his notes to 'The Talisman.'

THE SALTING COLLECTION AT THE VICTORIA AND ALBERT MUSEUM.

THE arrangements which have lately been made for the exhibition of the Salting Collection at the Victoria and Albert Museum were necessitated by the terms of the will, in which the testator bequeathed

"unto the nation my art-collections, namely, my pictures or such as they, the Trustees, may select for the National Gallery, and my other collections, whether in my chambers or at the South Kensington Museum, to be kept at the said Museum, and not distributed over the various sections, but kept all together according to the various specialities of my exhibits."

Besides the objects formerly exhibited on loan from as early a date as 1874, and now numbered roughly up to 3,000, there are included in this important bequest a number of objects which were housed in Mr. Salting's chambers at the Thatched House Club, but have not hitherto been available for exhibition. They are so wide in their range and so varied in their groups that it is not possible to give more than a brief summary of some of the outstanding features. We begin with some hundred and twenty Italian bronzes, which include a 'Hercules' assigned to Bertoldo di Giovanni; a rather uninspired 'David,' attributed to Domenico Poggini; and two magnificent sphinxes by Andrea Briosco (Il Riccio). We then pass to well-chosen examples of the medallist's art as seen in the work of Pisanello, Matteo de' Pasti, Sperandio, Gentile Bellini, and others. The last-named is represented by a portrait medal of Mohammed II., the Sultan who employed him as his court painter at Constantinople in 1479. Some of these were exhibited at Burlington House in 1888. The medal by an unknown hand representing 'Leonardo Loredano' is interesting in regard to the portrait of that Doge of Venice in the National Gallery. That which is here seen to bear the features of Isotta da Rimini will naturally be compared with the alleged bust of the same lady in the Campo Santo at Pisa and the 'Portrait of a Lady' in the National Gallery (No. 585) which was formerly identified with her.

Plaquettes; superb examples of Hispano-Moresque ware; Italian maiolica; Italian glass and crystal; boxwood and honewood medallions; the pair of stirrups of russet steel, inlaid with foliage decoration in gold and silver, which were so much discussed at the time of the Toison d'Or exhibition; a

fifteenth-century Italian *cuir bouilli* circular case; and a large Raphaellesque tapestry, together with furniture and woodwork, are among the most imposing or attractive exhibits in the first room.

Room 129 is given up to the Art of the Near East. A bronze ewer in the form of a lion, and a table case full of Greek and Roman coins, will attract the collector; but the two Persian carpets in wool and silver thread, especially the one with a floral pattern, borders, and an inscription from Hafiz in rich colours, are of the highest importance, a remark which will certainly not apply to the Greek vases and some of the Tanagra figures.

Mr. Salting's manifold objects of the French and German Renaissance have long been known to collectors, and the champelevé Limoges enamel of a 'Maesta' as a cover for a Book of the Gospels, a pricket candlestick, a spoon of rock crystal mounted with a gold handle tipped with a sapphire by an English fifteenth-century goldsmith, and an exquisite English signet ring engraved with the motto *tel il nest*, of about the same date, justify the conclusion that Mr. Salting was "that rare phenomenon—a collector of the finest things with a taste for all." Ivories made in Byzantium, Italy, France, and England are a welcome addition to the Museum, which was already rich in this department. The triptych of painted enamel on copper, attributed to Nardon Penicaud, has long been famous; and one of the wall cases contains examples of the much-sought-after Henri Deux ware.

A certain number of Dürer etchings and line engravings, and etchings by Rembrandt, were selected by the Board of Education to supplement those of the Ionides Bequest and the existing collection in the Department of Engraving, Illustration, and Design. Many of Mr. Salting's most celebrated miniatures by Hans Holbein the Younger, Nicholas Hilliard, Peter Oliver, Richard Cosway, and others have already been included in loan exhibitions.

On the upper floor are cases full of Chinese carvings in rock crystal, jade, lapis lazuli, onyx, and other semi-precious stones, and several hundred examples of Japanese lacquer.

The last room has been reserved for the Chinese and Japanese bronzes, and for the numerous standard cases of Chinese porcelain which for many years were arranged, or rather massed together, in the old South Court, and are indisputably the *clou* of the present exhibition.

Mr. Salting, who was in many respects the counterpart in this country of his contemporary the late M. Émile Peyre in Paris, has built up a remarkable monument to himself as a *collectionneur enragé* of the old school, while his natural taste and *flair* and years of sheer hard work have strengthened the national collections at many points. The hundred and ninety-two pictures which passed to the National Gallery, and the drawings, engravings, etchings, and water-colours which were eventually selected by the Trustees of the British Museum, and amounted in the aggregate to four hundred and thirty-three items in the official inventory, were long ago criticized in these columns.

It is noteworthy also that a certain number of the exhibits now added to each of these museums were "snatched" from dealers who would have offered, and in some instances sold, them to the nation. It may be doubted if there is any living man possessed of so encyclopædic a knowledge of the whole range of art history, as here

exemplified, as to notice with expert authority the innumerable *objets d'art* that passed into Mr. Salting's collection.

Although a certain proportion of the standard cases seem familiar, and were evidently constructed after a pattern long known to the frequenters of the Victoria and Albert Museum—the inadequacy of the annual Government grant no doubt explains this—the whole collection has been installed in its new environment with an effect that reflects the highest credit on Sir Cecil Smith and his army of expert assistants. It is, however, a matter for general regret that Mr. A. B. Skinner did not live to see the inauguration of a collection which for over thirty years he saw growing up under his eyes almost week by week.

One suggestion occurs in regard to the admirable catalogue, which will be equally serviceable for the expert and the layman: in future editions the numbers of the floor-cases might be printed in bolder type. The words "all together" should be substituted for "altogether" in the quotation from the testator's will on p. 5. M. W. B.

Fine Art Gossip.

MR. ALFRED PARSONS was elected R.A. on Wednesday last.

AT a meeting held in Edinburgh last week four new Associates of the Royal Scottish Academy were elected—two painters and two architects. The painters are Mr. J. Whitelaw Hamilton and Mr. Robert Hope. Mr. Hamilton is one of the artists associated with Sir James Guthrie, Mr. Walton, Mr. Lavery, and others in the so-called "Glasgow School." He is a landscape artist, and paints in oils and water colours. Mr. Hope began his career as a lithographic draughtsman. For some years he worked at book-illustrations, but latterly has devoted his attention chiefly to painting.

THE new architect Associates are Mr. William Kelly, a native of Aberdeen, and Mr. A. N. Paterson, a younger brother of Mr. James Paterson, R.S.A.

A COMPLETE Catalogue of the etched work of Mr. D. Y. Cameron is in preparation, with introductory essay and a detailed description of each plate by Mr. Frank Rinder. Several etchings which are known to exist have not been traced, and are mentioned in our advertisement columns. Mr. Rinder (21, Worenzow Road, St. John's Wood, N.W.) would be much obliged if information as to them could be sent to him.

LAST Saturday at Messrs. Christie's Turner's drawing 'Caerlaverock Castle, Dumfries,' fetched 231*l.*, and J. M. Strudwick's picture 'The Gentle Music of a Bygone Day' 210*l.* On Monday Barret's drawing 'A Classical River Scene, with Buildings, Figures, and Goats,' brought 241*l.*, and Sir J. D. Linton's picture 'The Declaration of War' 220*l.*

AT Messrs. Sotheby's sale of engravings on Monday and Tuesday last Whessell's 'Portraits of Celebrated Running Horses,' fetched 134*l.*; and 'Lady Elizabeth Delme and Children,' by V. Green after Reynolds, 58*l.*

Two notable pictures by Mr. P. Wilson Steer have just been presented to the Dublin Gallery of Modern Art by the Hon. Director, Sir Hugh P. Lane—the large landscape 'Ironbridge, Salop,' and 'The Blue Girl,' which was included in the last exhibition of the New English Art Club,

presenting a fair girl in a vivid blue dress seated at a table, the background being filled by a tall standing mirror.

THE Château de Maisons-Laffitte, which was purchased by the State in 1905 for 200,000 francs, is to be transformed into a museum, and will come under the administration of the Louvre, to which it will form a species of supplement. This Château, which is regarded as one of Mansart's finest works, was built for René de Longueil, President of the Paris Parlement, and remains almost untouched. M. Dujardin-Beaumetz, the Under-Secretary of the Fine Arts, is turning the Château into a museum of objects of art and tapestry of the seventeenth and eighteenth centuries; and in due course a number of pictures of the same period will be removed thence for the galleries of the Louvre.

THE most recent acquisitions of the Louvre include a collection of drawings by Girodet and Géricault, the gift of Mlle. de Mirimon. By the latter there is the study from 'Le Radeau de la Méduse' (itself one of the attractions of the Louvre); and by Girodet there are four studies from 'Atala au Tombeau,' which is also in the Louvre. Another gift consists of two pictures by Monticelli from M. Fayet of Marseilles.

FRESCOES have recently come to light in the choir of the church of S. Francesco at Brescia, which contains one of Romanino's finest altarpieces in a magnificent frame ascribed to the celebrated Brescian carver Stefano Lamberti (1485-1538). The frescoes consist of a figure of Christ in half length, the four Evangelists, and four Fathers of the Church, figures of very large dimensions, not well preserved, which are thought to be by Romanino, some of them being mentioned in eighteenth-century guide-books as by him. Of much earlier date, it is said, and in part in far better condition than the other frescoes, is a large composition of the Madonna and Child enthroned, surrounded by adoring angels. These frescoes, especially the last-named composition, were thought so important that the Director of the Brera, accompanied by Prof. Venturi, made a special journey to Brescia to inspect them, and the latter has suggested that the large composition may possibly be the work of Bembo. It will certainly be prudent to make an exhaustive search in the Brescian archives before venturing upon any attribution for this newly discovered work, which may prove of great interest in throwing light upon the development of painting at Brescia in the first half of the fifteenth century, to which it is said to belong.

BONIFAZIO BEMBO, it may be noted, was by birth a Brescian, but his family came from Cremona and he always identified himself with that city, being often spoken of in documents as "Bonifazio da Cremona." We must assume that he never lived at Brescia for any length of time, as his name has thus far not been met with in the archives in that city, and it seems, therefore, arbitrary to attribute to him the fresco of S. Francesco. The names of other painters who at this period were working at Brescia are known, such as Andrea da Cremona (perhaps the brother of Bonifazio Bembo) and Enrico da Milano. It is possible that one or other of these painters may have worked in S. Francesco, but unless a document should come to the rescue, nothing can be proved in this direction, as at present no works by any of these last-named painters are known, and Bembo's

few thoroughly authentic works are incapable of affording any proof.

A BOOK recently published at Christiania by Mario Kron, entitled 'Italienische Billederii Danmark,' with a summary in French, gives an instructive account of Italian pictures existing in Denmark; among them are a Filippino Lippi, an early Garofalo, and a work ascribed to the school of Ortolano. The Trecento paintings mentioned are for the most part known to students through the writings of specialists.

THE second volume of 'Some Old Devon Churches,' by Mr. John Stabb, will be published next month by Messrs. Simpkin & Marshall.

EXHIBITIONS.

- SAT. (March 25).—M. Bauer's Water-Colours and Etchings, Messrs. Obach's Gallery.
 — Exhibition of Works of a Group of Artists, Goupil Gallery.
 — Mr. Wilfrid G. von Glehn's Paintings and Water-Colours, Goupil Gallery.
 — Mr. Spencer F. Gore's Paintings, Chenil Gallery.
 — Post-Impression Pictures by Mr. H. Phelan Gibb; Miss Wakana Utagawa's Paintings on Silk; and Water-Colours by Mr. H. Franks Waring, Baillie Gallery.
 — Royal Society of British Artists, Suffolk Street.
 — Mr. Arthur Severn's Water-Colours, Leicester Galleries.
 — Spring Exhibition of Pictures by Early British Masters and Foreign Painters, Messrs. Shepherd's Gallery.
 — Mr. W. L. Wyllie's Pictures, 'The King's Navy,' Leicester Galleries.
 WED. Portraits and Landscapes by the Duchess of Buckingham and Chandos, Private View, Mr. T. McLean's Gallery.

MUSIC

THE WEEK.

QUEEN'S HALL. — *London Symphony Concert.*

THE LONDON SYMPHONY CONCERT on Monday evening was announced as the last over which Dr. Hans Richter would preside. Every seat was occupied, and immense enthusiasm prevailed, for the conductor showed that he is retiring while his powers are still unimpaired. The 'Meistersinger' Overture was instinct with life, strength, and poetry; and Beethoven's Symphony in F, a special favourite of Dr. Richter's, was admirably interpreted. A Haydn Symphony was included in the scheme, No. 8 of the "London" Symphonies being the one selected. We are glad that the old master to whom Mozart and Beethoven were so deeply indebted was recognized. Some portions of that Symphony certainly recall the pigtail period, but the first and strongest movement is in many ways interesting.

The programme included Mr. Hamilton Harty's Tone-Poem 'With the Wild Geese,' and the performance under his direction was excellent. This work was produced at the last Cardiff Festival, and a second hearing confirms our first opinion that, in addition to skilful workmanship and effective scoring, the music shows higher qualities. Herr Bronislaw Huberman played the solo part of the Brahms Violin Concerto. In spite of refined technique and artistic phrasing, the interpretation was deficient in strength of tone and of will-power. This was especially noticeable in the Finale.

In the programme-book was inserted a notice that a Farewell Concert with an

interesting programme will be given in honour of Dr. Richter at Queen's Hall on Monday evening, April 10th. The London Symphony Orchestra will take part, and Dr. Richter himself will conduct the whole of the programme.

ÆOLIAN HALL.—*Mr. Wesley Weyman's Liszt Recital.*

A LISZT RECITAL given on Wednesday afternoon was announced as "in commemoration of the centenary" of the composer; "in anticipation" would have been a more suitable term. Anyhow, the programme was interesting, inasmuch as it included pieces not often heard, such as 'Bénédiction de Dieu dans la Solitude,' 'Funérailles,' and 'Sonnetto CXXIII. del Petrarca.' Further, it was free from those operatic fantasias which merely helped to spread the fame of the pianist. In Liszt's pianoforte music there is much that is attractive and highly poetical, yet at times he seems to have forgotten that the instrument, even under his wonderful hands, could not properly express what he felt. When playing, he must have listened to his music with his inner, not his outer ear.

The pianist of the afternoon, Mr. Wesley Weyman, who made his first appearance in England, has evidently studied Liszt's music closely. His technique is admirable, and he interpreted the various numbers with marked intelligence and rare feeling.

BECHSTEIN HALL.—*Mr. Cyril Scott as Composer.*

A CONCERT PROGRAMME devoted to the music of one composer may not be the wisest way of calling the attention of the public to his art-work, but it certainly is the most practical. Although such a concert was given by Mr. Cyril Scott on Wednesday evening, the programme was arranged so as to offer considerable variety.

Mr. Scott opened with his Second Pianoforte Suite (Op. 75). The 'Prélude' is effective, the 'Air Varié' interesting, but the final section, 'Introduction and Fugue,' is, except for a somewhat prolonged coda, the cleverest and most characteristic of all. Of a 'Talahassee Suite' for violin solo, extremely well rendered by Herr Efrem Zimbalist, the first two movements, 'Bygone Memories' and 'After Sundown,' were heard for the first time. In the former the vagueness of phrase and harmony creates an atmosphere most appropriate to the title: the second, in large measure diatonic, offers excellent contrast.

A number of delightful songs were sung with thought and feeling by Miss Jean Waterson and Mr. Theodore Byard. Some were old favourites; of the new ones, the 'Villanelle of the Poet's Road' and 'The New Moon,' with its light picturesque accompaniment, were remarkable for simplicity and daintiness.

Musical Gossip.

SIR EDWARD ELGAR has expressed the hope that the valuable services rendered to music by Dr. Hans Richter will be publicly recognized. In any case, it must be, he says, a national recognition. As thousands of lovers of high-class music have enjoyed year by year the concerts given under the direction of the great conductor in various cities of Great Britain, there will surely be a speedy and hearty response to Sir Edward's wish.

MR. BENNO MOISEWITSCH gave a piano-forte recital at Bechstein Hall last Saturday afternoon and for his programme selected three sonatas. The first was Beethoven's in B flat (Op. 106), and, although the pianist is still very young, his rendering of the first three movements was remarkably good. In the final fugue, however, his desire to show how boldly he could face the music in which the composer has heaped up difficulties which have taxed the powers of the greatest pianists, led him to hurry through it. As in the fugue originally intended for the posthumous B flat Quartet, to which reference was recently made, so while this one was being composed, a struggle was evidently going on between head and heart, which ended in a victory for the former; of emotion there are, however, a few traces. Mr. Moiseiwitsch's reading of Liszt's Sonata in B minor was strong and brilliant. His programme ended with Brahms's Sonata in F minor (Op. 5).

THE CLASSICAL CONCERT SOCIETY's last concert took place at Bechstein Hall on Wednesday afternoon, when the programme was devoted to Brahms. Earnest performances were given of the B flat Sextet and Pianoforte Quartet in G minor. Fräulein Wietrowetz was leader in the first, and Mr. Leonard Borwick pianist in the second.

AN autumn series of ten concerts is announced to take place on the following dates:—October 11th, 18th, and 25th, November 1st, 8th, 15th, 22nd, and 29th, and December 13th. They are called simply "Concerts of Chamber Music." The term "Classical" has disappeared, so that the scheme promises to be more comprehensive, and therefore more interesting.

MR. LANDON RONALD will conduct next Friday the orchestral concert at the Guildhall School of Music, the first since he was appointed Principal.

MR. THOMAS QUINLAN has completed a scheme for the production of opera in the English language. He will start on October 2nd at the Royal Court Theatre, Liverpool, where Puccini's 'Girl of the Golden West' will be given in English for the first time. After visiting various important towns, he will go to Dublin for four weeks, immediately after which the company will sail for South Africa, and from there proceed to Australia.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Albert Hall.
—	London Symphony Orchestra, 3.30, Palladium.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
MON.	Hugo Heinz's Orchestral Concert, 8, Queen's Hall.
—	Mr. Howard Jones's Pianoforte Recital, 8, Bechstein Hall.
—	Miss Ellinor Lloyd's Pianoforte Recital, 8.30, Æolian Hall.
TUES.	Messrs. Alfred Cortot and Jacques Thibaud's Pianoforte and Violin Recital, 3, Æolian Hall.
—	M. Bronislaw Huberman's Violin Recital, 3.15, Queen's Hall.
—	Miss Helen Sealy's Concert, 8.15, Bechstein Hall.
—	Mr. Marcelan Thalberg's Pianoforte Recital, 8.15, Æolian Hall.
WED.	Mr. Leonard Borwick's Pianoforte Recital, 3, Æolian Hall.
—	Madame Frickenhau's Pianoforte Recital, 3, Bechstein Hall.
—	Mr. Theodore Byard's Vocal Recital, 8.15, Bechstein Hall.
—	New Symphony Orchestra, 8.15, Queen's Hall.
THURS.	Kathleen Chabot's Pianoforte Recital, 3, Æolian Hall.
—	British Musicians' Pension Society (Richter Conductor), 3, Queen's Hall.
—	Mlle. Ella Spravka's Matinée, 3.15, Bechstein Hall.
—	Royal Choral Society, 8, Albert Hall.
—	Madame Lula Mys-Guinelner's Song Recital, 8.15, Bechstein Hall.
FRI.	Mr. Frank Hutchens's Pianoforte Recital, 8.15, Bechstein Hall.
—	Mr. Wesley Weyman's Pianoforte Recital, 8.15, Æolian Hall.
SAT.	Queen's Hall Orchestra, 3, Queen's Hall.
—	Dr. Ethel Smyth's Concert, 8, Queen's Hall.

DRAMA

THE WEEK.

QUEEN'S.—*A Fool There Was: a Play in Three Acts.* By Porter Emerson Browne.

LURID is the only term which seems aptly to describe this piece. It is melodrama in excelsis and has for its central figure a Circe who in the shamelessness with which she lures her victims to their ruin leaves her classical counterpart far behind. America, which claims to do so many things on the biggest of scales, has certainly in this case beaten our own novelette-writers at their own game of picturing in high colours the langours and horrors of vice.

It is odd to think that Mr. Kipling should have inspired the transatlantic author to this effort! It happened in this way. Once upon a time Mr. Kipling wrote some lines about "a rag and a bone and a hank of hair," and a "fool" who for the sake of these sacrificed wife and child and fame and honour. Mr. Browne has composed a play round this fable, quoting the verses in the course of his story, and driving home every point with consistent over-emphasis.

The hero is wonderfully fortunate in wife, friend, and girl-baby till he meets his siren on board a liner. Then a glance, a smile, the dropping of a rose, and the man is enthralled for once and all by a beautiful fiend who only a moment before has driven a lover to suicide. She insists on her deck-chair being placed on the very spot where this poor wretch shot himself, and has all her battery of charms ready for the next comer before the blood has been wiped away from the floor.

When once "the husband" and "the woman" have met, what scenes of passion ensue between the pair, she luring him with inviting lips and mocking laughter, and pelting him with red rose leaves; he drinking spirits neat to drown his conscience, and expressing loathing amid his drunken caresses! Nor is vice allowed always to usurp the stage, even to point a moral; virtue, too, has its innings in the person of the husband's friend and the long speeches which he delivers as the advocate of morality.

Then comes the closing tableau—fit climax of such a tale. Not all the eloquence of the friend, not all the angelic sweetness of wife and child, can woo back the sinner to home and happiness. Once more Circe has only to smile and stretch out her arms, only to murmur, "Kiss me!" and lean back with outstretched throat, for her lover to succumb. But he revolts at last and makes a rush to strangle her, and then, in the midst of the struggle, falls dead at her feet.

Miss Katharine Kaelred, specially brought from America for the occasion, makes a picturesque Siren, and has

moments of intensity and some haunting peals of laughter. Mr. Frank Cooper works desperately hard in the part of the husband, Mr. Charles Bryant delivers the friend's rhetoric with great spirit; and Miss Margaret Halstan acts the wife very prettily. But it is an ungrateful business for players to be interpreting a piece which the audience can hardly take seriously.

PLAYHOUSE.—*One of the Dukes: a Play in Three Acts.* By George Pleydell.

MR. CYRIL MAUDE ought to be kinder to himself and insist on giving himself better parts. It seems a shame that an actor of his piquant personality and exceptional gifts should be condemned, for instance, as he is just now at the Playhouse, to figure as a zany of a peer who has not even nice taste, but merely a vague amiability, to excuse his stupidity. That this impecunious Duke of Rye causes plenty of laughter of the empty, spasmodic sort as he potters about with his bassoon and talks vacuously about his love-affairs or anticipates the time when, owing to the failure of his one supply of water, a garden well, he will no longer be able to have a bath, may be freely admitted; Mr. Maude, with his keen sense of humour, sees to that. There is, too, something ludicrous about a man who has nothing but his title to offer a bride being morbidly insistent that his future wife shall have nothing sham about her. But good form surely should prevent even a duke from giving away his former sweethearts in conversation, and explaining how the sea washed away one girl's complexion and a bramble snatched off another charmer's curls, while in a third case a shapely figure yielded to the point of an alpenstock. Granted that with that half-melancholy, half-droll manner Mr. Maude can always assume, such confessions as these divert the audience hugely for the moment, there is no avoiding the suspicion that they make the Duke little short of a cad. That the actor who is associated with so many instances of stage chivalry and self-sacrifice should be asked to descend to this level is a little disconcerting to the audience, and unfair to him, especially as the author seems to imagine his Duke to be the best of good fellows.

The piece has only one redeeming scene. That occurs at the bottom of a well—the well of the Duke's which is slowly drying up, and there is no justification for the place except that the playwright will have it so. In this scene we see the hero and the inevitable American heiress who has promised to marry him swaying about in a rickety cradle and unable for a time to return to the surface. They have come down to find an engagement ring which the girl has purposely thrown down because she wishes to break off the match; yet she cannot do so and save her fortune, for her father's will made forfeiture the penalty of her jilting an accepted lover. A very short experience of the Duke has taught her that she likes his cousin better,

and this brief underground trip somehow induces her fiancé to let her off. Really, however, the love-troubles of Maxine, sweet girl though she is, do not give us any concern. But it is delicious to hear Mr. Maude as the Duke groaning in the dark, "Oh, why isn't there a telephone?" and vowing many rash vows of how he will act if only he may see the light again. Miss Alexandra Carlisle looks a picture as usual, and plays some love-scenes pleasantly with Mr. Allan Aynesworth. But these do *not* happen in the well, and it is just the Duke's antics in the well which save the new piece from failure.

Dramatic Gossip.

THE PIONEER PLAYERS will give the first of their series of six performances at the Court Theatre on Monday afternoon, May 8th, when they will present three new one-act plays: 'Jack and Jill and a Friend,' by Miss Cicely Hamilton; 'In the Work-house,' a realistic scene by Mrs. H. W. Nevinston; and 'The First Actress,' by Miss Christopher St. John, in which Miss Ellen Terry will appear.

THE POETRY SOCIETY has arranged a special matinée of 'Atalanta in Calydon' on April 4th, the eve of Swinburne's birthday, by Miss Elsie Fogerty's company. Special efforts are being made to secure an adequate chorus.

MESSRS. GEORGE ALLEN will have ready early in April 'The Shakespeare Revival and the Stratford-on-Avon Movement,' by Miss Mary Neal and Mr. Reginald Buckley, with an Introduction by Mr. F. R. Benson. Appendixes will be furnished by the organizing secretary of the Festival Association.

A VERY successful performance of Marlowe's 'Faust' has taken place at Essen. The text used was that of 1604, translated by Morsbach and Repp. The staging of the play was that of Shakespeare's time. It will be remembered that last year the same 'Faust' was acted by the students of Göttingen.

M. EDMOND ROSTAND has planned a translation of Goethe into French, beginning with 'Goetz' and 'Tasso.'

FROM CONSTABLES' SPRING LIST

OF ALL BOOKSELLERS AND CIRCULATING LIBRARIES

SIR WILLIAM BUTLER

AN AUTOBIOGRAPHY. 16s net.

MORNING POST.—"Here is a book worth reading.....the record Butler has left is worthy of the life he lived."

STANDARD.—"The record of a great thinker, a brilliant soldier, a high minded gentleman."

OBSERVER.—"Butler gives us living visions of Egypt."

GLOBE.—"This autobiography is a notable book."

PALL MALL GAZETTE.—"None can resist the fascinating matter and style of the autobiography."

WESTMINSTER GAZETTE.—"Here is new light on recent history."

SPECTATOR.—"A delightful narrative of adventure and the revelation of a lovable character."

ATHENÆUM.—"This brilliant autobiography. More alive and alert than almost any other life-record of recent years."

VANITY FAIR.—"Emphatically a book of the season and one which everybody ought to read."

ADVENTURE, SPORT, AND TRAVEL

ON THE TIBETAN STEPPES. An Account of the Travels of C. H. Mears and J. A. Brooke. By W. N. FERGUSON. With over 80 Illustrations. Royal 8vo, 16s. net.

This volume deals with a notable journey undertaken in the unknown borderland between China and Tibet. The travellers succeeded in entering a region which no one had previously been able to explore, inhabited by eighteen semi-independent tribes, near the Chinese Tibetan border, and obtained valuable maps, data, and photographs of the mysterious land of the Lolos.

ACROSS THE ROOF OF THE WORLD.

By P. T. ETHERTON, F.R.G.S. 16s. net.

Daily Telegraph.—"Of this great journey the traveller gives us a simple, but deeply impressive narrative. That narrative will be read with great enjoyment by all who can delight in vicarious travel....a vivid record of the frost-bitten travellers travelling for hundreds of miles over the frozen steppes across the roof of the world, a really marvellous journey."

A wonderful crossing of unknown Africa by the great Missionary Explorer.

FROM HAUSALAND TO EGYPT. By Dr. H. KARL KUMM. With 96 Illustrations. 16s. net.

Athenæum.—"Dr. Kumm's toleration is among his admirable qualities. A missionary vowed to resist the progress of Islam, he appreciates the devotion of Muslim pilgrims and gives them his protection and succour; and he rides into British territory escorted by Sanusi Guards."

THE ENGLISH PEOPLE OVERSEAS.

By A. WYATT TILBY. In 6 crown 8vo vols. (sold separately).

Vol. I. The American Colonies, 1584-1763. 4s. 6d. net. } *Now ready.*
Vol. II. India, 1600-1826. 4s. 6d. net. }
Vol. III. Canada, 1763-1867. 6s. net. } *Ready shortly.*
Vol. IV. The American Tropics, Vol. V. Australasia, Vol. VI. South Africa. } *In active preparation.*

THE ESSENCE OF RELIGION.

By BORDEN PARKER BOWNE, Author of 'The Immanence of God,' &c. Crown 8vo, 5s. net.

The work opens with a consideration of the Supremacy of Christ; the volume also deals in a stimulating way with Righteousness as the Essence of Religion, the true relation of Salvation and Belief, the Christian Doctrine of the World, Prayer, the Law of Successful Living, &c.

PRIMITIVE PSYCHO-THERAPY AND QUACKERY.

By ROBERT M. LAWRENCE, M.D., Author of 'The Magic of the Horseshoe.' Crown 8vo, 7s. 6d. net.

A collection of curious, interesting, and sometimes very amusing facts and incidents showing how in all ages man have used and misused the influence of mind over body for healing purposes, through amulets, talismans, phylacteries, royal touch, relics, &c.

SIXTINE ROME.

By J. A. F. ORBAAN. With 32 Illustrations. Demy 8vo, 7s. 6d. net.

Standard.—"The book throws into relief not merely the multifarious activities of the great Pope, but his influence on art, architecture, and letters in the closing years of the sixteenth century. On every page the book throws light on the vast changes which were brought about in Rome by the energy and public spirit of Sixtus V."

TALES FROM THE OLD FRENCH.

Selected by ISABEL BUTLER. With Decorative Title and Chapter Headings. Crown 8vo, 5s. net.

Athenæum.—"In every respect a charming book.... translated with simplicity and directness....shows a true understanding of the period in which the stories were written. We commend this dainty volume to any one who wishes to sample mediæval French literature at its best."

THE WORLD OF DREAMS. By HAVELOCK ELLIS. Demy 8vo, 7s. 6d. net.

The following are some of the phases of the subject that are dealt with:—The Logic of Dreams; The Senses in Dreams; Aviation in Dreams; Symbolism in Dreams; Dreams of the Dead; Memory in Dreams.

SELECTIONS FROM ANCIENT IRISH POETRY.

By Prof. KUNO MEYER, Professor of Celtic Studies in the University of Berlin. Crown 8vo, 3s. 6d. net.

Times.—"If we have no 'Mabinogion' from Ireland, if we cannot expect a purified Ossian, we already have from Prof. Meyer a representative anthology of exquisite lyrics."

HAMEWITH. By CHARLES MURRAY. With Introduction by ANDREW LANG. Illustrated by DOUGLAS STRACHAN. Crown 8vo, 5s. net. [Fifth Impression.]

Westminster Gazette.—"The appearance of a volume of so much genuine poetry is an important event in literary history."

THE JAPANESE LETTERS OF LAFADIO HEARN.

Edited by ELIZABETH BISLAND. Demy 8vo, 12s. net.

Observer.—"The charm and fancy and humour which illumine these admirable letters. Everywhere are fascinating glimpses such as no one else has given us, and no one else will ever give us, of the Japan which is fast becoming merely a Great Power like the rest of us."

THE SPIRIT OF DEMOCRACY.

By LYMAN ABBOTT. Crown 8vo, 4s. 6d. net.

Part Contents:—Present Conditions in Industry—Political Socialism—Tendency of Democracy—The Home—The Church—The School—Who should Govern? &c.

THE STONE AGE IN NORTH AMERICA.

By WARREN K. MOORHEAD. In 2 vols., with Maps, and about 700 Illustrations, including several in Colour and Photogravure. Crown 4to, 31s. 6d. net.

An archaeological encyclopædia of the implements, ornaments, weapons, utensils, &c., of the prehistoric tribes of North America.

THE NEW LAOKOON.

By IRVING BABBITT. 6s. net.

Contemporary Review.—"Mr. Babbitt's concluding chapter is the portion of this brilliant book to which we would draw special attention, for in it he finely and bravely attacks the causes of that decadence in every form of art that now oppresses the Western world."

EMERSON'S JOURNALS.

Now published for the first time and Edited by EDWARD W. EMERSON and WALDO EMERSON FORBES. With Portraits and Facsimiles. Vol. III. 1833-1835. Vol. IV. 1836-1837. Crown 8vo, 6s. net per volume.

Already published: Vol. I. 1820-1824. Vol. II., 1825-1830.

SIR FREDERIC HAINES. By ROBERT S. RAIT, Fellow of New

College, Oxford. Illustrated. Demy 8vo, 10s. 6d. net.

Frederick Paul Haines fought his first battles against the Sikhs, serving as Lord Gough's Military Secretary. His letters describe the battles of Alma and Balaklava, and are specially important as to Inkerman.

Times.—"The book is of great value to students of the political and military history of India in the nineteenth century."

LITERATURE

About Edwin Drood. (Cambridge University Press.)

THE path of academic speculation commonly lacks fences, and conjecture straying therein, unconfined, has a whole metaphorical country-side at its service. Nowhere is this advantage, or disadvantage, more apparent than in the case of 'Edwin Drood,' to the elucidation of which our old contributor Prof. Henry Jackson, the most recent of seekers after truth in that puzzle, brings a wealth of pains and precision, minute and masterly grasp of detail, and a capacity for conjecture fully equal to that displayed by his predecessors. Once again are propounded the unanswerable problems "Was Drood murdered?" and "Who is Datchery?" in the discussion of which we shall credit our readers with knowledge of the story.

To the first Prof. Jackson replies in the affirmative, and with that conclusion, broadly stated, the present reviewer is disposed to agree. Among those holding the opposite view, so eminent an authority as Mr. Andrew Lang has made the comprehensive objection that, if Drood indeed be dead, there is an end to the mystery. This may, however, on the face of it, be countered first by the fact that the 'Mystery of Edwin Drood' is a mystery primarily for the inhabitants of Cloisterham and those persons connected with them; secondly, by Forster's oft-quoted résumé of the original scheme of the novel.

The words "the murder of a nephew by his uncle" coupled with "all discovery of the murderer was to be baffled till towards the close" indicate, as clearly as words can, that the author at least contemplated a "mystery" not so much in the actual fate of Drood, as in the "how" and the "where" of it.

On the manner of Drood's murder Prof. Jackson is generously elaborate. He pictures the victim lured in friendly fashion to the summit of the Cathedral tower, and thence hurled down the stairs, being first half, or wholly, strangled by means of the mysterious scarf; and maintains that Jasper's midnight vigil with Durdles was in the nature of a rehearsal of the final catastrophe. The Professor derives fortuitous support for this contention from Jasper's last recorded opium dream. The "perilous journey over abysses" is assumed to refer to such a scaling of the tower. The exclamation of Jasper, "I never saw *that* before," is called forth by the sight of the crushed and battered body of Drood lying far below. But, even if Drood could have been pitched down the corkscrew stairs in the manner suggested (which would be at best a prolonged and clumsy business), by no conceivable means could his murderer, standing at the top, have beheld the result of his crime at the bottom. Mr. Lang in a recent witty article in *The Cambridge Review* aptly alludes to the "patent double million gas magnifiers of hextra power" of 'Pickwick' as being in the circumstances inadequate. Nor, if Drood had been thrown off the tower into the Close, could any ordinary pair of eyes expect to see him there, on a night of storm and darkness. The expedition with Durdles may have been a rehearsal of certain features of the final tragedy; it may have been a device for the investigation of the Sapsea mausoleum; in neither event is any sufficient cause shown why the "perilous journey over abysses" should be taken *au pied de la lettre*. The words, which might be used figuratively by any one of average visionary capacity who meditates a possibly difficult, certainly hideous crime, do not justify the materialization of the airy nothings of an opium dream into a stone staircase quite unsuitable for the dreamer's purpose.

Prof. Jackson's further suggestion that the body was buried, or to be buried, in quicklime stored in the Cathedral crypt in case of emergency (which emergency might arise at any time—would, as it happened, probably have arisen next day in view of the havoc caused by the storm) is not convincing. It is, indeed, scarcely more plausible than Mr. Lang's picture of Jasper trundling barrow-loads of the like substance from the yard of Durdles to the Sapsea monument. In both proceedings the risk of detection would have been considerable, and in the latter the suspicions of Durdles, who was sharp enough on occasion, would certainly have been aroused by the mystical diminution of his heap, if by nothing else. Prof. Jackson has attacked the mystery

of Drood's death with undeniable ingenuity, but its details remain for the present reviewer unsolved.

The problem of Datchery is equally baffling. Hypothesis has been very busy with him. On the strength of his thick white hair and black eyebrows, it has given him a wig, and invested him with a disguise. On the strength of his carrying his hat in his hand, it has made him a woman, yet white hair and dark eyebrows are not unknown as a natural combination, while instances of men preferring to carry their hats Datchery-wise were not lacking long before it became a craze to go hatless. Prof. Jackson rejects the theory that Datchery is a detective, or that he is some new personage who has reasons of his own for unravelling the tangle. He dismisses Bazzard as "somnolent, dull, incompetent, egotistical," and "wholly incapable" of playing the part of Datchery. Here, however, as it seems to the present writer, he is generalizing too freely upon a character as yet barely introduced, of whom we know next to nothing. The somnolence, dullness, and the rest may well have been a pose. A careful study of Bazzard suggests that there is a good deal more to know about him; that the annual turkey from Norfolk and that most unconvincing of plays 'The Thorn of Anxiety' are but distracting trifles; and that in reality he is likely to "come out rather strong" at no distant date. Moreover the synchronization of his disappearance from Staple Inn with the appearance of Datchery at Cloisterham should not lack first-rate significance "if," to quote Prof. Jackson (p. 39), "Dickens has dealt fairly with us." Careful consideration and some ingenious chronological contortions finally persuade our author to the view, ably put forward by Mr. Cuming Walters, that Datchery and Helena Landless are one. This view was regarded as conclusive by a distinguished authority in *The Athenæum* of July 8th, 1905, and it is certainly alluring; but to the mind of the present writer there are difficulties. To render possible Datchery's collusion with "the Staple Inn alliance" it is necessary, as Prof. Jackson points out, that chap. xviii., with its account of the first coming of the stranger to Cloisterham, should be made subsequent in time to the proceedings contained in chaps. xix. to xxii. To effect this result it must be assumed, with Prof. Jackson, "that if Dickens had lived to issue the fifth and sixth monthly instalments, he would have placed our chap. xviii., without the alteration of a single word, after chap. xxii., next before chap. xxiii." This is a large assumption, and, if justified, would have had the effect of diminishing considerably the mystery of the story. It would, in fact, have been tantamount to letting the reader by swift degrees, and a natural process of elimination, into the Datchery secret. Further, Prof. Jackson's own examination of the manuscript reveals that "Dickens wrote the whole of chap. xix., 'Shadow on the Sundial,' before he wrote the earlier half of chap. xviii., 'A Settler in Cloisterham,' and presumably

decided to transpose the two chapters before he wrote the latter half of chap. xviii." This admitted former transposition made by Dickens himself may be taken to indicate mere vacillation as to the order of the chapters. It may also, with just as much force, point to a mind definitely made up on the advisability of placing chap. xviii. first; in which case Prof. Jackson's second transposition becomes even less plausible. Finally, Mr. G. K. Chesterton's personal objection to the Helena Landless theory should not be overlooked, to wit, that "it is comic"; that "we might as easily imagine Edith Dombey dressing up as Major Bagstock." There is for the present writer more than mere whimsicality in this.

If we are precluded from building on the potentialities of the unknown Bazzard, and conjecture be limited to the characters already introduced, then Mr. Lang's disguising of Neville Landless as Datchery, and Helena as Neville, seems the most satisfactory solution, granted always that the chronological difficulty can be made to disappear. To the present writer, however, such limitation of conjecture seems in the last degree arbitrary. Prof. Jackson, with other commentators, appears to assume that, both for this question and for that of Drood's disappearance, Dickens left the necessary clues; that is, to assume, in fact, that his own death was somehow timed to meet the exigencies of his growing novel. It seems to be tacitly understood that, though the book as it stands is a fragment, and not a large fragment, of the projected whole, yet it contains, if only they could be found, indications sufficient to furnish forth the rounded work as Dickens would have completed it. Mr. Lang, for example, adduces the remarks of Tope in chap. ii. in support of his theory of Drood's escape. "His memory grew DAZED," says Tope, speaking of the Precentor; and again, "a little time and a little water brought him out of his DAZE." "Tope," says Mr. Lang, "repeats" this and with "emphasis." The capital letters are to convey a clue to the wary reader, who will deduce therefrom that Jasper fell inopportunely into one of his "filmy seizures," and bungled the murder. Yet the text itself supplies an adequate explanation of the capitals in each instance. Mr. Tope had already been twice reproved by Mr. Crisparkle for indulging in language "not English—to the Dean." Mr. Tope has at last found a word in which his instinct tells him he may repose the fullest confidence. "Mr. Tope, with his eyes on the Reverend Mr. Crisparkle, shoots this word out as defying him to improve upon it," and afterwards "he repeats the word and its emphasis with the air of saying 'As I have made a success, I'll make it again.'" This characteristic piece of Dickensian humour, capitals and all, may, of course, mask a clue, but one does not altogether see good reason why it should. The clue in question, Jasper's addiction to "filmy seizures," is sufficiently emphasized elsewhere. Prof. Jackson in his turn writes

(pp. 39 and 40): "Now if Dickens has dealt fairly with us, we know by this time [i.e., by chap. xxiii.] all the people who are directly interested in the Cloisterham mystery." In other words, it was Dickens's business to see to it that we were not to be left in the dark about any essential person. This attitude, also, is arbitrary. It is conceivable, in view of the method of production in monthly parts, that at the time of his death Dickens's ideas as to the ultimate shape of the novel differed but little from those imparted to Forster, except for the necessary degree of progress and cohesion indicated by twenty-three existing chapters. The book is still in its infancy. Its predecessor, 'Our Mutual Friend,' attained to some sixty-seven chapters, 'Great Expectations' to fifty-nine, 'Bleak House' to sixty-six. There is no strain on probability in supposing that 'Edwin Drood' might, in happier circumstances, have reached something like these proportions. A brand-new character, Datchery, directly interested in the Cloisterham mystery, comes on the scene at chap. xviii. In 'Our Mutual Friend' a brand-new character, Bradley Headstone (very indirectly interested in the mystery of John Harmon), comes on the scene at what is virtually chapter xviii., and it would be interesting to imagine the possible theories of speculative critics about Bradley Headstone had 'Our Mutual Friend' ended prematurely at that chapter. In 'The Old Curiosity Shop' a brand-new character, "the single gentleman," rushes on the scene at chap. xxxiv. Had that novel broken off short with Mr. Swiveller beating tattoos with the ruler behind the door, and the rest of the Brass household occupying strategic positions with a view to precipitate retreat, might not conjecture have transformed the single gentleman into old Mr. Garland gone mad, or at least turned abnormally energetic, or Master Humphrey himself, determined if possible to cheat the trunk and butter business and return to the story in person? There seems to be no valid reason why, after all, Datchery should not be a new character. His wig is an assumption, his disguise hypothesis; and further, his speech and bearing have a distinct individuality, resembling that of no other person of the story, except Tartar, identification with whom is rendered impossible by the order of events. Bazzard roused from his somnolence might exhibit such, but that being by all but common consent denied us, Datchery may be fairly considered the stranger he purports to be. In his theory as to the possible life-story of the opium woman, and the cause of her interest in Jasper, Prof. Jackson becomes purely speculative. Any elaborate conjecture on the topic must be put out of court by the absence of data, and it is probable that Jasper's "short" treatment of the old lady, combined with a natural propensity for blackmail on the part of the latter, was at the bottom of her journeys to Cloisterham.

There are numerous other suggestive views propounded by our author into

which space forbids us to enter. His conclusions cannot be ignored by those interested in the question. That he will make converts, however, is hardly to be anticipated, for there are no topics so fruitful of bigotry as those which, from a severely practical point of view, do not matter. With such, every man may cleave in comfort to his own heresy with a light heart and no fear of consequences. Nevertheless the volume contains a great deal that is illuminating, and, though the solutions of the problems involved are, to the mind of the present writer, as far off as ever, it forms a notable addition to the literature of the subject.

Studies in the Synoptic Problem. By Members of the University of Oxford. Edited by W. Sanday. (Oxford, Clarendon Press.)

THE contributors to this volume are the editor, Sir John C. Hawkins, Mr. Streeter, Mr. Allen, Dr. Bartlet, Mr. Addis, and Mr. Williams; and among the essays are 'The Conditions under which the Gospels were Written,' 'Three Limitations to St. Luke's Use of St. Mark's Gospel,' and 'A Recent Theory of the Origin of St. Mark's Gospel.' The book is of the highest interest from its subjects, and of great worth from its treatment of them. The phases of the Synoptic Problem which are now attracting attention are examined with critical ability and scholarly care by men who are most competent for the task, and together they have produced a work of genuine value.

Prof. Sanday, after an Introduction in which he comments on the different essays, explains the conditions under which the Gospels were written. He pleads that the Evangelists were not copyists, but historians, and yet the Gospels are not exactly histories. The purpose of the Evangelists, he contends, is in part homiletic, "though it is embodied in an historical form, and though the story is left as a rule to have its own effect." He describes the writing and use of books in their bearing upon freedom of reproduction, and pictures the writer with the roll open upon his knees. A modern, he says, would have the book he was using constantly under his eye, but the ancient writer would not have his copy before him, but would consult it from time to time:—

"He would not follow it clause by clause and phrase by phrase, but would probably read through a whole paragraph at once, and trust to his memory to convey the substance of it safely from the one book to the other.... There is a substantial interval between reading and writing. During that interval the copy is not before the eye, and in the meantime the brain is actively, though unconsciously, at work. Hence all those slight rearrangements and substitutions which are a marked feature in our texts as we have them."

It is interesting to note in passing that Prof. Sanday rejects the idea of an Ur-Marcus,

or older form of the Gospel, and thinks that the coincidences of Matthew and Luke against Mark are due to their use of a recension of the text of Mark different from that from which all the extant MSS. of the Gospel are descended. Dealing with St. Luke's omission of Mark vi. 45-viii. 26, Prof. Sanday refers to the papyrus rolls, which were cut into convenient lengths, ranging within certain limits, and suggests that the Evangelist "was conscious of being pressed for space, and that he felt obliged to economize his materials." Sir John Hawkins states three theories which may account for that omission, and one of these is that this division of our second Gospel was accidentally left unused by St. Luke, he "having perhaps been misled into doing so by passing on in his MS. from the mention of feeding multitudes in Mark vi. 42-44 to that in Mark viii. 19-21, or from the name Bethsaida in vi. 45 to the same name in viii. 22." The theory, Sir John Hawkins thinks, is a more than possible solution; but we have Prof. Sanday's statement that an ancient writer would consult his copy from time to time, and, surely, it does not seem likely that St. Luke would content himself with one systematic reference to the MS. of St. Mark.

The part of the Synoptic Problem which is threshed out most completely in this volume, according to the editor, is that which is concerned with Q. There is, too, an adequate consideration of what Sir John Hawkins calls "the three-document hypothesis," and Dr. Bartlet deals with it at length, though he does not use that term, but speaks of "a two-document theory of Luke's Gospel alone." Luke, he argues, uses a second written source alongside and in preference to Mark; and this "special source," embodying its own form of Q, had its written shape from S. Luke [himself, but may be referred back to Philip the Evangelist. Philip, we are reminded, was the host of S. Paul and S. Luke at Cæsarea, the only place where the latter had leisure for literary work. Dr. Bartlet is forced to the conclusion that S. Luke wrote what Philip spoke, from the fact that there is no trace of any document written by Philip. That conclusion is ingenious, and this at least may be said, that Dr. Bartlet argues for the written source with great skill, and his theory certainly demands attention.

An instructive and suggestive essay is that by Mr. Streeter on 'The Literary Evolution of the Gospels.' Q is ascribed to the Apostolic Age, and the statement is made that men heard from the *living voice* concerning the Master's death, resurrection, and second coming. In reference to the silence of Q as to the death and resurrection of Christ, Mr. Streeter proceeds to say that in the Apostolic age, and in a non-literary society of Palestinian peasants, "only that was written down which one would be likely to forget.... No one was likely to forget that Christ had died and risen." He draws a parallel from the records of the

life of St. Francis, and points out that, though the reception of the stigmata was to the followers of the Saint as much the climax of his life as the Crucifixion was of our Lord's, there is but a casual allusion to it in the 'Speculum Perfectionis,' the earliest collection of his words and acts. Unfortunately for the parallel, there were few who said they had seen the stigmata, and many doubted and many denied their existence. Two or three miracles, it is admitted, are recorded in Q, and these were not in danger of being forgotten. They, however, were told "not for their own sake, but for the sake of the sayings they lead up to." Could not the sacred story of the death have been told for the sake of the sayings on the Cross? Mr. Streeter really answers himself in regard to the silence of Q. He declares that in Palestine the crucifixion of the Messiah was a paradox and a stumbling-block, and admits that "the author of Q perhaps was a little glad not to dwell on it."

London Clubs, their History and Treasures.
By Ralph Nevill. (Chatto & Windus.)

"WHY does not some great author write 'The Mysteries of the Club-houses; or, St. James's Street Unveiled'? It would be a fine subject for an imaginative writer. We must all, as boys, remember when we went to the fair, and had spent all our money—the sort of awe and anxiety with which we listened round the outside of the show, speculating upon the nature of the entertainment going on within."

Thus the author of 'The Book of Snobs,' who knew clubs so well and wrote of them so inimitably, was so constant to his own clubs, notably to the Garrick, where, painted by Sir J. Gilbert, he sits in the familiar place under the sea painting brought from the old house in King Street. It is curious to hear such a man described as "rather inclined to disparage clubs." Yet Mr. Ralph Nevill, who penned unblushingly these words about the great "clubman plus genius and a style," as Thackeray was once styled, has produced in this handsome volume something like a standard work upon the subject. The mysteries are not unveiled, for this author is as discreet as his English is urbane; he writes as a student and a man of the world, to whom tradition and modern practice are alike familiar. But what he does not know about London clubs is not knowledge.

"I belong," says Mr. Snob (once more), "to many clubs. The Union Jack, the Sash and Marlin-spike—military clubs. The True Blue, the No Surrender, the Blue and Buff, the Guy Fawkes, the Cato Street—political clubs. The Brummell and the Regent—dandy clubs. The Acropolis, the Palladium, the Arcopagus, the Pnyx, the Pentelicus, the Ilissus, and the Poluphoisboio Thalassos—literary clubs."

There are true names of clubs once extant just as remarkable. What does the ordinary man know of the Wet Paper Club, of Truby's, of the Pure Drinkers?

What of the Daffy Club, the *Je ne sais quoi*, and the Brothers' Club? Who can define the relationship between Arthur's and White's? What club has Asiatic Sundays? and what charming and famous club in St. James's Street was once the *Savoir Vivre*? We will not anticipate the examination paper in some future number of *The Cornhill*, but predict that the examinees will find it harder than the recent one on Browning.

Clubs, of course, began with the tavern. "In the early part of the eighteenth century there were said to be no fewer than 2,000 coffee-houses in London." Each profession, trade, class, party, had its peculiar coffee-house: lawyers gathered at Nando's or the Grecian; City men at Garraway's or Jonathan's; soldiers at the Old or Young Man's near Charing Cross; scholars and parsons at Child's in St. Paul's Churchyard; Scots at Forrest's; Frenchmen at Old Slaughter's; gamblers "in White's and the chocolate-houses round Covent Garden"; and at Will's, Button's, or Tom's in Great Russell Street, the wits.

Mr. Nevill neatly traces the process of evolution. First the tavern where you met your friends for purposes of conversation and refreshment;

"then the beginnings of the club proper—some well-known house of refreshment being taken over from the proprietor by a limited number of clients for their own exclusive use, and the landlord retained as manager";

and "finally the palatial modern club, not necessarily sociable, but replete with every comfort, and owned by the members themselves." In such a resort to-day modern men "do" themselves well, bore themselves badly. The name of them is legion, for the number of men belonging to clubs to-day is put at well over 200,000, to about 1,200 men in the beginning of last century. Mr. Nevill conceives of Dr. Johnson saying regarding one of these: "Sir, this may be a palace, but it is no club." Yet clubs in the old and modern sense—apart from the dining clubs, *THE Club*, *Grillion's*, and the recent *Kinsmen* and *Tatler's*—are surely the *Garrick*, *Pratt's*, and the *Beefsteak*, where Mr. Nevill is reminded of "that most delightful of men, Joseph Knight." Elsewhere a club within a club is not uncommon: coteries whose members lunch or dine, or, if the number of bedrooms permit, regularly live together, like members of a family. The *National Club* has its famous Flemish tapestries, its garden giving on the Embankment, and its morning and evening prayers, having been originally founded for those holding strong Evangelical views.

The original street of clubs transformed out of coffee-houses was, of course, St. James's Street. There stood, there stand, White's, Arthur's, Brooks's, and Boodle's. The last nearly expired in the recent crisis, but now flourishes afresh. Until its reorganization Boodle's was managed by a sort of secret tribunal. There was a committee, but nobody knew who com-

posed it. Mr. Gayner, its proprietor, of whose benevolent disposition we hear not for the first time, was a great-hearted person, saving one young fellow from the money-lenders and forgiving members their trespasses by a special clause in his will.

Boodle's still recruits from Shropshire, it is pleasant to know, and Arthur's from Wiltshire. "Sheep points and bullocks" on the rubber at whist were common once among these countrymen. At Boodle's evening dress for dinner is a matter of the club rules, but in a smaller room, and, as it were, occultly, members may dine in morning clothes. At White's—which, if less exclusive than it was, can boast of Rodney, St. Vincent, and Boscawen from the glorious past—and at Brooks's, famous for its effect as of a Duke's house with the Duke lying dead upstairs, may be seen their famous betting-books. One thinks at Brooks's of Charles James Fox and Selwyn, but it was there too that Fitzgerald the duellist had his singular election, which James Payn once narrated, without, we think, mentioning name or place. Fitzgerald bullied Admiral Keith Stuart into proposing him. On the election day proposer and candidate waited the result downstairs. It was adverse, with amusing details, and the duellist went the round of the members, asking each in turn, "Did you blackball me, sir?" Nobody pleaded guilty, and "Now," said Fitzgerald, "as none of ye have blackballed me, I must be elected." Mr. Bathurst, whose supposed skeleton was recently discovered at Quitznow, remains, if not the club ghost at Brooks's, the club mystery. There must be a club ghost somewhere, by the way, and let Mr. Nevill see to this in his next edition. Of formal and authorized clubs within a club the Fox Club at Brooks's is the best known, and dines four times a year, making no speeches, and toasting "without note or comment." "The Memory of Charles James Fox," "Earl Grey and the Reform Bill," "The Memory of Lord Holland," and "The Name of Lord John Russell." The monument inside the railings of Holland House is the gift of the Fox Club.

The Cocoa Tree had its great man in the eleventh Duke of Norfolk, the first Peer who abandoned pigtail and hair powder. He drank very much, looked like a butcher, and designed to give a dinner on the tercentenary of the Dukedom to every person whom he could ascertain to be descended from the first Duke. He abandoned the design on discovering nearly six thousand claimants.

At the Thatched House—though, as in the case of several clubs of the familiar names, the actual situation or building is changed—imagination conceives of Sheridan, whose favourite resort it was. It is pleasant to think of him writing a letter one frosty day when the Prince of Wales came in and ordered a beefsteak.

"The day happened to be excessively cold, and the Prince ordered a bumper of brandy and water straight away. Having

emptied the glass in a twinkling, he called for a second and a third, which also having swallowed, he said, puffing out his cheeks and shrugging his shoulders: 'Now I am warm and comfortable; bring me my steak.' The steak was brought, but before the first mouthful was eaten, Sheridan presented him with the following lines, which greatly increased his good-humour:

The Prince came in and said 'twas cold,
Then put to his hand the rummer;
Till swallow after swallow came,
When he pronounced it summer."

Life was easier in London then.

Of the Service clubs; the University clubs, old and young; the "smart" clubs, of which Mr. Nevill pronounces the Turf and the Travellers', like the Athenæum of another order of greatness, to be the most exclusive; the Indian—East India United Service for officials, the Oriental, which Jos Sedley adorned, for other Anglo-Indians; dilettante clubs; literary clubs, like the Savile, with its peculiar *cachet*; the political clubs, large and popular, or smaller and more difficult to enter; of the St. James's, represented in the frontispiece; and the Garrick, with its varied distinction, late hours, and rare wealth of pictures—Mr. Nevill treats learnedly and well.

He slips out of London as far as Cowes or the castle of the Royal Yacht Squadron, and glances at the Jockey Club at Newmarket. In his next edition he might include Edinburgh and Delhi, for the admirable New and Kildare Street Clubs are as distinguished as any in London, and, returning, tell us, without indiscretion, something nice and greedy about those dishes for which various clubs are famous. If the restaurant has hit London clubs hard, are there not still incomparable herrings at the Union, mutton-broth at the Reform, the eponymous steak in Garrick Street, to say nothing of less homely refectations, and the hundred ways or more of doing eggs by which a wearied diplomatic corps is restored at the St. James's? Club cellars would make a fascinating chapter, even if we have fallen on barley-water days. The cigarette has much to answer for in other respects than a lessened interest in wine. Mr. Nevill's chapters on the changed aspect of Clubland are not his least interesting, and the tobacco controversy is prominent therein. The Alfred, Byron's "pleasant club—a little too sober and literary perhaps, but, on the whole, a decent resource on a rainy day," perished because it would not improve its smoking-room.

The Marlborough arose out of King Edward VII.'s sympathy (when he was Prince of Wales) with the attempt in '66 to introduce smoking in the drawing-room of White's, or so Mr. Nevill tells us, though another version is current. The Beef-Steak need never have been made by discontent members of the Garrick, had the committee bowed its head in time before the movement. The old order, in fact, changes; the "characters diminish," or at least one generation thinks so, though its members may be becoming "characters" unconsciously to younger men.

Club servants still preserve their admirable features, touched here and there with singularity. We like Mr. Nevill's account of Shand, the Scots porter at the Turf, who refrained from forwarding a packet of photographs to a member abroad because his wife was travelling with him. But has he heard of the pageboy who lately applied to a well-known club for a situation, admitting that he had been dismissed from another for a crime of insolence? His case was inquired into. It appeared that he had rung up Colney Hatch by telephone, and asked if he might speak to—the chief lunatic. That boy was engaged.

The Japanese Letters of Lafcadio Hearn.

Edited, with an Introduction, by Elizabeth Bisland. (Constable & Co.)

MISS BISLAND is indefatigable in clearing the character and testifying to the genius of Lafcadio Hearn. She has followed up her two volumes of the 'Life and Letters' with another large volume containing letters written by Hearn in Japan, mainly to Prof. Basil Hall Chamberlain. In the Preface she quotes appositely a saying of the late Edmund Clarence Stedman that "Hearn will become in time as much of a romantic personality and tradition as Poe now is." Undoubtedly she is doing her best to bring this about. Miss Bisland finds a certain analogy between Poe and Hearn in regard to the misrepresentation from which both have suffered. We cannot doubt that much of her Preface and Introduction, much of this *apologia*, is directed against a curious appreciation of Hearn, which was really a depreciation, published in America a few years back by an old friend of the dead author's. Miss Bisland traverses all the grounds of this detraction, and, it seems, to an impartial observer, very successfully. Certainly Hearn's correspondence in this book exhibits him as quite another man from the sensualist and delighter in sordid tragedy who was set forth by Dr. Gould. These letters represent a man interested in all things human, but particularly in letters, and one who shows constantly very domestic and admirable traits.

The section of this book which is occupied by the Chamberlain letters is of considerable value and interest, revealing a very likeable individuality with a passionate enthusiasm for literature. Hearn's efforts at a distance to keep in touch with contemporary English writing are almost pathetic. He is constantly referring to modern authors—to Kipling, whom he admired; to William Watson; to Loti, whom he knew and considered disagreeable to any one and anything connected with life and letters at which he could grasp. Miss Bisland, we think, is justified in claiming that "no one ever so completely revealed every quality of his mind, his character, his modes of thought, his opinions, interests, affections, and convictions in a correspondence." How

could a man deserve the censure of Dr. Gould who wrote thus?—

"This reminds me of Pierre Louys—have you not noticed the tendency to *cruelty* in his work? I delight in normal healthy sensualism—or sensuousness at least, but that is always ideal in its emotional life—therefore tender, and therefore partly unselfish.... Well, a work of art ought to stir the sensuous life in us, the life of desire in a healthy way, but ought it not also at the same time to make us feel that there are things which it were beautiful to die for?"

Hearn's interests are very catholic, and his correspondence touches on many facets of life—on ethics and Herbert Spencer, in whom he had a profound belief; on Taine, on architecture and art, on education, and on folklore. He was magnificently alive to impressions, and set them down with vivid force. From one who lived for so many years in Japan it is interesting to hear that "Russia seems to me the coming race"; and that "pride and conceit are steering the Japanese" towards an undue intimacy with the West. He is bent on conserving the Japanese in the old forms, and fears a dissolution of the race. And that is not eighteen years since!

Some of Hearn's most interesting observations concern the relation of the sexes as exhibited in contrast in the two worlds. He explains the Japanese idea with a clarity which is exemplary, and proceeds to contrast it thus, in a passage which exhibits at once the acuteness of his intellect and his imagination:—

"At present the condition of passionate thought in the West does seem to me morbid, exasperating. But I think it does more than evil. It is a creative force in the highest sense. I think so. The process is slow, and accompanied with ugly accidents. But the results will perhaps be vast. All this woman worship and sex-worship is tending to develop to a high degree certain moral qualities. As the pleasure of colour has been developed out of perceptions created by appetite, so out of vague sense of physical charm a sense of spiritual charm is being evolved. The result must be rather elevating and refining at last than gross and selfish."

This is the course of a mind attuned to follow psychological speculations; and it would be hard to find a flaw in the hope.

Altogether the impression left after reading Hearn's letters is that his proper home was not in Japan, but in the West—in England, in intercourse with his literary contemporaries.

NEW NOVELS.

Jane Oglander. By Mrs. Belloc Lowndes. (Heinemann.)

POISON AND DIVORCE are two topics which have lately occupied much of this author's attention, but her manner of treating them is singularly free from offence, and has an interest of an altogether unusual kind. She has a strange mystic sense of higher

forces unseen behind the drama of human crime and passion, and the ethical problem presented near the conclusion of the present story is extraordinary, even for fiction, and not to be lightly dismissed. In Jane Oglander herself Mrs. Lowndes has had a fine conception, but we scarcely feel that it has taken a lifelike form. The real heroine is Jane's false friend, the siren who preys on men's souls and incidentally on women's lives—a vivid, if not wholly convincing figure. The style has all its wonted charm, and the narrative knows no "flat moments."

The Lonely Road. By A. E. Jacobson. (Melrose.)

THE social complications of suburban life are treated in this novel with a fullness of knowledge, and in general an absence of exaggeration, which are unusual in fiction. We commend especially the slight but excellent sketches of musicians and other "professionals." The author has had a happy idea in making her story centre round a love-marriage between a man and woman belonging respectively to widely different circles; but she has, in our opinion, unduly aggravated the difficulties sure to arise in such a case by endowing the wife with a degree of heartlessness, and perhaps also of snobbishness, beyond the normal. Our sympathies are throughout engaged for the poor "bounder" of a husband; and his end appears to us unnecessarily tragic.

The Lion's Skin. By Rafael Sabatini. (Stanley Paul & Co.)

ONE cannot resist the impression that this romance was designed with an eye to the stage. The author, however, has maintained the form proper to the novel, and the inference arises only from the more dramatic flow and the unities of the narrative. It is a good sound story of its sort, and has a hero who differentiates himself from the usual rollicking stupid or "ideal Englishman" with whom we are familiar. The plot is the plot of a foregone vengeance, and is handled very deftly and dramatically. The characters as a whole are not the stock puppets of historical fiction, but have life of their own. This is especially true of the hero's father, and of certain subsidiary characters. Mr. Sabatini's reputation advances among the writers of romantic fiction.

The Limit. By Ada Leverson. (Grant Richards.)

A CONTEMPORARY dramatist presented under an obvious pseudonym and not very vividly realized is, we believe, the only person in this novel who does any work; for we can scarcely count the artist who once painted a portrait of his cousin, or

the actress permanently in search of an engagement—the latter a delightful creation. Mrs. Leverson introduces us once again to a social circle whose occupations are spending money, wearing clothes, making and breaking promises of marriage, and flirtation. They are meant to amuse, and in this they are often, though not invariably, successful. At her best the author is decidedly amusing.

The Lord Dollar (Don Dinero). By Harper Curtis. (Blackwood & Sons.)

MR. CURTIS possesses a singular gift of plot-weaving, but he is unrestrained in the matter of invention. "This is a story of the narrowing lust of gold," he announces at the beginning: it is also a story of murder and fraud. It opens with an innocent man, a Spanish count, fleeing from the sentence of the "iron collar," and continues in Honduras, with a lovely señorita, a young English diplomat, and a dishonest American mine-manager, as the chief characters. There is also a Roman Catholic priest whose villainy is black indeed, and whose "fertile brain" is constantly providing the reader with a new sensation. The author displays a latent sense of style, but at present is too much inclined to bombast.

The Witch Ladder. By E. S. Tylee. (Duckworth & Co.)

THIS story "of Somerset in the later days of Victoria" has a pleasant old-world savour which its title might suggest. The episode which gives the book its name is amusing enough, but merely incidental, and has no definite connexion with the plot. That is a very simple and even unsophisticated affair, which may be considered as old as the hills. But the quality of the book is best sought in the pictures of rural life, which are sympathetic and charming, and in the atmosphere, which suggests broad acres, rich crops, and the Mendips.

A Little more than Kin. By Patricia Wentworth. (Melrose.)

MISS WENTWORTH is still faithful to the French Revolution, which was the theme of the prize novel with which she made her début. Her new story is of slighter construction, but of more compact interest. It shows a certain progress in craftsmanship, yet the plot has its weaknesses. Disguising a wilful young woman in boy's clothes is by this time a very conventional and stale device; and there is a sudden failing of interest with the withdrawal of the narrative from France. The earlier chapters are brisker, and promise a fulfilment which is denied the reader. The hero is rather more than a prig, but the heroine is adequately attractive. The author stage-manages her blood and

thunder with a reserve which suggests a shrinking from all that it connotes; and the reader is left wondering who L'Inconnu was, and why he intervened in the action so beneficently.

Lord Richard in the Pantry. By Martin Swayne. (Methuen & Co.)

LORD RICHARD SANDRIDGE, almost as impecunious as he is idle, proposes to a sentimental heiress, who, hardly less interested in his "soul" than in his title, accepts him on the condition that he earns his living for six months. Scorning the offers of insistent relatives to provide him with vague appointments in the City, the young aristocrat, whose lively sense of humour is his most engaging quality, becomes a butler to an attractive widow who resides in a flat. This is the only unexpected thing in the book. That the considerate mistress, guessing his identity, should fall in love with the incompetent butler, and that he, regardless of the foolish young person interested in his soul, should return her affection—these are among the inevitable things of fiction. It is a brightly-written book, and though the more amusing situations verge on the farcical, they are handled in the spirit of comedy.

The Secret of the Dragon. By Mary L. Pendered. (Harper & Brothers.)

THE scene of this story is the ancient house of the De Pagenals, and the old mansion, with its crumbling walls, grass-grown courtyards, and haunted rooms, is picturesquely described. A member of the family who lived in Tudor times is supposed to have discovered the Philosopher's Stone, and the precious document in which he is believed to have left a clue to his secret falls into the hands of Sir Christopher Manwood, a scholarly lover of old legends, who, failing to obtain from the modern representative of the ancient house permission to conduct investigations, enters his service as a gardener. How he outwits the ill-bred agent of a company which desires to purchase the estate; how he wins the affection of Godfrey de Pagenal's proud and charming daughter—these things make an agreeable story of the mildly exciting type. It would, however, have been more effective if there had been more appropriate incident and less affected talk.

AIDS TO CLASSICAL LEARNING.

Pauly's Real-Encyclopædie. Edited by G. Wissowa and W. Kroll. (Stuttgart, Metzler.)—The thirteenth half-volume of this new edition lies before us. The six ample volumes, begun in 1894, along with the present, bring us near the end of the letter G. In these days, when we are all solicited daily to subscribe to encyclopædias, it is worth while considering with which of them we shall venture to burden shelves of limited capacity. In the first place,

Pauly's is in German, which is unfortunately an obstacle to many Englishmen, for it is a scandal how small is the knowledge of that language even among our educated people. But, on the other side, there are strong reasons why those who can use a foreign tongue should rather invest in a foreign than a home encyclopædia; for there cannot but be a vast mine of special knowledge collected in the literature of each language which only its native authors can adequately command. In the work before us, for example, there are myriads of citations from German monographs which to the English student are complete novelties. Hence, if we had to choose (and who can afford two such works?), we should certainly recommend a foreign encyclopædia. The present one, indeed, covers only the ground of classical learning, but the interpretation of the term is so wide that all kinds of ancient knowledge are found in it, and to make the book more comprehensive would mean making its completion virtually impossible in any one generation.

Perhaps the best way to treat any such huge work is to consider the present instalment on its own merits, and see whether the knowledge it supplies is worth the moderate price of a single half-volume, were it offered as an isolated publication. F and G are perhaps letters less promising than others for this test, and near the outset we are confronted with one of the myriad troubles of the editors. The writer on the Forum has left them in the lurch, and this all-important article must wait for a supplement—an accident which had already happened to the article 'Athens,' supplied, with others, by a former supplement. But apart from these accidents, what have we before us? We have the most complete information on ancient Glass and Gems—the latter a monograph of great importance. We have, for Geography (also postponed), Gaugamela and Gades, for both of which the editors will, we hope, supply maps in their promised supplement. On birds we have a mine of knowledge under *Gans*, *Geier*, and the *Geflügel*, which include all the other domesticated birds. These, with *Getreide*, *Gemüse*, and *Gartenbau*, tell us all that is known about the farmyards and the gardens of the ancients. And these, together with the all-important *Gens*, come under a single letter! We need hardly add that *Frumentum* supplements the political aspect of corn-growing, and that there are many great Roman names, Fulvius, Furius, Fufius, &c., under the letter F. It seems idle to attempt any further enumeration; we shall conclude with pointing out how even a poet might find rare material in this learned volume.

Galaxias is the Greek term for the Milky Way, and about this feature of the sky there clustered all manner of strange and fascinating legends. By some it was thought to be the old track of the chariot of the Sun, disused either from its deep ruts, or because the god had changed it owing to the crime of Atreus. To others it was the eccentric way burnt into the floor of heaven by the maddened horses which had thrown Phaethon from his seat and then careered across heaven, seaming it with fire. To others, again, it was the highway of the gods going to the Palace of Zeus at the zenith, and opinions differed whether there was not a fixed ascending and descending road, still more whether the two extremities were not paths from heaven to earth. For there were still those who believed that a flat expanse of earth was spread beneath the vaulted sky; but wiser men thought that the way was continued under the earth, so as to

make a return journey from the sun during the night. There were also a number of legends attributing it to the milk of the goddess Hera, and hence regarding it as affording sustenance to the souls of the departed, who were kept in waiting for their return to the earth to inhabit new bodies. It was even suggested that this ethereal milk diet was the cause why infants could only be nurtured by the same food. This is but a tithe of the lore surrounding the heavenly path. The philosophers' conjectures would carry us far beyond our limits. Enough has been said to show the great value of this instalment, and how useful such a work is to any classical scholar.

Index Verborum Vergilianus. By Monroe Nichols Wetmore. (Henry Frowde.)—The backwardness of scholars in providing a comprehensive vocabulary, or index, or lexicon to Virgil has been remarkable. Have we not long had indexes to Euripides, Sophocles, and Æschylus, and have we not a 'Lexicon Cæsarianum'? A scientific study of Virgil's works in several departments, especially that of the diction of epic poetry in Latin, has been seriously retarded by this want. The lacuna is gradually being filled up. Messrs. Blackie have done well—in *tenui labor*—in issuing a shilling vocabulary to Virgil for schoolboys; and now an American scholar steps in with a complete index of 554 pages. We happen to know that a proposal for a similar work was made to an English University press, but that it was rejected on the score of expense. It is matter for regret that England, where Virgil is more extensively and intensively studied than, perhaps, in any country, has not produced this work; but it is good that it has been done at last.

What we have hitherto had to work on is an old Delphin edition of Virgil with an index, printed at the Hague in 1723, which may possibly have been of service to Mr. Wetmore in the preparation of the present volume; but the words of the Appendix Virgiliana were not included. Mr. Wetmore's index would have been a lexicon, had it not been for the untoward circumstance which the author relates in his preface. He gave due and wide notice in 1904 of his intention to publish a *Lexicon Vergilianum*, and H. Merguet, among others, was notified of this fact in February, 1905. "No hint was given that any one else had planned or wished to plan a similar work." In May, 1909, when the present work was very far advanced, it was announced that Merguet was about to begin the publication of a 'Lexicon zu Vergilius.' The result is that Mr. Wetmore's cherished plan was abandoned. He has our sympathy. The honour of making the first Virgilian lexicon should have belonged to an English-speaking University.

The present work is dedicated to that excellent scholar Prof. E. P. Morris, of Yale. A good clear type is employed. The standard of spelling adopted appears to be that of Brambach, though cross-references are given to other spellings, e.g., under *inclitus* and *inclutus* we are referred to *inclutus*. The base of the index is Ribbeck's text edition of Virgil (1895), but it contains also the variants found in Ribbeck's critical edition (1894), and in the editions of Ladewig, Schafer, Deuticke (1902-7), of Conington, Nettleship, Haverfield (1883-98), and other scholars. The readings are given from the edition of the 'Appendix Vergiliana' by Ellis (1907), and that of the 'Culex' by Leo (1891). Important variants are added in critical notes, unimportant ones

being indicated by a dagger. We note that the references to the different parts of a word (e.g., *abeo*, *abis*, *abit*, *abeunt*, *abibat*, &c.) are not given in alphabetical order, or in the order of Virgil's books, but in a more or less arbitrary grammatical order of tenses, cases, &c. We prefer the Delphin with its alphabetical arrangement. However, it is undoubtedly an advantage to have all the forms of a word indexed under it, instead of scattered about. Against each word is a number signifying the frequency of its use, e.g., *abeo*, 27, means that *abeo* with its parts occurs 27 times. Under invariable words like *ad* the references begin with the 'Eclogues,' and advance through the 'Georgics' and 'Æneid' to the 'Appendix.' As some guarantee of the accuracy of the book, we have noticed that Messrs. Blackie's Index includes words not found here, and omits words found here, and in all cases Mr. Wetmore is right.

We must offer a word of warm appreciation of the labour bestowed on the work. It seems perhaps a "work of supererogation" to give references for every use of *ego* (4 columns), *nec* and *neque* (4), *et* (12), and *que* (14½): still, if the thing was to be done scientifically, we suppose the catalogue was bound to be complete.

It is anything but a dry task to look through these pages. A cursory glance makes it obvious which were Virgil's favourite epithets. A comparison with Lucretian and other indexes will show the extent to which Virgil was an innovator in diction. What inference should be drawn from the fact that he uses *stultus* only twice (in the first two 'Eclogues')? How very sparing he is in his use of the Greek words he adopts, e.g., *asylum*, *barathrum*, *daedalus*, *lebes*, *nothus*, *spelæum*, *thiasus*—all used twice only; *zona*, *cantharus*—once! The chief exceptions are *thalamus* (25), *hymenæus* (16), *tropæum* (9), *chlamys* and *hyacinthus* (7). It says much for his fecundity that several of his choice literary epithets are used only once in all his works: e.g., *Hyblææ apes*, *vina Ariusia*, *Cyrneæ buxi*, *Acheloia pocula*, and *Paphiæ myrtus*.

Mr. Wetmore has placed all true Virgilians under an obligation.

OUR LIBRARY TABLE.

A Papal Envoy during the Reign of Terror, being the Memoirs of Mgr. de Salamon, the Internuncio at Paris during the Revolution, 1790-1801, edited by the Abbé Bridier and translated by Frances Jackson (Sands & Co.), is one of the few translations from the French published in recent years which we have been able to commend. Miss Jackson has done her share in the work very well. On the title-page she modestly suggests that her part has been merely that of translator, but as a matter of fact she seems to have edited with some care both the text of Mgr. de Salamon's narrative and the Abbé Bridier's Introduction, which she has abridged from the French original. If the Memoirs of the Internuncio had been recently discovered, the book would have merited a long and detailed review. But they were first published in Paris in 1890, and several new editions have been called for since, so they must be familiar to many of our readers who follow with interest the ever-increasing production of contemporary documents relating to the French Revolution. We notice that the translator has dated her Preface January 27, 1910; but this is

probably a misprint for 1911, which is the date on the title-page.

To those who have not read in French these Memoirs, and the Abbé Bridier's Introduction, we strongly recommend this volume. Mgr. de Salamon's narrative is told in such animated style, which the translator has successfully preserved, that it reads more like a romance than a page of history. Mgr. de Salamon was born at Carpentras, now a little town of 7,000 inhabitants in the department of Vaucluse, but then included in the Comtat Venaissin, which, with Avignon, was Papal territory until the Revolution. He was consequently a subject of Pius VI., who ended his life in exile at Valence, not very far from the frontier of his old French domain. The inhabitants of the Papal territory within France were in a somewhat hybrid condition. French by language and descent, they owed allegiance to the Papacy; yet they were permitted to occupy official posts under the French Crown as though they were subjects of the King. Thus the Abbé de Salamon was chosen by Louis XVI. before the Revolution to be a magistrate in the "Parliament" of Paris, and in 1790 Pius VI. appointed him to be Internuncio at the Court of the Tuileries in succession to the Nuncio Dugnani, who had fled from Paris in fright at some of the early manifestations of the Revolution. After the fall of the monarchy on August 10th, 1792, the Internuncio continued to claim diplomatic inviolability, though he ceased to wear his ecclesiastical costume. Before the end of the month he was arrested and was an eyewitness of the massacres in the prisons, but escaped from death by a series of remarkable chances and expedients. There are few narratives extant of the Massacres of September which give such a vivid picture of the horrors of the time. It is a pity that Taine had not at his disposal the Memoirs of Mgr. de Salamon when he wrote his account of 1792 in his 'Origines de la France contemporaine.'

The author's second series of adventures took place under the Terror. With his colleagues of the Parliament of Paris, most of whom were guillotined, he was condemned to death by default in the spring of 1794, escaping the scaffold by hiding in various suburbs of Paris. Unlike most of the victims of the Terror whose lives were spared, he did not find his tribulations come to an end with Thermidor and the fall of Robespierre. Under the Directory, when the Pope was trying to renew relations with the Government of France, the Internuncio was again arrested, imprisoned at La Force and the Conciergerie, and again just managed to save his head by another marvellous set of chances.

Here the Memoirs come abruptly to an end. They were written by Salamon in the form of three long narratives addressed to Madame de Villeneuve, daughter of the Comte de Ségur, Grand Master of the Ceremonies to Napoleon. The Abbé Bridier seems to have discovered a copy of the manuscript when he was staying at the Roman head-quarters of the Sulpicians about twenty-five years ago, and, after making careful researches as to their authenticity, published them. It is a pity that Mgr. de Salamon, with his remarkable gift of historical description, did not carry on his narrative through the days of the Consulate and Empire. At the Restoration he was made a bishop *in partibus*, and later Bishop of Saint-Flour, where he died in 1829.

Most of the mistakes (and these are not many) which we have detected in the

volume may have been made by the French editor, and not by the translator. Thus the archives of the Criminal Tribunal of the Seine are said to have been burnt by "the Communists" instead of by the Communards. The Cardinal de Talleyrand-Périgord, who was Archbishop of Paris under Louis XVIII., is called "Cardinal Périgord." After the Restoration, the Abbé Bridier says,

"the King recommended him [Salamon] to the Pope for one of the forty-two newly erected sees, that of Belley. But, for reasons that I have been unable to discover, he never occupied this see, and was obliged to wait until 1820, when he was appointed Bishop of Saint-Flour."

There are several errors in this sentence. The number of sees erected under the Restoration was not forty-two, and the great majority of them were not new, but were revived ancient sees, which had been passed over when the Concordat re-established the episcopate. Moreover, if Mgr. de Salamon were appointed to Saint-Flour in 1820, there could have been no question of his becoming Bishop of Belley, which see was revived by the "Ordonnance" of October 31st, 1822. In 1792, we are told, "a new Assembly had met under the name of the Legislative Assembly. Its first act had been to proclaim the Republic, and on the 27th of August it had decreed," &c. But this was the Convention, which took the place of the Legislative Assembly on August 20th. A little further on Mgr. de Salamon says: "I was arrested at the Castle in those days of August." For English readers the translator should have explained that the "Château" meant what we call the Palace (of the Tuileries). The "Duchesse d'Anville La Rochefoucauld" is mentioned, and the translator adds a foot-note, "Probably the Duchesse de Doudeauville," and on the strength of that probability appends an interesting portrait of that lady, who was foundress of the Dames de Nazareth. But this is a mistake. The Duc de la Rochefoucauld-d'Anville (or d'Enville) bore also the title of Duc de la Roche-Guyon, and was cousin of the Duc de Doudeauville. He was massacred in September, 1792, in the presence of his mother, the Duchesse d'Anville, who was then 93, and of his wife, who is probably the lady referred to by Mgr. de Salamon. As there is no book of reference in France which in any degree corresponds to Burke's 'Peerage,' it is always a matter of difficulty to identify members of even the authentic nobility, especially in a family such as that of La Rochefoucauld, which had and has still several ducal branches.

The agreeableness of the book is greatly increased by its beautiful and interesting portraits and other illustrations. There are three different views in sepia of Saint-Flour, which are pleasant to recognize if one is familiar with that uniquely situated city of the Cantal. To those who are not acquainted with that city set upon a hill the drawings will not give perhaps a complete impression of the abruptness of the site; but they are valuable as showing that Saint-Flour remains much less changed than does the Bishop's birthplace, Carpentras, which is represented by a drawing by J. B. Laurens of 1835. The translator, who seems to have obtained a photograph of a painting of Mgr. de Salamon which was in the episcopal palace at Saint-Flour—recently dismantled under the Separation Act—should in acknowledging it have mentioned the name of the present Bishop, Mgr. Lecœur, as the French editor mentioned those of his predecessors Mgr. Baduel and Mgr. Lamoureux.

THE authorized translation of the *Memoirs of Bertha von Suttner: the Records of an Eventful Life*, 2 vols. (Ginn & Co.), is reasonably well done. As it is evidently of American origin, we are not surprised to find a conversation opening with "Say"; and most of us have become hardened to "phenomenal" in the sense of "unusual." There is, however, no such person as "Lady Isabel Aberdeen." In their English dress these Memoirs should find readers, even among those who do not sympathize altogether with the enthusiasms of the Baroness. Her recollections of the Viennese aristocracy, among whom she spent much of her childhood, are full of interest; and there is an odd pathos about her mother's pilgrimages to various watering-places in search of a fortune to be won at the tables.

The Baroness, soon after her marriage, established herself in Mingrelia, and that picturesque corner of the world has in her a lively commentator on its manners and customs. After she comes to her advocacy of the Peace movement her chapters are rather too much overlaid with purpose, and the accounts of congresses, conferences, and receptions run in a monotonously ecstatic style. Still, a record of the first Conference at the Hague by one who was behind the scenes is worth having, and such is the zeal of the author of 'Lay Down your Arms' that she will win the respect even of those who have not much faith in tempestuous oratory and the passing of idealist resolutions. She has had an animated, varied life, and has told its story with much ingenuous charm.

The Starlit Mire, by James Bertram and F. Russell, with ten drawings by Austin O. Spare (John Lane), sets forth a paradoxical philosophy in the form of proverbs and maxims somewhat reminiscent of Mr. G. K. Chesterton. While generally cynical in tone, these are often effective by virtue of an element of inconsequent wit, of which such dicta as "No genuine effort is fruitless. Although we cannot mend the past, we can at least spoil the future," or "Journalism—Scribes writing for Pharisees," or, again, "Our manners are reserved for men, our mannerisms for women," may be cited as examples. As is sometimes the case, however, with epigrammatic fireworks on an extensive scale, all the pieces do not go off with uniform success, and the volume is not free from inept things, though their number is commendably small.

Mr. Austin Spare's drawings are at least arresting. His symbolism verges on the grotesque, and is often obscure, while a deliberate disregard of lineal beauty tends to discount the "starlight" and give over-much emphasis to the "mire."

THE "rich Virgilian" measure of "amica silentia lunæ" has given Mr. Henry Law Webb in *The Silences of the Moon* (John Lane) occasion for a singularly attractive volume in the vein of speculative meditation which has of late become popular. The general trend of Mr. Webb's reflections is towards the vindication of Animism or Nature Worship as the ultimate religion, but we feel that we are concerned less with his arguments and assumptions than with the manner in which they are conveyed. A mind both well stored and keenly observant, aided by a cultivated imagination and a style scholarly, rhythmical, and above all picturesque, is an endowment to be appreciated and enjoyed. We can conceive of many who will dissent from the author,

few who will resist the influence of his earnestness, none who will cavil at the charm of his prose. The book is primarily for the literary epicure, but it should appeal to all who are conscious of the charm of graceful thought wedded to melodious English.

THE new instalment of "Everyman's Library" (Dent) is again happily varied. *The Virginians*, 2 vols., and Victor Hugo's *Toilers of the Sea* need no commendation, nor, indeed, should Gibbon's masterly *Autobiography* or Anson's *Voyages*. We notice also *Essays on Education* by Herbert Spencer, *Plays of Beaumont and Fletcher*, *The Ring and the Book* and *The Old Yellow Book*, on which Browning's remarkable poem is founded, and which we noticed some while since in these columns. A curiosity in its way is *Charles Auchester*, a musical novel by Miss E. S. Sheppard long out of print, and including characters which represent amongst others Mendelssohn, Jenny Lind, John Hullah, Sterndale Bennett, and Berlioz. Chorley reviewed this work in our columns unfavourably, but at considerable length, and admitted its "fervid feeling." The American critic who speaks of it as "drenched with beauty" hardly commends it by such language.

The best of the Introductions to the volumes are those of Prof. Charles W. Eliot to Spencer's 'Essays' and of Prof. G. P. Baker to the twin dramatists. The others, however, are adequate, and we are glad to see less of a tendency to say clever things which are of little use to the readers for whom the books are presumably intended.

THE King's Lynn election petition, recently dismissed, lends a special interest to an article on 'The Charters of Lynn Regis' in *The Pedigree Register* for March, in which a letter is published of Francis Rolfe, an ancestor of the Rolfes of Heacham, with whom Mr. Ingleby is connected by marriage, and whose hospitable traditions he emulated. The letter describes how Francis Rolfe, when Town Clerk of Lynn in 1656, surreptitiously recovered the original charters of the liberties and privileges of Lynn, after they had been surrendered by the Corporation "upon their knees" to the Lord Protector. "I began to gather up the Charters," writes Rolfe, "and would have carried them away, but Oliver laid his hand upon me, saying, 'Nay, nay, young man, these are mine and belong to me, and I will take care of them and keep them': at which I was very much troubled, but durst not say a word." A new charter was in due course made out, confirming the earlier grants; but Rolfe remained unhappy, and evidently believed that the possession of the original parchments was of vital importance to the town. How he managed to get them back may be read in full in *The Pedigree Register*, and also in what "terrible fear" he lived of Cromwell's discovering the theft, which in Rolfe's eyes was a most righteous and patriotic recovery of the town's priceless property.

NOTES FROM OXFORD.

THE latest discovery of our papyrologists would seem to have the genuine Herodotean ring about it. Few Oxford men will sympathize with the learned but paradoxical representative of a sister University who pronounces it a forgery. On his view it is a by-product of the controversies known to have occurred at the time when the old Academy was being replaced by a New

Academy under entirely fresh management. The fragment runs as follows:—

"And they also relate that one such phoenix escaped his own notice in becoming old; so that when, five hundred years having been accomplished, it was necessary for him to be reborn, he felt that the fat was in the fire. [Thus a brilliant scholar of Balliol for συμφορὴν ἐποίησατο ὅτι ἔκετο ἐς τὸ πυθῆναι.] Wherefore he built a pyre of wood that had lain in the sacred river Nile; and, when it was kindled, much smoke arose; and the phoenix was no longer to be seen on account of the smoke. And, after a long time, he came forth from the smoke, and cried with a loud voice, 'Lo I am reborn!' But a certain salamander, that had drawn near to the pyre, yet was not greatly warmed, murmured and said, 'In word is he reborn, but in deed he is the self same bird.'"

To pass to the subject of University politics, the whole term has been spent upon the re-editing of the Faculties Statute, with the gratifying result that the Moderates have triumphed all along the line. It may be explained that there are three parties in Oxford. One small and contemptible section is against reform altogether. Another body quantitatively no less negligible, though in its earnestness immense, is recklessly enamoured of change as such. The remainder, composed of reasonable persons, who naturally predominate in such a place as this, holds fast to the principle of reform without change. In the light of that beacon, the Faculties Bill has been safely brought to port. Moreover, it has become clear on the way that we are privileged to sail in a ship, every man of whose crew is prepared to act as pilot. Only one versed in the higher mathematics could aspire to state precisely how many amendments to the draft statute, introduced by how many movers and seconders, have been printed in the *Gazette*, and in course of time put to Congregation. Numberless persons, with whose names fame had hitherto refrained from taking any liberties whatever, came forward as the champions of cryptic proposals taking some such form as the following: "That in Titulus V., Sectio X., §2, sub-clause f, the word 'not' be inserted between the words 'shall' and 'be.'" It was quite impossible to discover, except at the cost of research beyond the capacities of the ordinary man, whether the particular amendment in question was intended to offer a decided negative to some deep-laid plot of the bureaucracy—apparently another name for the professoriate—or was simply designed to correct a slip in the drafting, which, according to Prof. Holland at least, left a good deal to be desired. Therefore we, the crowd, voted almost at hap-hazard. Fortunately that instinct of gregariousness which we share with other animals, such as the sheep, did not desert us at this critical time. With remarkable unanimity we voted *placet* or *non-placet* as the feeling took us. Doubtless it will have all turned out for the best. The college system is intact. The College Teacher has still the whip-hand of the University Professor. This is only right because he is younger. This is a teaching University. Teach first, learn afterwards, is the natural order of mental development. Therefore the College Teachers will teach on, whilst in their turn the Readers continue to read, and the Professors to profess. Yet this reform has not been achieved without the introduction of a certain element of change. There will be one more Board to attend, and one less Delegacy.

Next term, which is to be slightly curtailed on account of the Coronation, promises to make up in strenuousness for what it will lack in duration. Not only shall we have to deliver final judgment on what is left of the Faculties Statute, but two fresh issues have

also to be faced. Firstly, there is the Museum Relief Bill, as it may be termed. In other words, the perennial Greek question recurs, in a modified form. It is proposed that the honours-man in Mathematics or Natural Science be allowed exemption from Greek or Latin in Responsions, the two classical languages being thus placed on a par. More precisely, he may compensate for want of either Greek or Latin by offering French or German, together with any one of three additional subjects, namely, the outlines of a Period of English History, or Elementary Trigonometry, Statics and Dynamics, or Elementary Physics and Chemistry. To judge by various views expressed when the statute making Greek optional was debated, and finally rejected, in Michaelmas Term last, this much more modest measure will be carried in Congregation by a comfortable margin of votes. Prof. Gilbert Murray is more or less pledged to support it, and there can be little doubt that, on the former occasion, his opposition turned the scale. Of course a certain number of worthy persons profess the heroic intention of "dying in the last ditch." They know by long experience that they will rise again, refreshed by their wallow. Their true function, however, in the scheme of things they scarcely suspect. It is to shock the academic liberal, and, by so doing, to drive that most captious and undecided of men into a forward policy.

Secondly, a statute establishing a Board of Finance will be brought forward, and almost certainly passed. The proposed composition of this body is not without interest. Council, which the new Board is especially designed to assist, will contribute three members chosen from amongst its own number. Convocation will also elect three, the principle of popular representation being thus respected. Finally, three are to be appointed by the Chancellor. These must be members of Convocation, that is to say, Oxford men who have been patriotic enough to keep their names on the books. With this limitation, the Chancellor is free to import into Oxford—for the quarterly meetings of the Board are to be held in the University itself—the experience of the City magnate or of the controller of Imperial revenues. Now, into our native *cuisine*—the metaphor is almost inevitable in such a context—fresh methods might assuredly be introduced with advantage. In particular, it is well that College accounts should be annually reviewed, if only to the end that they might in time be induced to bring their scheme of book-keeping within the reach of an ordinary understanding. There is nothing to conceal; so why this concealment? Moreover, besides reviewing the published accounts of the Colleges and of the University, and reporting thereon to Council, the proposed Board will offer suggestions to Council in regard to questions of financial administration. Its duties, however, will be solely those of supervision and advice. Thus no one can object that the University is abdicating its liberty. It can reject the best of advice, and doubtless it often will.

A good deal of gossip, not always in the best taste, has appeared from time to time in English newspapers concerning our Rhodes scholars from the United States. Recently the Carnegie Foundation for the Advancement of Teaching, in its Fifth Annual Report, has raised the discussion to a higher plane. In a most dispassionate and thorough study of the relations of Colleges and secondary schools in America, the President, Mr. Henry Smith Pritchett, incidentally cites a formidable list of opinions furnished to the Rhodes Trustees by Oxford

College tutors, and seemingly passed on by the former on their own responsibility to the Carnegie Foundation. These opinions relate no less to the social than to the intellectual qualities of the tutors' American charges. Socially, they are shown to be well fitted to take their part in college life. At first, perhaps, when they were still "feeling strange," there may have been a tendency on their part to herd together and form a set apart. To-day they have learnt to be good Oxonians without ceasing to be good Americans. Intellectually, on the other hand, they present something of a puzzle to a teacher accustomed to the product of the English public school. They are keen, and their interests are wide; but as a rule they are anything but well-grounded. Such is the burden of the tutors' friendly, but unsparing criticisms. Mr. Pritchett, in his turn, makes no bones about endorsing this charge of superficiality. Having an axe of his own to grind, that is, being anxious to promote the advancement of teaching in America by exposing whatever weaknesses pervade the existing system, he roundly accuses both the American secondary school and the American college of fostering slipshod habits of mind by means of a too diffuse curriculum. America, he says, has left the pioneer stage behind her, but has not ceased to cultivate the pioneer virtues of alertness and resourcefulness at the expense of thorough training and careful preparation.

Well, it is not for an outsider to dispute the correctness of this vigorous onslaught on American methods of education as a whole. It is only fair to note, however, that the Oxford tutors draw a sharp distinction between the average Rhodes scholar from the United States and the occasional, though by no means rare, individual who comes to his task not only full of zeal, but perfectly well-equipped as well. Does not this simply mean that Oxford, in drawing men indifferently from every State of the Union, and not solely or even mainly from the long-established centres of national culture, is enriched with raw material—excellent material, but raw—out of all proportion to the manufactured article of high finish? Mr. Pritchett, then, though doubtless he knows his own business best, should be careful not to regard the Oxford evidence as embodying a reflection on the training provided by the best educational institutions of America. Also, to be quite fair to his own folk, he should take into account a fact which perhaps the Oxford tutors rather fail to bring out. This is the fact that the wide interests of the American Rhodes scholars are *pro tanto* helping to create in Oxford a demand for new branches of study; to which demand Oxford is slowly but surely responding, conscious that intensive study too may have its drawback, if once it be allowed to generate the taste for moving along a rut.

That the mention of ruts should be associated, even casually, with that of the school of *Literæ Humaniores* breathes almost of sacrilegious. The Greats School is not a rut, but rather a religion. Nevertheless, it is convenient to add here that there are proposals on foot designed to tamper with the institution which every pious Oxford man believes to be without parallel in the world. One scheme that has actually reached Council would merely set up by the side of *Literæ Humaniores* a Diploma in Philosophy, wherein Greek would be optional. The other, that is still on its way, would shamelessly admit Greekless philosophers into the very sanctuary. Now in *Literæ Humaniores* three interests are

blended. Firstly, there is the interest in Greek and Latin as languages. This is by far the least powerful of the three. By a strange anomaly the highest honours in our Final Classical School are more or less out of the reach of the mere philologist whose history and philosophy are second-rate, whereas they go by indefeasible right to men whose strength lies not at all in the direction of classical composition or even first-rate translation. However, no one is moving to change that. The classical philologists are not distinguished for their initiative. Besides, they are, apparently, content with Honour Moderations, which is taken after five terms' work. It is held sufficient for the production of a schoolmaster, if not of a scholar. There are left, then, the two paramount interests, Ancient History and Philosophy. Now Ancient History is bound to stick to the ancient languages through thick and thin. It is absurd to suppose it possible to educate a man in the use of sources which *ex hypothesi* he cannot translate. Philosophy, however, is in a very different case. There have been some of the world's greatest philosophers who had no Greek and little Latin. There are, moreover, important branches of philosophy, the true affinities of which are not with Plato and Aristotle, but rather with modern mathematics or modern psychophysics. Will Oxford, then, the largest and most expensively staffed school of philosophy in the world, continue for ever to deny the opportunity of a philosophic training to men whose previous education has been mainly mathematical and scientific? The question answers itself. It will not because it cannot. At the same time, the school of *Literæ Humaniores* as it exists at present is such a perfect instrument in its way, and is, from a national point of view, so justified of its children, that Council are not to be blamed overmuch if they decline to admit any outrage on its pure integrity. It would be far better to have recourse to that well-recognized safety-valve for centrifugal energy, namely, the expedient of a Diploma course. Some day, then, it may be that the philosophic diplomatist will humbly push his way through the crowd in the wake of that diviner being, so lofty, so rapt, so cloud-compelling, the Oxford First in Greats.

M.

'ANNALS OF A YORKSHIRE HOUSE.'

I HAVE been reading your most interesting review of my book in your issue of March 25th, with its admirable analysis of the character of Walter Stanhope—an analysis rendered more difficult in that only a portion of his life could be comprised in the present instalment of the Cannon Hall Papers.

There is, however, a minor point concerning him which may be of some small interest to your readers, and which, with your permission, I should like to mention. You say: "We note that Mrs. Stirling makes a slip in describing the plum-coloured hat which the Macaroni holds in his right hand as black."

May I explain that in the original miniature of Walter Stanhope dressed as a Macaroni, taken in Paris in 1770, which is in my possession, his hat and shoes are *black*, as correctly described by me? and it is due solely to an error in an otherwise exact duplicate of that miniature that they appear in a purple shade in the frontispiece to the first volume of my book. The point is perhaps of moment to those who are curious with regard to the fashions of that date.

for I believe there is no instance of the Macaronis, with all their eccentricities of attire, ever having worn purple shoes and hat, as here represented owing to a slight error in reproduction.

A. M. W. STIRLING.

A DUBIOUS MANUSCRIPT.

Fitzwilliam Museum, Cambridge, March 28, 1911.

AMONG the books of the late Charles Butler to be sold by Messrs. Sotheby next week is a manuscript which appears in the catalogue (No. 408) as 'Etymologiae Morali-ter Distinctæ,' with a note from which it might be inferred that it was executed for Charles V. of France, although the catalogue adds that "the supposed provenance is now considered by a well-known French expert (L. D.) to be fraudulent." This manuscript has been twice sold in the same rooms in the last ten years, and on the second occasion (June, 1907) I explained in your columns that M. Léopold Delisle had not only proved conclusively that the arms and signature of Charles V. were modern forgeries, but had also shown that the manuscript had been stolen from the Bibliothèque Nationale. There is reason to hope that it will now return to the library to which it belonged, and that I shall be spared the necessity of writing to you on the subject a third time.

S. C. COCKERELL.

THE OLD SQUIRES OF ENGLAND.

Barkham Rectory, near Wokingham.

I AM writing a book which will be published shortly on the Squires of England, a race which will soon be extinct. I should be most grateful for any stories relating to them—humorous, pathetic, descriptive, or otherwise—with any notes or references to their lives, virtues, and achievements.

P. H. DITCHFIELD.

SALES.

ON Wednesday, March 22nd, Messrs. Sotheby held a sale of autographs, at which the following were the best prices realized: Gladstone, 22 letters addressed to the Rev. B. Haddan, 1847-55, 26*l.* Washington, letter, $\frac{1}{2}$ p., 1792, 15*l.*; another, 2 $\frac{1}{2}$ pp., 1794, 30*l.* Burns, original MS. of his ode 'On the Duchess of Kingston,' 42*l.* 10*s.*; a collection of letters and documents relating to him, 20*l.* 10*s.* Rev. George Whitefield, fragment of an autobiography in his handwriting, 54*l.* Bret Harte, original autograph MS. of 'The Devotion of Henriquez,' 26 pp., 15*l.* 5*s.* Byron, proof-sheets of 'Hints from Horace,' with his manuscript corrections; and a letter to J. Murray, 25*l.* 10*s.*; revise proof of 'Some Observations on an Article in Blackwood's Edinburgh Magazine, 1820,' with an autograph note on Keats, 56*l.* Charles Lamb, letter, 3 pp., to Barton Field, 1827, 20*l.* 10*s.* Mary Shelley, letter, 9 pp., to John Murray, giving information as to the circumstances in which Byron's different poems were written, 16*l.* Madame Necker, letter to D. Garrick, and his reply, 30*l.* Thackeray, letter, 2 pp., 1854, referring to the Yellowplush Papers, 15*l.* 10*s.*; another, 1855, 4 pp., 25*l.* 10*s.* Boswell, letter, 4 pp., 1774, 17*l.* The total of the day's sale was 1,086 19*s.*

At the sale of books from the library of the Right Hon. James Round held by Messrs. Hodgson last week the following prices were realized: Gilbert on the Magnet, 1690, 16*l.* 10*s.* Spenser's Faerie Queene, first collected edition, 1596, with first edition of 'Colin Clout,' 53*l.* A volume of Poems by Ben Jonson, Davies, Milton, &c., including first editions of 'The Characters of Two Royall Masques,' Sir John Davies's 'Nosce Teipsum,' and Milton's 'Tetrachordon,' 135*l.*

A folio volume of Poems, Ballads, and Broad-sides, by T. D[ur]fey, Dryden, and others, 1673-85, 45*l.* Fifteenth-century manuscript, on vellum, 79*l.* Gower's Confessio Amantis, printed by Caxton, 1483, imperfect copy, 150*l.* Jerome's Vitæ Patrum, printed by Wynkyn de Worde, 1495, imperfect, 39*l.* 10*s.* Higden's Polycricon, Wynkyn de Worde, 1495, defective and repaired, 52*l.* Sir James Boleyn's copy of the Latin Psalter, 1534, 31*l.* Quintus Curtius, contemporary stamped binding by John Reynes, 1542, 15*l.* Smith's History of Virginia, 1632, 46*l.* 10*s.*; True Travels, 1630, 25*l.* 10*s.* Lewis Evans's General Map of the Middle British Colonies in America, first edition, 1755, 26*l.* Long's Voyages and Travels, 1791, with Dalrymple's Plan for Promoting the Fur Trade, 1789, 30*l.* 10*s.* Hakluyt's Voyages, 1589, 25*l.* Purchas His Pilgrimes, 1625-6, 32*l.* Voltaire, La Henriade, first edition, autograph presentation copy, original boards, uncut, 1728, 75*l.* The sale also included an imperfect set of De Bry's Voyages, which sold for 23*l.* 10*s.*; and Sir William Alexander's Mapp and Description of New England—a rare tract printed in 1630, which realized 150*l.*

The total for the day's sale was about 1,900*l.*

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Brown (John), The History of the English Bible, 1/ net.

One of the Cambridge Manuals of Science and Literature.

Church of England Official Year-Book, 1911, 3/ A full and valuable record of the activities of the Church.

Duhm (Bernhard), The Ever-Coming Kingdom of God: a Discussion on Religious Progress, 2/6 net.

Translated by Dr. Archibald Duff.

Emmet (Rev. Cyril W.), The Eschatological Question in the Gospels, and other Studies in Recent New Testament Criticism, 6/ net.

Forms of Prayer with Thanksgiving to Almighty God, commended by the Archbishops of Canterbury and York for General Use on Thursday, the 22nd day of June, 1911, being the Day of the Coronation of their Majesties King George V. and Queen Mary.

In various editions.

Frere (W. H.), Some Principles of Liturgical Reform: a Contribution towards the Revision of the Book of Common Prayer, 5/ net.

Holy Week Book, 1/ net.

Compiled from the Roman Missal and Breviary. A revised edition.

John Rylands Library, Manchester: Catalogue of an Exhibition of Manuscript and Printed Copies of the Scriptures, illustrating the History of the Transmission of the Bible, shown in the Main Library from March to December, MCMXI., 6*l.* net.

Moffatt (James), An Introduction to the Literature of the New Testament, 12/

In the International Theological Library.

Moulton (late Rev. W. F.), The History of the English Bible, 3/6 net.

Fifth edition, revised and enlarged by his sons James Hope and W. Fiddian Moulton.

Shao-Yang (Lin), A Chinese Appeal to Christendom concerning Christian Missions, 5/ net.

Welldon (Bishop) and others, Sermons on the Coronation, 6*d.*

Law.

Dodd (Walter Fairleigh), Modern Constitutions: a Collection of the Fundamental Laws of Twenty-Two of the Most Important Countries of the World, with Historical and Bibliographical Notes, 2 vols., 20/ net.

Society of Comparative Legislation, Journal, March, 5/ net.

Fine Art and Archaeology.

Bode (Dr. W.), Great Masters of Dutch and Flemish Painting, 5/ net.

Translated by Margaret L. Clarke, with 38 illustrations. Part of the Library of Art, which is being issued at a reduced price. The article upon Rembrandt includes a good reproduction of 'The Mill.'

Cassell's Cyclopædia of Photography, Part I., 7*d.* net.

Edited by Bernard E. Jones.

Cruttwell (Maud), Donatello, 15/ net.

With 81 plates. Works in marble, bronze, wood, terra-cotta, and stucco are all included. One chapter mentions the most important works wrongly attributed to Donatello, and another those which have either perished with him or been lost.

Floyer (Rev. J. K.), St. George's Church, Esher.

With 6 illustrations.

Valentine (W. H.), Modern Copper Coins of the Muhammadan States of Turkey, Persia, Egypt, Afghanistan, Morocco, Tripoli, Tunis, &c.

With numerous illustrations and maps.

Poetry and Drama.

Dukes (Ashley), Modern Dramatists, 5/ net.

Contains critical studies of "pioneer" dramatists of Europe, and a chapter concerning the influence of Ibsen upon the modern movement in the theatre.

Earle (May), Juana of Castile, 5/ net.

A poem concerning the beautiful daughter of Ferdinand and Isabella of Spain, and her shallow-hearted and unfaithful husband, Philippe, Archduke of Burgundy.

Ford (Webster), Songs and Sonnets.

Miller (Frank Justus), Tragedies of Seneca translated into English Verse, 12/ net.

With comparative analyses of the corresponding Greek and Roman plays, and a mythological index. Introduced by an essay on the influence of the tragedies of Seneca upon early English drama by John Matthews Manly. One of the University of Chicago Publications.

Visiak (E. H.), Flints and Flashes, 1/ net.

A collection of short poems, with an introduction by A. L. Lilley. In the Satchel Series.

Music.

Krehbiel (Henry Edward), The Pianoforte and its Music, 5/ net.

With portraits and illustrations. A volume of the Music-Lover's Library. The first part deals with 'The Instrument,' the second with 'The Composers,' the third with 'The Players.'

Lewis (Walter and Thomas), Modern Organ Building: being a Practical Explanation and Description of the Whole Art of Organ Construction, with especial regard to Pneumatic Action, 7/6

The book contains 76 illustrations drawn to scale and reproduced from working drawings, together with diagrams, tables, &c.

Philosophy.

Lecky (W. E. H.), History of European Morals from Augustus to Charlemagne, 1/6 net.

A new edition, which should have a wide circulation, being issued at a very moderate price.

Schopenhauer, The Wisdom of, as Revealed in some of his Principal Writings, 6/ net.

Selected and translated by Walter Jekyll.

History and Biography.

Austin (William), The History of a Bedfordshire Family: being a History of the Crawleys of Nether Crawley, Stockwood, Thurleigh, and Yelden in the County of Bedford, 7/6 net.

Dasent (Arthur Irwin), The Speakers of the House of Commons from the Earliest Times to the Present Day, with a Topographical Description of Westminster at Various Epochs and a Brief Record of the Principal Constitutional Changes during Seven Centuries, 21/ net.

With notes on the illustrations by John Lane and many portraits.

Diocesis Herefordensis, Registrum Johannis de Trillek, Pars Prima.

Issued by the Canterbury and York Society.

Dunlop (Andrew), Fifty Years of Irish Journalism, 5/ net.

Gribble (Francis), Rachel: her Stage Life and her Real Life, 15/ net.

With 6 photogravure portraits.

Hill (Rev. Geoffrey), Cerdic's Landing-Place.

Jeffery (Reginald W.), The New Europe, 1789-1889, 8/6 net.

With short notes, bibliographies, &c.

Major (E.), George V., King and Emperor, 1/ net.

An inexpensive life of His Majesty.

More Leaves from a Life, 10/6 net.

Another volume from the author of 'Leaves from a Life.'

Pais (Ettore), Ancient Italy: Historical and Geographical Investigations in Central Italy, Magna Græcia, Sicily, and Sardinia, 10/ net.

Translated by C. Densmore Curtis. Another of the University of Chicago Publications.

Prelooker (Jaakoff), Russian Flashlights, 10/6 net.

With a biographical sketch of the author. Translated from the Italian by Helena Frank, with 16 portraits and other illustrations.

Shore (W. Teignmouth), D'Orsay; or, The Complete Dandy, 10/6 net.

With photogravure and 16 other portraits.

Sirr (Harry), *Ipsissima Verba: Strictures on Dr. R. R. Madden's 'United Irishmen' and Mr. W. J. Fitzpatrick's 'Sham Squire' with reference to the Notices of Major Sirr; with the Conclusions of Recent Historians.* 2/
 Turner (John Kenneth), *Barbarous Mexico: an Indictment of a Cruel and Corrupt System.* 7/6 net.

With 48 full-page plates.

Geography and Travel.

Belmont Book, by Vados, 6/
 Describes life in Normandy and among the Norman peasants as seen through a pair of kindly English eyes. With an introduction by Arnold Bennett.
 Fergusson (W. N.), *Adventure, Sport, and Travel on the Tibetan Steppes.* 16/ net.
 With illustrations from photographs by the author and the late Lieut. Brooke, and 2 maps.
 Garnett (Lucy M.), *Turkey of the Ottomans.* 6/ net.
 With 30 full-page illustrations. In *Countries and Peoples Series.*
 Gascoyne-Cecil (Rev. Lord William and Cecil Lady Florence), *Changing China.* 3/6 net.
 Cheap edition.
 Glamorgan and Monmouth, 4d.
 In *Our Own District Series.* With illustrations.
 Hanna (Charles A.), *The Wilderness Trail; or, The Ventures and Adventures of the Pennsylvania Traders on the Allegheny Path; with some New Annals of the Old West, and the Records of some Strong Men and some Bad Ones.* 2 vols., \$10. net.
 With 80 maps and illustrations.
 Motor Trips at a Glance in England, Wales, Scotland, Ireland, and France, 1911, 2/6
 With 300 illustrations of roadside curiosities. Edited by A. J. Wilson.

Sports and Pastimes.

Hodgkinson (E. H.), *The Tyranny of Speed; or, The Motor Peril and its Remedy.* 3/6 net.

Folk-Lore and Anthropology.

Folk-Lore, December, 1910, 5/

Philology.

Hargrave (Basil), *Origins and Meanings of Popular Phrases and Names.* 6/ net.
 A book of reference which does not aim at being exhaustive, but is nevertheless of a fairly wide scope.
 Poems of David O Bruadair: Part I. Containing Poems down to the Year 1666.
 Edited, with introduction, translation, and notes, by the Rev. John C. MacErlan, for the Irish Texts Society.

School-Books.

Bagnall (C.) and Michaut (J.), *French Composition: Graduated Course with Re-translation Book I.* 1/6
 One of Nutt's French Readers.
 Edgar (J.), *The Expansion of Europe during Five Centuries, with Special Reference to South Africa: being the Course of History prescribed by the University of the Cape of Good Hope: Part I. For the Junior Certificate.*
 With 5 maps. Comes from Cape Town, and forms part of Maskew Miller's Educational Series.
 Mason (M. M.), *English as Spoken and Written To-day.* 2/ net.
 With idiomatic notes and grammatical exercises.
 Narratives from Sir William Napier's History of the War in the Peninsula, 1/
 Edited by Maurice Fanshawe. Part of English Literature for Secondary Schools.
 Polko (Elise), *Musikalische Märchen*, edited by Mrs. M. G. Glazebrook, 2/; Word- and Phrase-book, 6d.; and Key to Appendices, 2/6 net.
 In Siepmann's Elementary German Series.

Science.

Battle (William Henry), *Clinical Lectures on the Acute Abdomen.* 4/ net.
 With 10 illustrations.
 Bean (R. B.), *The Racial Anatomy of the Philippine Islanders.* 9/ net.
 Beck (E. G.), *Bismuth Paste in Chronic Suppurations.* 10/6 net.
 Bolza (Oskar), *Lectures on the Calculus of Variations.* 16/ net.
 Another of the Decennial Publications of the University of Chicago.
 Carrington (Hereward) and Meader (John R.), *Death: its Causes and Phenomena, with Special Reference to Immortality.* 8/6 net.
 Dibdin (W. J.), *The Rise and Progress of Aerobic Methods of Sewage Disposal.* 1/ net.
 Notes of a lecture delivered before the Association of Managers of Sewage Disposal Works on March 18.

Frost (Percival), *An Elementary Treatise on Curve Tracing.* 10/ net.
 Second edition.

Hall (Rev. Charles A.), *The Open Book of Nature: an Introduction to Nature-Study.* 3/6 net.
 Contains 16 full-page illustrations in colour, and 114 reproductions, mostly by the author, as well as numerous illustrations in the text. Four chapters devoted to 'A Ramble in May' deal promiscuously with birds, beasts, fishes, and reptiles. Probably the most useful part of the book is the geological. Rocks and fossils are described in a manner likely to arouse interest in the young people for whom the book is written.

Keeble (Frederick) and Rayner (M. C.), *Practical Plant Physiology.* 3/6

With illustrations. Provides an outline of the experimental investigations on which our knowledge of the physiology of plants is based.
 Lafar (Franz), *Technical Mycology: Vol. II.—Eumycetic Fermentation.* 24/ net.

Monograph of the British Lichens: a Descriptive Catalogue of the Species in the Department of Botany, British Museum, Part II., by Annie Lorrain Smith, 20/

Rowe (J. P.), *Practical Mineralogy Simplified.* 5/6 net.

Smith (C. Chambers), *Economy in Sewage Disposal; together with a History and Description of the Sutton (Surrey) Sewage Works.* 1/ net.

A practical guide for councillors, surveyors, and works managers.

Solotaroff (W.), *Shade Trees in Towns and Cities.* 12/6 net.

Statistical Society, *Journal*, March.

United States National Museum: 1805, North American Parasitic Copepods, by Charles B. Wilson; 1807, Hyalinotrix, a New Genus of Starfishes from the Hawaiian Islands, by Walter K. Fisher; 1808, The Recent Crinoids of the Coasts of Africa, by Austin Hobart Clark.

Webb (Wilfred Mark), *The Brent Valley Bird Sanctuary.* 6d.

With many illustrations from photographs by H. H. Poole, and the writer.

Yule (G. Udny), *An Introduction to the Theory of Statistics.* 10/6 net.

With 53 figures and diagrams. In Griffin's Scientific Series.

Juvenile Books.

Mack (Amy E.), *Bushland Stories.* 3/6
 With 6 coloured illustrations.

Fiction.

Brooke (Capt. Will), *Love and Treasure Laden.* 6/

A tale of "wild doings and strange sights, afar in lonely lands, and on remote, unfathomed seas."

Caradoc (Horace), *Geoffrey Sanclair.* 6/

After supping at Romano's, the hero, a county-councillor, falls in love with a chorus-girl. Later he is infatuated with another woman. A celibate priest who shares his passion masters the jealousy of which at first he is a victim, and saves the hero from suicide upon the last page of the book.

Chamberlayne (Elsie), *A King of No-man's Land.* 6/

Opens with soldiering in the Criminal Legion of Jacarat.

Clark (Imogen), *A Charming Humbug.* 6/

The "Charming Humbug" is an heiress who takes a poorer friend's place as a governess in the country, and discovers what it is like to be in a dependent position.

Conyers (Dorothea), *Some Happenings of Gendalyne.* 6/

An heiress is suddenly ordered by her guardian to go to live with him in Ireland. There is also a mystery of a lost heir, who is found by the heroine.

Corner of Harley Street (The): being some Familiar Correspondence of Peter Harding, M.D., 4/6 net.

The doctor writes thirty letters to various people.

Creswick (Paul), *The Ring of Pleasure.* 6/

A story dealing with the earlier career of Emma, Lady Hamilton.

Crockett (S. R.), *Love in Pernicketty Town.* 6/

Pernicketty Town is full of mothers with daughters to spare. Hence the title of the book.

Crouch (Archer Philip), *Dick Comerford's Wager.* 6/

Relates the story of the hero's speedy courting and marriage. The interest of the situation lies in the fact that, if Dick Comerford does not accomplish his purpose within ten days, he will forfeit his inheritance.

Frenssen (Gustav), *Klaus Hinrich Baas.* 6/

The story of a self-made man. Translated by Esther Everett Lape and Elizabeth Fisher Read.

Garvice (Charles), *The Woman in It.* 6/
 A novel of incident.

George (W. L.), *A Bed of Roses.* 6/

The story of a woman's life spoilt by the mere struggle for existence.

Gretton (R. H.), *Ingram.* 6/

Gribble (Francis), *Double Lives.* 6/

A story of modern life.

Harris-Burland (J. B.), *The Shadow of Malreward.* 6/

A long story filled with crimes and mysteries which centre round the fortunes of a wealthy widow.

Hewlett (Maurice), *Brazenhead the Great.* 6/

Episodes from the career of a splendid and boastful swashbuckler.

Jenkins (Richard Wade), "O King, Live for Ever!" or, *The Last Days of Babylon.* 5/ net.

With an appendix and introductory matter. The work has already been dramatized by the author.

Lagerlöf (Selma), *The Girl from the Marsh Croft.* 6/

Translated from the Swedish by Velma Swanston Howard. A girl who has gone astray is the heroine of this love-story, but her innate honesty and goodness win for her the love of an honest man.

Macmillan's Series: Corleone and Sant' Ilario, both by F. Marion Crawford; The Adventures of Elizabeth in Rügen; Joan of Garioch, by Albert Kinross; and Tono-Bungay, by H. G. Wells, 7d. net each.

Marshall (Archibald), *The Eldest Son.* 6/

Deals with the affairs of a family that has resided in Meadshire for some hundreds of years.

Meredith's Works: Celt and Saxon, 10/6 net.

Munro (Hector), *Mrs. Elmsley.* 6/

A story of life in a Northern manufacturing city. The manager for a firm of oil-millers determines to save the fortunes of his worthless employer for the sake of the employer's wife.

Pemberton (Max), *Captain Black.* 6/

A continuation of one of the author's earlier successes, 'The Iron Pirate.'

Rickard (Mrs. Victor), *Young Mr. Gibbs.* 6/

Mrs. Venning, an elderly widow who lives in Queen Anne's Gate, is bored by her clever children. She discovers Frederick Gibbs at a charity bazaar, and, introducing him to her titled friends, threatens to marry him. The horror of her children and Mr. Gibbs's blunders provide her—and incidentally the reader—with amusement.

Rinehart (Mary Roberts), *The Window at the White Cat.* 2/ net.

A detective story with a love interest.

Sommerville (Frankfort), *A Parisian Princess.* 6/

The author, a journalist living in Paris, has endeavoured to present French life as he sees and knows it.

Tempest (Evelyn), *Poor Emma!* 6/

The story of Emma, as influenced by her aunt, her sister, her son, and her two husbands.

Thackeray Centenary Biographical Edition: The English Humourists, The Four Georges, and Esmond, 6/ net each.

Tolstoy (Count Leo), *War and Peace.* 3/6 net.

Translated by Constance Garnett. A popular and trustworthy edition.

Weale (B. L. Putnam), *The Unknown God.* 6/

The story of a young and enthusiastic English missionary in the interior of China.

Wylie (I. A. R.), *Dividing Waters.* 6/

An Anglo-German novel in which the greater struggle between the two nations is translated into the lives of individuals.

General Literature.

Allen (James), *Man, King of Mind, Body, and Circumstance.* 1/ net.

One of Rider's Mind and Body Handbooks. Treats of learning how to live. The author's doctrine deals with conquest over the evil within a man. When every one has brought about this victory for himself, all traces of evil will, it is held, have vanished from the earth.

Beca (Col.), *A Study of the Development of Infantry Tactics.* 2/6

Translated by Capt. A. F. Custance, with a preface by Col. Hackett Pain.

Bethell (Col. H. A.), *Modern Artillery in the Field.* 7/6 net.

An illustrated description of the artillery of the field army, and the principles and methods of its employment.

Billington-Greig (Teresa), *The Militant Suffrage Movement: Emancipation in a Hurry.* 2/6 net.

The writer attacks the management of the Suffrage Cause, accusing the leaders of the larger militant Society of egotism and too dictatorial a spirit.

Colles (William Morris) and Cresswell (Henry), *Success in Literature*, 5/ net.

The object of the compilers has been to collect from authorities such precepts as may serve to reveal the secrets of success in literature.

From a Northern Window, 6/ net.

Twelve papers, critical, historical, and imaginative, by various authors, including an analysis of humour by Ian Maclaren.

Greenwood (John H.), *The Theory and Practice of Trade Unionism*, 1/ net.

With a preface by Sidney Webb. No. 9 of the Fabian Socialist Series.

Home University Library of Modern Knowledge: *The French Revolution*, by Hilaire Belloc; *A Short History of War and Peace*, by G. H. Perris; *Modern Geography*, by Marion I. Newbigin; *Polar Exploration*, by William S. Bruce; and *The Stock Exchange, a Short Study of Investment and Speculation*, 1/ net each.

Key (Ellen), *Love and Marriage*, 6/ net.

Translated from the Swedish by Arthur G. Chater, with a critical and biographical introduction by Havelock Ellis. Contains the opinion that the free union of a man and a woman, who through mutual love desire to promote the happiness of each other and of the race, is the ideal form of marriage.

Maeterlinck (Maurice), *The Double Garden*, 2/6 net.

Translated by Alexander Teixeira de Mattos. Pocket edition of this volume of essays.

Position of Woman, Actual and Ideal, 3/6 net.

With preface by Sir Oliver Lodge.

Roberts (Field-Marshal Earl), *Fallacies and Facts*, 2/6 net.

Earl Roberts's answer to Sir Ian Hamilton's 'Compulsory Service.' Part II. examines 'The Military and Naval Situation,' and is from the pen of a well-known writer on problems of Imperial Defence. Part III. is styled 'The Argument from History,' and comes, we are told, from one who has given much time and thought to that subject.

Social Guide, 1911. 2/6 net.

Edited by Mrs. Hugh Adams and Edith A. Browne.

Pamphlets.

Molesworth (Sir Guilford), *The Reform of the House of Commons*, 2d.

No. 5 in the House of Commons Reform Association Series.

Smith (Rev. W. Kerr), *The Training of Village Choirs*, 2d.

Die Aufrechterhaltung des finnländischen Landtags, übersetzt und herausgegeben von Wilhelm Habermann, 3m. 20; *Petition des finnländischen Landtags vom 26 Mai, 1910, über die Aufrechterhaltung der Grundgesetze Finnlands*, 3m. 20; *Finnland und Russland: Die internationale Londoner Konferenz vom 26 Februar bis 1 März, 1910*, 3m. 20

Fiction.

Yver (Colette), *Le Métier de Roi*, 3fr. 50

*** All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

MESSRS. LONGMAN will publish in May 'Some Problems in Philosophy: being an Uncompleted Introduction to Philosophy,' by the late Prof. William James.

THEY have also in the press 'Napoleon I.: a Biography,' 2 vols., by Prof. August Fournier, translated by Annie Elizabeth Adams. The two volumes will represent the three of the enlarged edition published by the Professor in Vienna, 1905-7.

MESSRS. CONSTABLE are adding to their series of "Philosophies Ancient and Modern" volumes on 'Pragmatism' and 'William James,' and have planned another series of "Biographies Ancient and Modern" at a popular price, destined, as far as possible, to illustrate living political, literary, and scientific movements, but not excluding the lives of men of mark of the past, such as Charlemagne, Mohammed, and Babar. The literary series, including Sainte-Beuve, Samuel Butler, Lafcadio Hearn, Tolstoy, and Lecky, is to appear first.

MESSRS. MACMILLAN & Co. will have ready in the course of a few weeks the third volume of 'Lollardy and the Reformation in England,' by Dr. James Gairdner. This will take up the story from the death of Henry VIII. and cover the reign of Edward VI. An Introduction of considerable extent discusses various points that have been raised in the earlier volumes, and also defines more clearly the scope and object of the work.

MR. J. E. C. BODLEY's lecture on Cardinal Manning at the Royal Institution on the 25th inst. will be founded entirely on unpublished matter. Mr. Bodley was designated by the Cardinal as his biographer, and possesses an important collection of letters written to him by Manning during the last seven years of his life.

THE ROYAL SOCIETY OF LITERATURE have arranged for a strong "Academic Committee," now consisting of thirty-three persons, which is to take all possible measures to maintain a good standard of English, to arrange Discourses of Reception and Obituary Addresses, to recommend persons for the medals of the Society, and make awards of merit to particular literary works. A Commemorative Address on Prof. S. H. Butcher will be delivered by Prof. Gilbert Murray next Friday afternoon.

THE ACADEMIC COMMITTEE is by no means confined to Professors, and includes several leading writers of the day, such as Mr. Conrad, Mr. Hewlett, and Mr. Henry James; but we doubt if it can effect much good among the writers of a period in which there are no prophets, and every man goes his own way, and popularity is more desired than style. The recog-

nition, at any rate, of unpopular work which is of genuine literary merit should be a service to English letters. The controllers of Government pensions are not too discerning in this way.

MR. W. TEIGNMOUTH SHORE wishes to state that his volume on D'Orsay just issued is not a work of fiction, but a biography of the well-known dandy.

MR. OWEN WISTER's new novel, 'Members of the Family,' is expected in the early part of the summer. As in 'The Virginian,' the author has gone to the wild, free life of the Western States of America for his scenes and characters. Messrs. Macmillan will publish the book.

THE publishing business of Mr. John Milne of John Street, Adelphi—late of Henrietta Street, Covent Garden—has been taken over by Mr. W. J. Ham-Smith.

MR. H. CHARLES WOODS writes:—

"I have read with satisfaction and with interest your remarks concerning my book 'The Danger Zone of Europe,' which appeared in your issue of March 25th. Will you, however, allow me to correct one small mistake made by your reviewer? He says: 'We apprehend that he [the author] is unable to converse in Turkish or Arabic.' As a matter of fact I can talk Turkish, and obtained a certificate for proficiency in that language at the examination held by the Civil Service Commissioners for Army Officers in 1907."

MR. ALFRED OLLIVANT writes to us to point out that the title of a recent novel, 'Le Gentleman,' by Ethel Sidgwick, closely resembles that of his novel 'The Gentleman,' which appeared in 1908, and is "still living and selling." There is, as he points out, no remedy at law in such a case, but we think that publishers ought to be more careful in the matter of titles. Much of the repetition of titles and of books which now occurs might be avoided by friendly intercourse between various firms.

THE death is announced at Edinburgh, on March 24th, of the Rev. Dr. Alexander Mair, a leading contributor in former years to *The British and Foreign Evangelical Review* and *The Expositor*, and the author of a volume of 'Studies on the Christian Evidences,' published in 1883.

'HEBREW GLOSSES AND NOTES BY MARCO LUZZATTO' is the title of a little work by Prof. Hermann Gollancz about to be issued, dealing with Menasseh ben Israel's work 'The Conciliator,' the object of which was to reconcile conflicting texts of Scripture. The publishers are Messrs. Luzac.

THERE are few Parliamentary Papers of general interest this week, but we may note the appearance of Reports of the Chief Registrar of Friendly Societies re Industrial and Provident Societies, 1909 (post free 2s. 8d.); Statute for University College, Galway (post free 1d.); and List of Secondary Schools, 1909-10 (post free 11d.).

SCIENCE

OUR LIBRARY TABLE.

Unsoundness of Mind. By T. S. Clouston. (Methuen & Co.)—Few people are better qualified than Dr. Clouston to write an authoritative, yet popular book upon 'Unsoundness of Mind.' He has had nearly fifty years of experience in the subject, and has attained the highly honourable position of President of the Royal College of Physicians of Edinburgh. It is not surprising that with such a mastery he has produced a book which may be read profitably by all who are interested in diseases of the mind.

The book is remarkable throughout for its sound common sense. Thus in speaking of heredity Dr. Clouston says:—

"A bad nervous heredity usually means mental unresistiveness to the causes of mental weakness and ill-health. The margin of security is less. While a man who has a good heredity may, with impunity, take many liberties in the way he uses his brain, that is not safe if he has a bad heredity."

Similarly in speaking of the influence of alcohol he teaches that

"it is a mistake to imagine that alcohol is responsible for the greater part of the mental unsoundness of the civilized world...for the larger percentage of mental unsoundness due to alcohol in our city populations, and the greater percentage among the Jews and Quakers, who are non-alcoholic, than among our general population, form indubitable proof that the condition may be due to very various causes with which alcohol has nothing to do. When one cause does not exist, another of a different kind comes in and takes its place."

In like manner in speaking of treatment Dr. Clouston emphasizes what is too often overlooked—that "nearly all cases of mental unsoundness need moral and mental treatment as well as bodily and drug treatment."

It is satisfactory to find that the almost universal idea that mental diseases are increasing of late years is not fully warranted by facts, for Dr. Clouston maintains that,

"taking these diseases as a whole, it may be regarded that the proportion of patients who can pay for their maintenance in mental hospitals has not increased in proportion to the population. It is only the class that is paid for out of public funds that has increased so largely."

Those who are acquainted with the various diaries and letters of the eighteenth century will certainly agree with this conclusion. It is a welcome sign of the present times that unsoundness of mind carries less stigma with it than was formerly the case. "Mental disease" is replacing the older term of "lunacy" with all that it connotes, just as the neutral term "hospital" is being substituted for "asylum," and "nurses," in the best acceptance of the term, have taken the place of "attendants." Dr. Clouston's book will still further advance this movement, for it teaches that the unfortunate patient is often no more to be blamed for his mental disease than is a person with tuberculosis or a cerebral hæmorrhage.

It is interesting to note that the Clouston familiar in literary circles as the author of 'The Lunatic at Large' is Dr. Clouston's son, and may therefore be supposed to have in his amusing narrative some veracious touches.

The Birth of Worlds and Systems. By Prof. A. W. Bickerton. (Harper & Brothers.)—The author (who was for many years Professor of Physics and Chemistry at Canterbury College, University of New Zealand) states that the principal object

of this little book is to give a detailed exposition of a theory which he first broached about thirty years ago, and which he has come over to place personally before the astronomers of this country, respecting the formation of the new stars seen to blaze forth from time to time in the heavens. He endeavours to account for the phenomena observed by supposing that they are produced by the partial or grazing impact of two celestial bodies, resulting in the formation of a third body, with an enormous outburst of light and heat generated by the collision. Now it is possible that we may have in this a *vera causa* for such remarkable outbursts; but, when we consider the variety of circumstances which are manifested by the different occurrences of these new bodies, we can scarcely avoid the conclusion that different processes of action are at work. When, for instance, instead of a constant and continuous diminution of light, several fluctuations are noticed, it rather suggests the idea of a passage through nebulous matter not of uniform density.

In the subsequent part of his work Prof. Bickerton gives, in accordance with the title, some views on the genesis of worlds and world-systems generally. Of these it is well remarked in a Preface written by a former pupil of his, Dr. E. Rutherford, now Langworthy Professor and Director of the Physical Laboratories of the Manchester University:—

"His theories are highly ingenious and interesting, but, as he expressly states, they are to be regarded as speculations rather than logical deductions of his theory. No doubt there will be much difference of opinion in regard to the validity of such speculations."

The work is written in a clear and vigorous style, and whether students agree with the author's conclusions or not, they will certainly find "much that is interesting and stimulating" in his pages.

Annual and Biennial Garden Plants, their Value and Uses: with Full Instructions for their Cultivation. By A. E. Speer. (John Murray.)—Capt. Speer's volume will serve to draw public attention to a class of plants that scarcely receives the favour its merits deserve. The neglect is, perhaps, due to widespread prejudice based upon ignorance. "Annuals" and "biennials" are terms which convey to the popular mind an impression of transient, weedy subjects that have occasionally done duty in the flower garden, where they have been massed in beds planted as thickly as a clover field. Huddled thus together, the plants grow weakly; they rely on each other for support, and are incapable of producing strong flower spikes, of showing any individuality, or keeping in health beyond a very short season. In this matter most professional gardeners have until recently been as much to blame as amateurs. Where better knowledge is found, it is the result, as a rule, of experience obtained from sweet peas. Since these flowers became so fashionable, cultivators have discovered that the old system of growing peas was wrong. A dozen plants were grown in a space that is now given to one, and the different treatment shows wonderful results.

Established customs die hard, but we may reasonably expect that slowly the same principles of culture that have been so successful with sweet peas will be extended to other annuals, and then the mustard-and-cress-like groups will be abandoned for ever, and godetias, clarkias, mignonette, salpiglossis, convolvulus, larkspurs, and Drummond's phlox, that have been the delight of

many an old garden, will become popular features of the modern parterre. After all, annuals have much to recommend them. They can be purchased cheaply, and any one can sow the hardy sorts out of doors in March, whilst the tender kinds may be got for next to nothing as seedlings, or late sowings can be made out of doors in the last fortnight of April and first two weeks in May. Those who have a pit or heated frame may raise them in pans or boxes in March, and get fine plants for putting out into the beds in May. Annuals may be employed to fill beds of moderate size, but they may also be used for filling up gaps in the mixed border; and they can be cleared away directly the flowering stage is past, which is a great advantage.

But many of the choicer annuals have also a value for cultivation in pots for the conservatory, as, for instance, *Rhodanthe maculata*, *Celosias*, *Campanula pyramidalis* and *C. medium*, and *Schizanthus retusus*; but Capt. Speer has preferred to speak of annuals and biennials only as outdoor garden plants. The American *eschscholtzias* with their brilliant, orange-coloured flowers; the blue cornflowers of our own fields, the marigolds, sweet scabious, Chinese asters, Virginian and ten-week stocks, and the gaudily-painted *Chrysanthemum tricolor* are annuals prominent in this way.

Amongst the biennials the wallflower and foxglove are worth all the care that can be given them, though the foxglove really requires but little attention. We wish we could say the same for wallflowers, which in the neighbourhood of towns, and particularly in London, frequently deteriorate during our long, sunless winters.

The Introduction to the present volume describes the characteristics of annuals and biennials, and gives useful details concerning cultivation. The main part of the work is devoted to an alphabetical list of the species and principal varieties. The author does not always state whether a particular species belongs to one class or the other; for instance, *Abronia*, the first plant in the list, has two species mentioned, both being perennial when grown in a greenhouse. This fact might have been recorded, even if the plants need "annual" treatment. The details have rather too much of the character of a dictionary to be very interesting except for reference.

At the same time the information is trustworthy, and should help those who wish to look up particulars of a species unfamiliar to them. The plant names are generally correct, but there are some misspellings that should be corrected in a future edition, such, for instance, as "Tagetus" (p. 238), "Onagaceæ" (p. 111), and "Mesembrianthemum" (p. 176). There are six coloured plates and numerous illustrations in black and white. Both sets are good.

SOCIETIES.

BRITISH ACADEMY.—March 22.—Sir John Rhys in the chair.

Mr. E. C. Quiggin read a paper on 'The Book of the Dean of Lismore and Bardic Poetry in Ireland and Scotland, 1200–1500.' One of the most important features of mediæval Irish literature is that it has sometimes preserved primitive species of compositions which are not commonly met with in the rest of Europe. Amongst the number is the panegyric which can be traced in Ireland from the seventh century to the seventeenth. Such compositions bulk largely among the works of the later bards. A considerable body of bardic verse is contained in the following MSS.: 1. The Book of Hy Mane; 2. The Yellow Book of Lecan; 3. The Book of the Dean of Lismore; 4. The O'Connor Don's Book; 5. The

O'Gara MS. The poems were probably preserved in two ways. The compositions of one or two bards were collected to form a book, or a compilation might be made of poems addressed by various authors to the head or heads of a clan. One of the earliest of such tribal books is now in the Advocates' Library. The most famous poets of the period 1200-1500 were Muireadhach Albanach Ua Dálaigh (c. 1220), Giolla-brighde MacConmidhe, Gofraidh Fionn Ua Dálaigh (d. 1387), and Tadhg Og Ua Uiginn (d. 1448). Except in the case of the last-named writer, most of these poets are now known by only a few compositions. Apart from the panegyric, the later bards also wrote religious poems. The latter frequently contain stories drawn from 'The Golden Legend,' the 'Gesta Romanorum,' and the apocryphal Acts and Lives of Continental saints. The panegyrics are important as being almost our only source of information as regards social conditions in Connaught and Ulster. The poems by Highland writers in the Dean of Lismore's Book, such as Finlay MacNab, resemble contemporary Irish compositions. If the metrical scheme is restored, the language is found to be identical with the literary Irish of the period. The metres employed are generally less complicated than those of the Irish bards.

The paper was followed by a discussion, in which Dr. Norman Moore, Prof. Kuno Meyer, Miss Eleanor Hull, and Mr. A. P. Graves took part.

ROYAL.—March 16.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'Gametogenesis of the Gall-fly (*Neuroterus lenticularis*),' Part II., by Mr. L. Doncaster; 'The Action of the Venom of *Echis carinatus*,' by Sir Thomas R. Fraser and Dr. J. A. Gunn; 'Further Researches on the Development of *Trypanosoma gambiense* in *Glossina palpalis*,' by Col. Sir David Bruce and Capt. A. E. Hamerton, II. R. Bateman, and F. P. Mackie; and 'Spontaneous Cancer in Mice,' by Dr. M. Haaland.

March 23.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'A Theory of Asymptotic Series,' by Mr. G. N. Watson; 'The Ionization of Heavy Gases by X-Rays,' by Mr. R. T. Beatty; 'The Variation of the Ionization with Velocity for the Beta-particles,' by Mr. W. Wilson; 'The Causes of Absorption of Oxygen by the Lungs in Man,' by Mr. C. G. Douglas and Dr. J. S. Haldane; and 'The Influence of Planets on the Formation of Sunspots,' by Mr. A. Schuster.

LINNEAN.—March 16.—Dr. D. H. Scott, President, in the chair.—Mr. A. Belt and Dr. E. Hindle were admitted Fellows.—Miss Freda Bage, Mr. R. E. Drake-Brockman, Mr. M. B. Fullerton, and Mr. C. D. Soar were elected Fellows.

Prof. A. Dendy read a communication from Prof. W. A. Herdman combating the statement regarding the use of the term "Polyzoa" made by the Rev. T. R. R. Stebbing at the last meeting.—Mrs. D. H. Scott gave a lantern exhibition of new species of the fossil genus *Traquairia*. A discussion followed, in which Dr. G. J. Hinde (visitor), Prof. Dendy, the Rev. T. R. R. Stebbing, Prof. F. W. Oliver, and the President took part.—Mr. R. S. Adamson gave a lantern demonstration of his communication entitled 'An Ecological Study of a Cambridgeshire Woodland,' the woodland investigated, Gamlingay Wood, being in the extreme west of Cambridgeshire, situated on Boulder Clay. The discussion was carried on by Dr. C. A. Moss (visitor), Mr. A. G. Tansley, Mr. J. C. Shennstone, Mr. M. Wilson (visitor), and Prof. F. W. Oliver.—A paper by Miss S. M. Baker, 'On the Brown Seaweeds of the Salt Marsh,' was postponed.

ZOOLOGICAL.—March 21.—Dr. S. F. Harmer V.P., in the chair.—The Secretary read a report on the additions to the menagerie during February.—Mr. R. I. Pocock exhibited: (1) a pair of otter cubs about seven weeks old, which were found under a landing stage at Tewkesbury; (2) a specimen of the North American black-footed polecat (*Putorius nigripes*), a species furnishing, in Mr. Pocock's opinion, an admirable instance of "warning coloration"; (3) the skin of a chacma baboon (*Papio porcarius*) from Potchefstroom in the Transvaal; (4) the frontlet and antlers of a specimen of the Manchurian wapiti (*Cervus xanthopygus*).—Mr. D. Seth-Smith exhibited a living hybrid duck, which was believed to be a cross between the white-eyed pochard (*Aythya nyroca*) and the marbled duck (*Marmaronetta*

angustirostris). It was hatched at Scampston Hall, Yorkshire, from a clutch of eggs laid by a marbled duck at Lilford Hall, Northamptonshire.

Mrs. E. W. Sexton presented a paper, communicated by Dr. W. T. Calman, 'On the Amphipod Genus *Leptocheirus*.'—Messrs. J. L. Bonhote and F. W. Smalley read their paper 'On Inheritance of Colour in Pigeons,' which dealt with the first results of a long series of experiments. Dr. G. Stewardson Brady presented a paper 'On Marine Ostracoda from Madeira,' based on specimens collected by Canon Norman in the spring of 1897.

FOLK-LORE.—March 15.—Mr. W. Crooke, President, in the chair.—Mr. Cecil Sharp read a paper on 'The Sword Dances of Northern England,' illustrated by the performance of four of the dances from Mr. Sharp's collection.

BRITISH NUMISMATIC.—March 22.—Mr. P. W. P. Carlyon-Britton, President, in the chair.

Mr. Lawrence read a paper upon a hoard of 136 groats said to have been found in Norfolk many years ago. Their period of issue comprised about 70 years, and was represented by 1 specimen of Henry V., 2 of the heavy coinage of Henry VI., 2 of his light issues, 126 of Edward IV., and 5 of Richard III. Although every English provincial mint was in evidence, a Waterford groat of Edward IV. was the only visitant. The London mint-marks, with the exception of the trefoil, were represented as a complete series. Referring to the question of the mint-mark current at the date of Henry VI.'s restoration in 1470, Mr. Lawrence, in agreement with Mr. Fox, inferred that it must have been the short-cross-pierced, and in support of this mentioned Henry's gold angel with that mark, which he urged was reproduced from the current angel of his rival.

Mr. Henry Symonds read a short paper on the mint of Aberystwyth under Charles I., based upon a contemporary manuscript in the Harleian Collection. He traced the operations from their commencement in 1638 for about ten years, during which the mint was intermittently working; and quoted the amount of money that was struck there. The coining of Welsh silver ceased in 1648, when the dies were removed to an unknown destination, apparently for safe custody on account of political troubles. Amongst many interesting items was a memorandum that from the commencement of the mint to the 10th day of July, 1641, the open book was the mint-mark.

Mr. Alfred Chitty contributed the first portion of his treatise on 'The Token Coinage of Australia,' which comprised New South Wales and Victoria. The author described in detail the various issues of the traders, and was able to add numerous varieties to the lists previously published.

Exhibitions.—Mr. Carlyon-Britton, penny of Henry II., Hawkins 285, of the Norwich mint, originally issued by the moneyer Ricard, but re-struck from the dies of the moneyer Picot of the same type, but with obverse and reverse transposed; Col. H. W. Morrisson, light groat of Henry VI. of Bristol with mint-marks, on obverse a trefoil, on reverse a cross; Mr. A. H. Baldwin, a heavy groat of Edward IV., mint-mark lis from a die on which the king's name had been altered from that of Henry VI.; Mr. C. P. Hyman and Mr. H. W. Taffs, a series including unrecorded varieties of the Australian currency; Mr. F. Willson Yeates, the two-quart piece of R. Keeling for Gibraltar; and Mr. Henry Garside, the proof half-crown of 1823, first type.

FARADAY.—March 14.—Dr. J. A. Harker in the chair.—A paper on 'Some Properties of Aluminium Anode Films,' by Messrs. G. E. Bairsto and R. Mercer, was read in abstract by the Secretary.—A paper on 'The Weight of a Normal Litre of Hydrogen Chloride,' by Mr. F. P. Burt and Dr. R. W. Whytlaw-Gray, was read by Mr. Burt.—Mr. Ernest Vanstone read a paper entitled 'A Physical-Chemical Study of Mercury-Sodium Alloys or Sodium Amalgams.'—Dr. S. W. J. Smith and Mr. W. F. Higgins read a paper 'On Surface Effects between Mercury and Certain Solutions and an Electrochemical Method of estimating Dissolved Oxygen.'

MEETINGS NEXT WEEK.

- | | |
|-------|--|
| Mon. | Royal Institution, 5.—General Meeting. |
| — | Aristotelian, 8.—'The Theory of Psycho-physical Parallelism as a Working Hypothesis,' Mr. H. W. Carr. |
| — | Surveyors' Institution, 8.—'Annual Licence Values,' Mr. D. Dinwiddy. |
| Tues. | Royal Institution, 3.—'Explorations of Ancient Desert Sites in Central Asia,' Lecture III., Dr. M. A. Stein. |
| — | Society of Arts, 4.30.—'The Commonwealth of Australia,' Capt. R. Muirhead Collins R.N. (Colonial Section). |

- | | |
|--------|--|
| Tues. | Institution of Civil Engineers, 8.—'The Improvement of Highways to meet Modern Conditions of Traffic,' Mr. J. Walker Smith; 'Recent Development in Road-Traffic, Road-Construction and Maintenance,' Mr. H. P. Maybury. |
| — | Zoological, 8.30.—'Demonstration of Nematode Parasites obtained from Animals in the Gardens,' Dr. R. T. Leiper; 'Contributions to the Anatomy and Systematic Arrangement of the Cestoidea: No. 1. On some Mammalian Tape-worms,' Mr. F. E. Beddard; 'On the Natural History of Whalebone Whales,' Mr. J. A. Mörch. |
| Wed. | Archæological Institute, 4.30. |
| — | Entomological, 8. |
| — | Folk-lore, 8.—'Some Matrimonial Problems of the Western Borders of India,' Major O'Brien. |
| — | Society of Arts, 8.—'Wheels, Ancient and Modern, and their Manufacture,' Mr. H. L. Heathcote. |
| Thurs. | Royal Institution, 3.—'Surface Combustion and its Industrial Application,' Lecture II., Prof. W. A. Bone. |
| — | Royal, 4.30.—'A Chemically Active Modification of Nitrogen produced by the Electric Discharge,' Prof. R. J. Strutt. (Bakerian Lecture.) |
| — | Institution of Electrical Engineers, 8.—'Wireless Telegraphy Working in relation to Interferences and Perturbations,' Mr. J. E. Taylor. |
| — | Linnean, 8.—'On the Brown Seaweeds of the Salt Marsh,' Miss S. M. Baker; 'On the Genus <i>Salicornia</i> ,' Dr. C. E. Moss, Mr. E. J. Salisbury, and Dr. Ethel de Fraine. |

Science Gossip.

MESSRS. LONGMAN will publish shortly 'New Ideas on Inorganic Chemistry,' by Prof. A. Werner, translated by Dr. E. P. Hedley; 'The Star Pocket-Book,' a simple manual on guidance by the stars, by a naval instructor, Mr. Robert Weatherhead; and 'The Chemistry of Synthetic Drugs,' by Mr. Percy May.

THE same firm have in the press Lord Avebury's book 'On Marriage, Totemism, and Religion: a Reply to Critics,' which we have already mentioned.

THE BAKERIAN LECTURE will be delivered next Thursday afternoon by Prof. R. J. Strutt on 'A Chemically Active Modification of Nitrogen produced by the Electric Discharge.' The lecture will be illustrated by experiments.

WE congratulate Dr. Marie Stopes, who is well known for her work in botany, on her marriage with another student of the same subject, Dr. Reginald Gates. Dr. Stopes will retain her maiden name so far as her publications are concerned.

No. 17 of the *Publications* of the Cincinnati Observatory contains the results of micrometrical observations of nebulae, obtained under the direction of Dr. H. G. Porter, from 1905 to 1910. The 16-inch Clark refractor was mounted in 1904, tested, and used that year in miscellaneous work. Afterwards it was decided to undertake systematic observations of the nebulae in the N.G.C. catalogue south of the equator as far as could be seen in that latitude, about 36°. About the same time M. Bigourdan had undertaken to observe again at Paris the nebulae in that catalogue; about one-fifth, however, of those measured in this were not secured at Paris, but some observed there are not included here, partly on account of the frequently unfavourable state of the sky. The discovery of new objects was not a part of the scheme, but some (certainly nine, perhaps more) were picked up incidentally. The whole number in this list amounts to 669; the micrometrical measures are given, and a catalogue of the places; also the micrometrical measures of the comparison stars, which are 677 in number. Dr. Porter pays in his Preface a tribute to the general accuracy of the

Herschelian positions of nebulae. The climate of Cincinnati, he remarks, is not well adapted for work on very faint objects.

DR. BERBERICH finds that a small planet announced by Herr Götz at Heidelberg on January 14th, 1905, is, like that noticed by Herr Helffrich at the same place on the 22nd of last February, identical with Comacina No. 489, of which he gives an ephemeris in No. 4485 of the *Astronomische Nachrichten*.

PROF. MAX WOLF succeeded in obtaining a photograph of Halley's comet at the Königstuhl Observatory, Heidelberg, on the 19th ult. It was of about the fourteenth magnitude (a little brighter than Faye's, which he also observed), with no perceptible nucleus, but an increase of brightness towards the centre. He also discovered photographically another small planet the same night.

THE second number of Vol. XL. of the *Memorie di Astrofisica ed Astronomia* of the Società degli Spettroscopisti Italiani has appeared, containing principally Prof. Riccò's observations of comet *a*, 1910, at Catania, and a continuation of the spectroscopic images of the solar limb observed at Rome and Palermo from April 15th, 1881, to May 21st, 1882.

FINE ARTS

OUR LIBRARY TABLE.

Tintoretto. By Evelyn March Phillipps. (Methuen & Co.)—The series of monographs known as the "Classics of Art" has acquired an honourable distinction from the profuseness and completeness of illustration of the various volumes, the aim being to "reproduce all the master's pictures so far as is practicable." The promise was generously fulfilled in the 'Raphael,' the 'Titian,' and the 'Michaelangelo,' with 200, 180, and 125 plates respectively. Tintoretto was more prolific in art than any of these, and his work is far less easily met with in reproduction; for this reason it is the more to be regretted that it has been found necessary to curtail the number of illustrations to a third of the number allotted to Titian. The illustrations are good. The size renders them more satisfactory exponents of the works they represent than those in either the book by Mr. Holborn or that by Herr Thode, and, although they are not so fully representative as those in the latter work, they are superior to them in clearness and delicacy of tone. The features which perhaps first arrest attention in Tintoretto's work are naturalism and intensity of dramatic power. This is especially in evidence in the greater compositions—the 'Crucifixion' and the other works in the Scuola di S. Rocco, and the pictures in the Madonna del Orto and certain other of the churches in Venice. It is this side of his art which finds fullest expression both in the plates and in the text of the present work. The naturalism of landscape is seen in the Scuola di S. Rocco in such wonderful visions as the 'S. Mary of Egypt' and the 'Flight into Egypt,' silvery with breaking light and tremulous with dawn. The naturalism of incident, the intense yet restrained dramatic power, is seen in the 'Crucifixion' and the 'Christ before Pilate.'

Carlo Ridolfi, whose biography of the artist has something of Vasari's *curiosa*

felicitas, tells how he wrote on the walls of his studio, in order to keep before his eyes a resolution and a standard of endeavour, the words "the design of Michaelangelo and the colouring of Titian." In fulfilment he studied the works of Titian in Venice with patient zeal, and procured reduced models of Michaelangelo's statues in the Medici Chapel at Florence. These, we are told, he copied sometimes by lamplight when the shadows were deepest, in order to gain additional power to depict objects in strong relief, and he constructed tiny houses with windows for these models to study the incidence of the lights and shadows. It is probable, as a recent critic has observed, that he had studied Leonardo's 'Treatise on Painting,' and intended to profit by it, and as a result of this he has been likened in power of chiaroscuro to Correggio. Many influences went to the making of his art, but naturalism and dramatic power to present action were inborn, and by virtue of these he was a great innovator, and as such he suffered a corresponding neglect in the period of formalism which succeeded that of growth. The cloud of depreciation was in part dispelled by Ruskin's eloquent eulogy, and in Ruskin's work, obscured only by a certain waywardness in comparative judgment, the spirit which animated Tintoretto's creations has been rendered manifest. In the half-century which has elapsed since the time when Ruskin wrote, he has been the subject of occasional rhapsody, but otherwise he has attracted comparatively little attention.

There has long been room for a really critical, thorough, and reasoned estimate of his position in art. Even in Germany, where such things have their birth, nothing has yet appeared more extensive than the very useful but necessarily restricted monograph by Herr Thode in the Knackfuss series. Advantage has, however, not been fully taken of the opportunity in the volume before us. It is the most detailed account which has appeared, but its lack of breadth and fundamental structural qualities leaves us unsatisfied. Tintoretto stands alone in Venetian art in his combination of creative power and moral earnestness. He had something of Michaelangelo's purpose as well as his power of design. It is this side of his art which is most adequately interpreted in the book before us, but there are still whole tracts left to explore. Too meagre certainly is the treatment of the work in portraiture—those "wonderful studies of old age," as Prof. Justi terms them—senators, procurators, admirals, and others—who attest Tintoretto's rare power to express character; works in which by contrast with those of the other Venetians colour is scarcely a more dominant note in composition than it is in the work of Rembrandt. "Beautiful colours," he said, "are bought on the Rialto, but drawing only comes with study and night-watches"; and his favourite colours, we are told, were black and white "because the one gives profundity and the other relieves it."

Five examples scarcely avail to witness the variety of this side of his art, although its quality is fully shown by the inclusion of the portrait of the artist in the Louvre and the splendid 'Admiral Venier' at Vienna. It lacks the supreme grace and distinction which is found in Titian's types. The one preferred to paint courtiers and visionaries, the other found his sitters for the most part among men of action seamed and furrowed with the rougher usage of life.

The allegorical and classical subjects are hardly treated in a manner commensurate with their importance. Tintoretto came very near to Correggio in rendering the nude

with such subtlety and delicacy of texture that flesh seemed touched by shadow as lightly as by the air itself. In the larger compositions the perception of this power is apt to be obscured by the rush of the action and the triumphs of technical dexterity.

But where the symbolism is most dominant, as in the 'Annunciation' at S. Rocco, the 'Last Supper' at S. Giorgio Maggiore, and the 'Paradiso,' the interpretation is sympathetic and satisfying.

The catalogue of work disclaims any attempt to be exhaustive, but this does not free it from the reproach of being inadequate. The arrangement follows in the main that adopted by Mr. Berenson, but in a monograph on this scale so rigorous a canon as is here enforced should be supplemented by a critical apocrypha, or by at any rate a supplemental list. In its absence the catalogue is of far less value to the student than those in the books by Mr. Holborn or Herr Thode.

Following Mr. Berenson the list contains only three of the Dresden pictures, and these do not include such apparently characteristic examples as the 'St. Michael overcoming the Dragon' and the 'Women Playing Musical Instruments.' It would be more satisfying to be instructed as to the reason of the omission. Similarly, we find no mention of any of the numerous portraits in the Prado, some of which surely are genuine. The paintings in the Lower and Upper Halls of the Scuola di S. Rocco should be enumerated in the list of works. Such an entry as "Lower Hall. All the paintings on Walls" does not allow the list to be used as a work of reference, and this is presumably its object. Under the heading 'Brescia' the word S. Afra standing alone is not the name of a picture in the Gallery, as would naturally be inferred, but of a church which contains a 'Transfiguration' by Tintoretto. Under the heading 'Venice—the Accademia,' the two entries 'Madonna and Three Saints,' and 'Three Treasurers and their Secretaries, 1566,' refer to the same picture, No. 210 in the Catalogue.

The bibliography is useful, but might with advantage be supplemented. The separate issue of the life by Ridolfi in 1642 might be noted, because it shows the importance attached to it by contemporary opinion in Venice. Ruskin's famous lecture on 'The Relation of Michael Angelo and Tintoret' ought, we think, to be included. The most important omission, which was no doubt unavoidable through considerations of time, is that of an essay on the 'Paradiso of Tintoretto' by Mr. F. P. B. Osmaston, published last year by the Pear Tree Press. This book, illustrated by many photographs taken under exceptionally favourable conditions, presents an acute and penetrating interpretation of the whole conception and plan of what is the greatest, as it is the ripest, expression of the genius of Tintoretto.

We have received a copy of the fourth number of *Rassegna d'Arte Umbra*, which is, as usual, scholarly and well informed. It is not unusual to find an Italian art magazine rather tardy in appearance, and this number, dated December 15th, came to hand long after that date.

Mr. F. Mason Perkins writes a short note on a 'Holy Family' by Pintoricchio and on a 'Mystic Marriage of St. Catherine' by Bernardino di Mariotto, both of which are now in the collection of Mr. E. W. Forbes, the Director of the Fogg Museum in the University of Harvard.

In a long and well-reasoned article Signor W. Bombo attempts to arrange in strict

chronological order all the works painted by Raphael in his Umbrian period. He gives priority of execution to the gonfalone of the Confraternity of S. Trinità at Città di Castello, claiming that the introduction of St. Sebastian and St. Roch indicates that it was painted on the occasion of the outbreak of plague in 1499, as Comm. G. Magherini-Graziani has already suggested in his 'L'Arte a Città di Castello.' Morelli and Mr. Berenson, however, long ago assigned it to Eusebio di San Giorgio. The 'Coronation of S. Niccolò da Tolentino' is here claimed as the second of Raphael's works in point of time, and described as a masterpiece of his Umbrian period. It is held to have been finished by September 13th, 1501, while the 'Vision of a Knight' in the National Gallery, the 'Three Graces' at Chantilly, the small 'St. Michael' and 'St. George' in the Louvre—the last two formed a diptych when they were in the Mazarin Gallery—and the 'Conestabile Madonna' of the Hermitage come next. Then follow the 'Madonna with St. Jerome and St. Francis' and the 'Solly Madonna,' both now in the Kaiser Friedrich Museum, which mark steps in the gradual evolution of Raphael's art before the execution of his fully documented and dated 'Sposalizio' at Milan. We have not space to follow Signor Bombe through his detailed survey of this fascinating subject, which is generally satisfactory. The 'Agony in the Garden,' which is stated to have been in the Eldin [*sic*] Collection before passing into that of Lady Burdett-Coutts, now belongs to Mr. Burdett-Coutts, but the last step in its pedigree does not seem to be known to the writer of this article.

Signor Umberto Gnoli, the editor, has a short note on a hitherto unknown 'Coronation of the Virgin' by Niccolò da Foligno, which he regards as belonging to the same period as the triptych by this artist in the National Gallery.

The quotations cited from documents referring to Pintoricchio, Giannicola Manni, and Fiorenzo di Lorenzo are less interesting than some that have appeared in this magazine. A few items of news are communicated from Perugia and certain outlying Umbrian towns, in accordance with the excellent custom of the editor, but it seems rather late in the day to refer in detail to the Volpi Sale of last May and to a lecture given by Prof. Adolfo Venturi during the same month. Reproductions of hitherto unknown pictures are always welcome, but those contained in the present number can hardly be considered satisfactory. They are on too small a scale and badly mounted.

The Makers of Black Basaltes. By Capt. M. H. Grant. (Blackwood & Sons.)—It is safe to prophesy that this fine volume will revive the taste for a ware which is not only essentially English, but also "one of the most beautiful and refined in all the realm of ceramics." The neglect, for the last half century or more, of black Basaltes is strange. Many an otherwise excellent collection of British ceramics, both public and private, is destitute of a single example, or, at the most, contains two or three specimens, which are usually condemned to positions of obscurity. We suppose that articles of this material have lost their charm among connoisseurs and become unfashionable owing to the gloom of the colour. But the true charm of black should need no advocate at the present day.

Capt. Grant is fully justified in stating:

"If purity of form, dignity of colour, restraint of ornament, and exquisiteness of paste be the points of a ceramic thoroughbred, no further

excuses need be made for the subject of this book, for black Basaltes exhibits them all."

Gladstone in his masterly address delivered at the opening, in 1863, of the Wedgwood Memorial Institute at Burslem, impressed upon his hearers that, of the different constituents of works of art, "form is the foundation of the whole." Especially is this the case with fictile art. The true potter should next aim at securing excellence of material suitable for the expression of the best ceramic technique. The third element of success is the consideration of utility, or, as Capt. Grant happily expresses it, at least the possibility of utility. The potter should ever remember that, unlike the painter or the sculptor, he had his origin in the daily needs of mankind, and not in the claims of luxury or sentiment. Wedgwood himself, when writing to his partner Bentley in reply to a request for a definition of ornamental ware, said that he had "never any idea that ornamental ware should not be of some use." As Capt. Grant puts it when discussing the ethics of earthenware:—

"His vase, be it never so lovely, must still hold wine, water, or oil; his plate must not be scalloped or gadrooned out of all accommodation for meat or bread; his lamp must be handy and stand firm, whether Angel or Mephisto, Vestal or Phryne, uphold it. His 'Mysterie' is to glorify the vessels of the daily round and common task, and he does but rise to the pinnacle of his art when his useful things are so beautiful that their owners refuse to use them except to administer comfort to the eye."

Great as were the excellence and cleverness of Wedgwood and some of his imitators in the production of purely fanciful or ornamental pieces, such as animals, statues, intagli or cameos, the ablest potter, whether working in earthenware, stoneware, or porcelain, must ever lag far behind the inspired worker in marbles or gems. Wedgwood combined, in an almost unique degree, the essential characteristics of the ideal potter, and there can be no doubt that he found black Basalt the best material wherein to express, with consummate skill, beauty of form and the perfection of restraint in ornament.

The ancient potters, both the Greeks and their followers the Etruscans, in their love of form appear to have deliberately selected black ware as the best suited to display the beauty of outline, and the same sable hue came to perfection in England towards the close of the eighteenth century.

The origin of the true black Basaltes still remains obscure, as well as the time of their first use; but it was in 1768 that Wedgwood first offered plain Basalt vases for sale at high prices under the name of Etruscan. Capt. Grant divides the black ware of the master-potter into vases; tripods, lamps, and candelabra; flower-pots and inkstands; busts and statuettes; plaques and tablets; medallions, camei, and intagli, and tea, coffee, and other useful ware. To each of these headings he devotes a chapter. Later sections deal with the work of the Turners of Lane End, of Humphrey Palmer and Elijah Mayer of Hanley, of the minor potters of Staffordshire, and other places.

The volume is finely illustrated: ninety-six plates display nearly three hundred striking examples. It might perhaps have been better to include a few instances of absolutely plain ware, for it is in such pieces that the extraordinary beauty of form becomes most manifest. As we write, a plain black Wedgwood coffee-pot, 8½ in. high, and a plain low cream-jug, 2½ in. high, stand on our table, and it would be difficult to surpass them, among useful ware, in the beauty of their design.

THE WORK OF M. A. J. BAUER.

THE distinguished talent of M. Bauer is shown at its best in the series of water-colours now at Messrs. Obach's Galleries. As an etcher, serious and dignified as he often is, he suffers somewhat from the copiousness of his output and the furious haste with which (apparently) he flings a noble design upon a plate—sometimes of inordinate size—in a confused medley of cobweb lines. We are not ungrateful for such work, always virile in touch and spacious in its proportions; but we must confess to a pedantic scruple. In proportion as a work of art is produced in multiple form, we both instinctively and on principle ask that it shall be deliberate and considered—not a hasty improvisation or a raw observation. This is perhaps to confess oneself a purist—certainly the criticism might equally be pressed, except in the matter of scale, against some of the finest works of Rembrandt; but then we have frequently urged that that greatest of masters has done probably more than any one else to demoralize the technique of modern artists.

Be this as it may, we find more satisfaction in the water-colour drawings of M. Bauer, with their less exacting demands on the attention of the world. Ethereal visions burdened with but a slight message of concrete information, they seem fittingly expressed in a form materially slight and even perishable. The work of art in this typically modern phase is not a thing to be elaborately wrought for its own sake as a piece of craftsmanship; it is a bridge for thought, becoming, as intelligence is more perfectly established, ever slighter and slighter and of less intrinsic importance, till the contact between mind and mind comes to be maintained by a mere Morse code of suggestive signals, and the speculative critic foresees the arrival of the era of wireless telepathy, wherein the work of art as such will vanish altogether.

In this tendency of art to abandon definite statement for slight suggestion M. Bauer's work offers by no means so extravagant an example as is furnished by that of some other latter-day painters, but his thought is so dignified that we find ourselves wondering at the apparent heedlessness of his hand. Artists of the past who have shown a like spiritual insight have usually displayed at the same time a more noticeable reverence for the means by which their thoughts were to be expressed. Hence a gravity of hand, a sense of technical responsibility, which ensure for the work of art the sensuous beauty of processes perfectly employed—a beauty appealing even to such as fail to comprehend the painter's meaning. M. Bauer has no such fastidious care for his "matière": his drawings are as loose as those of the late Arthur Melville, but without his decision and brilliance of colour; they are so full of uncertain patches that we should feel them to be decadent examples of water-colour art if we missed their significance and judged them as bric-à-brac, like lacquers or enamels. The artist's genius, however, is triumphant and unmistakable. Majestic hints loom through the confusion of his uncertain facture—to some minds perhaps the more impressive for the intervening haze. No. 12, *Interior of Burgos Cathedral*, and No. 7, *The Alhambra*, show the artist at his highest point of technical lucidity—the former, perhaps

an early work, confesses an unexpected kinship with the accomplished, but relatively shallow art of Bonington. In the latter the much-painted Court of Lions, which in the hands of most painters becomes a despicably meretricious piece of architecture, arises in a lovely grisaille of shell-like surfaces serenely beautiful. Still finer are the more masculine *Aya Sofia, Constantinople* (2), the stupendous *Interior of Saragossa Cathedral* (15), and the very original design *At the Spring* (3), wherein, in a very subtilized form, we think we see traces of the influence of Sir John Gilbert.

Prof. Sadler, who writes for the Catalogue an admirable Preface descriptive of M. Bauer's work, lays perhaps a thought too much stress on its imaginative quality—in the sense which would imply the power of calling up visions unprovoked by actual sights or memories. Two designs certainly (19 and 30) have in a high degree the power of evoking the sentiment of phases of experience common to most of us. *The Bridge at Toledo* (19) is compact of the very essence of adventure. The three cavaliers so brusquely indicated upon their lean and muscular ponies seem the very symbols of energy and resource, speeding along through the crisp air, leaving range after range of hills behind them. *The Walls of a Fortress* (30) is as eloquent of another phase of travel when, in a long siesta in an angle of strangers' walls, every stone of the fortuitously chosen spot becomes oddly familiar, and it seems as if we should never forget this prospect, which yesterday we had never seen, and which we shall never look upon again. A poignant invention marks these designs. More often, however, M. Bauer's motives are none the less definitely suggested by actuality for being subjected to a rigorous abstraction of the particular elements which interest the artist. The sequence of shadows, revealing the successive movements by which light enwraps an object, forms the material of this master of chiaroscuro. The ordinary eye may miss the special variety of this theme offered by each building at any time of day, but it is there just the same, and its rendering is a matter comparatively of realism, though of a lofty and philosophic order.

THE WORK OF MR. SPENCER F. GORE.

At the Chenil Gallery is another collection of paintings—by an English artist this time—which, like that of M. Bauer, ought not to be missed. We have rarely seen a show of more pleasing aspect or in which the pictures hung so harmoniously. The similarity in the size of the canvases, the constant scale of touch, the fact of all the works, however varied in colour-scheme, being apparently produced by varied proportions of the same pigments and by the same method, give an admirable decorative unity.

Mr. Gore's work is fresh and independent, the result of a first-hand inquiry into the principles of painting; but his inquiries and experiments seem not to have been biased by any determination to find a solution fundamentally different from that accepted by his predecessors, and we fear that for this reason his real but modest originality is less likely to impress the present generation than the

apparently more revolutionary work of other painters of latest "couche." No. 29, *The Bed*, is an excellent example of the kind of research on which his painting is based—a searching analysis of natural colour by one who primarily is a colourist, and has sufficient constructive sense to bring his complicated scheme into harmonious relation when, as in subjects of this sort, his subject is constantly available for study. His designs based upon the ballet are rarely so completely unified, his partiality for a surface of blond fair paint leading him to blink certain falsities of colour-relation which he would probably set right if he were painting face to face with nature. Thus in No. 3, *Rule Britannia Ballet*, the relation between the red skirt of the danseuse and the scarlet tunic of the military gentleman behind her falsifies the lighting, which would place the one in a circle of light, the other in a half-tone behind. To have got them right would have entailed a wider range of chiaroscuro, which as a decorator Mr. Gore is entitled to refuse us, or alternatively the selection of rather fewer intervals in the slightly narrower range of colour implied by setting his brightest red in a paler key than vermilion paint, and thus inevitably at a less degree of intensity. The latter concession we should expect of a realistic decorator, and in No. 4 (*On the Heath Ballet*) comparison of the tone of the blue skirt on the lighted stage (the objective hue of which is gauged for us by its adjacent scarlet) with the blue-black of the shadowed orchestra reveals a similar error of values less easy to explain.

With subjects more readily accessible Mr. Gore's science is more sure and his taste more subtle, and we find his Mornington Crescent series (Nos. 9, 15, 25, 27) and the two window pictures (10 and 12) more perfect than the impressions of the theatre just cited. Much of his work has obvious affinities with that of the late James Charles, differing from that of the usual followers of that artist by the greater freshness and raciness which come of independent inquiry—differing from that of Charles himself by its simpler and more decorative spacing, by its less intimate drawing of the profiles of things, and its bolder seizure of the forms afforded by the various colour-elements of the picture utilized as pattern.

It is in the painting of the nude, with the more sustained opportunities of studying form undisturbed by variations of local colour, that Mr. Gore will probably develop this gift for seeing pattern, which is native with him, into a severer form of drawing. No. 22 is in this respect the most promising of his works, in that the successive lines of cleavage between tone and tone of the figure are endowed with a continuity, a logical expression of varying direction of the light in each of its turns as it envelops the form, which give those lines of cleavage a plastic significance as definite as that of the contour which defined the projection of object against object in the older school of draughtsmanship. Unless the division of tone from tone becomes thus the contour of planes illumined by rays of light at an exactly measured angle, to model a silhouette is but to degrade an intelligible form by meaningless subdivision. Little enough of modern or Renaissance painting completely satisfies this demand, and hence primitive painting looks distinguished by comparison. Mr. Gore's nude study shows sufficient of such ambition to indicate the budding draughtsman in one

who, if not a great, is already an attractive painter, sane and eminently fortunate in having found a method of approaching his art which offers at once immediate achievement and possible development.

Fine Art Gossip.

IN *The Burlington Magazine* for April Miss F. M. Stawell brings forward a new interpretation of the Phaistos Disk, making due acknowledgments to Dr. Hempl as the first interpreter in the field. The portrait of Philip IV. habited in red, from the Parma House of Bourbon, which has the best claim to be that painted by Velasquez at Fraga, is criticized by Mr. Roger Fry, reproduced in photogravure, and again in half-tone for comparison with the Dulwich portrait, placed beside it. Dr. Loewy supplies one more learned contribution concerning the sex of the Anzio statue; and Mr. Charles Foulkes a careful discussion on the craft of the armourer in view of a picture by Jan Breughel, 'Vulcan's Forge,' at Berlin. A précis of new discoveries from foreign periodicals is a fresh and noteworthy feature.

THE DIRECTOR OF THE NATIONAL GALLERY has begun to hang pictures by Matteo di Giovanni, Benvenuto di Giovanni, Pacchiarotto, and other Siennese artists in Room V., whence 'The Mill' was withdrawn over a week ago, though the option of purchase only expired yesterday.

THE ROYAL SCOTTISH SOCIETY OF PAINTERS IN WATER COLOURS held last Thursday a press view of their works at 148, New Bond Street.

NEXT Friday the International Society will open at the Grafton Galleries their eleventh annual exhibition to the press in the morning, the private view taking place in the evening.

MR. FIDDES WATT, an Edinburgh artist, has received a commission to paint the portraits of the Prime Minister and the Lord Chancellor (Lord Loreburn) for Balliol College Hall, Oxford.

THROUGH the instrumentality of the Société des Amis de Versailles, the series of pictures of châteaux in France, painted by Cotelle by order of Louis XIV., will be arranged in the Trianon. They are now displayed in the dining-room at the Palace. The furniture of the Empire and Louis Philippe periods will be removed from the large gallery of the Trianon, and other rearrangements will be effected by the same society.

Two more cases of English and Continental pottery and faience have just been added by Dr. Glaisher of Trinity College to the loan collection at the Fitzwilliam Museum. A small collection of Persian and Rhodian pottery was acquired by the Museum in March, and this will be supplemented by loans as soon as the necessary cases can be obtained.

PROF. COLASANTI in his recent book on Gentile da Fabriano draws attention to a hitherto unknown work by Jacobello del Fiore, a carved crucifix bearing his signature in the church of Castel di Mezzo, Fiorenzuola di Focara. Prof. Colasanti is also able to show from documentary evidence that Gentile da Fabriano's death must have occurred between August and October, 1427. We note further that he ascribes the

Madonna in the Victoria and Albert Museum, signed Peregrinus and dated 1428, to a Central Italian imitator of Gentile.

A PARIS dealer has presented to the Museum at Budapest an important example by Holbein the Elder. It represents the death of the Virgin, and belongs to the close of the fifteenth century. Two works by rare masters have also been presented to this gallery: an example of Jacob Gillig of Utrecht, signed and dated 1662, and one by H. Bogert of Amsterdam. The Museum has acquired by purchase Hogarth's portrait of Lady Thornhill.

THE death at the age of 72 is announced from Berlin of the distinguished archæologist Prof. Kekulé von Stradonitz. He was for many years Professor in Bonn, where he numbered the Emperor among his pupils. In 1887 he became Director of the Sculptures in the Royal Museum at Berlin, and he also held the appointment of Professor of Classical Archæology. He was the author of several valuable works on ancient art in which he laid down rules for the guidance of students of classical art, and pointed out the necessity of a close attention to details. Among his works are 'Hebe,' 'Griechische Thonfiguren aus Tanagra,' and 'Antike Terrakotten.'

ONE of the most distinguished of French medallists, M. Louis Oscar Roty, died last week at the age of 65. A pupil of Dumont and Ponscarne, he had been an exhibitor at the Salon since 1873, and two years later he won the Prix de Rome. Nearly all the great events in France during the last quarter of a century have been celebrated by a medal from Roty; his most famous design is that of "La Semeuse" on the current coin of France.

MESSRS. BELL & SONS are publishing for Dr. George Herbert West a book on 'Gothic Architecture in England and France,' with numerous illustrations. Dr. West, who studied under Viollet-le-Duc, aims at providing beginners with a sound basis for study of the simultaneous development and mutual influence of English and French Gothic.

EXHIBITIONS.

- SAT. (April 1).—'Child Life in London,' Pastel Studies by Bethia Clarke; and Paintings and Drawings by Modern Artists, St. George's Gallery.

MUSIC

THE WEEK.

BECHSTEIN HALL.—*Mr. Lamond's and Mr. Howard-Jones's Recitals.*

Two well-known pianists, Messrs. Frederic Lamond and Mr. Howard-Jones, have given pianoforte recitals—the former last Saturday afternoon, the latter on Monday evening.

Mr. Lamond is an earnest interpreter of Beethoven's music, and his fine technique enables him to carry out his intentions to the full. In the Sonata in c minor

(Op. 111) his powerful, impassioned reading of the Allegro was on the whole more impressive than that of the wonderful final movement. The pianist gave a forcible rendering of Chopin's Polonaise in A flat, but his reading of the A flat Ballade was not sufficiently delicate and romantic. Great Beethoven players are seldom ideal interpreters of Chopin.

Mr. Howard-Jones is one of the most enthusiastic admirers, and one of the most able interpreters, of Brahms's pianoforte music. His programme, entirely devoted to that composer, included the second of the three early sonatas, namely, the one in F sharp minor (Op. 2), and the reading of it was exceedingly good. The Sonata in F minor (Op. 5), has been much in favour of late, so that the change was welcome. Mr. Howard-Jones was also heard in some of the interesting short pieces of which Brahms in his later years wrote so many.

ÆOLIAN HALL.—*Mr. Marcian Thalberg's Recital.*

MR. MARCIAN THALBERG is a new-comer. We did not hear his first recital, but at his second on Tuesday evening he began with Grieg's 'Holberg' Suite. Technically the playing was correct and neat, but the reading lacked both colour and character: the touch was heavy, and the tempo too stiff. He next addressed himself to Beethoven's Sonata in c minor (Op. 110), but of this tone-poem he revealed neither the poetry nor the grandeur. Mr. Thalberg is an excellent pianist, and no doubt would be heard to far better advantage in pieces in which technical display is the chief feature.

ÆOLIAN HALL.—*Messrs. Cortot and Thibaud's Recital.*

MESSRS. ALFRED CORTOT AND JACQUES THIBAUD gave the first of two recitals on Tuesday afternoon. The programme included a Concerto for pianoforte, violin, and string quartet (Op. 21) by E. Chausson, of whose music little has been heard in London. A fine Quartet of his was performed a few seasons ago at Leighton House; the Concerto, however, surely represents the composer at a later stage. It consists of four movements. The first is interesting, though somewhat diffuse. A 'Sicilienne' is smooth and refined, while the Finale displays skill and rhythmic life. The third section, a solemn, stately 'Grave,' is, however, the most striking. There is deep thought and atmosphere in the plaintive and, at moments, highly impassioned music. An admirable rendering was given of the work.

BECHSTEIN HALL.—*Miss Sealy's Concert.*

AT Miss Sealy's third concert on Tuesday evening a Sextet for strings and two horns by Beethoven was performed. Although bearing the high opus-number 81, it was written during the early Viennese period, and was evidently a *pièce d'occasion*

for special performers on the horn, as the horn parts are very prominent. On this occasion they were played by Messrs. A. Borsdorf and T. R. Busby. It was an interesting, if not important revival. Beethoven himself did not apparently think much of the work. On the manuscript part for the first horn he wrote: "The Sextet is mine; Heaven only knows where the other parts are!"

Musical Gossip.

A LENTEN performance of Bach's 'Matthew' Passion will be given by the London Choral Society at Queen's Hall on Wednesday in next week, under the direction of Mr. Arthur Fagge. Mr. Plunket Greene will sing the passages allotted to the Saviour, and Mr. Gervase Elwes will be the Narrator. The orchestral accompaniments will be played by the London Symphony Orchestra. It has been the custom of late, at any rate in England, to play the accompaniments to the recitatives upon a pianoforte or an organ. We are glad to learn that on this occasion a spinet will be used.

THE PROGRAMME of Mr. Theodore Byard's vocal recital at Bechstein Hall on Wednesday evening was well arranged and of reasonable length. Two songs by Purcell, containing quaint specimens of realism in the vocal part, were well rendered, but most impressive was the interpretation of Schumann's dramatic 'Der Soldat.' In some Hungarian and old French melodies, requiring very different treatment, the singer was equally successful. He has a fine voice, well under control. His last group was devoted to British composers.

MR. F. C. WHITNEY will produce M. Felix Albin's comic opera 'Baron Trench' at the Whitney (late Strand) Theatre on Saturday, the 22nd inst. The cast will include Messrs. Walter Hyde (in the title-part), Rutland Barrington, J. Danvers, and W. McLoughlin and Mesdames Caroline Hatchard, Marie George, Agnes Fraser, and M. Lowell.

THE death is announced of Théodore Radoux. He was born at Liège in 1835, and studied at the Conservatoire there, of which in 1872 he became director. He wrote two *opéras-comiques*, 'Le Béarnais' and 'La Coupe enchantée'; an oratorio, 'Caïn'; choruses, and many instrumental pieces. But he will be best remembered for his work at the Conservatoire, which he raised to a high state of prosperity; and by the museum (placed at first in one of the halls of the Conservatoire) which he founded in memory of his illustrious fellow-countryman Grétry.

PERFORMANCES NEXT WEEK.

- SUN. Concert, 3.30, Albert Hall.
— London Symphony Orchestra, 3.30, Palladium.
— Sunday Concert Society, 3.30, Queen's Hall.
— National Sunday League Concert, 7, Queen's Hall.
MON. Eunice Grounds's Song Recital, 8.15, Æolian Hall.
— Mr. Fritz Hirt's Violin Recital, 8.15, Bechstein Hall.
— Audrey Chapman Orchestra, 8.30, Queen's Hall.
TUES. Mrs. Douglas Scott's Violin Recital, 3, Æolian Hall.
— Miss Annie Grew and Mr. F. Chiaffelli's Vocal and Violin Recital, 8.15, Steinway Hall.
— Mr. Leon Rains's Vocal Recital, 8.15, Bechstein Hall.
— Mr. Marcian Thalberg's Pianoforte Recital, 8.15, Æolian Hall.
— Oxford House Choral Society, 8.30, Queen's Hall.
WED. Mr. Leonard Borwick's Pianoforte Recital, 3, Æolian Hall.
— Mr. Thomas P. Fielden's Pianoforte Recital, 3, Bechstein Hall.
— London Choral Society, Bach's 'Passion,' 8, Queen's Hall.
— Miss Edith Lowe's Vocal Recital, 8.15, Bechstein Hall.
THURS. Miss Teresa Del Riego's Recital of her Compositions, 3.15, Bechstein Hall.
— Oriana Madrigal Society, 8.30, Bechstein Hall.
— Stock Exchange Concert, 8.30, Queen's Hall.
FRI. Miss Marie Novello's Pianoforte Recital, 8.30, Æolian Hall.
SAT. M.M. Cortot and Thibaud's Sonata Recital, 3, Æolian Hall.
— M. Benno Moisewitsch's Pianoforte Recital, 3, Bechstein Hall.
— Elsie Hall and Charles Draper's Pianoforte and Clarinet Recital, 3.15, Steinway Hall.
— Pachmann's Pianoforte Recital, 3.15, Queen's Hall.

DRAMA

THE WEEK.

HAYMARKET.—*Lady Patricia: a Comedy in Three Acts.* By Rudolf Besier.

AMONG the nine or ten young playwrights who with adequate encouragement from the public could render our drama as worthy of respect as our fiction, Mr. Besier ranks high, if only for his achievement in 'Don.' There we had not only an affecting story well told, but also a set of characters who, except the quixotic hero, were made to talk in their natural idiom, and preserve amid the clash of wills their own personality. This play does not reach the level of 'Don' in these respects. Its plot, in view of its length, is slight and rather too carefully symmetrical; and, apart from an amusing sketch of the sort of tomboy who catches up the jargon and the manners of the average public-school boy, only one of the *dramatis personæ* is so well observed as to arrest and hold attention. In theme the play is a satire on that type of woman, all "soul" and nerves and superfine culture, which was more common in the Victorian era than nowadays; and Mr. Besier had an inspiration when he suggested Mrs. Patrick Campbell for the part, for in this way we have the piquant spectacle of the actress who has so often elicited our sympathy for heroines of morbid sensibility burlesquing her own creations with a delicate, but most telling raillery.

Technically considered, Mr. Besier's new work varies between comedy and farce,—indeed, in its second act is merely a grotesque game of hide-and-seek—and rather too mathematically exact and balanced to reproduce the uneven rhythm of life. There are too many couples in the comedy. The cast is divided into couples, married or unmarried, and the main scheme shows in duplicate married idealists and unmarried novices pairing off for a while, and being ultimately reassorted. Even the two elderly spectators are represented as running in tandem, and the solitary character of the story, a gardener who is rather a symbol than an actual person, though a father of thirteen children, is made to say the same thing over and over again as chorus to protagonists who are constantly doing the same thing. In its excessive parallelism, and its repetition of phrase and incident and burlesque complication, lies the weakness of Mr. Besier's newest piece; but this, along with a tendency to verbiage, should not conceal from playgoers the polished yet colloquial felicity of its diction or its wit. Amusing—in the better sense of the term—his comedy is from first to last with its pretty oak-tree setting.

Lady Patricia herself deserves some study. Her kind may exist in garden cities of to-day, but she seems to date

back to the movement scarified in 'Patience.' When we first meet her she is reciting verses from the poets to the setting sun. A languishing creature addicted to sentiment and poses and high-flown language, she reveals the time to which she really belongs when she carries a lily in her hand and proposes to intoxicate it with wine. There speaks the silly æsthete of the eighties; and when her ladyship protests that her speech may be precious, but is not *précieuse*, she gives herself away, for a *précieuse* of thirty years ago is just what she is. Mr. Besier, however, transports her adroitly enough to our own day, crediting her with an affection for a boy of the healthy and slangy modern class. Very amusingly is she shown fondling the youngster and murmuring to him a high falutin creed of self-renunciation which he only half-understands. Balancing the courtship of this pair is that of Patricia's equally sentimental but middle-aged husband and a "flapper" whose irreverent treatment of her elderly lover Miss Athene Seyler makes peculiarly diverting. But neither of these sentimental attachments lasts, and the fun of the play largely depends on the efforts the younger folk make to dodge the embarrassing attentions of their elders.

Not many chances fall to the male members of the cast. Neither Mr. Charles Maude as Patricia's boy-lover nor Mr. Wontner as her husband has much to do except to cut an awkward figure in situations that are ridiculous. Mr. France does wonders with the part of the bucolic gardener who has a far shrewder idea of the game his betters are playing than his manner suggests. Mr. Eric Lewis's blandness reconciles us to the figure of an amorous Dean. But it is Lady Patricia to whom the play owes its success.

LITTLE THEATRE.—*Miss Lillah McCarthy's Season: The Master Builder.*

'THE MASTER BUILDER' was the play of Ibsen's which split his admirers in this country into opposing groups. The famous production of '93, in which Miss Robins and Mr. Waring shared at the Trafalgar Square Theatre, had to face not only the frenzy of the faction against Ibsen, but also the impatience of some of his former friends. A revival of the piece sets us glancing back at those days with an almost envious amusement. We may still think that 'The Master Builder' stumbled badly in trying to attach a mystical significance to the bald details of an architect's career and work, as well as to certain phrases which, perhaps owing to the *naïveté* of the idiom of the original language, convey to our sophisticated taste associations with the ludicrous. But the time-spirit has developed a larger tolerance; we can look at the play's material from Ibsen's own standpoint, even though we may not accept his formula; and so it happened that at the Little Theatre the other night expressions which would once have provoked smiles

were listened to almost sympathetically, and each act met with a flattering reception, due partly to the intelligence and intensity of the acting. As a study of provincial manners and types, the piece is curiously interesting, and made all the more so by the Mid-Victorian setting that Mr. Granville Barker's stage-management happily suggests. Hilda, the wild creature who finds existence so "frightfully thrilling" and is as cruelly exacting with her Master Builder as the young are wont to be with the gods of their idolatry, lives to-day, and will live on in stage-literature. Realized delightfully by Miss Lillah McCarthy she makes her old appeal, and this time we have a Solness who seems to justify the admiration of his Hilda, and makes something of a fight with the "younger generation" he dreads.

At first sight it might be suspected that an actor of Mr. Norman McKinnel's strong and dominating temper would accentuate the aggressive side of the Master Builder at the expense of his self-distrust and sickly conscience, as Hilda calls his defect of will-power. But not only does Mr. McKinnel disguise the vigorous lines of his face; he also subdues his voice and manner till the Solness he shows us seems to require all the hypnotism of a Hilda Wangel before he can shake off his despondency and rise to her heights of exaltation. If this Master Builder exposes all the turmoil of his distracted soul, equally notable is the performance of Miss McCarthy as Hilda. She brings out the girl's boyish moods, she hints at the minx in her, she indicates her sublime indifference to human weaknesses; you see her exercising her will intently, almost impishly, on the stage. The only faults in the rendering are awkwardnesses of gesture, carriage, and pose, and too much betrayal of strain and effort; but these are faults on the right side. The principals obtain good all-round support, notably from Miss Katharine Pole, who makes of Mrs. Solness such a monument of grief that you forgive her her tears over the "nine lovely dolls."

William Hunnis and the Revels of the Chapel Royal: a Study of his Period and the Influences which affected Shakespeare. By Mrs. C. C. Stopes. (Louvain, Uyst-pruyt: London, Nutt.)—Mrs. Stopes needs no introduction to our readers, who are familiar with the results of her researches in little-studied Shakespearean fields, and have often had cause to recognize her unwearied patience and industry, her knowledge of the unprinted sources of history of the later Tudor period, and the accuracy and care with which she sets them forth for the benefit of less fortunate students. The volume before us, which is one of Bang's "Materialien," displays all these qualities, and the limitations which accompany them are not serious drawbacks in a work forming part of that series. The ordinary reader who looks in this book for a disquisition on the influences which affected Shakespeare will, perhaps, be disappointed, misapprehending Mrs. Stopes's methods of working. What she has done is to provide materials for building up a

picture of the life of a successful man of letters of no extraordinary ability in the age which formed the character of Shakespeare. The poet may have appreciated his efforts for the entertainment of Queen Elizabeth at Kenilworth in 1575.

William Hunnis belongs to the select band of authors whom booksellers and publishers regard with respect, for his works sold. His 'Seven Sobs of a Sorrowful Soul' occupies a place in their pantheon beside such classics as Butcher's 'Spelling Book,' Davis's 'Arithmetic,' and Cornwall's 'Geography' of the days of men not yet old. The 'Seven Sobs' seems to have been printed for the first time in 1583 (there is no evidence that an edition appeared in 1581, and bibliographers do not accept the probability); and a century later it was one of the books of which the Stationers preserved the copyright by a lawsuit with the University of Oxford. Mrs. Stopes gives a list of editions which would serve as a basis for a bibliography, if the work had not already been done in a publication of the Bibliographical Society. She omits the 1589 edition in the University Library of Cambridge, and several others in private hands, and the innumerable editions printed for the Company of Stationers, beneath the notice of Term Catalogues. None of Hunnis's other works had anything like this success, though several of them had a temporary popularity and passed through various editions. Mrs. Stopes supplies extracts sufficient and more than sufficient to enable us to form an idea of the scope and intensity of Hunnis's muse. Its highest flights were commonplace; its subjects were the favourite topics of the period, and necessarily coincide with those selected by the real poets of the time.

The career of Hunnis introduces a great many of the peculiar features of the period—the life of the Children of the Chapel; the pressing of choristers, known to us by the complaint of Thomas Tusser; their troubles in learning to sing, which remind us of the mediæval verses on the same subject printed by Wright and Halliwell in 'Reliquiæ Antiquæ'; Hunnis's adventures in getting a grant of arms from the Elizabethan heralds, on which Mrs. Stopes has done a good deal of work; his dealings with alchemy (and counterfeit coining, then its common companion); his matrimonial experiences; and the grants of other people's property by which his services were rewarded. All this is of interest and value to the student of the period, as it brings him directly into the circle in which Shakespeare was to move.

Any criticism of Mrs. Stopes's work must necessarily be that of details, for the book creates its effect by heaping them up chapter after chapter, and such criticism may readily have quite disproportionate effect. We think Mrs. Stopes dates Coverdale's 'Goostly Psalmes' too late when she puts them "later than those of the two Wedderburnes in Scotland" (after 1542). The 'Goostly Psalmes' must have been printed about 1539. The proclamation mentioned on p. 12 was not a royal proclamation. Mrs. Stopes's personal views may perhaps be traced in her statement that Mary was "made Princess of Wales," which she was not, and in her remark about the "Great Charter of Womanhood" (1 Mary 3, s. 3, cap. 1). The recently acted 'Jacob and Esau' is ascribed to Hunnis, and to Mary's reign: its Calvinistic spirit makes that period unlikely; and the author's date for 'Roister-Doister' has found no favour among students.

Perhaps the parts of her book which will have most permanent value are the lists of

performances of the Queen's players of Court plays, of the Children of the Chapel Royal, and the illustrative notes. In these there is an amount of information brought together and not otherwise available which will be of the greatest value to workers on the history of the English drama. Mrs. Stopes's book is, in fact, a real contribution to the study of Elizabethan life and literature, in which there are still many gaps to be filled by those who will go to the sources instead of relying on somebody else's matter.

Dramatic Gossip.

WE are sorry to notice the death on Tuesday last, at the early age of 43, of Mr. Sydney Brough, who had been suffering from throat trouble and consumption for some time. The son of Lionel Brough, he had been on the stage since 1885, and had played a variety of parts with acceptance, his buoyancy appearing to special advantage in impersonating the gay young man of modern comedy who makes love and provides the high spirits of the piece. Latterly he had developed an aptitude for character parts such as Don Pedro in 'Much Ado' and Squire Chivvy in 'David Garrick.' In private life his excellent spirits and geniality won him many friends.

THE death at the age of 85 is announced from Berlin of the comedian Friedrich Haase. He soon made a reputation for himself as a clever actor, and eventually received an appointment at the Court Theatre at Berlin. He exercised a considerable influence on the stage, and assisted in founding the Deutsche Theater.

MESSRS. BELL'S BOOKS.

AN IMPORTANT NEW WORK BY
DR. J. HOLLAND ROSE.
Illustrated. Medium 8vo, xii-632 pp. 16s. net.
NOW READY.

WILLIAM PITT AND NATIONAL REVIVAL.

"Dr. Holland Rose's monograph is as thorough a piece of work as one can desire; and in nothing will the reader find it more satisfactory than in its just emphasis upon the reformer that was in Pitt; a reformer in spite of, perhaps betrayed by, occasional lapses from judgment which were discoverable in him during these years....The whole passage is a fine piece of modern historical writing, in its research, its guise of evidence, and its neutrality. It is also a first-rate piece of controversy, excellently distinguishing between the balance of witnesses when their statements are combined and the acceptance of evidence from one witness or from another."

MR. HILAIRE BELLOC in the *Academy*.

"As a contribution to the understanding of the one epic page in modern history the present work, by reason of its scholarship, its impartiality, and its artistic restraint, establishes the author's position once and for all as a serious historian of the first rank."

MR. THOMAS SECCOMBE in the *Daily News*.

Detailed Prospectus on application.

LITERATURE

A History of Wales from the Earliest Times to the Edwardian Conquest. By John Edward Lloyd. 2 vols. (Longmans & Co.)

THE primary native authorities for the history of Wales for the six centuries before the Edwardian Conquest are the 'Annales Cambriæ' and 'Brut y Tywysogion' (or 'Chronicle of the Princes'), written, as their titles indicate, in Latin and Welsh respectively, but both probably based, in part, on a common original. No English version of the somewhat bare register of events comprised in the 'Annales' has, we believe, ever been published, but the more detailed narrative of the 'Brut' (of which a translation appeared in the Rolls Series in 1860) became at an early date the groundwork of what long served as the standard history of Wales in the English language. For the 'Historie of Cambria,' originally compiled in 1559 by the antiquary Humphrey Llwyd, mainly from the 'Brut,' and published after his death under the patronage of Sir Henry Sydney, with large additions by Powel, continued for fully two centuries and a half to be, in its various editions, the chief English authority on the subject. It was thrice reprinted between 1811 and 1832, and even Warrington's 'History,' which tended to supersede it, was mainly an expanded version of Llwyd and Powel's work, couched in what was deemed the more elegant and philo-

sophical style of the Georgian period. No real advance was, however, made till the appearance in 1842 of a history written in Welsh by "Carnhuanawc," and possessing considerably more merit than the English history published ten years later by B. B. Woodward. A fresh survey of the whole field was made in an English work by Miss Jane Williams in 1869, and in a Welsh one by Gweirydd ab Rhys a few years later. The books appearing since then have been either popular sketches of the country's history or scholarly monographs such as those of Sir John Rhys on the Brythonic invasion, Dr. Hugh Williams and the late Prof. Zimmer on the British Church, and Dr. Seebohm on the laws and tribal organization of the Welsh.

It has been left to Prof. Lloyd to execute a task not attempted in English since 1869, namely, that of bringing together into a continuous narrative all that might fairly be regarded as ascertained fact concerning the history of Wales down to 1282. His object in the present work (he modestly states) has been "to map out.... what is already known and established, and thus to define more clearly the limits of that 'terra incognita' which still awaits discovery." Speculation and hypothesis have therefore been avoided as far as possible. A scrupulous caution, rare on the part of many previous writers, is shown in accepting the evidence of all but the best and nearly contemporaneous documents, unless corroborated by independent sources. The authority for any particular statement is almost invariably given in foot-notes which in themselves are a mine of information and add greatly to the value of the work; and there is the utmost candour in acknowledging when, in the author's opinion, a theory is not proven or a problem remains unsolved. Judicious use is made of the evidence of archæology and of place-names, but the inferences drawn by some writers from Welsh folk-lore are deemed too speculative to be as yet accorded a place in an historical work. The value of genuine tradition is, however, recognized by the use made of the two older series of historical triads, on the ground that the triad, though not a literary record, preserves an oral tradition at a certain stage in its transmission. The author's thoroughness of method is well illustrated by his treatment of many a long-cherished error or some distorted piece of tradition. Not content with merely rejecting it, he traces its devious development from its very source, as he has done with signal success in the story of the Lowland Hundred, made familiar to English readers by Peacock in his 'Misfortunes of Elphin.'

In a short opening chapter the author summarizes the chief conclusions of geology and archæology as to the prehistoric civilization of Wales, adopting the view that the palæolithic race perished utterly in the Ice Age, but that their neolithic successors, men of Iberian or Mediterranean origin, were represented in historic times by the Silures, whose descendants still form

the predominant element in South East Wales. It is unlikely that their territory in Roman times extended so far to the west and north-west as to include Gower and Builth, as suggested by the author, for until Tudor times Gower was always associated with Ystrad Tywi to the west, while Builth, separated from the Silurian country by the Eppynt range, continued to be a principality by itself till the ninth century.

The purely military character of the Roman occupation of Wales (except in the south-east corner) is emphasized, and the precise relation of Wales to the rest of the empire is very clearly brought out. In his otherwise excellent survey of the military stations in Wales, the author omits the hill forts of Penydarran (Merthyr Tydfil) and Colbren, both excavated about 1904; and he suggests—against the weight of probability, we think—that the Romans had no military post in Dimetia, or the modern Pembrokeshire. The discovery of a "blockhouse" (Prof. Lloyd refers to it merely as "a Roman site") near Laugharne, ten miles west of Carmarthen, shows that Maridunum was not the terminal station in this direction, and excavation may confidently be expected to bring other sites to light in the south-western peninsula.

The predominantly military character of the Roman occupation had the probable effect of retarding the spread of Christianity in Wales, and the author inclines to the view of Dr. Hugh Williams that there were no Christian churches in Wales before the beginning of the fifth century, though an earlier date was strongly championed by the late Prof. Zimmer. The Goidelic element prominent in Wales in the fifth century is regarded—in agreement with the view of Sir John Rhys—as the numerous remnant of a people the bulk of whom had passed over into Ireland, and not as re-invaders from that country, which is Prof. Kuno Meyer's view. The process by which the Goidelic speech was driven out during this and the succeeding century, mainly as the result of a Brythonic invasion from the North—a subject which Sir J. Rhys has made peculiarly his own—is skilfully reconstructed from the evidence of Ogam inscriptions, place-names, and the seventh-century Cumbrian or Northumbrian tract appended to Nennius's history, and known as the Saxon Genealogies.

The history of the two or three centuries preceding the advent of the Normans is so obscure and tangled that Prof. Lloyd treats it, not chronologically, but topically, devoting separate chapters to the early Welsh Church, the tribal divisions of Wales according to cantreys, and the social life and characteristic institutions of its people as disclosed mainly in the Welsh Laws. The author's treatment of these subjects is obviously the result of a careful independent study on his part, which has resulted in his contributing materially to our better understanding of them. Far-reaching in

effect is his recognition of the fact that all the principal or "mother" churches of Wales retained during the early Middle Ages, and in some instances even far later, the monastic organization of their origin, each being in the hands of a collegium of canons, who had an abbot at their head. It is in this fact, and not, as has hitherto been supposed, in any survival of the tribal system, that an explanation is found of the division of the revenues of these churches among a number of portionaries in later ages.

The most noteworthy conclusion in Prof. Lloyd's study of the Welsh Laws is his statement that the village community—with its open-field system of co-aration so graphically described by Dr. Seebohm—was in Wales confined to the unfree cultivators. Such a qualification has never before been suggested, and is in direct opposition to the views of Prof. Vinogradoff as well as of Dr. Seebohm. Nor does Prof. Lloyd seem to have discovered anything in the free tribesmen's organization which would support the theory of the communalistic origin of landed property:—

"The free tref (or community) was not a hamlet or body of villagers....The households of the better class were not grouped together in villages, but were scattered here and there over the country....The free tref was constituted by marking off a number of these scattered holdings and associating them in responsibility for the payment of a fixed portion of the free render of the commote....[It was not,] like the taeog tref, a society of joint tillers of the soil with interests closely intertwined, but merely a group of private owners, each pursuing his own way and holding his land separately.... Save in the Triads of Dyvnwal Moelmud [the oldest text of which dates only from the sixteenth century] there is nothing to suggest that a system of co-tillage existed in mediæval Wales among the free tribesmen."

While these conclusions are sure to provoke no little controversy, such is not likely to be the case with another of the author's new interpretations, namely, as to the meaning of "teulu." In modern Welsh this word signifies a family, and the institution so named in the Laws has therefore been hitherto interpreted in terms of kinship. But Prof. Lloyd gives to the word its original meaning of "household," and he makes the "penteulu" not the head of a family residing in a separate homestead, as previous writers have assumed, but the captain of the guard or household troops. Before passing away from the Laws, we may mention that in dealing with the subject of marriage the author does not refer to the provision made for regularizing "clandestine" unions, a provision which, in the light of some still-remembered Welsh customs, suggests that marriage by capture was at one time legally recognized, especially in South Wales. Foot-note 38 on p. 291, which bears on this point, is inaccurate as to South Wales.

A sense of concreteness is given to these studies by a detailed survey of the

territorial divisions of Wales under the tribal system, a subject which Mr. Egerton Phillimore has done much to elucidate. Indeed, Prof. Lloyd's treatment of Welsh historical topography, his identification of doubtful and misplaced sites, and his scrupulous exactitude in giving the correct forms of all names, both of persons and places, mark a great advance in this respect on the work of all previous writers on Welsh history. Unfortunately, he takes but the scantiest notice of the Scandinavian names found on the Welsh coast, as well as of the larger question suggested by them, namely, the extent and permanence of Scandinavian settlements at such points.

Much further light may, in course of time, be expected to illumine many a dark passage in the pre-Norman history of Wales; but as to the remaining period of Welsh independence, the goal of practical finality is nearer at hand, if not actually in sight. Most of the State records before the Edwardian Conquest have now been made accessible to students; the works of all the early chroniclers have been published; and, on the English side, research on special periods has been pushed well-nigh to its utmost limits by such workers as Mr. Round, Prof. Tout, and Mr. J. E. Morris. To collate the multitudinous data thus disclosed with the evidence of Welsh chronicle and poem, of local records and various forms of genuine tradition and mediæval survival in Welsh life, was a task requiring a sound Welsh scholar who was also a trained English historian. Combining these qualifications in a probably unequalled degree, Prof. Lloyd is further endowed with a highly judicial temperament which has enabled him to assess fairly and impartially the value of each piece of evidence, from whatever source drawn. So well and thoroughly has he accomplished the task he undertook that there is singularly little of his work with reference to the two and a half centuries before the fall of Llewelyn that is likely to be superseded, or even to require any substantial restatement. Hitherto the Welsh princes have too often appeared as so many shadowy, howbeit romantic figures on the stage of history; but with the aid of the rich stores of new detail judiciously utilized by the author, they stand out in his pages with clear-cut features, their stature and dignity alike enhanced, and their actions taking on a meaning and a reality which were often lacking in previous portraiture of them. Prof. Lloyd's terse, lucid, and restrained style, unmarred by a single turgid or obscure sentence, coupled with the simple dignity of his narrative, rising occasionally, especially in the second volume, to a high level of unaffected eloquence, adds to a work primarily conspicuous for its learning a charm which should render it attractive to the public generally.

When one considers the numerous Welsh and Latin quotations given in the foot-notes, and the many archaic forms of personal names and place-names repro-

duced, the work is a marvel in respect of its freedom from misprints. Of the very few we have discovered we may mention that Wynne's edition of Powel's 'Historie' should be described in the bibliography as "newly augmented," and not "arranged." The exhaustive Index of 43 double-columned pages will be very useful. There is a sort of omnibus map intended to show the chief centres and political divisions of Wales during the whole period considered. In future editions this will, we hope, be replaced by a number of separate maps, each illustrating a period of its own.

Essays on Russian Novelists. By William Lyon Phelps. (Macmillan & Co.)

THE author of 'Essays on Russian Novelists' gives such evidence of a real grasp of the Russian character that he must be imbued with the spirit of love and sympathy which he ascribes to Russians. The many flattering things that he says of the writers whom he has chosen to present to the Western world could hardly be said by a Russian without his failing in the humility which Mr. Phelps declares to be among the Russian characteristics. This sympathy may be taken as an offset to the limitations imposed upon a critic of one race in judging the works of another, especially when a knowledge of the language is wanting and the critic is dependent upon translations.

In his first chapter Mr. Phelps makes the somewhat startling assertion that Russian literature began with Pushkin. The writers who preceded Pushkin, such as Lomonosoff and all his school, may not be translated or known abroad, but they exist, and cannot be ignored by any literary critic. Ordinary foreigners do not read the English authors who preceded Shakespeare, but no one would dream of saying that English literature began with him.

There are other appreciations in this book that cannot go unchallenged. For example, the author emphatically declares that Gogol was Russia's only humorist, thus totally ignoring Saltikoff, whom it is hard to believe any student of Russian literature can fail to know, and passing over the subtle humour of Chekhov. Some of his criticisms of Gogol also call for much questioning. It is true that Gogol's portraiture of local types—so different from what is familiar to the West—makes it easy to understand that he is least likely among the great Russian writers to appeal to Western readers. But the author, while assuring us that he enjoys Gogol's "rollicking" humour, sees none of it in the immortal 'Quarrel of the Two Ivans,' as he calls it, where it is perhaps most apparent. In this, as indeed in all Gogol's work, the man of sorrows comes out. With Gogol tears are always near, and, no matter what

he writes, they burst out at the end, and no fun, no caricature, of his ever leaves the reader untouched by the sordid narrowness of the types depicted, the tragedy of stupid ugliness in life.

The author ascribes to Gogol "the only really great Russian comedy." He may be so devoted to classical unity and form as to be unable to appreciate the modern school, and thus to deny the claims of Gorki and Chekhov and Andreef. But it is simply impossible to leave without a mention Griboedoff's 'Gore ot Ouma' ('Sorrow from Wisdom'), which bears all the marks of genius, and is generally considered the greatest dramatic work in the Russian language, or to pass over Ostrovsky in silence.

Of all Russian writers, Dostoevski and Turgenev are the most favoured by the author. It is natural that Turgenev, the most European of Russian writers, should be most appreciated by the Western mind. His brevity is much commended, and is favourably contrasted with the length of Tolstoi's and Dostoevski's books. The very bad translations of Dostoevski may be misleading, but with Mrs. Garnett's renderings of Tolstoi it should be possible to appreciate how telling each detail is, how it deepens the impression, and what an intrinsic part it is of the reality of his pictures. The author seems unaware of the irony of Dostoevski's title "The Idiot," for he says of Alosa in 'The Karamazov Brothers' "Alosa is the Idiot, minus idiocy and epilepsy." But surely no one who has read this work can fail to see how brilliantly clever this so-called "Idiot" is—his idiocy consisting only of his gentleness, his unworldliness, his purity and oneness of mind and purpose.

It is quite a revelation, apart from the doubtful English of the phrase, to learn that "the astonishing inequalities of 'War and Peace' make the reader at times angrily impatient and at other times inspired." But the author's sympathy with Tolstoi is not unbounded, and he does not hesitate to say of him: "Of all the great Russian writers, Tolstoi was the most unlovely." If Tolstoi's genius, his intense sincerity, and the continuous growth of his spiritual being do not save him from such sweeping condemnation, it can only be that his critic is hopelessly out of touch with him. Mr. Phelps quotes several contemporary Russian critics to corroborate his view, but it is well known that Tolstoi was largely misunderstood at first, even in his own country, partly as all great men are misunderstood, partly on account of social and political considerations that it would be impossible to state here.

Mr. Phelps gives a fair appreciation of some of Russia's younger and less-known writers, though he dismisses Garshin in a few lines, and does not even mention Kot Mourlika, who is surely as worthy of attention as Kuprin. He treats Gorki somewhat harshly, and does not seem to have noticed that Gorki did attempt to point out remedies for the social evils he depicts,

both in 'Meschani' ('Les Bourgeois') and in 'Mother.' One of the author's happiest phrases is: "Gorki completely satisfies that strange but almost universal desire of well-fed people to go slumming. In his books...all the world goes slumming." It is as apt and as true as his definition of Turgenev as "the greatest diagnostician among all novelists."

The book is written in a fluent style, the interest never flags, and it contains much excellent material. It is a pity that it should be marred by such expressions as "a blazing ass."

The list of publications by Andrew Keogh at the end, giving as it does the available English, French, and German translations of the nine authors with whom Mr. Phelps deals, forms a useful addition, and should prove valuable to all students of the subject, though it is strange that the best translations of 'War and Peace' and 'Anna Karenina' are omitted.

Thucydides and the History of his Age.

By G. B. Grundy. (John Murray.)

WHAT a wonderful person Thucydides must have been! He lived a life about which we know almost nothing. He left an unfinished work, which cannot have received his last and most artistic touches. Though known in the next generation to Xenophon, who begins his 'Hellenica' as a continuation of the older history, he presently drops out of notice. Plato, Demosthenes (in spite of legends to the contrary), Aristotle, Polybius, know nothing of him, or, if they knew him, wholly failed to appreciate him. In the Augustan age Dionysius, in a society that was beginning to study him, offers severe and not undeserved criticisms of his style. Yet now, in the twenty-third century since he died, we have volume after volume issuing from the press in England, France, Germany, America, analyzing him, commenting on him, estimating the man as well as the historian, theorizing on what he said, on what he ought to have said, on what he intended to say—*et adhuc sub judice lis est*.

In these columns we reviewed, not very long ago, a brilliant book by Mr. F. M. Cornford, full of theories as to the real causes of the Peloponnesian War and how far Thucydides misunderstood them. If we remember rightly, he dwelt on the influence of the rich *metics*, who were not even citizens, and used Pericles as a lever for their financial schemes. Now we have Mr. Grundy, a man versed not only in the Greece of history, but also in the Greece of the present day, who thinks he is able to present the history of the time under a wholly new aspect, ignored or misunderstood by all his predecessors. He is not the first, nor will he be the last, who has been fortified in his long and arduous work by this delightful persuasion. It is one of great value to his readers, for such a writer is sure to be both instructive

and suggestive, even where he is not convincing; for he sees the facts from a new standpoint, and groups them in a new order.

We will venture to follow his example, and review the main topics of his volume, not seriatim, but as it seems to us most convenient for a mere general *aperçu*. The three subjects he brings before us are the life and work of Thucydides as a writer and thinker; the economic causes of the great war which Thucydides has inadequately described, owing to his want of appreciation of those causes; and lastly, the art of fighting as practised by the Greeks of that age, and its consequent effect on the questions of war and peace.

The first part, on the life of Thucydides and the condition of his text, might have been put in a much briefer form. For the actual facts about the man can be stated in a page, and the endless theories about him are only the weaving and unravelling of a web, like that of Penelope. So is the last part of the book, presenting all the theories of both wise men and fools upon the way in which the work was composed, why such a thing is omitted, such a thing restated; why we find a new preface in the middle, and no speeches in Books V. and VIII.; why there is only one dialogue (that at Melos), and whether this is the rough draft of the argument for speeches never composed, or whether Thucydides really meant to accentuate the brutalities of the Athenian empire in these striking sentences, conundrums for the modern examiner to set, and the modern commentator (or candidate) to solve. But the outcome of all these discussions is very small: every probability that one scholar suggests is met by the counter-probability of another; there are hardly any firmly established conclusions, and this is well exemplified by the present book, which seeks to give a new interpretation of the facts, and one which the author thinks wholly his own.

Not that we deprecate or undervalue all this ingenuity; it is one of the fascinations of classical scholarship, and reminds us of Malebranche's famous saying: "If God were to offer me with one hand truth, with the other the search after truth, with all reverence I should choose the latter." In the present instance Mr. Grundy is right in maintaining the general genuineness of our text. All the early papyrus evidence is in its favour. But he should have added that, owing to the arithmetical notation in these papyri, mistakes in numbers are to be expected in our mediæval copies. Thus the ringleaders of the revolt at Mytilene, where the population may have been 5,000 males, were not "a little more than 1,000," as our texts absurdly print, but a little more than 30—a mistake of A with a curl above it for Λ. Such corrections would have been far more interesting than the discussion whether ὅδε ὁ πόλεμος and ὁ πόλεμος ὅδε mean the same or different things. This speculation, which reminds us strongly of the essays in the Harvard

studies written by candidates for the Ph.D., seems to us mere idle hair splitting. In the earlier books, Thucydides used the one, then he goes on with the other; lastly, he uses them turn and turn about. It is merely a little psychological vagary of style, as if, *e.g.*, we were to urge on Mr. Grundy that "reliable," which he uses constantly, was bad English, and that he ought to use "trustworthy." His next book might adopt our suggestion entirely; ultimately he might resume his old word, no longer exclusively, but varying it with that we had persuaded him to adopt. This part of the book, then, seems to us too long and too minute, for it only shows immense reading of German pamphlets and articles not very fruitful to the reader, unless he is a specialist.

Let us turn to what the author proclaims as the real plum of his book, the economic views he holds as to the causes of this and other wars in Greek history. He apparently does not know Mr. Cornford's work; he thinks Beloch his sole, and very imperfect predecessor in this field. His main thesis is that the population of Greece became too great to be supported by home produce; hence at one period the prevalence of colonizing, for this diminished the stress at home, and moreover created colonial markets which valued the peculiar products of Greece. Of these he holds that far the most important were wine and oil; the increase of these diminished the already too scanty wheat crop. There were, of course, other exports, notably pottery (which he ignores), and all of them together tended to turn Greece into a home of manufactures, whose population lived by exporting them, and importing food. Hence slave labour was much used, and free labour depressed, so that later Greece sent out not colonists, but mercenary soldiers and sailors.

We cannot criticize this attractive theory, which is supported by much good evidence, as a whole; we content ourselves with pointing out some gaps in the argument. Why was the Euxine so predominant as the source of corn (and of fish) that the exclusion of any state from its traffic meant starvation? For Mr. Grundy tells us rightly that both from Egypt and Cyrene, and also from Sicily, corn was brought into Greece. Why then should Megara, a centre of manufactures, be driven to starvation by being excluded from the Attic markets, when she had the port of Pegæ on the Gulf of Corinth, and the way to Sicily open? There is surely a great difficulty here; for at this time there was no blockading Attic fleet in the Gulf, and outside it Corcyra, on the great route to Italy, was still neutral. Moreover, regarding this route from Italy to Corcyra, Mr. Grundy exaggerates, we think, the fear the Greeks had of the open sea. In fact, the admission that cornships came from Africa to Cythera, the island off Laconia, proves that this trade crossed an open sea not less wide and dangerous than that from Elis or Messene to Sicily, where the giant

Etna afforded a beacon seen 100 miles out at sea. Mr. Grundy's further suggestion that the campaigns of the Athenians in Ætolia and Acarnania were intended to stop a land route to Sicily from the Albanian coast seems to us wild. Such a land route, carried to the north so as to get clear of Corcyra, must have been far too long and difficult for any considerable trade. It would have been much easier for Peloponnesian ships to strike out directly for Sicily or for Cyrene than to incur the dangers by land or sea of going north, and round by Italy.

This is but one of the considerations which make us hesitate to follow Mr. Grundy in his demonstration that the whole cause of the Peloponnesian War was economic. But we nevertheless thank him for his many excellent observations on this much neglected or ignored cause of wars in ancient history. We will only remind him that there have been wars, not for bread, but for sentiment, even against the economic interests of the belligerents.

We now come to the discussion on the strategy and tactics of Greek wars, which seems to us the least satisfactory part of the book. There are two statements on a single page which show how much Mr. Grundy knows of modern warfare.

"What happened to infantry, even provided with firearms, but assailed before it could make use of them, is shown by [other cases] or by the French infantry which advanced against the English left at Waterloo, and was cut to pieces by a sudden charge of English cavalry."

This is an odd view of the details of D'Erlon's attack and its failure. The French were shattered by infantry fire, and charged with the bayonet, before the Heavy Brigade came down upon them.

The next statement is even stranger. The author imagines that heavy infantry, more mobile than the Greek, could not only break the shock of cavalry with missiles, but also, "apart from that, could adopt a more open order so as to let the assailant cavalry pass between its ranks." Has he confounded cavalry with scythed chariots, or elephants, about whose charges we hear such stuff? or does he imagine that this is the way the British infantry defeated the charges of French heavy cavalry at Waterloo? But cavalry, as he rightly says, played a very small part in old Greek warfare till Alexander made his horse guards the offensive arm in his battles, just as Cromwell did in similar circumstances.

According to Mr. Grundy's account, the earlier wars carried on by citizen armies were childish. The invaders of a territory could not stay there, because they had to mind their farms, &c., at home; the invaded could not last out within their walls, for they had no food supply, and the devastation of their vines and olives, not to speak of cereals, meant poverty for years to come. Hence the citizens must come out and fight the in-

vaders, and a pitched battle decided the issue. The obvious policy of stopping the heavy infantry of the invaders by setting upon them on their march through the glens and defiles which encompass every city territory in Greece seems never to have occurred to them till the reverses of Demosthenes in Ætolia. If this be the full story of the matter, then the Greeks up to the days of Epaminondas were of small account as a military nation. Indeed, we might conclude that their victory at Plataea was all but a disaster. If Mardonius had not been compelled (probably for want of commissariat) to fight the battle, the Greeks would have been in dissolution and flight in a very few days. But these considerations are carrying us too far, and we must omit many points of interest, but of doubtful solution, raised by the author.

A word in conclusion regarding some details of the book. Mr. Grundy speaks very cautiously throughout his pages of the recently found tract on the Athenian State as Aristotelian, not as Aristotle's, wherein most English scholars agree with him. But he explains the *Hektemoroi*, the Attic farmers who were so terribly oppressed that it required Solon's legislation to save them, as men who *paid* one-sixth of the produce as rent to their landlords. This seems to us an amazing view, though some German scholars share it. Tenants who only pay one-sixth of their produce would be better off than the most favoured of any age or country. In the *métayer* system the usual figure is one-half. These wretched Attic farmers had to pay five-sixths, and received only the remainder.

We cannot praise the author's style; it is diffuse and often obscure; it seldom shows any brilliant quality. Why does he use "Spartiate" for the familiar "Spartan"? We might quote specimens of involved sentences, but we have already exceeded our space. In spite of these defects of form we have found Mr. Grundy's book full of interest, and recommend it strongly to classical readers.

England under the Hanoverians. By C. Grant Robertson. (Methuen & Co.)

THE series of which this volume forms a part inevitably invites comparison in its idea and execution with other productions of the co-operative method. In scope it differs little from 'The Political History of England' edited by Drs. Hunt and Poole, except that that runs to twelve volumes, and this is to be complete in seven. Mr. Oman's series, though less ambitious than the 'Political History,' has some distinct advantages. It is notable for its combination of scholarship with a popular appeal—indeed, some of its volumes have been criticized as too popular; but in the one before us the right note is struck in the combination of dignity with real interest and brightness.

Be it said at once that the personality of the author makes itself felt throughout in a way always attractive.

His book covers a "natural" period (as indeed do the others of the series), for the years between 1714 and 1815 form one complete and distinct phase in the development of English history. The "material" available for the eighteenth century is perhaps more abundant, and has been better worked than that of most periods, and in matters of fact it was hardly possible for a new authority to advance on the accuracy and exhaustiveness of the 'Political History,' though even here Mr. Robertson has occasional differences from the earlier writers. Thus he does not repeat the oft-told tale that England's policy towards her colonies improved after she received the lesson of the loss of the United States. On the contrary, he shows that she remained as unenlightened as ever in this respect.

It is in its method rather than in its matter that the value of this new treatment of eighteenth-century history lies. The narrative is severely condensed, and it is remarkable how much information is compressed into five hundred pages; but the point to notice is the way in which the facts are used as material for grouping and generalization—reflections often apt and convincing, and always stimulating.

"The expansion of the British Empire, the consolidation of Parliamentary government under a constitutional monarchy, the transformation of the political and economic organization of society by the agricultural and industrial Revolution—to illustrate and explain these three capital features of eighteenth-century British history have [*sic*] been my self-imposed task."

These three factors receive abundant emphasis and illustration throughout the volume, but especially good is the emphasis laid on the interaction of economic and political history. This theme is developed in two admirable chapters summing up respectively the general characteristics of the two halves of the period. Chap. iv. of the first part of the book is entitled 'Hanoverian England,' and offers an admirably accurate and vivid picture of many sides of English life under the first two Georges. Such things are considered as the Revolution settlement, the characteristics of the two great parties, Cabinet methods under the new *régime*, and the conscious expression of political ideals in the writings of the time.

Notably lucid and full is the account of the economic changes which were passing over the land, transforming the comparative simplicity of seventeenth-century England into the subtle and complex civilization of modern days. Mr. Robertson generally writes well, and it is in touching on this theme that he writes best. A passage taken almost at random will illustrate his tone:—

"The territorial feudalism had dominated its dependants from castles and manor-houses; the industrial feudalism is seated

among its factory chimneys, its warehouses, the roar and glare of blast furnaces, the undying throb of its machinery, drowning the tramp of the wearied feet of men and women born tired and condemned to toil. Over the new towns—Manchester, Leeds, Sheffield, Birmingham—are hung the banners and scutcheons of the industrial lords, whose indentures and service bind a host more numerous, and more dependent, than were ever sworn to the bear and ragged staff of a Nevile. The dull monotony of brick and stone, sweat and grime and smoke, unceasing noise, the stress of a competition whose cessation means ruin—these are the new towns. Is it surprising that many who had known the old cities before steam, coal, iron, and the machines scrapped the old home life and the home industries, who had seen 'the doghole of St. Helens' and the underground life of the coalpits, were ready to call the new towns porches of Hell, to cry on the housetops that it was merry in England before the new industry came up?"

The corresponding chapter of the second half of the book (devoted chiefly to the crowded reign of the third George) is headed 'The Industrial Revolution,' and we have seldom seen a clearer, and within its limits a more adequate account of the numerous transforming forces at work on the old society in the latter part of the eighteenth century and the first years of the nineteenth.

It is characteristic of the author's method that constitutional changes and problems find treatment in these "economic" chapters. One curious omission we have noted. While the coming into being of an "urban race" is described, we find no direct mention of the employment of child-labour, one of the most appalling evils of the time of transition.

Religious history, too, has its place in these chapters, for Wesleyanism, which was but a revival of "heart" religion, "found its readiest hearers in the neglected village, mine, and slum." It is significant that, while Wesley receives but a passing allusion at the hands of the 'Political History,' Mr. Robertson devotes three full pages to the man and his work.

On the other hand, literature gets but scant attention from him, though the abundance and aptness of his allusions and his ready quotations from contemporary comment give a literary flavour more welcome than any formal chapters, inadequate as they must have been, on the literature of the time. These comments frequently find their place in foot-notes, of which the author makes excellent use in just proportion. A good example is the foot-note on p. 8 illustrating from set pronouncements of prominent men of both parties the attitude of Whigs and Tories in the matter of foreign policy. The Tories obviously were the "Little Englanders" of the epoch, and it is interesting to compare the style of comment (of which the foot-note furnishes three examples) with modern pronouncements on the subject. It may be remarked that Mr. Robertson's sympathies are generally with the Whigs, as the party which stood for that liberty of which he is almost an impassioned champion.

The constitutional history of the eighteenth century has a subtle fascination, and Mr. Robertson rightly emphasizes the reality of the problems at issue, and the keen appreciation which the Whigs always had of the danger still threatening from the power of the Crown:—

"The Whig supremacy, with all its defects, was an inevitable and beneficial stage in the long journey from 1689—1910. Under the domination of a proud, patriotic, and enlightened aristocracy, England proved to Europe the success of a gigantic constitutional experiment. The Whigs added an unwritten code to the letter of the law, and their success destroyed automatically the reasons for their own supremacy."

Mr. Robertson supplies an interesting and ingenious apology for the proverbial Whig "corruption":—

"It consisted in applying the influence of the Crown and the patronage of the Executive to sustain the balance between the monarchy and the popular element."

Excellent is the description of the normal working and development of the nation's institutions in the two halves of the period. The treatment of the House of Lords in both "general" chapters has a modern interest, and the account of the changes wrought in its character and functions through Pitt's lavish creation of peers is noteworthy.

One side of the history of the period seems to us to have suffered somewhat from the urgency of the need to condense, viz., the history of diplomacy, the chief interest of which necessarily lies in detail, in the peculiarly cynical politics of the eighteenth century. However, the author is always clear, if summary, and particularly good is his chapter on England and the French Revolution, with its story of aggression and panic. This chapter gives a description of Charles James Fox at his best as a champion of freedom, with his fervent conviction that liberty must ultimately prevail. The characterization is excellent throughout the volume. It is comparatively easy to make an interesting sketch of a personality like Fox, with his fascinating and repellent traits alike strongly marked; but it requires greater power to enlist sympathy and understanding with more reserved and less vivacious types, such as the younger Pitt or Robert Walpole. One feels that Mr. Robertson is thoroughly at home in his period, and has entered into the psychology of its types. Walpole often appears elsewhere as a mere lay figure, his strength lying merely in his caution; but here he lives, and his limitations appear less obstinate and more conscious.

It is curious that a style and a plan so carefully designed as Mr. Robertson's should not unfrequently admit verbal and ungrammatical slips, which are commonly associated with hasty writing. Thus on p. 71 we find "also likewise," where only one of these words is required. On p. 61 we read: "Walpole and Newcastle preferred overtures to the Emperor and thus isolate Spain." It is surely not

pedantic to point out the ambiguity in the following sentences: "The existing number of the peers should not be enlarged beyond six" (p. 37); "Walpole saw that the Polish succession to Great Britain was not worth the bones of a grenadier of the First Foot Guards" (p. 66). There are also one or two minor slips in matters of fact, but Mr. Robertson is to be congratulated on having produced a thoroughly competent work, uniting scholarship with sound philosophy.

NEW NOVELS.

A Kingdom of Dreams. By J. J. Bell. (Cassell & Co.)

AN instant appeal to the curiosity is a sure method of attracting readers, and Mr. Bell makes it effectively in the prologue and first chapter of his new story. His younger hero, having been discharged from prison, is suddenly and mysteriously befriended, and becomes the guest of a charming gentleman and his niece. The gentleman hopes to found a kingdom in Africa, where worldliness will have no place, and money no value. A huge sum of money is required to buy and stock land for this purpose, and to obtain it he uses an ingenuity above petty scruples. On this angelic and humorous rogue Mr. Bell has expended much skill, and the reader responds by developing a fondness for the character in question, who, however, is allowed to lose his life in an ill-contrived and melodramatic scene. The element of love in the story is fresh and piquant; but there is a coincidence, favourable to the heroine's opinion of her lover, which is too improbable for acceptance.

Thorpe's Way. By Morley Roberts. (Eveleigh Nash.)

THE "way" was very unconventional—in fact extravagantly so—extending from a proposal of marriage by Thorpe himself, after about an hour's acquaintance at a public dinner in the first chapter, to his elopement with the lady over a mountain pass in the last. In the intervening pages we are introduced to certain members of a family whose hyphenated name was anything but the outcome of marriage between people of progressive ideas; a particularly aggressive and progressive, though ill-educated grandmother; a sporting scion of the nobility, with characteristic traits of character; and other only slightly less interesting types. The author manages to introduce a good deal of present-day discussion without too obviously hampering the rollicking action of his story; and for this accomplishment he deserves, and will probably command, a wide public.

Shadow-Shapes. By Maude Annesley. (Methuen & Co.)

TWO righteous hypnotists nearly lose in a conflict of wills against the hypnotic power of an unscrupulous husband; and Mrs. Annesley may be complimented on the fact that in this weird story she maintains human interest under trying conditions, leaving the simple and sensitive reader reluctant to extinguish the light after a nocturnal perusal of her thrilling pages. Premising that it is possible to cause death by hypnotic suggestion, she imagines that her heroine has repeatedly received the order, in hypnotic sleep, to die immediately after her husband, who desires companionship in the world to come; and that her lover (a physician) and a French hypnotist endeavour to nullify the effect of this order by a contrary command. In the end the husband appears at once inconsistent and heroic. The setting of the story is modern and luxurious. Its psychological value is slight; but as an exhibition of the phenomena of hypnotism it has considerable merit.

A Man with a Past. By A. St. John Adcock. (Stanley Paul & Co.)

MR. ADCOCK introduces his story with a facetious declaration that he has invented all his characters. We have no doubt that this is true, and we like one of them very much. Mr. Patton, the writer of music-hall songs, is a veritable creation, and one could wish that the rest of the tale were in keeping. Mr. Adcock writes in the Dickens tradition, and he does it very well. The trouble is that the Dickens tradition is played out. Old wine will not go into new bottles. The matter of the story is rather melodramatic, and the climax is idyllic, so that it should have a profitable future. But when one has finished with the villains and sordid and shady characters and the uninteresting heroine and hero, one turns back to Mr. Patton and his household, and wishes that the author would write a story wholly about him.

Fenella. By H. Longan Stuart. (Chatto & Windus.)

THIS story, which would have been far more effective if it had not been quite so long, presents two men—one an ascetic author struggling none too bravely with poverty, the other a rich financier almost brutally frank in his sensuality—in love with the same woman, who is a curious mixture of innocence and worldliness, fidelity and indiscretion. Paul Ingram and Sir Bryan Lumsden are mere conventional types, but Fenella Barbour, who becomes a fashionable dancer, has the quality of life. The story deals—sometimes with a frankness that borders on the daring—with many phases of social,

theatrical, and journalistic life, and reveals good powers of observation and expression. But the narrative is clogged by over-elaboration.

Griffith Colgrove's Wife. By Gerald Fitzstephen. (Methuen & Co.)

THIS well-written story, in which a picture of the literary and social life of the sixties is presented, is a sincere and capable piece of work, though marred by some faults of construction and characterization. Rachel Orpwood, a cultured and ambitious girl, marries Griffith Colgrove, whose masterful will and intellectual qualities win her admiration in his struggling days, in the fond expectation that she will share his literary aims and renown. Colgrove, who takes a wholly Mid-Victorian view of women, condemns his wife to a solitary life of domestic drudgery. It is her unhappy fate to see the character of the colossal egoist deteriorate under the influence of social success, and his tragic misfortune to realize when it is too late the fatal blow he has dealt his own happiness. A number of thinly veiled personalities of the period are introduced, but not with success.

The Early History of Jacob Stahl. By J. D. Beresford. (Sidgwick & Jackson.)

A CAREFUL and intelligent study of a young man's *vita sexualis* and of the formation of his philosophy is always worth reading, and the author has the literary qualities needed to make such a study a success. He tells the story of Jacob Stahl from the period when in his babyhood a careless servant allowed him to injure his spine to the time when, uplifted by conscious kinship with the larger life of the universe, though parted from wife and mistress and financially ruined, he contemplates exchanging the profession of an architect for that of an author. The relations between Jacob and the self-sacrificing aunt who brought him up are admirably described, and the commonplace expression and development of his ingratitude are thoroughly lifelike. Our author interests us more over in the atmosphere and incidents characteristic of architects' offices, and maintains brightness in patiently realistic writing with much success. The book seems to demand at times a liberty of statement withheld from modern English fiction, and the ingenuity of Mr. Beresford is fortunate in preventing an effect of compulsory abridgment.

OUR LIBRARY TABLE.

Le Général de Galliffet, par Louis Thomas (Paris, Dorbon-aîné), is disappointing as a biography of the brilliant officer of the Second Empire and the desperate hero of Sedan, for much of the author's matter will be already familiar to the expert reader of French memoirs of the period.

The sight of this stout volume of 343 pages led us to hope for a great deal of interesting detail concerning Galliffet's early military career, with novel side-lights on the Court and Parisian society under Napoleon III. Our expectations, however, are not realized, for, after a preliminary chapter on the Galliffet family, only 56 pages are given to the General's eventful history down to the Franco-Prussian War, including the Crimean, the Italian, and the Mexican campaigns. About the same space is given to the war of 1870, and to the very energetic part which Galliffet took in the repression of the Commune. These last operations deserved extended treatment, for here was an opportunity for a highly interesting investigation of the charges of ruthless cruelty brought against the General by the partisans of the insurrection of 1871. Too little also is said of the relations between Gambetta and Galliffet in the early days of the Republic.

It was as a direct consequence of those relations that in 1899 Waldeck-Rousseau, who had begun his official life in Gambetta's "Grand Ministère," persuaded the reactionary cavalry officer, then in his 70th year, to be Minister of War in the Cabinet constituted for the "liquidation" of the Dreyfus affair. He thus became the colleague of M. Millerand, who until then had been a militant Socialist, and whose party used to greet the War Minister in the Chamber with cries of "Assassin," in memory of the repression of the Commune, to which the General used to reply "Voilà, voilà, voilà!" Galliffet remained only twelve months in this anomalous position, criticized alike by his old friends and new allies. The incidents of his resignation and the connexion he had with the termination of the Dreyfus affair have provided a good deal more journalistic material for a life of Galliffet even since this book appeared, as the *Matin* has recently published a quantity of Waldeck-Rousseau's private papers relating to this period, in spite of the protest raised by the widow of the deceased Prime Minister.

The book, in fact, contains little that is new to us. But we do not recollect having seen before a fantastic origin attributed to the name of Galliffet—no doubt by an anti-Semite who resented the General's complicity with the liberation of Dreyfus, and who discovered for him a Jew ancestor, converted in 1581 and endowed at baptism with the name of *Gallus factus*, to signify that he was made a Frenchman.

A good example of Galliffet's boisterous unexpected repartees, which he used to hurl at persons conversing with him, without respect for their rank or even their sex, is reported of him at Marionbad, where in 1891 he met with the Comtesse de Paris:—

"Il lui lança à brûle-pourpoint:

"Madame, si vous voulez jamais régner sur la France, savez-vous ce qu'il faut faire?"

"Et comme la Comtesse de Paris le regardait avec perplexité:

"Divorcez et épousez M. Carnot!"

Seven Sages of Durham. By G. W. Kitchin. (T. Fisher Unwin.)—When the idea of this book first presented itself to the mind of the Dean of Durham, on a smaller scale, it occurred to him to give it the title of 'The Portraits of Four Durham Gaol-birds,' for each of the four worthies originally selected were for divers reasons shut up in prison at one period or other in their lives.

Eventually, however, he was induced to add to this number sketches of the lives and characters of three other men, who all had

the good fortune to escape the prison taint. In his brief but quaint preface the Dean states that:—

"These seven men were singularly various. Durham is a favoured home of irregular qualities, such as make men difficult to live with but interesting to read. It has been the amusement of an old man to meditate on all these characters, and to wonder whether I, too, have escaped the picturesqueness of being an oddity."

The first picture is that of Bishop Richard d'Aungerville (1333-1345), who in the days of his episcopate surrounded himself with a brilliant group of scholars, and who was one of our first writers on libraries and the praise of books. To him follows that strange anomaly, a lay Dean of Durham, Thomas Wilson, whom Queen Elizabeth, to her lasting disgrace, in defiance of all laws and statutes, rewarded for certain risky adventures by making him Dean in 1581. He held this wealthy office for less than a year and a half, was installed by proxy, and was probably never in residence for a single day. The third portrait is that of Peter Smart, the grimmest and most bitter of Puritans, the implacable foe of Bishop Cosin, and the Popish enrichment of Durham Cathedral.

To him succeeds that interesting character, Isaac Basire, a much-travelled Frenchman, who became, as Prebendary of Durham and Archdeacon of Northumberland, a man of much note in the Church of England. A man of very different calibre follows, namely, Denis Granville, a man of the world, and for ever entangled in debt, but distinguished for his unvarying loyalty to the Stewarts; he was appointed Dean of Durham in 1684, but was before long deprived as a nonjuror. The last two of these sages of Durham are those absolutely literary contrasts, who were contemporary bishops, William Warburton, who became Prebendary of Durham in 1755 and Bishop of Gloucester in 1760, and Joseph Butler, who was made Bishop of Bristol in 1738 and translated to Durham in 1750. The Durham Chapter about this date was a curious coterie. Shortly after Butler's appointment, the great Hebrew scholar Robert South held a prebend. In 1750 the Hon. Spencer Cowper was Dean, and on 20th July of that year James Gisborne, rector of Staveley, Derbyshire, who had held a Durham prebend for several years, wrote as follows to his wife, in a letter which has not, we believe, been hitherto published:—

"I found this place very full of fine folks of the county and of Yorks and Northumberland, as it still continues. The weather has not been very favourable to the races, nor have they had many horses. Only two started yesterday, and one of them tumbled down at the beginning of the first heat, and so there was no second, and Dr. Stillingle and I, who had stolen out in our coats to see (unseen) came back disappointed; but feasting, concerts, and assemblies flourish greatly. Our Quire had a concert yesterday, and a most incomparably good one, in the Chapter House, a noble room for the purpose near twenty yards high. It was Alexander's Ode, near twenty instruments and about fifteen excellent voices, and 300 or 400 gentlemen and ladies to hear them, who all expressed great admiration. For my part I was never so entertained so long together, two hours—and to-day, vile change, in the very same place there has been as long a continuance of jarring, quarrelling, and disagreement."

Dean Kitchin, who shows in this entertaining and well-written book that he has a keen appreciation for all that is quaint or unusual, will probably rejoice in this letter if it is novel to him, and be thankful that he has nowadays to preside in the Chapter House over more harmonious gatherings.

Foundations of the Nineteenth Century. By Houston Stewart Chamberlain. A Translation from the German by John Lees, with an Introduction by Lord Redesdale. 2 vols. (John Lane.)—Mr. Chamberlain's well-known book, which has had a great vogue in Germany, is hardly, we think, likely to meet with a similar success in England, despite the eulogistic preface by Lord Redesdale, and the admirable care and patience, marred only by a few slips and misprints, with which Dr. Lees has translated it. The author, in about 1,200 pages of close type, surveys the general course of human history in order to prove that the "Germanic" peoples—by which he means the Celts and Slavs of Northern Europe as well as the Teutons—are the heirs of all the ages, and in a sense the saviours of mankind.

He begins reasonably enough with chapters on Hellenic art and philosophy, Roman law, and Christianity as the triple legacy of the ancient world. Then he goes off on a long and bitter digression about the Jews, which probably appealed to the Anti-Semites of Germany, but will be less effective here. The mediæval Church and its relations to the Empire are next considered at length; and then comes a sketchy historical survey of the six centuries from 1200 to 1800, concluding with a chapter on art which is in some respects the best thing in the book.

Mr. Chamberlain has read widely, and quotes from a whole library of authorities; moreover, while proposing to write only for the unlearned public, he often breaks off in the middle of an argument to wrestle with some expert or examine in detail some obscure problem, as, for instance, whether Jesus Christ was a Jew. But all his wide reading serves rather as a decoration than as a solid substructure. It disguises, rather than strengthens, the polemical pamphlet, glorifying the "Germanic" peoples, depreciating the Jews, and denouncing the Roman Catholic Church, into which this imposing book resolves itself on examination.

We cannot enter here into the many matters in dispute. But, writing without prejudice, we merely say that the author's arguments in many cases do not make a successful appeal to us. A humble British historian will gasp when he finds Mr. Chamberlain declaring that the signing of Magna Carta assured the triumph of Teutonic freedom in Europe. The references to the history of the English agricultural class are too brief to be satisfactory; the author looks back to the fifteenth century as a golden age for the peasantry, and assumes that their lot grew steadily worse until about 1850. These are trifles, perhaps, and not essential to his purpose. But the two examples, selected at random, typify not unfairly the author's method. He writes as a controversialist.

The Nature of Personality. By William Temple. (Macmillan & Co.)—Mr. Temple's book is not an essay on Personality, but is a set of lectures on that subject which were delivered in Oxford. These lectures with discussions on 'Thing, Brute, and Person,' 'The Will and its Freedom,' and 'Personality and the Time-process,' are meant to stimulate and guide those who are not far advanced in philosophy. The writer is never dull, and he has the art of touching with a light hand things with which he is evidently familiar. While Augustine and Thomas Aquinas, Kant and Hegel, Bradley

and Lord Haldane, are cited, there is nothing fantastic in the introduction of R. L. Stevenson.

A rival guide of speculative novices may naturally ask many questions. Mr. Temple asserts that the common purpose of society does exist, and yet is not consciously present in any of the members. Though unwilling to use the idea of the subconscious as an explanation of human affairs, he sees here no help for it. But if the common purpose is never in the consciousness of the individual, how does it pass into the subconscious region? Another question may be asked. Mr. Temple says that "for an act to be morally good, it must have both good results and a good motive," but how does he reconcile these words with his statement that "if the motive is right and the result only turns out wrong through unpredictable circumstances, we still allow full moral worth to the action"? Then, again, Mr. Temple may be right in asserting that "all virtuous action can be rooted in pride," but what does he mean? Another sentence may be quoted: "It is misleading to speak of self-realization *through* self-sacrifice. Self-sacrifice *is* self-realization." He does not explain how, if the self is negated or sacrificed and the process ended, the self can be affirmed or realized. Many answers on various points might be demanded, but even the keenest questioner would be forced to admit that Mr. Temple, the bearer of an honoured name, is admirably fitted to stimulate the thought of those who are interested in philosophy.

The Serpent of Division. By John Lydgate. Edited with Introduction, Notes, and a Glossary, by Henry Noble MacCracken. (Frowde.)—One of the distinguishing qualities of poetry, as a mode of speech, is its power of condensed expression—the reader when raised to the pitch of the poet, shares his high intensity of vision; the distinguishing quality of Lydgate as a poet is that his verse takes three times as long to say a thing as a prose writer would. With, however, this prose work by him before us, our dictum requires modification: Lydgate is as lengthy in prose as in verse, though 'The Serpent of Division' is probably not intended for prose, but merely a projected poem in an early stage. The book is full of his well-known tags and inconsequences, and any one familiar with the jog-trot of his verse could have no difficulty in turning it into the familiar eight-line stanzas without hesitation. Only one objection to the theory we put forward is worth consideration: it presupposes Lydgate to have written his poetry on a definite scheme settled beforehand, an idea which would not appeal to the average reader of his works.

Dr. MacCracken's text is presented to us by his publishers in a very desirable form, and seems, as far as can be judged without collating the manuscripts, to be satisfactorily edited. He has compiled a vocabulary, for which there is less need now that the 'Oxford Dictionary' is so far advanced towards completion, beyond place-names and exceptional forms. One or two of these occur in the text, like "assoine lyne" (the "Limes ab Ausoniis" of Lucan), and are left alone by the author.

The greater part of his work has been concentrated on the introductory note, which is of considerable length, and deals with the sources of the work, its authorship, and the circumstances of its composition. To speak frankly, the Introduction, although the greater part of it was a Harvard doctor's thesis, does not add

much to the general stock of knowledge, and it is to be hoped that the notes on the historical origin of the work did not form a part of the thesis. Four MSS. of the work are known; three of them are without date; and one has a double date, Dec. 1 Henry VI. (1422) and 1400. One of the undated MSS. says that the author wrote "by commandment of my most worshipful master and sovereign," the other three omit the words "and sovereign." As to the authorship of this work, there can be no doubt it is stamped with Lydgate on every line, but Dr. MacCracken's theory of its origin, based on these two words, calls for comment.

"Duke Humphrey of Gloucester the Lord Protector and real sovereign of the kingdom, and others of the great nobles were not without apprehension, as they reflected what might be the result of the great king's untimely death.... Among other measures which he took to preserve public tranquillity was the plan of employing the chief literary figure of the day.... to write a tract showing the dangers of civil strife as illustrated by the life of Julius Caesar."

We are surprised alike by the approximation of the influence of a Lydgate tract to that of a succession of leading articles in some modern "organ" of opinion, and by the idea put forward of Duke Humphrey's position in December, 1422. Let us briefly recall the circumstances. Henry died at Vincennes on August 31st, 1422. On his death-bed he warned Humphrey against selfishly preferring his own interests to those of the nation, and appointed him to act as deputy to Bedford during his absences from England. Gloucester immediately attempted to seize on the regency, and only the determined opposition of the Council prevented him from doing so. Parliament was adverse to his claims, and subordinated him altogether to Bedford, creating him his principal councillor, and protector of the realm in his absence, while the real governing power was in the hands of the Council. If, therefore, Lydgate wrote this tract in December, 1422, it could not have been at Gloucester's command to warn others against Civil war, but rather as a warning to Gloucester himself to act loyally towards Bedford—a warning justified by events. But on the whole, the theory does not seem likely. What seems more probable is that Lydgate may have had an idea for a Caesar poem in Henry V.'s time, but found it did not work out in the proper way—it is a little difficult to skim over the circumstances of Caesar's death when complimenting a conqueror—and left the work in an unfinished state, adding an Envoi which is not the worst of his verse. However that may be, it seems impossible that Gloucester should have commissioned this work at the particular moment assigned, and there is little likelihood that he ever saw it at all. We must all be grateful, however, to Dr. MacCracken for filling up a gap in the scholar's shelves, and reducing the list of Lydgate's works unattainable by the average reader.

Shapes of Clay, the fourth volume of the Collected Works of Ambrose Bierce (New York, Niele & Co.), shows that versatile and forceful writer using what in his hands is—to adapt Milton a little—that other hardness of poetry. Within the limits which this prevailing characteristic implies—a characteristic which excludes charm to begin with, and all beauty except of a glittering and spectral kind—there are the proofs here of a great deal of practised ability in verse, and even of an imaginative power which ought to be poetical. Poetical in a sense it is, on occasion. The metaphysical quality which

gives a weird awesomeness to Mr. Bierce's best (and worst) short stories assists the projection of his visions in verse, as in prose. You see the thing which he wishes you to see, sheerly, as though it were alone in the void and you the sole spectator. Such a situation is expressed in the conclusion of the remarkable first poem, 'The Passing Show,' of which, however, the opening is better than the close, which we quote:—

The sun with sullen and portentous gleam
Hung like a menace on the sea's extreme;
Nor the dead waters, nor the far bleak bars
Of cloud were conscious of his falling beam.

It was a dismal and a dreadful sight
That desert in its cold uncanny light;
No soul but I alone to mark the fear
And imminence of everlasting night!

All presages and prophecies of doom
Glimmered and babbled in the ghastly gloom,
And in the midst of that accursed scene
A wolf sat howling on a broken tomb.

Poems which do honour to the writer are 'Invocation,' an American "recessional" which preceded Kipling's by ten years; and 'The Confederate Flags,' in which he supports the petition of those against whom he fought thirty years earlier to have their flags given back to them.

But despite these worthier instances—despite even an abundance of wit and some real fun—the general effect of the book is depressing. Upon half of its pages the writer seems to be wasting himself for trivial ends. With an intellect strong and penetrating, if somewhat arrogant in habit, and a sincerely, if aggressively honest personality, he yet deems no price too dear to pay for the chance of being sardonic. The price is often the spoiling of what should have been a very good thing. Many of these poems, again, are personal lampoons, and are of a character, even when the subjects are women, that surprises us. It is a sad outcome of lifelong devotion to the cult of the swashing blow when the hand usurps the man, as the tail, it is alleged, may wag the dog. But all who believe in the dog deny the allegation.

MR. FREDERIC M. HALFORD, "Detached Badger" of *The Field*, and author of "The Halford Dry Fly Series" (*Athenæum*, March 28, 1903), has added to its three volumes another, almost uniform in appearance, entitled *Modern Development of the Dry Fly* (Routledge & Sons). In this book he explains how from close observation of natural insects, and from a profound belief that the more exactly they are imitated the better will be the artificial fly, he was led to introduce changes in dressing, and a reduction in number of patterns from 100 to 33. This alone is a step in the right direction, and it is highly probable that a further reduction would be advantageous. Mr. Halford has given his improved patterns many trials, and is satisfied that they are more killing than the old ones. This may be so, but it is at least doubtful whether trout can detect, or care at all for, microscopic differences in the flies on which they feed. Probably no two of the natural flies are exactly alike, and a feeding trout, if satisfied that an insect is good for food, would not, we may suppose, waste time over discrimination.

We are inclined to think that too much importance is given to colour; the various shades are exhibited in plates x.-xxvii., the names in some cases being difficult to account for, when apparently a recognized water-colour description might have been used. Thus "Sulphury White" seems to have little to recommend it, while the lemon yellow of water-colour painting is marvelously near what is shown in plate x.

The illustrations in Part II. are admirable, whether of trout or of river; they are well chosen and well executed.

THE PARISH REGISTER SOCIETY OF DUBLIN has lately issued to subscribers its eighth volume, containing the *Registers of Derry Cathedral, 1642 to 1703*. The editing has been done by Mr. Herbert Wood of the Irish Record Office, and leaves nothing to be desired. Canon Hayes of Derry contributes a Preface in which he describes the original Registers, and notes certain gaps, which naturally include the disturbed period of the famous siege of Londonderry. The Register is the oldest in Ireland, outside Dublin, with the single exception of Lisburn. Among the baptisms we notice "Aromintho, daughter of Collonel Robert Lunday and Martha his wife, 17th May, 1686." The notorious Lundy's baby had a less notorious Christian name, it seems. Canon Hayes draws attention to some other curious names, such as Chrispiana, Hannibal, Foresee, Reperta, and Mountenia. The volume, the largest yet issued in this series, is admirably printed and indexed, and in every way a credit to the Dublin Parish Register Society.

NOTES FROM CAMBRIDGE.

A SOMEWHAT dull term has come to an end; but no one can say that it opened without excitement. The hard-fought contest for the representation of the University provided interest and amusement for everybody, and very nearly resulted in the humiliation of the dominant political party in Cambridge. The death of Mr. S. H. Butcher, though hardly unexpected, produced a sense of general bereavement. It was felt that in him we had lost not merely an ideal representative, but also one of the most delightful personalities connected with the University. As one by one the last of the great scholars, trained under the excellent old system which sought to ground men perfectly in the languages of Greece and Rome and to imbue them with a love of their matchless literature, disappear, there is a feeling that the gap can never be filled and that cultured life will be for ever the poorer. In Cambridge an Adam, a Headlam, a Jebb, and a Butcher are simply irreplaceable; and the education of the future seems as incapable of producing their like as the architecture of to-morrow is of building a Gothic cathedral.

As to the vacancy in Parliament, everybody seemed at a loss what to do, except a few who decided upon giving Mr. Harold Cox an early start in the race for the representation. Slowly the official leaders of the Conservative party decided that they could not do better than nominate the Hon. Charles A. Parsons, well known for his work on turbines, and a director of several important scientific companies. Accordingly they called a general meeting, open to all members of the Senate to decide who should be chosen to represent the University as its burgess in Parliament. The Master of Trinity Hall took the chair, and Sir Robert Ball, Sir George Darwin, and Mr. W. Rouse Ball came prepared to speak for the nominee of the "caucus." The meeting lasted about three hours, and those who looked in to find amusement were not disappointed. From start to finish it may be described as a screaming farce. Had Mr. Cox's supporters come in force, they

could, I think, have carried him as the "official" candidate; for the meeting had the merit of being conducted with an impartiality which was as much due to the fairmindedness of the chairman as to the fact that only a very few present had a clear idea of what they actually wanted. Mr. Parsons's merits were pressed with eloquence by his supporters, but his name evoked little or no enthusiasm. A few Public School masters had come on purpose to support Mr. T. E. Page, whose name will always be connected with Charterhouse; but both he and his friends had to learn by experience that education is the one subject a University believes in least. Thus far things went fairly calmly; and then Prof. Ridgeway stood up and gave his opinion. It is always interesting to listen to the Disney Professor. His methods are those of the controversialists of a bygone age. He is lacking in what the French call *onction*; and his speeches are less full of grace than flavoured with salt. Still, he is completely disinterested and sincere, and possessed of the eye of a veritable Vidocq when he takes his walks amid the tortuous byways of the academic mind. In the present case the Professor was alive to the fact that Mr. Parsons had hardly the sort of academic distinction to qualify him for the representation of the University. True, he had taken a good degree, was a Fellow of the Royal Society, and had received the high distinction of an Honorary Fellowship of St. John's; but his life had been mainly spent in commercial pursuits, and he had never taken part in University teaching or administration in any form. This and a good deal more Dr. Ridgeway said to an impatient audience, after which he exploded a veritable bomb-shell by proposing Prof. Sir Joseph Larmor. No one was more astonished than Sir Joseph himself; but his protests were of no avail, and his brother professor went on to enumerate his qualifications as though he were absent. Then the meeting went the usual way of such meetings, and every one who had nothing to say said it, and one by one those present began to slip out of the room. At last, when about fifty remained, a vote was taken—first between Mr. Page and Mr. Parsons, and then, I believe, between Mr. Parsons and Sir Joseph. After some attempts to count, the chairman decided that Sir Joseph had it by one vote; and thus he became the official candidate. Mr. Parsons chivalrously made way for his friend, and the supporters of Messrs. Cox and Page respectively decided to run their men as Independents.

Into the story of the election itself it is unnecessary to enter. Indeed, I have only permitted myself to be thus diffuse in order to show how strangely things are done in Cambridge. The present member owes his seat virtually to the vigour of a single individual, backed by the influence of the "party" in London, who seemed greatly perturbed at the idea of the University of Cambridge imitating Oxford in sending a representative who would not be certain to be amenable to their Whips.

I think, now all is over, that in Sir Joseph Larmor we have a good member for a University Constituency. If not a trained politician or one likely to be prominent as a speaker in the House, he is recognized as a great man of science, and his opinion is likely to have much weight when the claims of Cambridge to be acknowledged as the leading scientific University in England are before the Legislature. These are more important than is generally realized, and not infrequently come into consideration.

Already I am under the impression that Sir Joseph Larmor's presence in the Commons is appreciated, though he has not yet attempted to rival the great orators of the past. Jebb and Butcher were masters both of the spoken and the written word.

Politics are at present occupied by larger issues than University affairs, but there are rumours that the Liberal party is preparing for a Commission, by formulating its ideas as to necessary reforms. Nothing much is known at present; but it is to be hoped that the mania for organization and efficiency may not rage too severely. It is idle to assert that certain changes are not necessary; and the behaviour of the ultra-conservative members of the Senate has done much to dispel the idea that internal reform is possible. Not that that is not constantly going on; but once a reform becomes a party matter, it is doomed. Personally I fear that the ancient Universities may find themselves under State control, possibly under the Education Office or even under some official with the autocratic powers of the President of an American University. At present the abuses of our system are not serious; and in many departments the work is admirably carried on. Indeed, it is a question whether the conscientiousness of many of our College lecturers in discharging their duty to their pupils is not detrimental to that self-reliance which the scholars of the past had to practise. At any rate, may the day be far distant when an enlightened democracy converts Cambridge into a sort of glorified board-school!

Much excitement has been caused by the election of Mr. A. E. Housman as Latin Professor. Trinity has elected him to a Fellowship, and Cambridge is ready to extend a hearty welcome to the author of 'A Shropshire Lad' as well as the learned editor of Juvenal and Manilius. That he is an Oxonian is in some ways an advantage, especially as the sister University has of recent years done more for Cambridge men than we have for those trained on the banks of the Isis.

The appointment of the first Professor of English Literature had been awaited with much keenness. As a rule people were most positive as to whom they did not want; nor was there any lack of undesirable "possibilities." Accordingly the choice of Dr. Verrall was hailed with a mingled sense of pleasure that we had been given the right man, and relief that the powers above had not selected the wrong one. His Clark Lectures have raised universal expectation, and his classes are sure to be large and appreciative.

We won the sports, and lost the boat race. I have read so much about the whys and wherefores of the latter that I begin to have theories of my own. Oxford is said to have "represented strength, and Cambridge style." It would be difficult to compose a more misleading sentence. Its real meaning is that the Oxford men looked as if they were rowing wrongly, and rowed rightly; whilst the converse was true of Cambridge. I observed that in the Oxford crew—except bow (a freshman) and 5, who hailed from Australia, and thrice rowed for Melbourne University against Sydney University—every member had won at least three important races since entering the University. No one in the Cambridge crew, except bow and 7, had rowed in so many winning crews since they came up. I do not count the trial eights; but no fewer than three of the Cambridge crew rowed in the losing boat in 1910. J.

THE SALE OF BOOKS.

Bardwell Rectory, Bury St. Edmunds, April 3, 1911.

FIVE books (and one packet of Christmas cards) have been sent to me recently, varying in price from two shillings to two pounds, without having been ordered, payment being requested. They come from London, Brighton, Heidelberg, Norwich, Yarmouth. In each case the book has been kept, because in no case has money been sent for the expense of return. In some cases repeated demands for payment, culminating in the threat of legal proceedings, have been made, but no proceedings have been taken.

It is a form partly of begging, partly of pressing the circulation of a book, which seems to be novel, unwarrantable, and objectionable.

F. E. WARREN.

* * We publish with pleasure this letter concerning a modern method of persuading the unwary to purchase. It is, however, by no means novel, for we recall a similar attempt to force elaborate Bibles on clergymen some years since.

MSS. OF ST. BERNARD.

I AM editing for the "Cambridge Patristic Texts" Series, published by the University Press, the 'De Gradibus Humilitatis et Superbiæ,' the 'De Diligendo Deo,' and the 'De Conversione' of St. Bernard. For the purpose of collating Mabillon's text I am wishing to obtain information as to the MSS. of St. Bernard which exist in this country. By the courtesy of the respective custodians I have learnt something of the MSS. of this author in the British Museum, the Bodleian, and the Cambridge University Library. I am led to suspect that others are contained in various public and private collections. I venture to beg your kind help in order to make known my need. I should be very grateful to any person who would meet it. My address is Monkton Vicarage, Isle of Thanet, Kent.

WATKIN W. WILLIAMS.

SALE.

ON Monday, March 27th, and the following day, Messrs. Sotheby sold books and manuscripts, including the library of the late Mr. F. G. Hilton Price. The most important lots were the following: Anthropological Institute Journal, 26 vols., 1871-1908, 15l. 10s. Musée du Caire, Catalogue Général, 36 vols., 1901-8, 23l. 10s. Engravings from the Choicest Works of Sir Thomas Lawrence, 50 plates, 1835-46, 76l. W. Rothschild, Extinct Birds, 1907, 18l. Dürer Society's Publications, 10 series, 1898-1906, 17l. 12s. 6d. Two scrapbooks containing 130 coloured prints of military uniforms, 15l. 10s. The total of the sale was 1,350l. 11s.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Book of Common Prayer: George V.

Issued by the Oxford Press in various bindings exhibiting once more the excellent taste and workmanship of the famous house. The books have as frontispiece a picture of the King or the King and Queen. Coronation: Form and Order of the Service and of the Ceremonies. Various sizes and prices.

Hewat (Rev. Kirkwood), Peden the Prophet: being some Account of the Life and Times of Alexander Peden, Minister of New Luce from 1660 to 1663, and afterwards of God's Persecuted People in the Fields, 2/6 net.

With 7 illustrations.

Kenyon (Frederic G.), Our Bible and the Ancient Manuscripts: being a History of the Text and its Translations, 2/ net.

With 29 facsimiles. A new and cheap edition.

McCurdy (James Frederick), History, Prophecy, and the Monuments, 3 vols. in 1, 12/6 net.

New edition.

Ramsay (Rev. F. P.), An Interpretation of Genesis, \$2 net.

Includes a translation into present-day English.

Welldon (James Edward Cowell), The Religious Aspects of Disestablishment and Disendowment, 3/6 net.

Three lectures delivered by the Dean of Manchester to audiences representing "the man in the street." A great part of the last lecture has appeared as an article in *The Nineteenth Century*.

Law.

Beatty (Charles), A Practical Guide to the Death Duties and to the Preparation of Death Duty Accounts, 4/ net.

Third edition, revised and enlarged.

Becker (J. E. de), Annotated Civil Code of Japan, Vol. IV.

Donogh (W. R.), A Treatise on the Law of Sedition, &c., in India, 10/6 net.

Practical Statutes of the Session 1910 (10 Edward 7 and 1 George 5), with Introductions, Notes, Tables of Statutes, Repealed and Amended, Lists of Local and Personal and Private Acts, and a Copious Index.

Edited by James Sutherland Cotton. One of Paterson's Practical Statutes.

Fine Art and Archaeology.

Barton (Mary), Impressions of Mexico with Brush and Pen, 10/6 net.

With 20 illustrations in colour.

Essex Archaeological Society Transactions, Vol. XII., Part 1, 6/

Garner (Thomas) and Stratton (Arthur), Domestic Architecture of England during the Tudor Period, 2 vols., 147/ net.

Illustrated in a series of photographs and measured drawings of county mansions, manor houses, and smaller buildings.

Gray (Harold St. George), Third Interim Report on the Excavations at Maumbury Rings, Dorchester, 1910, 1/ net.

Reprinted from the *Proceedings* of the Dorset Natural History and Antiquarian Field Club.

King (Harold C.), The Chancel and the Altar, 1/6 net.

With a preface by Percy Dearmer, and 48 illustrations. One of the series *Arts of the Church*.

Poetry and Drama.

Besier (Rudolf), Lady Patricia, a Comedy in Three Acts, 1/ net.

One of the Plays of To-day and To-morrow.

The piece was noticed in our columns last week.

Gordon (Armistead C.), For Truth and Freedom: Poems of Commemoration, \$1.25.

Masters (Edgar Lee), Eileen, a Play in Three Acts, 50 cents.

Masters (Edgar Lee), The Locket, a Play in Three Acts, 50 cents.

Meredith (Hugh Owen), Week-Day Poems, 5/ net.

Pickering (James E.), The King's Temptation, and other Poems, 1/ net.

Sheppard (Thomas), Bacon is Alive: being a Reply to Sir Edwin Durning-Lawrence's 'Bacon is Shakespeare,' 1/ net.

Presidential address to the Hull Shakespeare Society, delivered December, 1910.

Tucker (Beverley Dandridge), My Three Loves, \$1.25

Poems by the Bishop Coadjutor of Southern Virginia.

Bibliography.

Bulawayo Public Library Report, being for Nine Months, 1st April, to 31st December, 1910.

Includes an address on South African Literature, Past and Present, by the Rev. S. S. Dornan.

Philosophy.

Cushman (Herbert E.), A Beginner's History of Philosophy, 6s.

Hodgson (Shadworth H.), Some Cardinal Points in Knowledge, 2/ net.

Reprinted from the *Proceedings* of the British Academy.

History and Biography.

Elliot (Hon. Arthur D.), The Life of George Joachim Goschen, First Viscount Goschen, 1831-1907, 2 vols., 25/ net.

With portraits.

Fox (Fontaine T.), A Study in Alexander Hamilton, \$1 net.

Fraser (Mrs. Hugh), A Diplomatist's Wife in Japan: Letters from Home to Home, 1/ net.

New edition. For review see *Athen.*, March 18, 1899, p. 329.

Jeffery (Reginald W.), The New Europe, 1789-1889, 8/6 net.

Has short notes, bibliographies, biographies, diagrams, and maps.

Maxwell (Sir Herbert), A Century of Empire, 1801-1900: Vol. III. 1869-1900, 14/ net.

For notice of Vol. II. see *Athen.*, June 4, 1910, p. 672.

Senior (Dorothy), The Gay King: Charles II., his Court and Times, 12/6 net.

With frontispiece and 16 illustrations.

Spencer (Alfred), Life of Harry Watts, Sixty Years Sailor and Diver, 3/6 net.

With a foreword by Andrew Carnegie, and 7 illustrations by Oswald Crompton. Watts played a prominent part in the diving operations after the Tay Bridge Disaster in 1879.

Stiles (Robert), Four Years under Marse Robert \$2 net.

New edition. "Marse Robert" is the celebrated Confederate general Robert Lee.

Tate (G. P.), The Kingdom of Afghanistan: a Historical Sketch, 10/

With an introductory note by Sir Henry Mortimer Durand.

Thompson (James Westfall), The Wars of Religion in France, 1559-1576: the Huguenots, Catherine de Medici, and Philip II., 18/ net.

With 24 maps and plates. The author has tried as far as possible to ignore the doctrinal issues of the French Reformation, inquiring rather into its political, diplomatic, and especially its economic activities.

Turner (Henry Gyles), The First Decade of the Australian Commonwealth: a Chronicle of Contemporary Politics, 1901-1910, 9/

Vedder (Elihu), The Digressions of V, written for his Own Fun and that of his Friends, 21/ net.

Contains an account of the author-artist's stay in Florence, his return to America, and his prolonged residence in Rome, with over 100 illustrations.

Wexford, History of the Town and County, Vol. VI. History of the Town, Castle, and Cathedral Church of Ferns, illustrated, 40/

Edited by Philip Herbert Hore.

Whitsitt (William H.), Genealogy of Jefferson Davis and of Samuel Davies, \$1

Williamson (David), Our King and Queen: the Story of their Lives, 1/

With 7 illustrations.

Geography and Travel.

Campbell (Joseph), Mearing Stones: Leaves from my Note-Book on Tramp in Donegal, 3/6 net.

With 16 pencil drawings by the author.

Cook (William Azel), Through the Wildernesses of Brazil by Horse, Canoe, and Float, 7/6 net.

With many illustrations.

Sociology.

Small (Albion W.), The Cameralists, the Pioneers of German Social Polity, 12/ net.

One of the University of Chicago Publications.

Small (Albion W.), Adam Smith and Modern Sociology: a Study in the Methodology of the Social Sciences, 5/ net.

Another of the University of Chicago Publications. The book aims at bringing about a more conscious and systematic partnership between the economists and the sociologists, who are studying the real conditions of life, says the author, from different angles of approach.

Philology.

Catalogue of the Greek Papyri in the John Rylands Library, Manchester: Vol. I. Literary Texts (Nos. 1-61), 21/ net.

Edited by Arthur S. Hunt, with 10 plates.

Migeod (Frederick William Hugh), The Languages of West Africa, Vol. I., 12/6 net.

Mulvany (C. M.), The Indo-European Language, 2 rupees.

Five lectures delivered at the Queen's College, Benares.

New English Dictionary on Historical Principles: Scouring—Sedum (Vol. VIII.), by Henry Bradley, 5/

School-Books.

Allcroft (A. H.) and Collins (A. J. F.), Higher Latin Composition, 3/6

In the University Tutorial Series.

Science.

- Bardswell (Frances A.), *The Herb-Garden*, 7/6 net.
With 16 illustrations in colour drawn from nature by the Hon. Florence Amherst and Isabelle Forrest.
- Bower (F. O.), *Plant-Life on Land* considered in some of its Biological Aspects, 1/ net.
One of the Cambridge Manuals of Science and Literature. In one chapter the author discusses the circumstances which may have led to the adoption of the fixed habit in plants, and certain of the disabilities which this fixity of position imposes on them. In another he describes the influence of perennial vegetation upon the contour and surface of golf links on the coast.
- Cables (H. A.), *Diagnosis and Treatment of Diseases*, 10/6 net.
- Gorton (David Allyn), *The History of Medicine*, Philosophical and Critical, from its Origin to the Twentieth Century, 2 vols., 25/ net.
- Guilfoyle (W. R.), *Australian Plants* suitable for Gardens, Parks, &c., 15/ net.
- Guyer (Michael F.), *Animal Micrology: Practical Exercises in Microscopical Methods*, 7/ net.
One of the University of Chicago Publications. The volume, which is illustrated, is intended primarily for beginners, and the student is warned at what stages he is likely to encounter difficulties and how to avoid them.
- Luciani (Prof. Luigi), *Human Physiology: Vol. I. Circulation and Respiration*, 18/ net.
Translated by Frances A. Welby, edited by Dr. M. Camis, with a preface by J. N. Langley.
- Pearson (Karl), *The Grammar of Science: Part I. Physical*, 6/ net.
Third edition, revised and enlarged.
- Reinhardt (Charles), *Faith, Medicine, and the Mind*.
- Rumpel (O.), *Cystoscopy as Adjuvant in Surgery*, 42/ net.
- Stanley (William Ford), *his Life and Work*, 2/6 net.
A small but interesting volume of autobiographic notes, edited by Richard Inwards, with 18 illustrations.
- Tutton (A. E. II.), *Crystallography and Practical Crystal Measurement*, 30/ net.
With many diagrams.
- Werner (Dr. A.), *New Ideas on Inorganic Chemistry*, 7/6 net.
Translated from the second German edition by Edgar Percy Hedley.
- Wintle (W. J.), *Recreations with a Pocket Lens*, 2/ net.
With many illustrations, and a useful, though by no means exhaustive Nature Calendar, which the author has compiled from the observations of several naturalists. The book is written in a popular style.

Fiction.

- Birmingham (George A.), *The Major's Niece*, 6/
A series of adventures in the household of an Irish bachelor, invaded for a fortnight by a small tomboy of a niece.
- Blyth (James), *Brumblingham Hall*, 6/
A story of a strange death.
- Boldrewood (Rose), *The Complications at Collaroi*, 6/
The scenes are laid partly in India and partly in Australia, and the characters are said to be taken from actual life.
- Brother Copas, by Q, 6/
The story deals with a charitable hospital for decayed gentlemen—a sort of blend of the Charterhouse and St. Cross at Winchester—and tells how this effete brotherhood is reclaimed by the presence of a small child within its walls.
- Brown (Vincent), *The Irresistible Husband*, 6/
A tale of a Scotch hydro and its irresponsible inmates.
- Browne (Porter Emerson), *A Fool There was*, 1/ net.
The story of the play now being acted at the Queen's.
- Candler (Edmund), *The General Plan*, 6/
Nine stories, five of which have appeared in various magazines.
- Corelli (Marie), *Jane: a Social Incident*.
Reissue with a new preface by the author. The first volume of fiction in Methuen's Shilling Books.
- Dewar (George A. B.), *The Leaning Spire*, 2/6 net.
A number of short tales, some of which have appeared in *The Saturday Review* and *Westminster Gazette*.
- Fletcher (J. S.), *The Pinfold*, 6/
A story of farm life in Yorkshire, illustrating the effect of early environment on the life of a man naturally ambitious and gifted.

- Gretton (R. H.), *Ingram*, 6/
Opens with the first night of a General Election, and is described by the author as "an exercise in the Disraelian manner."
- Herbert (Edward G.), *Newera: a Socialist Romance*, 1/ net.
New edition.
- Hurst & Blackett's Sevenpenny Net Novels: *Madame Albanesi's A Question of Quality*, *Beatrice Whitby's Bequeathed*, and *Percy White's The House of Intrigue*.
- Innes (Norman), *The Governor's Daughter*, 6/
An historical romance.
- Jessop (George H.), *Where the Shamrock Grows*, 3/6
Relates the fortunes and misfortunes of an Irish family.
- Long's Sixpenny Net Cloth Novels: *Buchanan's Father Anthony*; *Bindloss's Delilah of the Snows*.
- Marcin (Max), *The Wife He Never Saw*, 2/ net.
For a large sum of money, an impecunious young lawyer agrees to marry a woman whose face he is not allowed to see, whose identity is unknown to him, and who disappears immediately after the ceremony.
- Newte (Horace W. C.), *The Socialist Countess: a Story of To-day*, 6/
Depicts some would-be social reformers who are divided between philanthropy and their own ends.
- Norris (W. E.), *Vittoria Victrix*, 6/
Is concerned with the heroine's suitors, including a young peer, an American millionaire, and a famous sculptor who tells the story.
- Pratt (Ambrose), *The Big Five*, 6/
The "big five" are a quintet of strangely dissimilar friends who have been prospecting in Western Australia, and now set out on a tour of exploration with an English lady and gentleman of title.
- Rolland (Romain), *John Christopher: II. Storm and Stress*, 6/
Translated by Gilbert Cannan.
For review of Vol I. see *Athen.*, Nov. 12, 1910, p. 587.
- Scott (C. A. Dawson), *Mrs. Noakes, an Ordinary Woman*, 6/
The third volume of the author's 'Some Wives.' The middle-class Mrs. Noakes longs for love, but only finds suffering.
- Scott's *The Fortunes of Nigel*, 2/
Well edited, with introduction, notes, and glossary, by Stanley V. Makower.
- Watson (Alexandra), *The Case of Letitia*, 6/
The story deals with a girl's marriage to a repulsive man and her recovery of her freedom and happy second marriage, though the latter involves parting from her child.
- Westrup (Margaret), *Phyllis in Middlewych*, 6/
Another study of childhood by the author of 'Elizabeth's Children.'
- Wilson (Christopher), *For a Woman's Honour*, 6/
A mystery of Mount Street.
- Wilson (Theodora Wilson), *Moll o' the Toll-Bar*, 6/
A tale of romance and adventure in Cumberland during the rough days of the Napoleonic wars.

General Literature.

- Colonial Office List (The), 1911, 15s.
- Coronation Durbar and After, by Scotus Indigena, 1/ net.
- Gosset (Adelaide L. J.), *Shepherds of Britain: Scenes from Shepherd Life Past and Present*, from the Best Authorities, 7/6 net.
With many illustrations.
- Gould (F. J.), *Youth's Noble Path*, 2/
A volume of moral instruction designed for the use of children, parents, and teachers, and mainly based on Eastern, tradition, poetry, and history.
- Insurance Blue Book and Guide for 1910-11, 2/
- Martyn (Frederic), *A Holiday in Gaol*, 3/6
The author's experiences of police, prison, and prisoners.
- Rogers (James Edward), *The American Newspaper*, 4/ net.
Another of the University of Chicago Publications.
- Wilde (Oscar), *De Profundis*, 1/ net.
A popular edition, printed in excellent type, of Wilde's remarkable booklet.
- Wintle (W. J.), *Nights with an Old Lag*, 5/ net.
Conversations with a burglar, who made these confessions to the author during the period of his reform. Later it was found that he was acting as a receiver of stolen goods, and he was sent to penal servitude once more.

Pamphlets.

- British Guiana: *Cacao and Coffee Industries*; *Coconut and Lime Industries*; and *Timber Industry*.
Issued by the Permanent Exhibitions Committee.

- International Institute of Agriculture: *Price Fluctuations in the Staples, their Influence on the Welfare of the State*.
International Institute of Agriculture, Rome, and its Influence on Economic Welfare: Reply to some Comments made by the Minister of Agriculture of France.
Watson (James), *Agricola and Tacitus*, 3d.

FOREIGN.

Theology.

- Merx (A.), *Die vier kanonischen Evangelien nach ihrem ältesten bekannten Texte: Vol. II. Part II. Das Evangelium Johannes*, 16m.
Edited by Julius Raska.

Part of the Bibliothèque de Philosophie Scientifique.

Literary Gossip.

SIR ARTHUR CONAN DOYLE'S new volume 'The Last Galley: Impressions and Tales,' will be published by Messrs. Smith & Elder on the 25th. The stories are arranged chronologically, and embrace such subjects as the last sea-fight of the Carthaginians (with its warning to Great Britain), the landing of the Saxons in England, the first appearance of Christianity and of Mohammed, the invasion of the Huns, and other great crises in history.

THE same firm will issue on the 24th, under the title of 'Ruskin: a Study in Personality,' seven lectures by Mr. A. C. Benson on the life and work of Ruskin which he delivered in the Hall of Magdalene College, Cambridge. The book is a sketch, and not a finished portrait, but mainly an attempt to emphasize the salient features and characteristics of the man.

MISS NETTA SYRETT'S new novel, which will be published after Easter by Messrs. Chatto & Windus, is entitled 'Dreder's Daughter.' Incidentally, the story satirizes various modern educational, social, and moral theories; while its main theme is the revolt of a beautiful girl against the kind of life arranged for her by her prospective husband.

THE second volume of the series of manuals projected and edited by the Rev. Louis H. Jordan, and issued by the Oxford University Press, will be ready in

the autumn. It will be entitled 'The Study of Religion in the French Universities,' and will be the joint work of Mr. Jordan and M. Arnold van Gennep, the editor of the *Revue d'Ethnographie et de Sociologie*, and one of the founders of the new Institut Ethnographique de Paris.

THE REV. H. F. STEWART is preparing for publication a volume of sermons by the late Prof. J. E. B. Mayor. The volume will contain a memoir, and will be published by the Cambridge University Press before the end of the present year.

MR. ELKIN MATHEWS is bringing out about May 1st a little volume of mystical poems called 'Angels and Symbols,' by Mrs. Montgomery of Grey Abbey, Ireland, whose book 'The Rose and the Fire' appeared in 1908.

'THE OTHER RICHARD GRAHAM' is the title of a new novel by Mrs. Frank Clapperton, announced for immediate publication by Mr. Elliot Stock. It is a story of New Zealand, dealing with the bush and the everyday life of the miner in Central Otago.

MESSRS. SIDGWICK & JACKSON write:—

"Noticing your comment on Mr. Alfred Ollivant's complaint that Miss Ethel Sidgwick's novel 'Le Gentleman,' recently published by us, bears a title closely resembling that of his own, 'The Gentleman,' we have to point out that some years before the issue of Mr. Ollivant's novel there appeared one under the title of 'A Gentleman' by the Hon. Mrs. Walter Forbes.

"While we regret that Mr. Ollivant should feel himself aggrieved in any way, we venture to submit that we did not and do not think any one could confuse 'Le Gentleman' with 'The Gentleman'; had we thought so, we should certainly have altered our title."

'IRELAND UNDER THE NORMANS, 1169-1216,' a study by Mr. Goddard Henry Orpen, will be published shortly by the Oxford University Press in two volumes. It may be recalled that Mr. Orpen edited 'The Song of Dermot and the Earl' for the same Press.

THE first course of a new series of Hibbert Lectures will be given by Dr. L. R. Farnell concurrently in London and Oxford, and should attract wide attention. His subject, 'The Higher Aspects of Greek Religion,' will include marriage, family life, and theories of divine punishment, and the development of the individual conscience. The first London lecture will be delivered on the 25th in the University of London, South Kensington.

MR. WILLIAM CHAWNER, Master of Emmanuel College since 1895, died last Wednesday week at Vence, Alpes Maritimes, at the age of 62. Mr. Chawner's chief work was the organization of the studies of Indian Civilizations at the University. Recently his strong views on religion had brought him into prominence.

WE regret to notice also the death of the Rev. John Anderson, Curator of the Historical Department of H.M. Register House, Edinburgh. Licensed for the Church in 1874, Mr. Anderson served as

a missionary in India, but, returning to Edinburgh in 1887, took up historical work, and was employed by Sir William Fraser in the compilation of his many notable family histories. In 1896 he was appointed Assistant Curator of the Historical Department in the Register House, and ten years later succeeded Dr. Maitland Thomson in the Curatorship. Mr. Anderson edited for publication the extensive collection of charters left by Dr. David Laing to the Edinburgh University Library.

IN *The Scottish Historical Review* (April) the Quincentenary of St. Andrews University evokes a fine study by the Librarian, Dr. Maitland Anderson, on 'The Beginnings of the University, 1410-1418.' He notices several documents from the twelfth to the fifteenth century, and Prof. Firth some sly Jacobite ballads, while Dr. R. L. Poole re-edits a bull of 1231 on the isles of the Sodor see. Sir Herbert Maxwell goes on with his 'Lanercost Chronicle Englished.' Other contributions include a survey of Mr. Robert Renwick's years of work on burghal archives, and a note by Dr. David Murray on Glasgow earthquakes. 'The Kingis Quair' begets a sub-controversy on the personality of the poet "Auche...."—perhaps James Auchinleck, Miss Muriel Gray, however, favouring Vedast Auchinleck.

MESSRS. GOWANS & GRAY will shortly publish an authorized translation of Gottfried Keller's 'Seven Legends.' Though this delightful book has passed through more than fifty editions in Germany, this will be its first appearance in English.

ON Wednesday last Mr. Moberly Bell died suddenly at the office of *The Times*, with which he had been prominently associated for some years. Born in Egypt in 1847, Charles Frederic Moberly Bell began his connexion with the paper at an early age as a correspondent on Egyptian affairs, and, making his mark in that capacity, was appointed assistant manager of *The Times* in 1890, and in 1908 became manager of the new company formed to control the concern.

ALWAYS a hard worker and a master of detail, Mr. Moberly Bell had acquired of late years a commanding position in Printing House Square. The extent and direction of his energies did not escape criticism, especially during what was called the "Book War." He wrote 'Khedives and Pashas' (1884), 'Egyptian Finance' (1887), and 'From Pharaoh to Fellah' (1889).

THE opening proceedings of the Royal Commission on Public Records have been widely reported in the daily press. Unfortunately, not all that has been related in this wise can be vouched for by the Master of the Rolls' officers. The alleged discovery of "Magna Charta" by the Deputy Keeper in a sack of unsorted records is an instance in point, although the statement was probably accepted by

thousands of readers who were not aware that four specimens of this royal circular are preserved elsewhere, and that the supposed original thus "discovered" is merely a distantly related document which is enrolled in the contemporary Patent Roll and has been printed both by Rymer and the Record Commission.

It may be of interest to state that the Commission having now received the evidence of the Record officers, will proceed to take that of the librarians and other custodians of the Departmental Records and Registries, reports upon which are being carefully prepared. The proceedings of the Commission in the near future include visits to the archives of Paris and Brussels, as well as the inspection of various provincial repositories of Public Records. The evidence of several historical scholars, antiquaries, and record experts, both British and foreign, will be taken in the summer and autumn. The subject of Local Records will probably not be touched during the present year.

MESSRS. LONGMAN have in the press 'Studies in the Evangelisation of South Africa,' by Mr. G. B. A. Gerdener, and 'A History of Christian Missions in South Africa,' by Mr. J. Du Plessis.

WE are glad to find that *The English Review* continues its policy of printing contemporary verse. The current number also continues the admirably quaint and well-illustrated views of Mr. Yoshio Markino on John Bullesses, which we have already praised.

CONSIDERABLE interest has been aroused by an official report issued this week concerning the books read in prisons and at the Borstal institutions. In popularity Mrs. Henry Wood easily heads the list, Dickens coming next, and *longo intervallo* Mr. Henty and Mr. Rider Haggard. There is, it appears, a steady demand for Scott, Dickens, and other standard authors; and Reade's 'Never Too Late to Mend' is a favourite.

THE HOUGHTON MIFFLIN COMPANY of Boston and New York announce 'The Complete Poems of Edgar Allan Poe,' edited by Mr. J. H. Whitty. The book claims to include several texts supposed to be lost, revisions made by Poe a few weeks before his death, and half a dozen hitherto uncollected poems.

MR. HUGH HOPKINS, a well-known Glasgow bookseller and publisher, died last Sunday, aged 80. He was well informed on subjects relating to Scottish history, literature, ballads and songs, as well as books about old Glasgow.

AMONG Parliamentary Papers of some general interest we note: Scotch University Court Ordinance, No. 33 (post free 2d.); Table of Holiday Courses, 1911 (post free 2½d.); Directory of the Welsh Education Department (post free 8d.); and Welsh Church Commission, Vol. VI., Appendices (post free 4s. 4d.).

SCIENCE

The Golden Bough: a Study in Magic and Religion. Third Edition.—Part I. *The Magic Art and the Evolution of Kings.* By J. G. Frazer. 2 vols. (Macmillan & Co.)

'THE GOLDEN BOUGH' ought surely to be renamed 'The Golden Banyan,' so completely does it resemble that Eastern tree in its power of reproducing itself in a host of supporting growths, each of which, whilst organically one with its prototype, is yet firmly rooted on its own account in the fresh ground that it covers.

The original idea of the book was, as the Preface points out,

"merely to explain the strange rule of the priesthood or sacred kingship of Nemi and with it the legend of the Golden Bough, immortalized by Virgil, which the voice of antiquity associated with the priesthood."

But, as the work grew on his hands, and, at intervals of ten years or so, edition swelled into new and enlarged edition, Dr. Frazer perceived that the slender thread of connexion linking together all sorts of outlying topics with his central theme was at last threatening to snap. Hence he has now decided to resolve his overgrown treatise into its elements. The old title is indeed retained, but merely as a collective name for a series of separate disquisitions on leading aspects of the evolution of primitive religion and society. Dr. Frazer even goes so far as to contemplate without dismay the possibility that the priest-king of Nemi may be destined after all to be "struck out from the long roll of men who have masqueraded as gods." Should his theory of this particular priesthood collapse, he insists, its fall would hardly shake his general conclusions, founded as they are "on large collections of entirely independent and well-authenticated facts."

Not that the priest-king of Nemi in any sense suffers dethronement as the result of a fresh review of the evidence. On the contrary, the facts and theories bearing directly on the worship of Diana at Nemi, which now come to about seven times the amount that is to be found in the previous edition, serve to bring out far more conclusively than ever before both the function of the goddess as a promoter of fertility, and the nature of her relations with such an odd and repulsive kind of priest. We have not the space in which to enlarge on the interesting proofs that *parthenos* as applied to Artemis carried with it no implication of virginity. Suffice it to say that there is in Greece no public worship of Artemis the chaste, as Dr. Farnell has well pointed out, whilst in Asia Minor, as Sir W. Ramsay shows, "the Parthenos goddess was also the

Mother." Dr. Frazer therefore supposes that Artemis as the mother needed a consort, and found one in Hippolytus. By parity of reasoning it would follow that Diana of the Wood needed a male companion, and found him in Virbius, mythical predecessor and archetype of a line of priests who, like Virbius, must come one after another to a violent end.

"It is natural, therefore, to conjecture that they stood to the goddess of the grove in the same relation in which Virbius stood to her; in short, that the mortal King of the Wood had for his queen the woodland Diana herself. If the sacred tree which he guarded with his life was supposed, as seems probable, to be her special embodiment, her priest may not only have worshipped it as his goddess, but embraced it as his wife. There is at least nothing absurd in the supposition, since even in the time of Pliny a noble Roman used thus to treat a beautiful beech-tree in another sacred grove of Diana on the Alban hills. He embraced it, he kissed it, he lay under its shadow, he poured wine on its trunk. Apparently he took the tree for the goddess. The custom of marrying men and women to trees is still practised in India and other parts of the East. Why should it not have obtained in ancient Latium?"

It only remains to add that, on Dr. Frazer's view, kingship in ancient Latium and ancient Greece alike originally descended in the female line. A king was just a queen's husband. Hence arises the type of story, common to many Aryan peoples, of the gay adventurer who, coming to a strange land, performs some transcendent feat of arms and wins the king's daughter, as also with her the right of succession to the kingdom. Even so, then, "the woodland temple of Diana" was "a kingdom acquired by the sword," as Ovid says in the 'Ars Amoris.'

Logically, however, before discussing kingship we are required by Dr. Frazer's theory to discuss the nature of magic, since a king is primarily an evolved magician. We need not, however, enter very deeply into this latest exposition of Dr. Frazer's view of magic, since it is cast on the old lines. He continues to base magic on a mistaken association of ideas, herein following Dr. Tylor, to whose 'Primitive Culture' he refers us in a note for the source of the doctrine, though indeed it is to be found already sketched in Dr. Tylor's earlier work, 'Researches into the Early History of Mankind.' Dr. Frazer's special contribution consists in an analysis of the different kinds of association, and a classification of the different kinds of magic framed in accordance therewith. Homœopathic or Imitative Magic corresponds to the Law of Similarity; and Contagious Magic to the Law of Contact or Contagion. It is, in short, the scheme of the 'Lectures on the Early History of the Kingship' over again. Nothing is changed, with the exception that, instead of roundly stating taboo to be a negative magic, Dr. Frazer now states the theory less absolutely:—

"The whole doctrine of taboo, or at all events a large part of it, would seem to be

only a special application of sympathetic magic, with its two great laws of similarity and contact."

He also remarks in the same context that a misapplication of the laws of the association of ideas furnishes only "the logical basis" of magic and taboo; and to this qualified explanation the further qualification is attached that the logic is "implicit, not explicit," since the savage "reasons just as he digests his food, in complete ignorance of the intellectual and physiological processes which are essential to the one operation and to the other." On the other hand, he regards "the supposed mysterious force" which the Melanesian calls *mana* "as supplying, so to say, the physical basis both of magic and of taboo." Here Dr. Frazer's usual lucidity deserts him. We could understand him after a fashion if what he were intending to say was that, when a savage believes something—say, a queer-shaped stone—to possess mysterious force, he does so partly because he is guided by a certain logic of belief, and partly, too, because the mysterious force is physically there. But then it turns out that it is not physically there at all, being only a "supposed" mysterious force. So we are back again in the region of belief; the physical and the logical fuse. Nor does any other passage in these two volumes throw light on Dr. Frazer's view of the relation that he would set up between *mana* and magic. According to his system of watertight compartments, if *mana* is the basis of magic, it cannot be part of the essence of religion. Yet how is it that, as we constantly find, gods and spirits have *mana*, and are prayed to for *mana*, whilst the prayer itself must likewise have *mana* to be successful? Dr. Frazer would doubtless reply that these are all cases of "confusion," of "theoretical inconsistency," on the part of heedless savages. Surely some one ought to found a mission in order to teach these benighted beings the rudiments of anthropology. As it is, the stupid folk break every rule in the textbooks. Perhaps they were more consistent when the "Age of Magic" was in its heyday. But that state of primitive innocence appears, in this latest account, to have retired further than ever into the dim and uncertain past.

But we have spent too much time, perhaps, over questions verging on the verbal. The words in the end must settle themselves, so long as the facts are forthcoming in their almost infinite profusion. These volumes are a mine of learning. It is the kind of careful and critical learning, too, that would be bound to prevail of itself, even if Dr. Frazer's literary *mana* were not there to help it out. There was a time when all the world looked askance at Dr. Frazer's kings whose divine right positively included execution at the hands of the Commons. No one would care to rule on such terms, it was said. Yet every day fresh evidence is accumulating that shows a kingdom to be worth a somewhat short shrift in

the eyes of persons who "e'en can because they must." Such a kingship is being carried on at this very moment in lands nominally under the ægis of the British rule. Indeed, the more we know of our brother man, and the more we apply to his ways the canons of our logic, the more the mystery thickens. Yet logic, we say, must be one for all.

OUR LIBRARY TABLE.

Anthropological Report on the Edo-Speaking Peoples of Nigeria. By Northcote W. Thomas. Parts I. and II. (Harrison & Sons.)—Two fair-sized volumes bristling with facts constitute no small harvest of firstfruits as the result of a tour of fourteen months by a Government Anthropologist; and both Mr. Thomas, and the Colonial Office that had the happy thought of appointing him to such a post, are to be heartily congratulated. Of the Edo-speaking peoples of Nigeria the most famous are the large tribe whose capital is Edo, better known as Benin City. In the map showing the boundaries of the whole linguistic province the upper portion only is accurately defined, namely, that which fringes a short section of the Niger south of Ida (spelt Idah in the inset map on the same page) and extends a little way into Upper Nigeria. The lower limit is purely conjectural, but apparently is somewhere short of the coast.

Mr. Thomas has compiled a goodly number of folk-tales, and a dictionary in which is observed an elaborate system of transliterating sounds, tones, and accents. He has obtained much assistance from a use of the phonograph, though it requires much skill and patience to supplement the record, as needs must be done on the spot, with a transcription that at all closely resembles it. In the way of human instruments Mr. Thomas had to rely on a number of interpreters, some of whom were doubtless better than others. The sociological material varies in quality according to the time spent in each district. On many points we crave for more exact information, which Mr. Thomas is doubtless at this moment engaged in acquiring. The genealogical method is used with profit. Incidentally, it has provided the interesting demographic datum that, contrary to what might have been expected in Africa, the proportion of the sexes is almost exactly equal.

Natural Philosophy. By Wilhelm Ostwald. Translated by Thomas Seltzer. (Williams & Norgate.)—This is, we suppose, one of the firstfruits of the leisure of Dr. Ostwald, who on gaining the Nobel Prize two years ago announced his intention of abandoning direct teaching and devoting himself to the study of philosophy. In this little book he certainly ranges over the whole field of science, beginning with the formation of concepts, and proceeding by way of logic, algebra, and shorthand to the physical sciences and—rather unexpectedly—biology. Perhaps the logical terminus of this sort of inquiry would be a metaphysical one; but Dr. Ostwald valiantly resists the temptation to which an Englishman—and a fortiori a Scotchman—would have succumbed, and winds up with some sociological remarks upon the advisability of the nations adopting "Ido" (apparently a new kind of Esperanto) and abolishing war.

It will be seen, then, that Dr. Ostwald's task is mainly one of classification; but

here he is met with the preliminary difficulty, which he frankly admits, that no real dichotomy or hard and sharp dividing line between the different "concepts" which he discusses is possible. No one can say where Physics leaves off and Chemistry begins; and if we accept the Comtian division into Formal, Physical, and Biological Sciences, which Dr. Ostwald mentions with approval, it is plain that "Phoronomy, or the science of Motion," which appears as the last of the first category, treads very closely on the heels of Mechanics, which begins the second. While, therefore, Dr. Ostwald's survey may be of some service in clarifying the ideas of those who, like himself, have run through the whole cycle of the sciences, we are afraid that it will not do much for the beginner who is as yet ignorant of most of them.

The translation is, perhaps, neither better nor worse than the average of such work to-day. Many of its phrases are not English; as when the translator says, of science and philosophy, that "they belong together," or of the absolute zero of temperature that it "has been considerably approximated." So, too, we learn that the most efficient optical telegraph is "the heliotrope" (heliostat?), and that the electromagnetic theory of light is supported "by quite considerable experiential grounds."

Practical Electricity. By W. E. Ayrton. Revised by T. Mather. (Cassell & Co.)—This is a new edition, virtually rewritten throughout, of the late Prof. Ayrton's well-known book with the same title, which since its first appearance in 1887 has formed the primer on which nearly every student of electrical engineering in this country has been brought up, and must therefore be held to have proved its usefulness. In the present state of electrical science, it is no doubt wise to take the beginner in applied electricity direct to the system of measurements which forms almost the only thing with which he will henceforth have to concern himself, and a more lucid explanation of this it would be difficult to produce. Mr. Mather, who played an important part in the preparation of the earlier book, may be trusted to have seen the weak points in it, and to have repaired them as efficiently as possible; and the new volume is in every respect an improvement on its predecessor. It makes free use, for instance, of that diagrammatic representation of Faraday's lines of force which is now pretty generally accepted as the most intelligible mode of depicting the still mysterious workings of what we call electricity. Mr. Mather has also done good service in including in his illustrations several instruments and pieces of apparatus omitted in the earlier work, and it is curious to notice that the original book contained no description of the Ruhmkorff or inductive coil, here fully explained. The "Addendum" on 'Electrostatics' at the end of chap. ii. is perhaps a little skimpy, and it is a pity that Mr. Mather did not offer some experimental proof of the existence of electric lines of force, such as that which can be found in Prof. Kolbe's 'Elektrizität.' We notice, too, that he is still faithful to Ayrton and Perry's form of gold-leaf electroscope, although we fancy there are many improved forms of this instrument now to be had. On the other hand, his chapter on potentiometers seems to be entirely up to date, and his description of the zero electro-dynamometer which he introduces as a means of accurately measuring the strength of currents leaves nothing to be desired. An Appendix on 'Wires,' including among other things the new system of insulating by

enamel instead of cotton or silk covering, adds materially to the usefulness of the book.

We have no doubt that Mr. Mather's volume will be before long in the hands of many English students who intend to make practical use of his knowledge of electricity, and will thus fulfil its main purpose. We think, however, that he must have considerably curtailed Prof. Ayrton's original programme for the second volume, which was to deal with such subjects as storage cells, capacity, and so on. These are, indeed, touched upon in the present work, but with such brevity as to make us wish for more. May we hope that Mr. Mather will soon provide it? The book is clearly printed and well got-up, but the Index leaves something to be desired.

SOCIETIES.

GEOLOGICAL.—March 22.—Prof. W. W. Watts, President, in the chair.—Mr. Ernest Parsons was elected a Fellow.

The following communications were read: 'On some Mammalian Teeth from the Wealden of Hastings,' by Dr. A. S. Woodward,—'Some Observations on the Eastern Desert of Egypt, with Considerations bearing upon the Origin of the British Trias,' by Mr. A. Wade,—and 'Faunal Horizons in the Bristol Coalfield,' by Mr. Herbert Bolton.

SOCIETY OF ANTIQUARIES.—March 30.—Sir Edward Brabrook, Director, in the chair.

Mr. W. Dale, in presenting his report as Local Secretary for Hampshire, exhibited a large palæolithic implement of peculiar form, intended to be held in the hand, from Southampton, and a finely chipped neolithic celt from Sholing. This specimen was particularly interesting as it had evidently never been used, and in fact was unfinished, being probably just ready for rubbing smooth. Mr. Dale also exhibited specimens of New Forest pottery from St. Denys; a large sixteenth century jug from Southampton; and slides of the ancient trackways near Winchester, of the Lynchets on Shawford Down, and of the Longstone, a megalithic monument in the Isle of Wight. He was able to announce that the Corporation of Southampton had decided to purchase the Tudor House, which had been in danger of destruction.

Mr. V. B. Crowther-Beynon communicated some notes on recent finds, chiefly of the Anglo-Saxon period, from Market Overton, Rutland. The ironstone diggings, which were begun at Market Overton in 1906, have brought to light what are unmistakably two distinct Saxon burial-grounds, separated by a considerable interval. Both have yielded interesting series of relics. The finds in the north cemetery were exhibited and described before a meeting of the Society of Antiquaries in January, 1908. The present paper dealt with the discoveries in the south cemetery during 1909-10. No excavation on scientific principles had been found to be possible, the result being that the objects cannot be collected into grave groups, and thus are not so interesting or instructive as might have been the case under more favourable conditions, since the methods employed for obtaining the ironstone are fatal to any good scientific results. Among the most striking finds in the collection exhibited were: a gold bracteate in perfect condition, displaying a riderless horse and a bird; a gold bead; a gold spiral expanding finger-ring; a silver torque; three pairs of silver hook-and-eye clasps, two of these having flattened centres of a type (it is believed) not recorded before; and a silver brooch of the "radiated" type, with an oval foot, and decorated with animal patterns. The bronze brooches included four good examples of the "square-headed" type (one having a border or frame of silver wire, a feature also believed to be unique), and three of the "cruciform" type. There were examples of the "applied" circular brooch, the "saucer," and some twenty specimens of annular brooches of various forms, as well as many smaller objects of bronze. Beads were represented by a collection considerable both in number and variety. The finds also included 30 iron-spear-heads and 25 pots and urns of different types. The objects which can be assigned to the Roman period have not been very numerous or unusual, with the exception of some pieces of pottery decorated with

a peculiar phallic pattern not previously met with in the district, though somewhat similar decoration is recorded from Corbridge. A few unimportant finds of mediæval times were included in the collection exhibited.

Mr. E. Thurlow Leeds added some notes on the bracteate and the silver brooch.

MICROSCOPICAL.—*March 15.*—Mr. H. G. Plimmer, President, in the chair.—Dr. Ralph Vincent gave a lantern demonstration on 'Some Photomicrographs illustrating the Morphology of the Organisms concerned in the Production of Acute Intestinal Toxæmia in Infants.'—Mr. Nelson described a new piece of apparatus consisting of an objective mount fitted with an iris diaphragm, in which the iris was just clear of the back lens, and its movement was controlled by a collar. He also described some new objectives and eyepieces made by R. Winkel of Göttingen, and contributed a short historical and descriptive résumé of the variable microscope.

The President announced that an advance report on the Rotifers collected by the British Antarctic Expedition of 1909 would be published as rapidly as possible in the *Journal of the Society*, and the first portion of it, dealing with Australian Rotifers, was communicated by Mr. J. Murray, who stated that 46 Bdelloids were collected, bringing the Australian list up to 51 species. There were 7 new species, and 8 others occurred as distinct varieties.

ROYAL INSTITUTION.—*April 3.*—The Duke of Northumberland, President, in the chair.—Mr. J. Devonshire, Mr. G. H. Griffin, Mr. W. E. Lawson Johnston, Mrs. Guy Pym, and Mr. A. E. Reed were elected Members.—The Chairman reported the decease of Prof. J. H. van't Hoff, an Honorary Member, and a resolution of condolence with the family was passed.

ARISTOTELIAN.—*April 3.*—Mr. E. C. Benecke in the chair.

Mr. H. W. Carr read a paper on 'The Theory of Psycho-physical Parallelism as a Working Hypothesis in Psychology.' The nature of the relation of mind and body is a metaphysical problem, but the method and scope of psychology depend on the formulation of the problem. The hypothesis most generally adopted in psychology is that mental phenomena form an independent series concomitant with a series of physical changes in the matter of the brain, and that there is a point-to-point correspondence between the two series. The hypothesis was considered as a possible description of fact apart from any metaphysical explanation, and it was held that it involves a direct logical contradiction from whatever point of view it is considered. To an idealist it is impossible, because for idealism there is no independent physical thing to run parallel with the mental existence; and to a realist it is equally impossible, because the independent reality which realism regards as essential to perception is not the physical movement in the brain. The paper was followed by a discussion.

MEETINGS NEXT WEEK.

- Mon. Institute of British Architects, 5.—'Coloured Relief as Decoration,' Mr. R. Anning Bell.
 — Geographical, 8.30.—'On the Plans of the Australian Antarctic Expedition, 1911-12,' Dr. Douglas Mawson.
 Tues. Asiatic, 4.—'The Religions of the Shan States,' Sir J. G. Scott.
 — Institution of Civil Engineers, 8.—Discussion on 'The Improvement of Highways to meet Modern Conditions of Traffic' and 'Recent Development in Road-Traffic, Road Construction and Maintenance.'
 — Institution of Mechanical Engineers, 8.—'Steel,' Lecture I. Dr. W. Rosenhain.
 — Colonial Institute, 8.30.—'The Development of Rhodesia,' Mr. C. W. Boyd.
 Wed. Central Asian, 4.30.—'A Visit to Afghanistan,' Dr. W. Saise.

Science Gossip.

THE PRESIDENT OF THE BOARD OF EDUCATION has appointed Dr. J. S. Flett to succeed Dr. Horne as assistant in Scotland to the Director of the Geological Survey. A graduate of Edinburgh University, Dr. Flett has published many scientific papers, dealing chiefly with the volcanic and metamorphic rocks of the British Isles, and has contributed largely to the memoirs of the Geological Survey, not only on Scotland, but also on Cornwall and Devon.

THE Third Report of the North Sea Fisheries Investigation Committee has just been published as a Parliamentary Paper (post free 6s. 3d.).

Two more small planets are announced as photographically discovered at the Königstuhl Observatory, Heidelberg: one by Herr Massinger on the 22nd ult., and the other by Prof. Max Wolf on the 23rd. The former, however, is near the calculated place of a previously discovered planet, and the latter near that of Wolf's comet, though this is not likely to be visible just yet.

HERR H. E. LAU publishes in No. 4488 of the *Astronomische Nachrichten* the results of measures of a number of close double stars obtained by him last year at the Urania Observatory, Copenhagen.

A NEW investigation has recently been made of that remarkable system by Mr. Joel Stebbins of the University of Illinois, using a selenium photometer on a 12-inch refractor. He has thus detected a secondary minimum when the companion is occulted by Algol. Taking the parallax as 0".05, he infers that the side of the companion nearest that star gives six times the light of the sun, and the other side three times. The companion is probably one-seventh larger than the primary, and the eclipses partial.

AN attempt has been made by M. Charles Nordmann to determine the approximate sizes of some of those stars whose parallaxes and distances are known, by studying the relative intensity of their visible spectra in different positions and the brightnesses of these compared with that of the sun at an equal distance. This would give the intrinsic effective brightness; and on this principle it is generally admitted that stars of the Sirian type of spectrum have a greater surface brilliance than those of the solar type, and still more than those of a red colour. Dr. Crommelin, in an article contributed to this month's number of *Knowledge*, considers that this method gives at least a rough idea of the dimensions of the stars in M. Nordmann's list. Two of these, according to his determination, are much larger than the rest—Aldebaran and β Andromedæ, the diameters of both of which are about thirteen times as great as that of our sun. Capella stands next with a diameter eight times that of the sun. Sirius, notwithstanding its great brilliancy, does not stand high on this list, and probably is not much larger than the sun—a result which is, however, not surprising, as its mass is only about double that of the sun. Arcturus, the brightest star in the northern hemisphere, is probably much larger than the sun; but it is not included in this list. Algol, the variable β Persei, is rated at a diameter 1.3 times that of the sun.

FINE ARTS

The Roman Wall in Scotland. By George Macdonald. (Glasgow, MacLehose & Sons.)

THE ROMAN WALL which Pius built from the Forth to the Clyde has never won so much notice as its southern compeer which Hadrian built from Tyne to Solway. It is, indeed, much shorter—36 instead of something like 72 miles long. It runs through scenery which is rarely beautiful, and has in parts been spoilt by modern

industries. Its remains, the grassgrown *débris* of earthen ramparts, compel admiration from few but the initiated. Its problems provoke few of those controversies which are the lifeblood of popular archæology. That, probably, is the reason why it has been less often and less fully described in print than the Wall of Hadrian. It has, however, found its niche in the great works of Gordon, Horsley, Hodgson, and others. But no one has ever written a real guide-book to it; no Bruce has compiled for it a 'Roman Wall' in quarto and a 'Lapidarium Septentrionale' in folio. Indeed, those very titles show how utterly the Wall of Pius has dropped out beside the Wall of Hadrian.

Now at last a highly distinguished Scottish antiquary, Dr. George Macdonald, comes to help a national monument. In his ample and amply illustrated octavo he sketches successively the literary evidence for the history of the Wall; the organization of the Roman army with special reference to frontier work; the actual remains, first of the Wall, and then of the forts posted along it and possible minor structures; and, lastly, the legionary "distance-tablets" and other inscriptions and remains. A final chapter of "Conclusions" sums up the general result. Over fifty full-page plates and plans and some illustrations in the text accompany the description, and provide, among other things, a picture of every surviving inscription found on the Wall. A map of the whole Wall on the scale of an inch to the mile, with the contours carefully marked, is particularly helpful, though the symbols adopted to denote forts in it are not easily intelligible.

The work is admirably done; it is complete, learned, judicious, and readable. Dr. Macdonald has summed up critically and carefully all that has been written before him about the Wall; he has used the results of the recent excavations at Barhill, Castle Cary, Rough Castle, and Camelon; and he has added much new material due to his own researches. Thus he has both codified and advanced knowledge, and in writing the standard account of the Wall he has included discoveries which most investigators would have thought worthy each of separate publication. We may quote one instance. It is an old puzzle that the "distance-tablets" on the Wall give the distances generally by the symbol MP, which can mean only "thousands of paces," that is, miles; but sometimes they use the symbol P, which would more naturally mean *pedes*, feet. This matter (like many others) had been treated inadequately. Dr. Macdonald has now corrected the texts and verified the provenance of the stones concerned, and has been able to prove that MP actually means "miles" and P "feet," and that the distance was usually reckoned in miles; but at the extreme west end feet were substituted, presumably because only small pieces of work were left over for the various working parties, and the distances looked small and mean if stated in paces.

This is an instance, but only one instance, of the many good things which this volume includes. It is, indeed, an excellent piece of scholarship, and a substantial contribution to our knowledge of Scottish antiquities and history. The year 1911 is still young; but it is already an *annus mirabilis* for Roman Scotland. In January Mr. Curle issued his fine Report on the excavation of Newstead, near Melrose. Now Dr. Macdonald puts the study of the Wall on a scientific basis. At one bound our knowledge of the subject has advanced wonderfully. We wish we could add that the trained intellects, the classical scholars and historians, of the Scottish Universities had helped in this advance, which concerns both ancient history and the national monuments of Scotland.

FRENCH ARTISTS AT THE DUTCH GALLERY.

MR. VAN WISSELINGH'S exhibition of pictures, "chiefly by French Artists of the Last Century," shows that period in a very attractive light. Daumier and Puvis de Chavannes, if we may hazard a prophecy, are perhaps the forerunners of a later school; but Michel and Monticelli, Jongkind, Daubigny and Corot, Fantin and (in the phase in which he is here displayed) Millet, all represent the striving for mysterious quality of paint which was characteristic of the time. This devotion to quality was in France allied to a sounder structural sense than is found in English painters of the period, yet even the Frenchmen, by setting so high a price on the envelope of their thought, lost something of the direct and robust expressiveness which belongs to the greatest periods of art. Of the artists last named, Millet alone realized this danger, and, after an apprenticeship to virtuosity of which we still see traces in the charming *Église de Chailly* (pastel) (4), and still more in the accomplished *Woman on a Bed* (uncatalogued), he joined Daumier as one of the founders of a school of more creative design, which, we hope, is still potentially vigorous. In doing so he sacrificed the elegant craftsmanship he had been at such pains to acquire. He became a clumsy—as the even more *intransigent* Daumier was a positively brutal—painter.

Of Puvis we remember a contemporary critic saying that so long as the paint got where he wanted it, he evidently thought it was of small consequence *how* it got there. His lofty, if sometimes vague, aspiration is well shown in the fine cartoon for his Panthéon decoration *La Vie de Sainte Geneviève* (1), wherein we do not feel, as we should before the complete work, how thin his painting is, judged as painting, compared with that of the best of his contemporaries. When we consider how divided by temperamental differences were Daumier, Millet, and Puvis de Chavannes, we can understand why they had but a limited influence on the compact phalanx of learned practitioners who admired them, but did not for that reason abandon their settled convictions as to what qualities were necessary for "la belle peinture." In face of such union, the three innovators could only frame a minority report, which, as is the way with such reports, will probably be acted on now that the settled convictions of

that day have a little spent themselves in mature productiveness.

It is with these mature products of what we already realize to be an historic school, a closed chapter in the history of art, that the exhibition is mainly concerned, and it must be admitted that, thanks to the selection of an impresario in closest sympathy with the artists represented, their charm is more in evidence than their limitations. Jongkind when not at his best may strike us as something of a specialist—almost a manufacturer—a little more varied than Daubigny; Corot in his more popular works sacrifices so much to merely intrinsic delicacy of transition that the massiveness of his design is frittered away; Fantin is often a dull and laborious imitator of nature; but all three are shown here in works of such perfection that we remain entranced by the wizardry of paint they have at their disposal. Their art, which soothes rather than stimulates, is singularly satisfying, retaining its interest in part by richness of content, but in part by elusiveness of presentation. It is the former doubtless which is the principal factor in the success of Jongkind's *Les Patineurs* (20). Never, surely, was so much learning packed by any other painter in such a slender compass.

Both elements count for something in Corot's exquisite *Ramasseuses d'Herbes* (22) and in Fantin's astonishing copies from Titian (12 and 16), Veronese (11 and 17), and Rembrandt (uncatalogued). The head of the bridegroom from *Les Noces de Canaan* (Veronese, Louvre) (17) is a work of such extraordinary mastery that almost inevitably we think that it must be far finer than the original, merest episode as the latter is in that prodigal ebullition of exuberant initiative. Yet memory is here scarcely to be trusted. Even in the presence of such virile work as that of Veronese, we are apt to be deceived by his straightforward procedure, which disdains, or perhaps ignores, all mystery of handling, and makes its statement as though it were the simplest thing in the world. It is only when we try to reproduce the simplicity of this narrative style that we find that it taxes all the arts of a complex technique to give the gist of its casual suggestiveness. The searcher after subtlety of presentation weaves no mystery more finely spun than is in this unconscious handling of a direct painter.

ESSEX CHURCHES: LEAD SPIRES AND IVY.

IN May, 1904, you were good enough to allow me some space in your columns to call attention to the grievous destruction of the highly interesting old Essex Church of All Saints, Chingford, by the rampant growth of ivy, which had been deliberately encouraged from a false idea of picturesque beauty. Since that date, to my certain knowledge, several other churches in different parts of the kingdom have been partially ruined from a like cause. The baseless notion that ivy actually holds together and protects an old building, or ruins already crumbling, still prevails in certain quarters. Several other Essex churches are now in jeopardy through the reckless encouragement of this devastating parasite.

Permit me to say a few words with regard to the immediate and pressing question of the condition of the tower and spire of Great Baddow church, near Chelmsford. This most interesting fabric is chiefly remarkable for the excellent early sixteenth-century

brickwork of the upper parts and battlements of the aisles and nave, and also of the south porch. Much of the rest of the church, including a good western tower, is of fourteenth-century date; but there is some older rubble walling with Roman tiles. The tower is crowned with a graceful lead-covered timber spire of considerable elevation. About four years ago, when visiting this church, I noticed the great masses of ivy with which much of the tower was burdened, right up to the battlements. I ventured to speak of this to a local wiseacre, expressing a hope that the ivy would be removed or considerably curtailed, for otherwise mischief must shortly accrue. The reply was: "O! Baddow people would never hear of that; we think the ivy by far the most picturesque thing about our old church." My prophecy, I am sorry to say, has now come true. A short time ago a gale of wind turned the weather-vane at the top of the spire half over. This vane is of somewhat unusual size, and bears the date, I am told, of 1828. An architect was summoned in consequence of this disaster. On examining the steeple, he reported, I understand, that the upper parts of the tower were so much damaged by ivy that they would require renewal or rebuilding for several feet. He also reported that the lead-covered spire was generally in a perilous condition. As a result of this report, a proposal is being put forward to cover as much as possible of the expense of these repairs by the demolition of this remarkable spire and the sale of its lead. Lead-covered spires are a special feature of English architecture, owing doubtless to the comparative abundance of lead ore in the kingdom in early days. Such spires not only possess particular value from the ingenuity of their timber construction, and the cleverly diversified way in which the leaden sheets were applied, but they also have no small grace and beauty of their own, particularly in the oldest examples, which have assumed a delightful silver-grey tone from long exposure to the weather.

Beautiful and interesting as are the remnant of these English spires now extant, a far greater number have been ruthlessly destroyed within the last two or three centuries, and not a few within the memory of those now living. Where information is available as to the reason for the destruction of these spires, it is almost invariably found that the cause was a mean idea of economy, in order to use the value of the lead for repairs to other parts of the fabric, or even to apply the money thus obtained to other purposes.

Essex possesses a few small spires or spirelets which are lead-covered, the best of them being at Chipping Ongar; and there is also a certain amount of leadwork in the remarkable composite spire of Danbury. But the church of Great Baddow stands alone in that large county in possessing a true lead-covered spire of any magnitude. So far as my experience goes, this spire may lay claim to that often-misused term "unique," for I do not know of any other example in which the leaden sheets have been applied with so much symmetry after a rectangular fashion, tier above tier. I have not ascended this tower, so as to make any examination of the timberwork of the spire, or to study the lead close at hand. I cannot, therefore, offer any opinion as to its age—whether it is of the date of the tower or possibly of much later reconstruction. But surely all true ecclesiologists and reverent Churchmen, as well as mere architectural antiquaries, will desire that this spire should be carefully preserved. Possibly, by the time this

appears in print, veneration for the past will have prevailed at Baddow and the threatened destruction may have been averted.

On the general question of ivy-threatened Church fabrics, it is surely time that special protests should be raised. I could, if necessary, give a list of some length of churches now in jeopardy through this rank growth. There are churches, or parts of churches, now in imminent peril in different parts of East Anglia, in the Home Counties, in the Midlands, and in the West of England. The old archidiaconal records of Essex show attention to the question. In 1705-7 John Warly, Archdeacon of Colchester, when visiting the churches under his care, not only condemned the trees, bushes, brambles, and elders growing close to the fabrics in various churchyards, but also required certificates, within a limited time, from the churchwardens as to their removal. In various instances he noted small trees growing on steeples, and ordered the roots to be destroyed; and in many cases, as at Walden and Hatfield Peverel, he directed that the ivy should be taken down from the walls, and, further, that the roots should be "stubbed up."

J. CHARLES COX.

SALES.

MESSRS. CHRISTIE sold last Saturday the collection of the late Mr. D. P. McEuen. Drawings: Sir L. Alma Tadema, *Drawing the Curtain*, 1891. Birket Foster, *Gipsies*, 1891; A Highland Cottage, 1571; Roquebrune, 1621. J. M. W. Turner, Rhine Gate, Cologne, 1261. Pictures: T. Faed, A Lowland Lassie, 2831; The School Board in the North, 2361. Erskine Nicol, Steady, Johnnie Steady! 6301; Interviewing their Member, 3671.

C. Fielding's drawing, A View over the Downs, with cattle and sheep, two peasants on a road, on the left, from another collection, fetched 2621.

On Wednesday, March 29th, and the following day, Messrs. Sotheby sold the drawings collected by the late Mr. Charles Butler, the highest prices being obtained for two by Rembrandt, Cain killing Abel, 2301., and A Wood on the Border of a River, 3301.

Fine Art Gossip.

CONNOISSEURS will do well to note that some of Sir Charles Dilke's drawings and pictures will be sold at Messrs. Christie's on Monday next. There are four fine drawings by Blake, and three by Randolph Caldecott in one frame. Among the painters represented are Breughel, Lucas Cranach, Van Goyen, Cornelius and Honorius Janssens, Van der Helst, Lely, Mierevelt, Ostade, Teniers, and Titian.

THERE are also, as might be expected, some good French pictures, including examples by Laquy, Pourbus, Jean Pillement, and Vernet.

At the City of Manchester Art Gallery there is now on view till May 20th an exhibition of water-colour drawings and other works by the Northern Art-Workers' Guild.

A MEMORIAL EXHIBITION of the work of Sir Francis Seymour Haden will be held at the Leicester Galleries, Leicester Square, during the coming season. Owners of fine proofs by this artist are asked to communicate with the organizers of the exhibition, Messrs. Ernest Brown & Phillips, at the above address.

A SOCIETY has been formed to promote a more systematic study and appreciation

of British art of the past. Its aim is to bring into greater prominence the pictures and records of the less-known men and to facilitate the collection of materials in regard to them. The Society is to be called the Walpole Society, as it is intended that it shall continue the historical work begun by Walpole in his 'Anecdotes of Painting.' A Committee has been formed, with Sir Charles Holroyd as Chairman and Mr. A. T. Finberg as Secretary.

MEMBERS are invited to join by paying an annual subscription of one guinea and communicating with Mr. C. Mallord W. Turner, 22, Dawson Place, W. The Committee might well, in addition to the nineteen at present elected, include such prominent critics in this branch of art as Mr. J. L. Caw and Mr. Algernon Graves.

HOLBEIN's organ shutters, painted for the Cathedral at Basle, but removed thence in 1785, have, after some vicissitudes, found a permanent home in the Basle Museum. On the initiative of Dr. Ganz, they have been carefully restored. Holbein's sketch for these panels is also preserved at Basle in the Kunstsammlung.

THE exhibition in the Castel S. Angelo, which forms part of the patriotic celebrations in Rome, and was opened last week, comprises a very interesting section dealing with Roman topography from the fifteenth century onwards. Among the plans and panoramas is the unique "Cartaro" of 1576 and the panorama of very large dimensions made for Paul V., of which only three examples are known. Other notable exhibits are Heemskerck's beautiful drawings of the Septizonium, numerous drawings by Vanvitelli, and a large series of water-colours by Roesler Franz, 'Roma sparita,' a melancholy record of the many changes which have taken place in the Eternal City within comparatively recent years.

A NEW edition of the catalogue of the Wallraf-Richartz Museum at Cologne has lately appeared. The section dealing with the Early School of Cologne before Lochner has been rewritten, and careful statements are made as to the condition of the pictures at the beginning of the nineteenth century, based upon evidence afforded by the old Wallraf catalogues and other records. In view of the sensational discoveries made at Cologne in recent years, this is a welcome addition.

SIR CASPAR PURDON CLARKE, whose death last week is a loss to the world of art, was born in London in 1846, and, after a successful career as an art student, travelled a great deal abroad, notably in Italy, Persia, Greece, Turkey, Syria, Spain, and Germany. On some of these journeys he was entrusted with the organizing of temporary exhibitions and the purchase of various art objects for the Victoria and Albert Museum, his connexion with which began as far back as 1862. In due course he became Keeper of the Art Collections in that Museum; in 1893 he was Assistant Director, and Director from 1896 to 1905. Sir Caspar resigned in the summer of 1905, owing to ill-health, and shortly afterwards took up the office of Director of the Metropolitan Museum at New York, of which about the same date Mr. J. Pierpont Morgan became President. Sir Caspar's term of office witnessed the addition of two wings to the Metropolitan Museum, the introduction of a section of mediæval and eighteenth-century furniture and woodwork, and the acquisition of the Hentschel Collection. The large

sums bequeathed by Mr. Rogers, Mr. F. C. Hewett, and Mr. J. S. Kennedy notably increased the financial resources of the Museum. Sir Caspar, who during the many years he was at the Victoria and Albert Museum was a popular official and an indefatigable worker, gave up much of his time in New York to the holding of Loan Exhibitions, which became a feature of his Directorship.

MUSIC

THE WEEK.

QUEEN'S HALL.—Symphony Concert.

MISS BEATRICE HARRISON was the chief attraction at the extra Symphony Concert last Saturday afternoon. It was her first appearance since she has been studying at Berlin under Prof. Hugo Becker and won the Mendelssohn Scholarship at the Hochschule. She was heard in Édouard Lalo's 'Cello Concerto in D minor, and made one think more of the music than of the performer; in other words, she is a genuine artist. Her future career will be watched with interest. Her tone, style of phrasing, and technique are excellent. At the end of the programme came Brahms's Double Concerto in A minor. In this work Miss May Harrison was the violinist, and the sisters played with skill, and, especially in the slow movement, with true feeling.

QUEEN'S HALL.—Dr. Ethel Smyth's Concert.

CONCERTS of which the programmes are devoted to one composer are apt, even when the music is of the best, to become monotonous. Yet the one given by Dr. Ethel Smyth last Saturday evening formed an exception. From the early days of her 'Solemn Mass in D'—of which the smoothly written "Benedictus" for soprano solo and chorus was effectively sung by Madame Blanche Marchesi, assisted by a small, though excellent choir of her pupils—down to 'The Wreckers,' the lady has been developing and maturing the gifts which nature has bestowed upon her. There have been and still are many composers who write one good work after another, yet without signs of gradual progress, of fuller display of individuality. With Dr. Smyth it is otherwise. The interval between the first and second operas is small: 'Der Wald' was produced in 1901, 'The Wreckers' ('Strandrecht') in 1906; but the music of the latter is riper, has more interest. At the concert under notice the former was represented by the Choral Prologue; the latter by the Orchestral Prelude "On the Cliffs of Cornwall," which in character and clever orchestration appears to us Dr. Smyth's highest achievement. Songs were rendered by Miss Edith Clegg, and the 'Anacreontic Ode

also three numbers from 'The Wreckers' by Madame Marchesi.

At the end of the programme came as novelties three 'Songs of Sunrise'—'Laggard Dawn,' for women's chorus unaccompanied; '1910,' described as a "Medley," for mixed chorus and orchestra, the words of which concern a "current question"; and 'The March of the Women,' also for mixed chorus and orchestra, all three apparently late compositions. The second is clever and amusing. From a purely musical point of view this group offers no advance; they are mere *pièces d'occasion* which will not enhance Dr. Smyth's reputation. The last would have been more suitable for some society concerned with the advance of women; for there the words would have offered full compensation for the tune, of which rhythmical swing is the chief characteristic.

QUEEN'S HALL.—British Musicians' Pension Concert.

THE concert given in aid of the British Musicians' Pension Society last Thursday week was exceptionally fine, and for that very reason there is little to say about it. Dr. Richter was in the vein, and his renderings of the Overture to 'The Flying Dutchman,' Sir Edward Elgar's 'Orchestral Variations,' and Brahms's Second Symphony in D were immensely enjoyed. The audience—unfortunately, not very large—can never for a moment have felt that the conductor was retiring because of any weakness: the beat was firm as ever, and there was a full display of the power, dignity, restraint, also consummate ease, which render his readings as convincing as they are unique. Miss Muriel Foster sang Mozart's "Non più di fiori" from 'La Clemenza di Tito' with skill and brilliancy, Mr. F. Gomez playing the important *obbligato* part for the corno di bassetto, on an instrument specially lent for the occasion by Sir Henry J. Wood; while her tender, yet noble delivery of 'The Angel's Farewell' from 'Gerontius' went straight to the hearts of her hearers.

ÆOLIAN HALL.—M. Alfred Cortot's Recital.

ON Friday afternoon last week M. Alfred Cortot gave his only pianoforte recital this season. His very modern transcription of a Concerto by Wilhelm Friedemann Bach was performed with great sureness of finger and in brilliant style, while his next solo, the quaint 'Coucou' of Bernardo Pasquini, was rendered in the daintiest possible manner. The finest achievement of the afternoon was, however, the interpretation of Brahms's 'Variations on a Theme by Handel.' Only a virtuoso can successfully overcome the technical difficulties, but M. Cortot seemed to treat them all as trifles. His conception of the music was great, and by his splendid command of the keyboard he was able to carry out to the full his intentions.

Musical Gossip.

THE LONDON CHORAL SOCIETY gave Bach's 'Matthew' Passion at their fourth concert at Queen's Hall on Wednesday evening, but not successfully. It was a cold, wintry night, and this may account for the voices of the principal soloists, Messrs. Plunket Greene and Gervase Elwes and Misses Esta D'Argo and Effie Martyn, not being in good order. Anyhow, apart from the earnestness of Messrs. Greene and Elwes, the performance was dull. In the Chorales the choir was good, but the singing in many of the choruses was lacking in light and shade. Then the tone of the spinet was feeble. In quality it was a near approach to that of the harpsichord, but there ought to have been an instrument of the latter kind. Again, there was no body of tone in the accompaniments to some of the solos, for no attempt was made, even on the spinet, to fill up the harmonies. Mr. Arthur Fagge conducted with his usual care.

MR. LEONARD BORWICK gave the second of his two recitals at the Æolian Hall on Wednesday afternoon. He interpreted music of different schools with intelligence, artistic taste, and faultless technique. He is about to leave England for a lengthened tour in America and Australia, countries which should appreciate his abilities as a pianist and sound musician.

AT the concert of the University of Dublin Choral Society held last week, Brahms's 'Requiem' was given for the first time in Dublin. The programme also included Mendelssohn's 'Reformation' Overture.

A BEETHOVEN CHAMBER MUSIC FESTIVAL will be given at Bonn, May 21st–25th, but the title must not be taken literally. On the first day Beethoven's Quartet in E flat (Op. 127) will be played by the Capet-Paris Quartet; on the fourth, with the Klingler Berlin Quartet, the whole programme will be devoted to the same composer; while on the final day his Septet will be given. The other composers who will be represented are Haydn, Mozart, Schubert, Schumann, Glazomoff, Tschaiikowsky, Dvorák, and Brahms.

WE read in *Le Ménestrel* of March 25th that at a recent sale at Berlin a fine autograph letter by Beethoven, written in 1824 to the poet Hans Georg Naegeli of Zurich, only fetched 656 francs, whereas a sheet of music by Haydn was sold for 662 francs.

THE directors of the Queen's Hall Orchestra announce a concert, in memory of King Edward VII., at Queen's Hall on the afternoon of May 6th, that being the first anniversary of his death. On this occasion the programme of the first Memorial Concert, on May 19th, 1910, will be repeated. The instrumental numbers will be: Chopin's 'Funeral March,' Tschaiikowsky's 'Pathetic' Symphony in B minor, Mozart's 'Masonic Funeral Music,' and the 'Siegfried Funeral March.' Miss Edna Thornton will sing "O rest in the Lord," and "God shall wipe away all tears" from Sullivan's 'Light of the World.'

AT the Wednesday evening concert of the forthcoming London Musical Festival, Madame Julia Culp will sing a Monteverdi Aria and Schubert's setting of 'Ellen's Song' from Scott's 'Lady of the Lake.' The programme of the afternoon concert on the next day will include Mozart's Pianoforte Concerto in D minor with Beethoven's cadenzas. Mr. Harold Bauer will be the

pianist, and the conductor Dr. Richard Strauss.

ALEXANDRE GUILMANT, whose death is announced at his home at Meudon, was an organist of worldwide reputation. He was born at Boulogne-sur-Mer in 1837, and, after studying with his father, became organist, when only sixteen, of St. Joseph's in his native town. He studied under Lemmens at Brussels, and attracted notice at Paris by giving a recital on the St. Sulpice organ. In 1871 he was appointed organist of Trinity Church in that city. All through his long life he was most active. In addition to his church duties, he was professor at the Conservatoire, editor of the collection entitled "Archives des Maîtres de l'Orgue," and a composer of great merit for his instrument, his works including sonatas, concertos, transcriptions, &c. He paid visits to Germany, Italy, and even America, everywhere giving recitals with success. To this country he was a frequent visitor. Guilmant was held in high esteem by all who knew him.

THREE cycles of the 'Ring' will be given in French at the Paris Opéra during June, on the following dates: the first on the 10th, 11th, 13th, and 15th; the second on the 17th, 18th, 20th, and 22nd; and the third on the 24th, 25th, 27th, and 29th. The conductors will be Felix Mottl and Arthur Nikisch for the first and third cycles, but no one is yet named for the second.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	London Symphony Orchestra, 3.30, Palladium.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
MON.	London Symphony Orchestra, 8, Queen's Hall.
—	Walenn Quartet, 8.15, Æolian Hall.
—	Miss Alice Mandeville's Vocal Recital, 8.30, Bechstein Hall.
TUES.	Mr. Leon Rains's Vocal Recital, 8.15, Bechstein Hall.
FRI.	Crystal Palace Concert, 3.30.
—	Royal Choral Society ('Messiah'), 7, Albert Hall.
—	Sacred Concert, 7.30, Queen's Hall.

DRAMA

THE WEEK.

WYNDHAM'S.—*Passers-by: a Comedy in Four Acts.* By C. Haddon Chambers.

ALL things considered, this is a delightful play. But it is the accidentals which are its striking feature and give it the appearance of being something much out of the ordinary; and when at the end of the story we look back to its beginnings, we observe with admiration and considerable amusement the cleverness with which the author has masked what turns out to be an appeal to conventional sentiment.

He starts so freshly and brightly that we fear in the midst of our pleasure that what he is offering is too good to last. So it proves. Yet it is strangely good for a while—as good as 'The Tyranny of Tears' at its best. Sprightliness of wit, stagecraft, fertility of fancy, skill in characterization of the normal kind—these gifts Mr. Haddon Chambers has often shown, but in 'Passers-by' we find the promise, and at first the provision, of even more. Types not usually presented on the boards are brought to

notice, and set talking in odd association; the hero behaves towards social inferiors and in awkward situations with a rare geniality and a good humour; and when the curtain falls on the first act we are agreeably conscious of having come into contact with what closely resembles originality.

True, just before the conclusion of the act the playwright strains what he has called the long arm of coincidence to little short of breaking point. That a young governess whom the hero loved and wronged years before should be taking shelter from the fog on his doorstep and be asked indoors because he is in the mood for indiscriminate hospitality requires a number of suppositions which are far from plausible. When we learn that the girl is the mother of a boy of whom his father had never heard, while Peter Waverton himself is engaged to be married, hopes of witnessing a play that shall run off the beaten track are sensibly damped.

But there has been so much to be grateful for that our spirits rise again. Certainly the picture of the rich young man of leisure stumbling on a feast which his valet is giving a cabman at his expense, and resolving, after a preliminary explosion of annoyance, to have in one or two waifs and strays to entertain his solitude, is distinctly piquant; and when a wastrel named Burns has been dragged in and the cabman has been recalled, the prettiest clash of philosophies results between the conservative views of the flunkey and the Bohemianism of these passers-by. There is much fun, too, later in Burns's spluttering indignation when he has been bathed and reclothed and shaved and is invited to perform housework. But soon we perceive that he and the cabman have been included and are kept among the *dramatis personæ* largely to cover the artifice needed to bring about the sentimental meeting whereon the plot really turns.

Surely enough sentiment begins more and more to usurp the stage, often, however, with scenes that are very true to human nature. Thus the father's first overtures to his child furnish an episode that is as touching as it is charming, and there are passages between the little boy's parents which have an element of surprise or tense feeling that is legitimately effective. But the tone of the play more and more changes as the action proceeds, and fantasy suggesting unexpected developments gives place to problem drama of which the issue can be foreseen. For, though Peter may seem faced with a ticklish dilemma, bound as he is in honour to both women, the child, old memories, and the very independence and pride of the mother all pull one way, and it hardly needs the unsentimental attitude the hero's fiancée is made to adopt towards her engagement to lend the play a bias in the direction of domestic romance.

Mr. Chambers does not manage the happy ending badly, though the device of the loafer's kidnapping of the boy and the scene between the governess and her

rival, and every appearance and speech of Peter's half-sister, who was Margaret's former employer, scarcely escape the reproach of being theatrical; so that though the author's may perhaps be the way to touch "the great heart of the public," we are disappointed by the play's ultimate lapse into conventionality, and the whitewashing of lawless affection.

The charm of Mr. Gerald du Maurier's personality and well-bred manner enables him to skate over Peter's many embarrassments with a gracefulness and a tact that never seem at a loss. Miss Nina Sevensing in her handling of the fiancée's scenes shows a notable advance alike in the art of comedy and emotional power. Miss Irene Vanbrugh, whom it is a pleasure to find no longer condemned to interpret the vagaries of the smart sinner, acts as the unmarried mother with a pathos that is all the more affecting because it is allied with womanly dignity and self-restraint. The half-witted loafer of Mr. Heggie; the cabman made so bluff and hearty by Mr. Shelton; the valet, half-deferential, half familiar, of Mr. Gayer Mackay, and not least the natural and self-possessed child of Miss Renée Mayer, are all impersonations which should help Mr. Chambers to a decided and well deserved success.

'WILLIAM HUNNIS' AND THE REVELS OF THE CHAPEL ROYAL.'

April 4, 1911.

I MUST thank you for a kindly review of my lately published book in your last issue. I would not have referred to the minor strictures on some of the details, but for a suggestion made that I allow my personal views to colour my statements of facts in two matters concerning Mary Tudor. As this suggestion has appeared before in your columns, I think you must allow me emphatically to contradict it. I never form my opinions until *after* I have found my facts on which to build them. Your reviewer asserts that Mary was not "made Princess of Wales." A cursory study of the printed Calendar of 'Letters and Papers of Henry VIII.' at the Record Office will show that she *was* entitled so; and, if the search is carried through manuscript sources, much cumulative evidence may be found. It is true that she had no *patent* granted to the office. Her father apparently exercised his autocratic royal prerogative and nominated her to the dignity; as he disgraced her by the same despotic power on his divorce. But if *she* had no patent, her officials *had*. There is no need to multiply examples, but take for instance Patent 25th May, 18 Hen. VIII. p. 1, M. 10, "to Walter Devereux, Lord Ferrers of Chartly, to be Seneschal, Steward, and Chancellor, &c., to "our most dear firstborn Mary, *Princess of Wales*," for life. (This was voluntarily surrendered to Mary herself in the first year of her reign.) Also the patent to John Russell (Chancery Warrants, ii. 575), June 16th, as "Secretary and Clerk of the Signet to the Princess in her principality of Wales, Worcester, Hereford, Gloucester, Chester, Shropshire, and the Marches of Wales." There she kept her royal state, and held her Council. Lord Ferrers wrote to a nobleman, "when you were admitted President to the Prince's Council in the Marches of Wales,"

&c., about the privilege that all Welsh cases should be heard in Wales, not in Westminster.

Neither had I any preconceived "views" about Mary's statute referred to. She knew that Stephen and John had usurped the place of the rightful heirs because they were women, and she hastened to set it on the Statute Book that sex in itself was no ground for political disabilities; that a *Queen* should enjoy all privileges granted to a *King*. The statute may be read anywhere.

In regard to Coverdale, I cut out much of my work on the Psalms lest it should overweight the beginning of the book, but I think that Coverdale was too fully occupied with Bible, Testament, and title-pages to think of anything else till after 1539. He had to fly the country in 1540; he became accustomed to the German Psalms then, and though he does not say so much, his own are but translations of them. His phrases resemble some of those of the Wedderburnes, and as Coverdale married the sister of Wedderburne's special friend, it is not too much to suppose that, he knew of their renderings early. Prof. A. J. Mitchell, in 'The Wedderburnes and their Work,' gives reasons for believing there was an earlier edition of their Psalms than the one which has come down to us. And Coverdale's publication was undated.

I did not attempt to give any date to 'Roister-Doister.' I only showed that the writer in the 'D.N.B.' and others who decide the date because it was alluded to in Thomas Wilson's 'Art of Rhetoric' did not take the trouble to find out that the reference did not appear until the *third edition* of 1553, so nothing could be based on that.

In regard to my Bibliography, it must not be forgotten that I completed it and my book twenty years ago, and had read my paper before the Bibliographical Society was founded. I might have gone through all the work again when I sent it to the press, but I did not, and must bear the blame of incompleteness, common to early workers.

CHARLOTTE CARMICHAEL STOPES.

Dramatic Gossip.

At the Coronet Theatre, Notting Hill, a welcome series of revivals of the Gilbert and Sullivan operas is now being given by the D'Oyly Carte Principal Répertoire Company. On Tuesday last 'The Mikado,' with the veteran Savoyard Mr. Henry A. Lytton in the part of Ko-ko, drew a crowded and enthusiastic house. Mr. Lytton's recent excursions into musical comedy have not impaired his sense of Gilbertian seemliness, and his performance, largely on the lines of Mr. George Grossmith's, was completely in the spirit of the text. Mr. Fred Patrick was excellent as Pooh-Bah; and the Yum-Yum of Miss Marjorie Stone proved not unworthy of her distinguished predecessors in the part. The work of the chorus was especially good, and Mr. François Cellier, as in other days, conducted. Encores, however, seemed to be too readily granted, and we doubt whether there is justification for embellishing 'The Flowers that bloom in the Spring' with orchestral vagaries suggestive of the music-hall.

THE season is to be continued for a further two weeks, terminating on the 22nd inst., and the operas selected include 'The Pirates of Penzance,' 'The Princess Ida,' 'H.M.S. Pinafore,' 'The Yeomen of the Guard,' and 'The Gondoliers.' It is noteworthy that, in the case of 'The Mikado'

at least, no signs of wear are as yet apparent, book and music alike showing that indifference to the flight of time which constitutes the classic, and it is matter for satisfaction that, to judge from the large and appreciative audiences, a considerable body of playgoers still take a keen delight in both.

A CORRESPONDENT writes:—

"The new four-act play 'Mixed Marriages,' by Mr. St. John Irvine, which was produced last week at the Abbey Theatre, Dublin, is a vivid and trenchant study of life in the North of Ireland. As its title indicates, it deals with a question which is a burning one in Ireland to-day, and the 'argument' is presented by the author through his characters with singular force. On the one side we have John Rainey, a Belfast Orangeman, whose religious animosity, tempered for a while by the desire to serve his fellow-workmen, bursts into fury when he learns that his son is going to marry a 'Catholic.' On the other side is his homely wife, with her mother-wit and common sense, vainly strives to mitigate his wrath. In the end the problem remains unsolved, and the curtain falls on a scene of riot. The play is one of the best which the Abbey Theatre has yet produced."

THE annual meeting of the German Shakespeare Society will be held at Weimar on the 23rd inst. The well-known actor Prof. Ernst von Possart will deliver the Festvortrag on 'Der Stil der Darstellung und die Aufgabe der Schauspielkunst.' In the evening there will be a performance of 'As You Like It' at the Court Theatre.

MESSRS. BELL'S BOOKS.

Some Opinions on WILLIAM PITT AND NATIONAL REVIVAL.

By DR. J. HOLLAND ROSE.
Illustrated. Medium 8vo, xii-632 pp. 16s. net.

Mr. HILAIRE BELLOC in the *Academy*.

"Dr. Holland Rose's monograph is as thorough a piece of work as one can desire; and in nothing will the reader find it more satisfactory than in its just emphasis upon the reformer that was in Pitt; a reformer in spite of, perhaps betrayed by, occasional lapses from judgment which were discoverable in him during these years.....The whole passage is a fine piece of modern historical writing, in its research, its guise of evidence, and its neutrality. It is also a first-rate piece of controversy, excellently distinguishing between the balance of witnesses when their statements are combined and the acceptance of evidence from one witness or from another."

Mr. J. L. GARVIN in the *Observer*.

"Dr. Holland Rose established a high reputation at once by his vigorous and solid life of 'Napoleon,' but he has commenced what will evidently be a far more important achievement.....We regard the present volume as one of the foundation books of English historical writing.....Dr. Holland Rose's pages are full of wise reflections, permanently valuable to students of political method."

Mr. THOMAS SECCOMBE in the *Daily News*.

"As a contribution to the understanding of the one epic page in modern history, the present work, by reason of its scholarship, its impartiality, and its artistic restraint, establishes the author's position once and for all as a serious historian of the first rank."

The 'NATION.'

"Dr. Holland Rose has devoted so much time, care, and talent to the biography of Napoleon, that his long expected life of Napoleon's great opponent has been awaited with keen interest and curiosity. The first of the volumes in which he is to describe Pitt's career from the documents now available will not disappoint the hopes of his readers. It is a very thorough, patient, and scholarly piece of work."

The book which answers all your questions.

WEBSTER'S NEW INTERNATIONAL DICTIONARY

CONTAINING OVER
400,000 DEFINED WORDS and PHRASES.
2,700 PAGES. 6,000 ILLUSTRATIONS.
SIR NORMAN LOCKYER, K.C.B. F.R.S.,

Director of Solar Physics, Observatory, S. Kensington, says:

"I am very deeply impressed with the knowledge, care and thoroughness which have been brought to bear upon its production. It has been necessary for me at times to coin new words. I find them all, but more than this, the fulness and complete accuracy of their definition has surprised me."

On receipt of a post card mentioning the 'Athenæum,' Messrs. Bell will forward a copy of the Illustrated Booklet and specimen pages, which fully describe the "NEW INTERNATIONAL."

London: G. BELL AND SONS, LTD.,
York House, Portugal Street, W.C.

MR. MURRAY'S NEW BOOKS.

FALLACIES AND FACTS.

By Field-Marshal LORD ROBERTS, V.C. K.G. An Answer to Sir Ian Hamilton's 'Compulsory Service.' 2s. 6d. net.

IRISH AFFAIRS AND THE HOME RULE QUESTION.

A Comparison of the Attitude of Political Parties towards Irish Problems. By P. G. CAMBRAY. With an Introduction by the MARQUESS OF LONDONDERRY, K.G. Demy 8vo, 3s. 6d. net.

JOHN VERNEY.

By HORACE ANNESLEY VACHELL, Author 'Brothers,' 'The Hill,' &c. 6s.

In 'John Verney' Mr. Vachell gives us a vivid picture of the political life of to-day, introducing the characters of 'The Hill,' and the same theme, the eternal struggle between good and evil. As in 'The Hill,' John Verney wrestled with Scaife for the friendship of Caesar Desmond, so in this book a similar struggle for the love of Sheila Desmond, Caesar's sister, is set forth. How the fight ends, it would not be fair to tell. Mr. Vachell has written no more powerful or thrilling love-story than this.

CROOKED ANSWERS.

By PHYLLIS BOTTOME (Author of 'Raw Material,' 'The Imperfect Gift') and HOPE DE LISLE BROCK. 6s.

'Crooked Answers' is a letter-book describing the winter adventures of two girls abroad; one in the High Alps and the other in Italy. It deals with the special opportunities and experiences of hotel life and the many humorous contretemps which occur under such circumstances. This story is told not only through the girls' own letters, but through the correspondence of various leading characters among their acquaintance.

THE DOWNFALL OF THE GODS.

By Sir HUGH CLIFFORD, K.C.M.G., Author of 'Studies in Brown Humanity,' 'Heroes of Exile,' 'Further India,' &c. 6s. [Ready next week.]

The scene is laid at Angkor, the capital of the great Khmer Empire. The novel relates the life-story of Chun, a hewer of stone and the unacknowledged son of one of the Brahman rulers of the land. The book tells of Chun's love for a Woman of the Temple, who leads him to the discovery of mysteries closely guarded by the Brahmins. Inspired by her, and infuriated by these revelations, which shatter the myth that so long has held the souls and the bodies of his fellows in bondage, Chun leads a revolution with results which are here set forth.

REPTON.

By Lieut.-Colonel F. KANE. 6s. [Ready next week.]

A tale of the intriguing reign of Anne when political uncertainty turned the friends of to-day into the enemies of to-morrow, when no man quite knew if his property might not be more secure by following the fortunes of the Stuart dynasty than by upholding the Hanoverian succession. The much vexed question of how far the Jesuits made use of lay help (or crypto Jesuits) to push their own interests is examined under the light of circumstantial evidence.

THUCYDIDES AND THE HISTORY OF HIS AGE.

By G. B. GRUNDY, D.Litt. With 2 Maps. Demy 8vo, 16s. net.

This volume contains a great deal of new matter with reference to Greek history in the sixth and fifth centuries B.C. such as can hardly fail to introduce considerable modifications into the current views of the history of this period. The results will be interesting to students of Greek history. The book also contains studies on the vexed question of the composition of Thucydides' work, as well as on the art of war in the time of Thucydides and on the strategy of the Peloponnesian War prior to the peace of 421 B.C., a subject which has hitherto been very inadequately treated in modern histories of Greece.

LITERATURE

Dulce Domum: George Moberly (Headmaster of Winchester College, 1835-1866; Bishop of Salisbury, 1869-1885), his Family and Friends. By his Daughter C. A. E. Moberly. (John Murray.)

IF it be true that Miss Moberly's reluctance to obtrude family records on the public gaze was overruled by the advice of her publisher, Mr. Murray has added another boon to those which the great Sosii of Albemarle Street have bestowed continuously on English literature during a hundred years. While to Wykehamists her book will be sweeter than honey in the mouth, its wide range of interest and felicity of handling, the remarkable family around which it revolves, and the conspicuous persons whom it introduces to notice will attract the general reader. A pair of richly endowed parents transmit their excellence to seven sons and eight daughters—the boys profusely decorated with academic distinctions; the girls receptive, widely read, linguistic, musical, portraying one after another with crisply fluent pens the events, characters, conversations, presented to them during more than half a century, making thus a volume which careful editing has redeemed from trivialities and protected from indiscretions. Neighbours and intimates of the family were the Kebles, Charlotte Yonge, and Sir William Heathcote; while Mrs. Arnold of Rugby,

Mrs. Gatty, Bishops Selwyn and Patteson, George Ridding, Dean Church, Cardinal Manning, Samuel Wilberforce, and Lord Cardwell, serve to widen the scenic horizon by occasional incursions across the stage.

George Moberly, head of the family, was for thirty years Head Master of Winchester, and died Bishop of Salisbury. A sickly boy, he sustained with difficulty the barbarities incident then and long after to a Winchester schoolboy's life, was looked upon by boys and masters as incapable, and acquiesced submissively in their verdict. Escaping New College, he went up to Balliol, just then beginning to take the place of Oriel in hegemony among Oxford colleges. Here he sprang at once into life, felt conscious of new powers, was thought much of by those around him, gained a First Class, and became Fellow and Tutor of Balliol. Notable figures pass through his lecture-room: an audacious Manning brings unprepared work into class, and hotly argues in defence of his lame construes; Tait, a shy raw Scottish lad, is kindly patronized by his Tutor, and placed in a good College set: forty-three years later, when on Moberly's consecration Tait as Archbishop preceded his old Tutor in the Westminster Abbey pageant, he turned and whispered, "This is a reversal of things." In days when Queen Calliope had not come down from heaven, Moberly ranked at Oxford as a finished musician, having a sweet, high, Mario-like tenor voice: "I owed to you music and metaphysics," wrote Cardinal Manning long afterwards. That he had no mean powers in verse his lines on pp. 57 and 150 show; but he attained his highest reputation as a talker; his bright and polished word-play, flashing repartee, quick and unexpected wit, were long remembered as alarming or delightful according to the quality of his opponent. Newman records that when he entered Oriel Common Room as a guest, men said, "Now the lightning will coruscate."

A close acquaintance with Dr. Arnold had kindled in Moberly an enthusiasm for Public School reform; and in 1835 he became a successful candidate for the Head-Mastership of Winchester. With him went to Winchester his lately married wife, some ten years younger than himself. Mary Anne Cokat had lived during her girlhood in the South of Europe, at Leghorn, Palermo, Genoa, Naples. Her father and uncle—the one a commercial magnate, the other an American consul—were admitted into the most exclusive Italian and Sicilian circles; and the young lady's extraordinary beauty, vivacity, and good manners—she tells us that she was carefully instructed to avoid behaving like an Englishwoman—made her a cynosure of society in each of the capitals where she lived. Her reminiscences of this time—of her sumptuous homes, with their artistic decorations within, their oleanders and orange trees without; of the lucent atmosphere by day, the dancing fireflies by night; of balls and entertainments, princely and noble acquaintances—re-

counted to her children in after years, and here by them preserved, form not the least interesting chapter in the book. Through these intoxicating experiences the young lady kept her head, true always to the principles which her Scotch mother, who died when she was thirteen, had impressed upon her. She refused to dance on Sundays; taken to Mass, she persisted in standing during the elevation, until dragged down by her scandalized chaperon; told by an English lady whom she much respected that "nice girls" in England did not waltz, she renounced, to the remonstrating consternation of her countless partners, a practice which she had keenly enjoyed. Her father's second marriage brought the family to England: shocked at first by the change both of skies and of society, she soon became acclimatized; was made as welcome in English homes as in Italian palaces; sat to Wilkie for the beautiful portrait here reproduced; encountered "Mr. Moberly," and after a year's acquaintance married him.

College, cathedral, barracks, furnished good Winchester society; but the Moberlys soon formed an inner circle of their own. The Warden of the College was Robert Speckolt Barter, "a great broadshouldered, genial Englishman," whose goodly bulk and stature typified the grand honesty of purpose, overflowing kindness, and consistent loftiness of character, which dwarfed men far abler intellectually in the presence of this ἀναξ ἀνδρῶν. Of his almost fabulous bodily prowess Miss Moberly relates several anecdotes: will she permit one of them to be slightly amended, as it was told by the Warden to the present writer? The Allied Sovereigns, led by the Prince Regent, were to be decorated in the Theatre at Oxford. The day of their appearance was a holiday; but on the whole days before and after Barter, then an under-master, was due in school. He came out from his classes in the afternoon, walked all night, reaching Oxford for an early breakfast, saw the whole show, dined in Hall at New College, started back to Winchester, walking again all night, and arrived in time for morning school.

The Moberly pair soon found that a retreat was necessary for the summer, and, as the nursery filled, for the children: a large farmhouse was obtained at Hursley, five miles from Winchester. The squire of the parish was Sir William Heathcote, a distinguished Oxford Wykehamist, afterwards M.P. for the University; its vicar was the author of 'The Christian Year.' At Otterbourne, close by, lived Charlotte Yonge, chief among a group of young lady writers whose novels of domestic life, infused with the nascent High Church sentiment, held the field of drawing-room literature till the "golden quill" of George Eliot took their place. These, with certain *minores ignes* of personal, not historic lustre, formed with the Moberlys one family. Keble, whose life has been sympathetically, but never critically considered, stands out here, limned with

frank illustrative touches. He is prophetically described in Wordsworth 'Poet's Epitaph'; of him it was true, as of that modest seer, that you must love him ere to you he would seem worthy of your love. His intimates saw in him the poet, saint, sage, instinct with bright imagination, sublime morality, passionate energy; to strangers or casual acquaintances his almost morbid self-suppression made him repellent, and the effect was deepened by an outside of manner, speech, visage, homely even to plainness. A lady whom he wooed in 1825 rejected him on the score of "ugliness"; and he consoled himself by composing the poem "Why should we faint and fear to live alone?" incorporated afterwards in 'The Christian Year.' His communications with Moberly in this volume are incessant: "Mr. Keble often asks my advice, and sometimes follows it."

The pages which chronicle school life at Winchester during Moberly's long reign will arrest all "old boys" who realize how transformed is the memory, how hateful was often the experience, of those unfledged days: "C'était le bon temps, nous étions si malheureux," says Sophie Arnauld. Outside the school Moberly was never popular. His theology was proclaimed unsound. An English Churchman of the *via media*, measuring his belief and practice by the Prayer Book, he had defended Ward, refused to condemn Hampden, differed from Pusey, differed equally from Tait; but the tone of the Winchester bishop, chapter, diocese, was harshly Evangelical; he smelt in their nostrils of the faggot, was never asked to preach in town or village. Nor was he personally ever popular. He could not suffer fools gladly, and outsiders were afraid of him: the bluff Wykehamist squires, parsons, parents, who saw their ideal alike in the virtues and the foibles of Warden Barter, were alarmed and estranged by Moberly's refined superiority of manner and stinging incisiveness of speech. So the school had ups and downs, at one time dwindling seriously, going up at the last in repute and numbers, to rise under his son-in-law and successor Ridding to the first rank amongst English Public Schools. His old pupils, not a few of whom still survive, looking on Sir Francis Grant's characteristic portrait here reproduced, or haply standing by the canopied niche enclosing his recumbent figure in Salisbury Cathedral, send after him into the Silent Land a chorus of gratitude and love.

Meanwhile the domestic life opens out in a succession of joyous narratives; the seven sons and eight daughters grow up to adolescence. The boys gain distinctions in school and college; one wins the Newdigate, and a large contingent of the family goes up to sit in the Theatre and taste the delights of Commemoration.

Of the girls, four successively take up the tale. Kept strictly under a governess for nine months in the year, they run wild throughout the summer in the spacious

Hursley woods, "living with the birds and butterflies and flowers," listening to the silence of the pines, the midsummer hum, the trill of nuthatch, call of woodpecker or pheasant; sometimes declaiming 'Marmion,' 'Thalaba,' 'Hiawatha,' or 'Sintram,' which they nearly knew by heart, or acting scenes from the Waverley Novels, which they had absorbed almost from their cradles. Moberly used to relate how once, dismounting from an omnibus at his door, he was met by two eager children crying out the good news that the Black Knight had got into the castle; and the youngest child cautioned her sisters in all seriousness not to talk against the *Vehme Gericht* while undressing, lest their beds should be drawn down into the larder. Nor were they *cithara carentes*. Inheriting their father's sweet voice, all had been taught by Dr. S. S. Wesley, cathedral organist and composer, and would sing quartets when resting from their rambles in the woods. The time came when the concerts were broken up, the sisterly link snapped, the idyll brought to an end: love and marriage, which Miss Beale of Cheltenham used to denounce as the set-back to feminine development, swept off five out of the eight sisters; nor, where so many fair young hostages were given, did Death fail to exact his cruel tribute.

Other changes marked the inevitable: the grand old Warden died, chanting like a Christianized Ragnar Lodbrog the 'Magnificat' and 'Nunc Dimittis' with his ebbing breath; the Kebles passed away; the weary Titan of a father exchanged his thirty years' load for a Fellowship of the College (a lucrative sinecure never before so well bestowed), for a small benefice in the Isle of Wight, for a Canonry of Chester, for the Bishopric of Salisbury; dying finally, "as ripe fruit," says Cicero, "is lightly and without violence loosened from its stalk," at the age of eighty-two, and followed three years later by his wife.

Each change brings its own far-reaching influence, its own fund of amusing comment from the facile female pens. We have the lonely Brightstone parsonage, embowered in myrtle and fuchsia, with its dangerous bay which, except as a wreck, no ship entered; the move to Chester, where on the girls' appearance in the Cathedral people said to one another that the Daisy Chain was in residence; the beautiful Salisbury home, and the parents' golden wedding. Conversations of sage elders are boswellized; episcopal transactions become readable as humanized by the feminine mind; and the book ends with an analysis of the maternal character and personality which we can hardly be wrong in ascribing to the initials appearing on the title-page as those of the editing author. To her wise selection not a little of the book's charm is due—its æsthetic sufficingness, its abundant sparkle, its veiled religious feeling; and we end as we began by thanking her for an entertainment picturesque, well sustained, and unusual.

William Pitt and National Revival. By J. Holland Rose. (Bell & Sons.)

DR. HOLLAND ROSE, who has recently shown some disposition to dissipate his energies on periodical literature, has in the work before us produced a connected historical study. The volume, which takes Pitt's career down to the beginning of friction with Revolutionary France, is a highly creditable performance. Dr. Rose has accomplished for the son the task executed by Dr. von Ruville for Chatham, the father. Brilliant sketches there have been of Pitt, notably Lord Rosebery's and Mr. Charles Whibley's; but he has hitherto lacked his exhaustive biographer. We agree with Dr. Rose that Bishop Tomline's 'Life' is not so hopelessly bad as some have contended, but still it is not good; nor can Lord Stanhope's be regarded as other than superficial and invertebrate. Here, however, we get a sober, luminous examination of origins, notably of manuscripts preserved at Chevening and Orwell Park, and conclusions set forth with conspicuous honesty. The value of such a book needs no explanation for all who take interest in the makings of modern Europe, and, for that matter, of Canada and Australia. We trust that Dr. Rose's readers will not be deterred by his length, and they should readily forgive him certain curious inequalities of style. For the most part he writes correctly and with dignity, but here and there he becomes "chatty," and phrases like "to peter out" obtrude themselves. Fortunately such lapses are few, and his tags from Shakespeare, though frequent, are, perhaps, nowadays something like a novelty.

Dr. Rose well remarks that Pitt took more after his mother, a Grenville, than his father, and he produces a letter from the Pitt MSS. written by the boy at the age of eleven, and showing what an effort it must have been to him to live up to the awesome Chatham:—

"From the weather we have had here I flatter myself that the sun shone on your expedition, and that the views were enough enlivened thereby to prevent the drowsy Morpheus from taking the opportunity of the heat to diffuse his poppies upon the eyes of the travellers."

We need not follow Pitt through his residence at Cambridge, where he should have lost, but did not lose, his stiffness; or through his political apprenticeship and early efforts at Parliamentary reform. Dr. Rose passes over his relations with Shelburne rather rapidly, and hardly faces the problem why Shelburne, having suggested Pitt as Prime Minister in February, 1783, should have been deliberately excluded by Pitt from the Cabinet in the following December. "To clear Pitt," as Lord Rosebery has observed, "one must understand Shelburne," and the universal distrust he inspired. Meanwhile the young statesman had bided his time; had allowed the Mezentian alliance of Fox and North to be brought about, and

had tripped them up over their India Bill. Dr. Rose retells the familiar story with spirit, and duly notes that, although George III. came forth victorious from his long struggle with the Whig houses, the Cabinet thenceforth obeyed not him, but the First Minister.

Pitt's financial measures and his plan for conciliating Ireland—the most enlightened, perhaps, of his ideas—receive satisfactory treatment from Dr. Rose. The survey of his conduct at the time of the impeachment of Warren Hastings does not please us so well. We find Malleon's 'Life of Warren Hastings' given as an authority, but not the all-important 'Selections from the State Papers preserved in the Foreign Office, Government of India, relating to Warren Hastings,' which Mr. G. W. Forrest has given to the world. The case against the Governor-General, accordingly, seems to suffer from over-statement, and Pitt's change of front escapes rather lightly. We fully concur with Dr. Rose in his argument that it was not an act of treachery. The humanitarian sentiments of Wilberforce influenced Pitt not a little, and he experienced great difficulty in mastering the facts, which Hastings, unfortunately for himself, presented in none too intelligible a shape. But Pitt cannot be acquitted of taking the line of least resistance, and by so doing of inflicting obloquy and impoverishment on the saviour of India.

Dr. Rose produces some fresh evidence on the Regency crisis which is not without interest. His theory that the madness of George III. was due to the misconduct of the princes appears a trifle fanciful, and fails to take into account the attack or attacks soon after the King's accession. Overwork and underfeeding—the spare diet being due to a fear of becoming unwieldy like his uncle the Duke of Cumberland—are more probable causes. At the same time the misconduct of the Prince of Wales and the Duke of York may well have precipitated the mental breakdown. But the points that emerge from Dr. Rose's new documents are the courage with which Pitt faced a situation that might have brought about his political ruin, and the ingenuity with which he played for delay. He wrote to the Marquis of Buckingham:—

"I have not half time [*sic*] to thank you sufficiently for your very kind and affectionate letter, and for the communication thro' Grenville. You will learn from him that our last accounts begin to wear rather a more favourable aspect, tho' there is not yet ground for very confident hope. There is certainly now no danger to his life, but the other alternative, which there was some danger to apprehend, was, if possible, more distressing. It seems now possible that a total recovery may take place, but even on the best supposition there must still be a considerable interval of anxiety...."

Foreign affairs are handled in this volume with considerable skill. They are, of course, the side of politics to which Dr. Rose has mainly devoted himself, and not always with success. But here

he shows a welcome ability in elucidating and co-ordinating the factors in a diplomatic tangle. He is almost French in his clearness. The chapters devoted to Pitt's foreign policy are much superior to the corresponding estimate in Lecky's 'History.' In the first place, Dr. Rose has investigated the Foreign Office papers much more thoroughly than Lecky, and has devoted particular attention to German sources, whereas the rival historian neglected them. Secondly, Lecky started with a bias against Pitt; and, thirdly, he investigated diplomacy rather because it had to figure in his work than because he took much pleasure in it. But to Dr. Rose British representatives abroad are real people; he sets them all on their feet—the able but unfortunate Ewart, the flamboyant Elliot, and the rest of them. He brings out the quixotism of Gustavus III. and the duplicity of the Prussian minister Hertzberg, who might have stepped out of the pages of Machiavelli or Philippe de Commines. Above all, when evidence fails him Dr. Rose does not go beating the fields for motive. "From causes which are obscure" is a refreshing phrase which he is not ashamed to use. That is the true way to write history.

On the whole, it is an inspiring story that Dr. Rose has to tell, justifying his association of "national revival" with Pitt's happier days. The young Minister found his country isolated and humiliated. By cautiously waiting on the chapter of accidents—and surprising accidents some of them were, notably the bold stroke for liberty committed by the Princess of Orange when she flouted the Estates—he succeeded in building up the Triple Alliance of Great Britain, Holland, and Prussia. That arrangement maintained the equilibrium of Europe against the unscrupulous ambition of Catharine of Russia and her dupe Joseph of Austria. Dr. Rose conclusively proves that the policy was Pitt's, not that of the Foreign Secretary, the Duke of Leeds; the drafts of the most important dispatches are in the Prime Minister's handwriting, and no material alterations were subsequently made. At the same time Leeds had good, though not great qualities: he understood men, and was jealous for the honour of England. Dr. Rose inspires vitality into a statesman whom historians have hitherto left a shadow.

This volume closes with the discomfiture of Pitt by the cunning of Catharine and Hertzberg. He suddenly found himself on the brink of war with Russia and recoiled, justifying the Empress's witty sneer, "Dogs that bark do not always bite." With tears in his eyes, Pitt told Ewart that it was the greatest mortification he had ever experienced. How it all came about we will leave Dr. Rose to relate. There is much force, however, in his final contention that Pitt cannot be blamed for failing to foresee that the rise of combative democracy in France had rendered obsolete the doctrine of the balance of power, on which the "federative system" was built.

Creative Evolution. By Henri Bergson. Authorized Translation by Arthur Mitchell. (Macmillan & Co.)

M. BERGSON is, of all the stars that have in these latter days appeared in the philosophic firmament, the only one whereto the first magnitude is accorded by almost universal consent. Hence it was time that an English translation of his masterpiece 'Évolution Créatrice' should be available for the benefit of those who, by reason of their insularity, must perforce abstain from the delight of appreciating a diction which is organically one with the thought it enshrines. Though faced, however, with the impossible task of reproducing a synthesis of outward form and inward meaning as individual as that which unites body with soul, Mr. Mitchell has nevertheless contrived a version which in its own way is both live and satisfying. We are even grateful to have the chance of withdrawing out of range of the glamour, the personal magnetism, with which M. Bergson's use of his mother tongue is instinct. "Will he translate?" is, to be sure, no fair test to impose on a poet. But, unless we agree with M. Ribot's cynical dictum that "metaphysicians are poets who have missed their vocation," we have a right to expect the high-priest of philosophic evolutionism to proclaim a truth that will prevail independently of its setting.

What is "the true nature of life, the full meaning of the evolutionary movement"? Such is M. Bergson's problem. His answer is at once critical and constructive, but critical first. The very threshold of philosophy is the greatest stumbling-block that it presents. Philosophy seeks by way of thought to be adequate to life; yet life is not thought, but transcends it as the whole transcends its part or aspect. How, then, are we to avoid the vicious circle, and think our way past the limitations of thinking? Paradoxical as it sounds, such a method must lead to the genuine understanding of life, or else no method can avail us. M. Bergson, therefore, sets himself at the outset the critical task of liberating real thinking, that is concrete and vital, from apparent thinking, that is merely abstract and logical. Logical, he argues, means geometrical. His destructive thesis, as it may be termed, is

"that the human intellect feels at home among inanimate objects, more especially among solids, where our action finds its fulcrum and our industry its tools; that our concepts have been formed on the model of solids; that our logic is, pre-eminently, the logic of solids; that, consequently, our intellect triumphs in geometry, wherein is revealed the kinship of logical thought with unorganized matter, and where the intellect has only to follow its natural movement, after the lightest contact with experience, in order to go from discovery to discovery, sure that experience is following behind it and will justify it invariably."

Now M. Bergson is not alone amongst philosophers in perceiving that a certain

kind of logic—the so-called logic of identity, with its moulds that are too narrow, and above all too rigid, to contain the living, so that if we force it into them, they crack—can rise no higher than the use of the category of mechanism. So far he is at one with Hegel, though his refutation of mechanism by a consideration of real duration, namely, “the continuous progress of the past which gnaws into the future and which swells as it advances,” is entirely his own. Like Hegel, again, he turns to the antithetic category of teleology to see if it can redress the balance of the universe, but finds it too, taken by itself, a mere point of view, a source of half-truths. Neither of “the two ready-made garments that our understanding put at our disposal, mechanism and finality,” yields a fit. At most, when the latter is recut and resewn, it is found to fit less badly than the other. Thus it is futile to try to assign to life an end, in the human sense of the word. This is to think of a pre-existing model, to suppose *more Platonic* that implicitly we possess universal knowledge, that all is given at the start, that the duration of life which “gnaws on things” is an illusion masking a motionless reality. On the other hand, life involves an “original impetus,” which breaks up immediately, however, into independent lines of evolution. The diverse tendencies have a common source rather than a common object in view; there is harmony in the universe just in so far as there is “complementarity” of an undesigned sort between them. Thus does M. Bergson reshape the classical argument, from design—by representing it as an undesigned design, a design that can be foreseen only after the event of its realization. So much for the critical side of the book—the analysis of the two great illusions to which the understanding is prone.

The constructive task, then, to which M. Bergson is committed is to transcend the point of view of the understanding, or at least, by bringing the understanding back to its generating cause, namely, evolving life, to discipline it in such a way as to enable it itself to transcend itself. Its first lesson, obtained by a review of biological process in general with the aim of contrasting the intellectual type of process with the non-intellectual, and especially the instinctive, must be that “the intellect is characterized by a natural inability to comprehend life.” It is at ease only in the discontinuous, the immobile, the dead. Its special gift is that of making omelettes by breaking eggs, or, to quote M. Bergson’s own more stately language, “the unlimited power of decomposing according to any law and of recomposing into any system.” Contrast intellect with instinct, man the lord of the soil with the ant, the lord of the subsoil. Whereas the man’s faculty is that “of making and using unorganized instruments”—for he is the tool-making animal *par excellence*—the ant’s is “a faculty of using and even constructing organized instruments.” The man treats

everything mechanically, the ant proceeds organically. “If the consciousness that slumbers in it should awake, if it were wound up into knowledge instead of being wound off into action, if we could ask and it could reply,” instinct would reveal life in its true inwardness. Intellect, on the other hand, looks only at outsides in their “spatiality” and “distinct multiplicity.” Undivided continuity and creation escape it. Yet these form the very essence of evolving life.

If, then, the thought of man would, by self-discipline, rise to a higher plane, it must engender new categories—nothing less. For instance, as regards space, “we must, by an effort of mind *sui generis*, follow the progression, or rather the regression, of the extra-spatial degrading itself into spatiality.” We must acquire the “feeling” of extension. And this is only a beginning. We must, in general, become more self-conscious, must feel ourselves into the world of things. Our cosmology must be a “reversed psychology”; for the Absolute “is of psychological and not of mathematical nor logical essence.” To think real duration we must install ourselves within it straight away. Our object is to advance with the moving reality. Now the mechanism of our ordinary knowledge is of a “cinematographical” kind. Action is discontinuous, like every pulsation of life; therefore knowledge, being essentially practical, is discontinuous also. But our only chance of realizing the true nature of change is somehow to perceive it from within, so as to feel how there is unceasingly being created in the heart of it something unforeseeable and new. To intellect there must be added intuition. Since we are limited to taking instantaneous views of this flowing reality, scientific knowledge must appeal to another knowledge to complete it. Making a clean sweep of the symbols of science, the philosopher will without dismay see the world of mere matter melt back into a simple flux, and will seek real duration there where it is still more useful to find it, namely, in the realm of life and of consciousness. We shall have grasped them in their essence when we have adopted their movement, when our philosophy as creative effort makes live contact with the creative effort that is the evolution of the world.

Essays by Henry Francis Pelham. Collected and edited by F. Haverfield. (Oxford, Clarendon Press.)

“THIS VOLUME,” writes Prof. Haverfield in his Preface,

“contains thirteen papers on Roman History which Prof. Pelham published at various times and in various places, together with three which he left in manuscript and which seem worthy of print. . . . It is a collection of papers which, though written for the most part several years ago, are nevertheless—so far as I can judge—still valuable and likely long to remain valuable to students

of Roman History. They fill what would otherwise be void places in our English literature of the subject. They do not deserve to be sunk in that ocean of modern periodicals which is at once Chaos and Lethe.”

In this book, then, of some three hundred pages, and in the short, dry, precise, and valuable ‘*Outlines of Roman History*,’ we have the whole of the published work of one of the three great English masters of our generation in the domain of Roman history. Pelham died in his sixty-first year, Mommsen in his eighty-sixth. Even so, compared with the ‘*Gesammelte Schriften*’ alone, the English scholar’s literary output seems sadly meagre. The claims which the College Tutorial system at Exeter made on the best working years of his life, his administrative zeal devoted to University and other objects, the duties devolving upon the President of Trinity with the sore handicap of bad eyesight in his later years—all these made bitter encroachment upon the time of the student and Camden Professor. Yet such was his splendid optimism to the very last that but a few months before his death he left the present writer with the impression that at least a great part of his projected History of the Early Principate was virtually ready for the press. Scarcely anything of this History, it seems, has been found among his papers which an editor so devoted to his memory as Prof. Haverfield can use or publish. The influence of the teacher is beyond appraisement. It defies such standards of the measure of the value of life. It is well to remember this in these days when the very word “research” is becoming a shibboleth.

The sixteen papers in this book differ greatly in length, and to some extent in worth. They are “arranged in consecutive chapters following the chronological order of their subjects.” Probably this is a better arrangement than that of the chronological order of their writing, though the latter system might seem to those interested in the study of a great historian’s development of greater attractiveness. Pelham’s qualities, however, of incisiveness, thoroughness, and lucidity were stamped on his work from the first, and admitted little development. The earliest of these papers was published 35 years ago; the last in the year before his death. The majority have been disinterred from the fugitive numbers of learned periodicals. Would Lethe, but for Prof. Haverfield’s loyal care, have overwhelmed contributions to the study of Roman history of permanent value?

The first paper in the book, itself one of the earliest written, may perhaps be cited as a test case. In an article on ‘The Roman Curia’ in *The Journal of Philology* for 1880 Pelham contended that the Curia was originally a division of land among the Sabine warriors, the result of conquest, at once “a military, a territorial, and a political division of the *populus Romanus Quiritium*.” That it stood in relation of any kind to *gens* or family he denied. Later the Curia lost

its old patrician associations and all its military and political importance, and became more and more closely associated with the *plebs urbana* and their old agrarian festivals, the Fornacalia and Fordicidia. Presently assimilated to the Tribes in number, its connexion with the Tribus was so strengthened that it became little more than the religious aspect of the latter, "supplying the religious element which had always been wanting to the Tribes."

Thirty years of inquiry have left the main contentions in this paper untouched. Certain modifications doubtless are needed. The statement made on Paulus's authority that the number of the Curiae was raised to 35 seems now more doubtful. The explanation of the Fornacalia would hardly satisfy Mr. Warde Fowler, a recognized ultimate authority to-day on topics such as these. Yet a comparison of this paper with, e.g., Gervasio's treatment of the Curia in Ruggiero's 'Dizionario Epigrafico' in 1907 not only strengthens confidence in the conclusions of the Oxford historian, but also illustrates in marked fashion the Englishman's superiority in force and "grip."

Again, in this paper, as elsewhere, Pelham's love of illustrating his subject by parallels from modern or mediæval history shows itself clearly. This is all the more striking in his written work, as such "modernity" was scarcely ever allowed to interrupt the timed and even flow of his spoken words. But here in this book Jews and Saxons, Scots and the Saints of the Catholic Church, the nobility of Savoy and the French *noblesse*, Lord Bute and the Bonapartes, make welcome appearance on the historical stage. On one occasion a few years ago the present writer was standing with the Professor in the quadrangle of Exeter College, watching a fierce struggle raging on the steps of the College Hall. A tide of 150 undergraduates flowing out from a popular lecture on modern history was met by a surging inflowing current of as many undergraduates desiring to "keep Pelham's lecture." The battle raged. "Here at last," said the Professor grimly, "we may see where ancient and modern history meet." It was an impromptu characteristic not only of his ironical humour, but also of his attitude to his own subject.

The reprint of many other papers in the book is welcome. Under the heading of 'Problems in the Constitution of the Principate' the editor has included the paper 'Princeps or Princeps Senatus' (*Journal of Philology*, 1879) and that on the 'Imperium of Augustus and his Successors' (*Journal of Philology*, 1888). The result of both papers is that Merivale's earlier views are generally discarded, and Pelham's meet with common acceptance. No later evidence has been forthcoming to dispute their validity. Again, the conclusions concerning Claudius and the chiefs of the *Ædui* and that Emperor's relations with the Quæstura Gallica (*Classical Review*, 1895 and 1896) have now passed

into accepted commonplaces of the Oxford Schools.

Still more valuable are papers VIII., IX. and X., which deal with the Roman frontier system. The first of these is a brief general sketch, published in 1895. The second, a detailed exposition of the Limes in Southern Germany, originally appeared in the *Transactions* of the Royal Historical Society for 1906. Prof. Haverfield has reprinted the article as published, but he has added an illustrative map of the highest merit, greatly superior to that which was issued with the paper in the *Transactions*. The third paper, concerning 'Arrian as Legate of Cappadocia,' was published in *The English Historical Review* for 1896. The chance close association here of the second and third papers suggests a reflection which is inevitable, if heterodox, namely, how great is the advantage in respect of interest (and therefore to some extent in respect of value) which a story based on any literary source has over one founded on information mainly archaeological, eked out perhaps by sentences of irritating brevity and uncertainty. Did Romano-British Antiquities possess even their Arrian as well as their Walls and villas, the interest in them would not be so largely confined to antiquaries. The quality of the material for the history of the Roman frontier system is unpromising; its quantity is increasing with bewildering rapidity. Despite this double disadvantage, inherent in the nature of his subject, Pelham's treatment of it is masterly and of permanent value. Perhaps it is not exhaustive. It is not enough to day to call a frontier "scientific." The term needs explanation as well. Frontiers are "strategic" as well as "scientific." Thus in this very example the Roman Limes on Rhine and Danube is a splendid illustration of the "re-entering" frontier, and may serve as apt illustration of whether it be the weakness or the strength of the type.

Certain of the other papers may be passed over more rapidly. The last three, numbered XIII., XIV., XV., deal with questions of the land. The thirteenth, 'The Imperial Domains and the Colonate,' the Camden Professor's Inaugural Lecture in 1890, establishes a precedent in the management of the Domains in the second and third centuries A.D. for the Colonate of the Codes. The brief history of cattle-farming in Italy from the earliest times (XIV., 'Pascua') was written about 1885, but is now published for the first time. It contains a somewhat questionable view of the Lex Thoria (p. 303). The last paper, 'Pagus,' of date 1884, succinctly describes this distinctively rural institution.

The brief note on the 'Chronology of the Jugurthine War,' the earliest in time of these papers (*Journal of Philology*, 1876), should have been sacrificed. A simpler and better solution of the difficulty in Sallust's chronology, adopted by Greenidge ('History of Rome,' chap. viii.), holds the field. All geographical probability divides

Marius's campaign between two years. The long article on 'Discoveries at Rome 1870-1889' was of good and fitting utility in *The Edinburgh Review* of 1889, but the editor's own notes show that it cannot be of much profit twenty years later. A paper of the kind must be ephemeral in value unless the whole work of discovery is "shut down" on its appearance. Pelham, true founder of the British School at Rome, would have been the first to admit this. Yet we may welcome the republication of the paper, if for no other reason, for its vivid visualization of the growth of the city of Rome, with its suburbs and its gardens. The remarkable picture of the extension of London in 'The New Machiavelli' may give all material for his laments to the *laudator temporis acti* who, under the enthusiastic guidance of Prof. Lanciani and Pelham, traces out the advancing circuit of ancient Rome. It would be still simpler for him to visit Rome to-day.

The greatest interest is naturally aroused by Prof. Pelham's treatment of the early Roman Emperors, even though there is little in the book on this topic beyond the menu of the banquet which was so long in preparation, and now can never be served. One conspicuous example of the loss to learning is afforded by the writer's attitude to Hadrian. This Emperor's work for Rome in many and laborious spheres obviously had won Pelham's unstinted admiration. Yet this is proved by little more than a few passing allusions elsewhere, each of them pregnant with suggestiveness and summary of judgment, and by the brief note which he wrote by way of introduction to the English translation of Gregorovius's 'Hadrian' in 1898. These few pages, here republished, are in very truth worth more than the whole of that discursive and dishevelled work, which cannot be ranked as a conspicuous example of historical skill. We are rejoiced to have the note without the German's lengthy chapters to follow it. But Hadrian has lost his ideal biographer. Like was inevitably attracted to like.

The long paper on 'The Domestic Policy of Augustus' should be of twofold interest. Not only is it now published for the first time, but it was written, the editor tells us, about 1890, tentatively as a chapter for the *opus magnum*, the History of the Early Principate. In it the general policy of Augustus is most lucidly described (compare especially pp. 97 to 99). In the handling of the details the chapter suffers somewhat in comparison with Gardthausen's later work, the German historian's treatment of the same material being more comprehensive and even more luminous. So long, however, as Gardthausen remains untranslated Pelham's chapter will be found useful.

It is in the paper contributed to *The Quarterly Review* in 1905 upon 'The Early Roman Emperors' that Prof. Pelham's most mature and most important dicta can be found. Sentence after sentence recalls his most characteristic utterances

and attitude. His cautious wisdom is shown here when he surveys the great superstructure which is usually raised upon the slender foundations of the earlier sections of the *Lex Julia Municipalis*, or investigates the problem of Julius Cæsar's intentions. His dispassionate eloquence pays its notable tribute to Augustus, who "saved for posterity a Latin civilization, and postponed for two centuries the triumph of undisguised military despotism." His swiftness of judgment shows Tiberius "soured by the difficulties of his loyal adhesion to the maxims and policy of Augustus"; Gaius "posing as a monarch of the Græco-Oriental type"; Claudius as one whose very administrative sagacity conduced of hard necessity to his unpopularity; Nero, the slave of uncontrolled impulse and passion, who "disliked affairs as much as Claudius loved them"; Seneca the erudite scholar rather than the insincere philosopher, or courtly philosophic director of souls. Doubtless much can be added, and something could be challenged. To the famous question, "Why did Tacitus paint the rule of the Cæsars in such unfavourable colours?" Pelham answers that Tacitus as an artist felt "the weird fascination of the *ancien régime*." This judgment needs at least the complementary explanation given by Hermann Peter's keen psychological analysis of the Roman historian. And the greatest contribution of all made by the early Emperors, Augustus and Claudius in chief, to the peace, contentment, and good government of the Empire hardly receives its due meed of notice. It was they who gave the Roman middle class, for the first time in the history of the City, permanent and ungrudging opportunity for honourable public service on a royal scale. It was as though in our own land half the posts in the Home, Indian, and Colonial Civil Services, hitherto exclusively confined to sons of the aristocracy, were suddenly thrown open by a judicious monarch to all young men educated at any Public School or University. Those who had hitherto been compelled to devote their whole energies to money-making in private business at the expense of their neighbours now found that the State had need of them. Herein lay one of the chief of the vital sources of strength inherent in the Imperial system of the first two centuries after Christ. Even Hirschfeld leaves his readers to draw the conclusion instead of taking the trouble to make it manifest. Yet Pelham had fewer opportunities than his German contemporary.

The last word has not even yet been said on the Julio-Claudian Emperors. The epigraphic material for their history increases daily, and still neither the growth of knowledge nor the means of knowledge keeps pace with the desire to use them. Yet a mysterious fatality seems to attend every attempt of the modern scholar who boldly announces his intention to write a comprehensive history of the Early Principate. Mommsen speedily renounced the task. Greenidge never came within sight of this part of

his promised country. Pelham has left inconsiderable fragments of preliminary studies. Signor Ferrero halts upon the threshold, and is perhaps himself little more than an able journalist. Pelham's recent lectures upon the immediate successors to these princes, the Flavians and Trajan, could probably be reproduced verbatim from the notebooks of the tutors in ancient history who sat at his feet. For the pace of the spoken word was timed to a nicety, and the Professor himself would sardonically tell a tale to illustrate this. Yet no work under his name may be published about which might cling the least taint of incompleteness. This must be Oxford's regretful tribute of at once praise and farewell to the greatest of her Camden Professors.

It only remains to be said that Prof. Haverfield has discharged his editorial duties with admirable care and forethought. The references which he has added in the foot notes are always of value. Perhaps the date of the *Lex Julia de Collegiis* might have been amended (notwithstanding Dio 54, 2) from B.C. 22 to A.D. 7. The size of the page is awkward, and the lettering of the cover is ugly. Paper XI. has unaccountably disappeared. This, however, is but an error in notation, as the total number of papers is, as stated in the Preface, sixteen.

Finally, the editor's introductory biographical note is a most graceful tribute to the memory of his predecessor in the Camden Professorship. It deserves to rank with Mr. Warde Fowler's sketch of Mommsen's life and work. Higher praise cannot be awarded.

NEW NOVELS.

Nina. By Rosaline Masson. (Macmillan & Co.)

THOSE ancient devices the Scotch marriage and the long-lost father seem rather out of place in what is essentially a modern story, though its modernity is of no exaggerated or ungraceful type. The English Dean, his wife and his High Church curate, and the Scotch doctor's daughter with her Highland servant and her counsellor the minister, form respectively two pleasant trios, carefully drawn in an unpretending fashion. The heroine is a nice girl who scarcely lives up to the artistic temperament with which she is credited; but we have nothing to say against the hero.

The House of Bondage. By C. G. Compton. (Heinemann.)

EVEN in modern novels it is not usual to find an unmarried heroine the mother of two children by different fathers; and when she crowns a career of this sort by marrying a highly virtuous Duke, apparently amid general approval, we are plainly justified in expecting her to possess

an extraordinary measure of fascination. We cannot say that this expectation is fulfilled by Laura Henderson, the inmate of "the house of bondage." We hear much of her marvellous insight into men's minds and her power to sway them as she will, but her actions and conversation scarcely bear out the claim, and we do not admire either her infatuation for the commonplace scoundrel who deserts her in her hour of bitter need, or her curiously businesslike liaison with the financier who has a prejudice against marriage. Laura's mother and some other members of the dubious society surrounding her are amusingly drawn.

A Parisian Princess. By Frankfort Somerville. (John Long.)

THIS is virtually a study of Parisian life, of the more or less Bohemian kind. A beautiful young bourgeoisie and her husband come from Savoy to try their fortunes in the great city. She makes the acquaintance of a popular actress, and is fascinated with the luxury and excitement with which she finds herself surrounded, while the husband, who has simpler tastes, becomes a prey to nostalgia, and eventually to jealousy. The situation is complicated by the wife's independent spirit and the reappearance of an old lover, whom she marries after her husband is shot in an affray with strikers in Savoy. The writing is commonplace, and the narrative displays but little invention; the author, however, shows familiarity with the scenes he portrays.

A Babe Unborn. (Grant Richards.)

A PRETTY WIFE'S dislike and avoidance of motherhood are the cause in this philosophical novel, deeply tinged with Roman Catholic feeling, of ingratitude to a dead man, and indirectly of her separation from her husband. The story begins with the unfavourable impression produced on the lady's mind before marriage by the spectacle of two fruitful married couples and their progeny. Later her lover and she are made rich by the will of an incautiously generous knight, who desired them to found a goodly line of landed gentry. Bored by country life, she collects about her a crowd of eccentric persons; and, in the course of an inspection of the domiciles of some of their poor neighbours, her Malthusianism comes into bitter conflict with a slatternly mother. Her husband refuses her revenge, and she therefore pursues apart from him a life of travel and oratorical publicity. He also travels; and he is recalled from Pekin by news of her illness, which terminates fatally. The book ends in the cloud of religious light and mist in which he finds himself when her funeral is over. The parts relating to the funeral are praiseworthy for realistic imaginativeness. The author sees and writes vividly, and shows an unusual measure of originality.

Zoe: a Portrait. By W. F. Casey.
(Herbert & Daniel.)

A SELFISH Irish woman with several beaux is cleverly drawn in this tale of social life near and in Dublin. The author is a satirist whose enjoyment in the exposure of feminine artfulness is infectious; and he successfully hits off the foibles of a literary *poseur* and a prig. The title-character marries a sensitive man for his money, and is engaged in a flirtation, menacing to her honour, when she learns that he has been run over by a motor-car. Indirectly she is responsible for this catastrophe, the effect of which is to dismiss her most audacious lover and to complete her subjugation of an impressionable major. With all its cleverness the story lacks sufficient dramatic interest. Its characterization is excellent, and the portrait of Zoe's father, who is her principal counsellor and critic, deserves special praise.

Young Mr. Gibbs. By Mrs. Victor Rickard. (Eveleigh Nash.)

THE AUTHOR is to be congratulated upon an amusing story. Although there is nothing strikingly original about Clarence Venning, there is a good deal that is entertaining. He is a superior person, the particular cult of the school to which he belongs being "refinement." His mother is a widow, and Clarence's cleverness bores her to distraction. So she introduces to her household a certain Mr. Gibbs, a good-looking, but ill-mannered young City clerk with whom she pretends to be deeply in love. In order to avoid such a catastrophe as the marriage of this ill-assorted pair, Clarence dangles his own titled friends before the vainglorious eyes of the hateful Mr. Gibbs, introducing him to them as a minor poet. The complications which result are described in a lively manner, the humour throughout being broad, but compelling.

FOREIGN LANDS.

An Unknown People in an Unknown Land. By W. Barbrooke Grubb. Edited by H. T. Morrey Jones. (Seeley & Co.)—The Indian territory of the Gran Chaco between Paraguay and Bolivia has remained a *terra incognita* by the simple expedient of killing its explorers. From Juan de Ayolas in 1537 to Crevaux in 1882 and Page in 1889, death and disaster have attended most expeditions, whether military or scientific, into the swampy, yet droughty, land west of the Paraguay river. Till lately the Jesuits alone seem to have had any success; Dobrizhoffer and his fellow-missionaries managed to stay in the country for some years in the middle of the eighteenth century. Nearly a hundred years later, Capt. Allen Gardiner, R.N., made a valiant but futile attempt in 1845 to settle among the Tobas; and it was not till 1889 that the South American Missionary Society began a tentative establishment on the edge

of the Chaco under Henricksen, on whose death Mr. Grubb took up the work, to which he has devoted his abundant energies for the past twenty-one years.

No one, however, need be prejudiced against this record of his experiences, which Mr. Morrey Jones has written and arranged from his dictation and conversation, on the ground that it is a missionary chronicle, and therefore biased and suspect. Mr. Grubb seems to be as unlike the conventional missionary as it is possible to imagine, and there is very little about conversions in his book. The fact that he could muster only 38 communicants after twenty-one years of work shows that he at least followed the apostolic example and "laid hands suddenly on no man." He had the sense to perceive that before any genuine Christianizing of the Chaco Indians could be attempted it was necessary to teach them some of the elements of civilization. So for many years he lived amongst them at the hazard of his life, studying their character and customs and beliefs, teaching them to respect him, and gradually imposing his influence and authority upon them by vigorous, not to say imperious, action such as savages soon learn to obey, until he was strong enough to combat their witch-doctors, reform some of their worst customs, and at length introduce very cautiously the Christian propaganda. This seems a wise way to set about the work, and the foundations thus slowly and laboriously laid are likely to be firmer and more durable than the apparent triumphs of hysterical "revival" meetings.

Mr. Grubb's book is therefore valuable chiefly to the anthropologist, as a record of an unprecedentedly long intimacy with several little-known tribes of South American Indians. P. Dobrizhoffer's '*Historia de Abiponibus*,' which Sara Coleridge translated in 1822, and on which Southey founded his graceful '*Tale of Paraguay*,' has hitherto been our leading authority; but the greater length of Mr. Grubb's residence, his remarkable power of ingratiating himself with the Indians, and the recent date of his experience, make '*An Unknown People*' a record of unrivalled importance in its special subject. It may be objected that he was not trained for anthropological observation, and did not know precisely what to look for; and this is obvious in his chapters on religion and superstitions; but, on the other hand, there are advantages in starting without preconceptions, with no analogies to adduce and no theory to prove, and we may at least feel confident that we have here a plain, unbiased statement of facts as they appeared to an untrained observer. The record is the more important because Mr. Grubb is convinced that a considerable change has for some time been taking place among the tribes; the organization under chiefs has become weaker, and many old customs are dying out.

In that dreary and climatically ill-regulated country the Chaco, Heber's classification is reversed: "every prospect displeases, and the only really interesting and bearable thing... is man." Mr. Grubb represents the Lenguas as a fine race, physically and morally; monogamists, except in certain situations where polygamy or polyandry has its apparent justification. It is true they are too fond of killing their female children, like the ancient Arabs; but the result is the prodigious triumph of the sex, so that not only is there no such thing as a spinster in the land, but the scientific adjustment of relative numbers has brought about a pleasing emulation among rival suitors

for every marriageable girl. Every Chaco maiden has eager would-be bridegrooms besieging her door, awaiting her choice or manœuvring her capture. The capture-dance, where girls form a circle round the maid supposed to be menaced by invading boys, represents the old custom. The people cannot be said to be drinkers; the women never taste intoxicating liquors at all; but the men have mighty potations at their feasts, where a good deal goes on that no missionary or layman can approve; yet even here these sagacious Indians adopt a precaution worthy of a higher civilization. A band of young men are bound over to abstain, and these watch over their more happy but inebriate elders and see them home. Nothing will induce them to drink milk. They are such resolute smokers that when their tobacco gives out they chop up a cactus pipestem and smoke the wood impregnated with nicotine. Their music has the peculiarity, according to Mr. Grubb, that they all play the same tune: possibly he is not an expert listener. Fathers are named after their children, and, as this implies a new name after each addition to the family, some confusion is apt to occur in the mind of the visitor. They have a commendable plan—which would be invaluable to cyclists at home—of sticking up a pole in a track to show which way a party of Indians have gone, and putting a bunch of feathers on it to intimate that a feast is in progress, whilst suspended wool and a corn-cob add the welcome intelligence that there will be mutton to eat and maize—hopefully in the form of beer, though it can hardly be distilled, even in "a secret still," as the plate facing p. 238 seems to imply.

Mr. Grubb had some amusing bouts with the native medicine-men, in which he exposed their tricks and "went one better," inasmuch that he was firmly believed to be a wizard himself in formidable intimacy with a powerful evil spirit. It is a question whether he has outlived that reputation yet. Many of his adventures with the medicine-men and chiefs are amusing, and he evidently held his own with them with considerable humour and courage. The attempt to murder him, and his extraordinary endurance of a serious wound during the long tramp back to the mission station, make a wonderful tale.

One of the best features of his work seems to be his opposition to the communal (or as he calls it "socialist") system of the tribes, which discouraged individual energy and economics, and his success in introducing the principle of private property. Of one small community of about 200 people he says:—

"Fifteen years ago the only property they possessed were their weapons, some miserable household chattels, and a few sheep, goats, and horses; whereas to-day that community is in possession of aggregate wealth amounting to close upon £1,000, in flocks and herds, goods, houses, and permanent gardens, not to mention a considerable sum of money in a savings' bank of their own."

This interesting, though unscientific and not very well-arranged collection of anthropological notes on an almost unknown people may be commended to all readers who care to see what a courageous and sensible man can do among savages. It is the more readable since the author has omitted all details which are not fit for open discussion; but this is regrettable from the purely scientific point of view. The volume is lavishly illustrated by excellent photographs, but the Index and map are inadequate.

Storm van's Gravesande: The Rise of British Guiana. Compiled from his Despatches by C. A. Harris and J. A. J. de Villiers. 2 vols. (Printed for the Hakluyt Society.)—The diplomatic controversy between Venezuela and Great Britain over the boundaries of British Guiana, which lasted through a century and a half, was settled by the Paris Award in 1899. This international arbitration had another result besides confirming in all substantial points Sir Robert Schomburgk's line of boundary. It brought to light an immense mass of documents, "hundreds of thousands" of which "had not seen the light of day since they were written." They are bound up in 47 huge folio volumes of about 2,000 pages each, now deposited in the Public Record Office, and comprise the reports of the Commanders (or Directors-General), the Secretaries, and the Court of Policy of the then Dutch colony to the Zeeland Chamber of the Dutch West India Company at Middelburg in the Netherlands.

Among these voluminous documents are a complete series of the dispatches of the Commander of the colony from 1738 to 1772, Laurens Storm van's Gravesande, "a man so utterly forgotten even in his own country in the nineteenth century that Netscher," the historian of Guiana and Brazil, "speaks of him as one of those meritorious Netherlands 'whose names are but little or not at all known, and who nevertheless deserve to be dragged from oblivion.'" The truth is that Netscher was unable to consult Storm van's Gravesande's dispatches from 1759 to 1772, and did not know that they existed. He was obliged, therefore, to leave imperfectly recorded an important interval in his otherwise admirable history. The gap thus left included a significant period in the growth of the colony, for, under this Commander, Essequibo, then the centre of the vast tracts administered by the Dutch Company, attained the height of its prosperity, and Demerara, which was destined to supplant Essequibo in importance, began to be colonized, largely by Englishmen from Barbados and elsewhere.

The present volumes aim at filling the gap left by Netscher by means of a selection from Storm's dispatches. As the whole series would fill twenty-one volumes similar to these two, it is obvious that selection was necessary. Our only doubt is whether it should not have been carried out more drastically. We find a great deal of repetition and sameness in the dispatches, and especially constant reiteration of complaints of neglect by the Zeeland Directors, of overwork and illness, and other personal grievances, which might have been merely referred to in the brief abstracts that the editors sometimes usefully substitute for the full dispatches, but do not substitute so often as might be wished. These volumes, however, are addressed, not to the general reader, who would find them wearisome, but to the student of history, and such students will find little to criticize in the careful and elaborate manner in which Mr. C. A. Harris of the Colonial Office and Mr. J. A. J. de Villiers of the British Museum have edited and annotated the selection.

Nothing better of its kind has been done for a long time. The editors show an acquaintance with the bibliography of their subject which is certainly unrivalled in this country, and we doubt if it can be matched even in Holland. The notes are meticulous, and what is not explained is an insignificant residuum. We should have liked a table of Dutch and other money and measures

compared with the English, instead of having to search for their values in scattered notes. The editors have even verified Storm's frequent quotations from his favourite classics, which strike a reader of contemporary Blue-books rather oddly. It must be remembered, however, that the unscholarliness of present-day politicians is a modern phenomenon, and further that Latin was almost a mother-tongue to the Dutch, and remains so even now, at least in the Universities, where a foreigner who cannot talk Dutch can still make himself easily understood in the common language of the Middle Ages. The Zeeland Directors may have grown rather tired of Storm's familiar lines from Virgil, Ovid, and Horace, and notably of the "Sic vos non vobis" with which he was fond of reproaching them; but we have no doubt they did not need a dictionary.

What they did need was a little energy and consideration; for a more shameful story of the neglect of a conspicuously able, self-denying, and honourable administrator and the starving of a valuable colony has never been set in print. The personal side of the history is pathetic, almost tragical, in its record of affliction, bereavement, calumny, persecution, neglect, overstrain, and ill-health. One must admire the fine character of the man, whilst one wishes he had been less sensitive. The public side of the dispatches presents a curious, if too iterative and tedious, account of the life of the colony, its sugar industry, shipping, trading, relations with the Indians, and its slave revolts, vigorously repressed by Storm, who was every inch a soldier to the day of his death.

It is interesting to note that it was the timely assistance of five English ships brought from Barbados by Gedney Clarke that saved Demerara, if not the whole colony, from the horror of a servile revolution; and the energy and common sense of the Englishmen who formed a third of the planters of Demerara often excited Storm's admiration. Whilst much harassed by the English smuggling of slaves—whom the Dutch Directors neglected to supply in sufficient numbers, with disastrous results to the sugar industry—Storm was himself most humane towards the negroes. We find him writing on behalf of the old slaves, who after spending their lives "in working for the Honble. Co." were allowed, "when they have grown old and weak, [to] be driven, like old horses (as it were), naked and uncared for, from pillar to post," without rations or clothes, and at the mercy of their relatives. Harsh treatment of slaves by the planters roused his indignation, and he laments that there are no laws to protect them, even so much as the English law that a master could not give a slave more than 40 lashes at a time; "but what is that with what goes on here?" Nevertheless he had to employ Indians to catch rebel negroes, and found it no easy matter to get them brought in alive. There is a tragic side, one sees, to the public as well as the personal history.

Lion and Dragon in Northern China. By R. F. Johnston. (John Murray.)—When China was prostrate at the feet of Japan, Russia demanded a lease of Port Arthur in return for her good offices in the negotiations which followed; and as soon as China had liquidated the indemnities demanded of her, Wei-hai-wei was by a three-cornered arrangement leased to Great Britain, which lease, it was understood, would continue as long as the Russians were in possession of Port Arthur. But having possessed them-

selves of the territory, the British Government were at a loss to know what to do with it. It was thought that it might serve as a naval station. Others advocated that it should be utilized as a military outpost; and yet others were in favour of establishing it as a health resort to bring colour into the white faces of the residents at Shanghai and Hong Kong. Experience has shown that it is best fitted for the last object. For a time a Chinese regiment was enlisted and maintained there, which has, however, dwindled away into a small police force. Mature consideration led the authorities to determine that it is unfitted for a naval station, and the result is that it has come to play the part of a Chinese Brighton. The extent of territory annexed at Wei-hai-wei is about 300 square miles, and, without any other defence than the police force just mentioned, is dominated by a Commissioner and some three or four officials of magisterial rank. The population is purely bucolic and very easily ruled. The expense of keeping it as a military territory is considerable, and there is no reason why it should not be a health resort.

It may at first sight be a matter of surprise that so large a volume could have been written on so comparatively small a subject, but Mr. Johnston points out, with truth, that in such out-of-the-way places as Wei-hai-wei one finds reflected the ancient manners and customs of the empire unmodified by contact with modern schools of thought which are to be met with in the streets of Peking or in the alleys of Canton. He takes as an example of this assertion the fact that there the "queer practise" of celebrating marriages between the dead is preserved, whereas in the highways of the empire it has dropped into desuetude. But this is only partly true, for in so huge an empire as China there must be preserved manners and customs which belonged, in the first instance, to the barbarous and semi-barbarous tribes which have in course of centuries been absorbed by the more civilized Chinese. Mr. Johnston quotes with effect a number of cases in which young girls whose fiancés had died before the marriages had taken place committed suicide in the belief that they might join their betrothed in the next world.

Those who are under the impression, gained from superficial books on China, that the lot of women in China is not happy will have their views modified by Mr. Johnston's chapters on the subject. As is well known, though the legal status of women is one which female suffragists would by no means consent to, their word has weight in all domestic concerns, and Mr. Johnston quotes an example of a termagant who held a whole district in awe.

"That cases of ill-treatment of women," writes the author, "are sometimes met with is undoubted, but as a rule the tyrant is not the husband, but some female member of the husband's family. Mothers-in-law are the domestic tyrants of rural China. Besides treating the wife with severity, they often place the husband in a most unhappy dilemma."

In another passage Mr. Johnston says:—

"'Why do you run away from the woman?' I once asked an unhappy husband, whose domestic troubles had driven him to the courts. 'Is she not your wife—can you not make her obey you?' The young man's features broadened into a somewhat mirthless smile as he replied: 'I am afraid of her. Eight men out of ten are afraid of their wives.'"

Mr. Johnston adds some interesting chapters on the religions of China, and places great faith in the doctrines of Confucianism.

to the effects of which he attributes the law-abiding proclivities of the people of Weihai-wei. That with a mere handful of native policemen it has been found possible to rule the crowded population of the district is a striking proof of this.

UNIVERSITY RECORDS.

The Obituary Book of Queen's College, Oxford, an Ancient Sarum Kalendar, with the Obits of the Founders and Benefactors of the College. Edited, with Introduction, Notes, and Appendixes, by John Richard Magrath, Provost. (Oxford, Clarendon Press.)—Following the praiseworthy example of Dr. Shadwell in his Oriel College Calendar, the Provost of Queen's has transcribed and edited the Obituary Book of Queen's College, and presented it to the members of his College and the Oxford Historical Society. It is a record which, apart from other attractions, must be highly valued by every book-lover into whose hands it may fall, for the sake of its superb typography. The fourteenth-century Calendar, or Obituary of the benefactors of the College, kept as the Founder directed, is here reproduced on suitable paper, in Gothic and Domesday type, in red and green and black and blue, faithfully following the original, with the obits recorded in the fascinating shorthand of the mediæval scribe. Dr. Magrath has evidently spent much time and labour in setting out these abbreviations and commenting on the benefactors recorded. Some of the notes indicate a smaller acquaintance with mediæval script and liturgiology on the editor's part than might have been deemed necessary for the task; but with the help of several antiquarian friends, generously acknowledged, he has succeeded in producing a Calendar set forth with so much accuracy and in such detail as to be worthy of a place beside those edited by Prebendary Wordsworth and the Provost of Oriel. We notice that Dr. Magrath prints Sir John and Matilda de Handlo, who are frequently mentioned as benefactors, though the editors of the Calendars of Patent Rolls of Edward III. published by the Record Office seem rightly to have decided that Haudlo is the place-name intended: *n* and *u* are, in script of that date, virtually indistinguishable, and we are led by some observations of Dr. Magrath's to think that he does not sufficiently appreciate that fact.

Needless to say, there is much here to interest liturgiologists, and they will observe that blue is used in this Calendar in a manner liturgically trustworthy, to differentiate blue- from red-letter days. Another point of interest lies in the note "*ab operibus feminarum (ferianda)*," to distinguish saints' days which were to be observed by complete cessation from work on the part of women. Dr. Magrath was long of opinion that the Queen's College Calendar was unique in respect of the use of this phrase; but Mr. Bannister has recently discovered a Calendar of a Sarum Missal in the British Museum which contains the same formula.

The thanks of all interested in these and kindred subjects are due to Dr. Magrath for his ungrudging labour, which has been beautifully enshrined by the craft of the Clarendon Press.

Descriptive Catalogue of the Manuscripts in the Library of Corpus Christi College, Cambridge. By Montague Rhodes James. —Part III. Nos. 157-250. (Cambridge University Press.)—The present instalment of

Dr. James's edition brings the catalogue of this great collection to the end of the first volume. It contains the description of two manuscripts of the eighth century—the Hexameron of St. Ambrose, the oldest complete copy known (193), and the fragment of the Gospels of St. John and St. Luke, known through Goodwin's work upon it and the facsimiles in Westwood (197). We note one ninth-century manuscript, Bede's Life of St. Cuthbert (183), five manuscripts of the tenth century, fourteen of the eleventh, and nine of the twelfth, out of forty-three in all: a higher proportion of early written literature than could be found in any other collection in England, or perhaps in the world.

It is not necessary to dilate upon Dr. James's seemingly inexhaustible knowledge in his treatment of these manuscripts. The notes represent an acquaintance with the advance of modern scholarship which may be emulated, but hardly surpassed. It is left for the reviewer merely to draw attention to the chief treasures here described, such as the three books given by Leofric to Exeter, the *Pœnitentiale* (190), *Regula Chrodegangi* (191), and *Saxon Martyrology* (197); the Life of St. Cuthbert already alluded to; and the *Amalarius* (192) written in Brittany in 952. A leaf of the last, containing the interlinear glosses to which attention was drawn by Henry Bradshaw, was published by the New Palæographical Society in 1907. It is satisfactory to see that the Provost of King's confirms the opinion of Dr. Plummer, with regard to the Life of St. Cuthbert, that it is the actual copy given by Æthelstan in 930 to the see of Durham. As an example of Dr. James's elaborate care in the treatment of these manuscripts it may be pointed out that he prints in parallel columns a description of this and *Vespasian B. 6*, extending over eleven pages. It is interesting also to see that he does not believe Walter of Coventry to be the author of the *Chronica* (175) associated with his name. Here he joins issue with Stubbs, and cites examples from manuscripts in Cambridge and elsewhere in support of his view.

Admissions to Trinity College, Cambridge.—Vol. IV. 1801 to 1850. Edited by W. W. Rouse Ball and J. A. Venn. (Macmillan.)—We are grateful for this well-printed and comely volume, the first to appear of five recording admissions to the College from 1546 to 1900. The Preface and 'Addenda et Errata' immediately after it supply a number of interesting details as to officers of the College, and some memoranda which, though not official, are certainly worth recording. The Admissions are followed by an admirable Index. It is well, however, to add that no attempt, as in other College Registers—e.g., that of King's, 1850-1900, by Mr. J. J. Withers—is made to follow out careers, distinctions, occupations, publications, &c., in after life, the typical entry giving parentage, place of birth, school or teacher, and the degrees taken. These details alone doubtless represent a good deal of work, and the additions we have suggested would involve considerable extra labour. But, even if incomplete, they would add so much to the value of the book that we hope they may be considered at any rate for Vol. V. In many cases School Registers would give information, and an appeal to the members of the College for help would surely produce substantial results.

OUR LIBRARY TABLE.

THE contents of *Notes from the Life of an Ordinary Mortal*, by A. G. C. Liddell (John Murray), are in keeping with the title of the book. Mr. Liddell has spent, honourably and profitably, the normal existence of many other people in his social position. He has been at Eton and Balliol; he has been called to the bar; he has been secretary to various Commissions; and he has obtained the chief clerkship at the Crown Office. But why, the critical will ask, make a book of it all? It must be confessed that many of Mr. Liddell's recollections have a leaning towards the trivial. Even those of us who have escaped the experience of having part of a swarm of bees settle on our heads, have probably gone on reading parties or been present at debates in the House of Commons.

Still, Mr. Liddell has met a good many interesting people, and he has noted down their observations in a diary. Thus we usually get, not the reproductions of old talks from memory, but words taken down within a few hours of their utterance. Mr. Liddell's records, therefore, have all the stamp of authenticity, and some of the conversations are so happy that his readers will be lured onwards in the expectation of lighting on something very good indeed. We fear that they will close his volume with a certain feeling of disappointment. Yet it is something to know that Carlyle was an enthusiast for golf, and that George Eliot considered Prof. Owen a charming talker, excelling greatly in narrative and description.

Familiar names occur in the course of Mr. Liddell's Eton reminiscences: "Judy" Durnford, and William Johnson, who afterwards became Cory and the author of 'Ionica.' We wonder if the dignified boy of to-day would condescend to the catapult and other sportive weapons affected by his predecessor of the early sixties. At Balliol Mr. Liddell was a contemporary of Lord Loreburn, and received instruction from a staff of tutors which, as he truly remarks, was by far the best at Oxford. He hits off their foibles neatly enough; many will remember Henry Smith's "almost finicking silkiness of speech and manner," and many more "the carefully thought-out character" of Jowett's utterances, giving them "the effect rather of texts finely carved upon a wall than of the words of a teacher speaking from the fulness of his heart."

Mr. Liddell's recollections of Eton and Oxford form, perhaps, the most interesting parts of his book. But he has a good story or two to tell of that oddity Baron Marton and of that finished wit Lord Bowen, with whom he was reading at the time of the Tichborne trial, receiving in consequence but little instruction. Gladstone's opinion of Beaconsfield, as confided to Mr. Liddell, is pretty much that with which the world is already familiar, and so, for that matter, is Mr. Balfour's. As the writer draws near present times, he becomes rather flat; and if his readers expect revelations of moment, they will fail to get them. Still, we are told that four hours' sleep is enough for Lord Kitchener, and that Mr. Balfour regards Mr. Winston Churchill as having "a sterner ambition" than his father Lord Randolph.

From Memory's Shrine: the Reminiscences of Carmen Sylva (H.M. Queen Elisabeth of Roumania). Translated from the German by Her Majesty's desire, by her former Secretary Edith Hopkirk. (Sampson Low & Co.)—"Likeable" is the epithet one

is inclined to apply to these pages in which the Queen of Roumania offers a tribute of affection to her Penates. Literary criticism, in the stricter sense of the term, seems a little out of place in discussing them: one may indeed feel now and then in reading them that their actual content is rather slight, that they display no very striking powers either of thought or observation, and that their form leaves something to be desired; but such considerations are of secondary importance. Their main appeal is to be found in the author's attractive personality, her spontaneity and generous sympathy; and we do not doubt that English readers will respond to it.

For the most part the volume deals, in a somewhat rambling and discursive fashion, with the kinsfolk, companions, and tutors who influenced Carmen Sylva in her quite early days, and, significantly enough, it generally gives us a clearer impression of her than of the men and women of whom she speaks. Thus the chapters devoted to such notabilities as Ernst Moritz Arndt, Bernays, or Bunsen are a little disappointing, for they tell us little of importance and merely give a somewhat sentimental estimate of their characters. The most interesting portions of the book are its accounts of the simple, old-fashioned life of a German Court some sixty years ago, when, as Heine says, the princes still had the crown firmly on their heads and at night drew their night-caps over it and slept peacefully. In particular we get a good idea of the Spartan way in which the youthful princes and princesses of those days were usually brought up: their lives

"were indeed lonely enough at the best of times, for once out of the nursery they saw but little of one another, not even having their meals in common, but each child brought up quite apart from the rest with a special tutor or governess, with whom the repasts were taken *lête-à-lête*, and to whose tender mercies the pupil was somewhat ruthlessly abandoned. In my own early childhood we still experienced the inconveniences of this system of education, but the transition to more rational and humane treatment of the young was already taking place...."

Of the older generation of aristocrats we get some vivid glimpses. Here, for example, is a characteristic anecdote of the author's grandfather, who, when a widower and well advanced in years, married a pretty young girl, and

"that there might be no mistake at all as to the position he intended to assume, the wedding-ceremony was no sooner over, and the newly-married couple alone in their travelling-carriage, than he proceeded to light his pipe, and, closing the windows, smoked hard in her face for a few hours, just to see if she would venture to remonstrate or complain! Needless to say, she was too well broken in by a long course of severity to dare to utter a word of protest."

"Unfortunately," adds Carmen Sylva, "in Germany the custom still prevails of trying to keep women in subjection."

Miss Hopkirk's translation is readable, but not invariably grammatical.

Saint Francis of Assisi and his Legend. By Nino Tamassia. Translated into English with Short Preface by Lonsdale Ragg. (Fisher Unwin.)—As a destructive critic Prof. Tamassia strikes hard. There is, doubtless, considerable scope for scepticism in the study of the sources of the history of St. Francis, which has been restricted almost entirely to the question of the authenticity and the value of the 'Speculum.' We may take it that, with the exception of a few notable gaps, we are now in possession of accurate texts of the early lives of St. Francis. The further questions arise. How closely do

these represent the facts? and what do they omit, unconsciously or of design? Every modern life of St. Francis is in some degree an answer to these questions, but none of them has ever been so iconoclastic as to deny that we have any facts about his life at all. Yet this is very nearly the position taken up by the author of this book. The 'Speculum' is brushed aside without argument as a late compilation, the two lives by Thomas of Celano remaining our sole authority. To these the following simple canons of criticism seem to have been applied. Whenever a similarity in language or sentiment can be found in the language of Celano to the Bible, St. Gregory, Peter Damian, or any other well-known writer, it is a case of plagiarism, and the passage is to be rejected. Whenever an incident or a miracle is recounted which can have been suggested by anything described in any contemporary or previously written hagiography, that incident is to be regarded as unhistorical. The application of these simple rules—"simples with a vengeance," as Scott once said—results in this: that of the St. Francis whom we once knew nothing is left us but that he was born and died, and that he was probably a heretic, but did not mean to be so.

It is difficult, indeed, to take the Professor's work seriously. He does not, apparently, know that St. Gregory's Dialogues were familiarly used as a textbook in the schools of the day, and is surprised at the fact that a popular preacher should use Scriptural language or the commonplaces of theological parlance in writing a devotional work. Let us take an example of his criticism at random. Perhaps in the whole legend nothing is more peculiarly Franciscan than the story of the saint walking the paths of Umbria, playing the viol with two sticks for bow and instrument, and singing the praises of the Lord in the French tongue. This, says Thomas of Celano, we have seen with our eyes. The Professor thus comments:—

"*Oculis vidimus*? Yes, undoubtedly; but what the eyes of Thomas actually did was to peruse a charming page of Cæsarius [of Heisterbach], where he speaks of a cleric archipoeta who makes a pair with Frate Pacifico, converted when already King of versification, like other joyous souls, by Saint Francis."

The note of authorities to this paragraph runs as follows:—

"R. 58 (III. 49; cfr. III. 27 e 76) [references to text of Celano which are meaningless in this connexion]. Caes. II. 16. Cfr. Boncompagni, Cedrus t.c. 163, which recalls the great renown of Bernard, the inventor of *gloriosæ conciones et dulcisonæ melodiarum*. The 'Re dei Versi' saw two swords of fire issue from the saint's body; just as the dumb porter saw flames issuing from the mouth of Peter Telonarius the hero of charity: Vita S. Joan. Eleem. c. 21: Migne, lxxiii, 359...."

On verifying these references we find no allusion to an "archipoeta" in Cæsarius at the place indicated, the only mention of an archpoet in the whole work (about 750 closely printed pages) that we have found being in the preceding chapter, ii. 15, which tells of an archpoet, Nicolaus by name, who entered the Cistercian Order when suffering from a grave disease, but, recovering, fled away, casting aside the habit "*cum quadam irrisione*." The reference to Boncompagni is wrong—the work quoted is not the 'Cedrus,' but an "*ars dictandi*," a mediæval polite letter-writer—and the quotation is one from a series of letters commendatory of singers, harpers, dancers, jugglers, minstrels, and such-like, with names inserted which have no personal significance of any kind. The story of the two swords of fire has no bearing on St. Francis's viol playing.

Loose treatment of authorities of this sort (for which the translator is not responsible) does not leave a favourable impression of the value of the author's criticism. How any one who has read Cæsarius or any of the hagiographers of the time can see a resemblance in spirit between them and Celano is inexplicable. That the biographer of St. Francis should employ the phraseology of his time and class, that he should use the common language of hagiography to record the common evidences of sanctity, arouses little suspicion in the mind of any reader of sufficient experience. What is surprising in Thomas of Celano's work is the subjectivity of the miraculous element, the absence of the childishness, the credulity, one might almost say the immorality, of many of the miracles recorded in contemporary collections of "Exempla."

Tales of the Uneasy, by Violet Hunt (Heinemann), might as appropriately have appeared under an even more sombre title, such as Loti's 'Livre de la Pitié et de la Mort,' only it is death, or the sense of death, rather than pity, that bulks most largely here. Miss Violet Hunt is an eminently skilful, albeit a relentless *raconteuse*; the light of her inspiration burns with a hard, gemlike flame; the garden of her House of Life grows, as it were, thorns for grapes, and thistles instead of figs; her shadows are of an indescribably tragic profundity. Each of these nine stories, with one exception, is steeped in an atmosphere of the deepest disquietude, sometimes of horror, as, for example, 'The Witness,' an admirably told tale of murder and a mind unhinged, and 'The Tiger-Skin,' an example in quite another style, a grim study in morbid psychology which displays the author's remarkable gifts to the utmost. It is virtually a picture, painted with signal power and restraint, of a woman's unnatural cruelty towards her child; and so brilliant is the handling that we are led almost without reluctance through the phases of the horrible history. Perhaps 'The Prayer,' in which a man recrosses the threshold of death at the urgent entreaties of his wife, is one of the most impressive stories in the book. Miss Hunt has gained greatly in craftsmanship during the last few years: her style is excellent, her grip of her subjects sure, and her insight exceptionally clear and sane, in spite of her choice of motives. Perhaps her next volume may entertain us with an equally able, but a less sinister group of tales.

As its title suggests, *The Tyranny of Speed; or, The Motor Peril and its Remedy*, by E. H. Hodgkinson (John Lane), is a protest against excessive speed in driving on the public highways. As such, it is pretty sure of the approval of all sane and considerate people, whether motorists or those who do not use mechanically propelled vehicles. We have no criticism to offer regarding the writer's conclusions, and little regarding his method of presenting them; but we cannot help thinking he uses too many words: 135 pages is fully fifty too many for the matter of this protest. We reach p. 90 before 'Potential Remedies' are touched. Now in our opinion the need for remedies could have been adequately presented in five-and-twenty pages; then there might have been more than the present fifteen pages of suggested remedies. After all, the question of cure is more important, and, we think, more interesting, than any amount of enlargement upon the disease and its symptoms. The author's suggestion of a mechanical signalling device to be fitted

compulsorily to all motor-cars, to give visible and audible warning whenever the legal speed-limit is exceeded, is ingenious. As is pointed out, this would save expense to the public. The penalty would be enforced automatically, as it would be arranged that motor-car owners or drivers would, after every infringement of the limit, have to call at a police station to have their speed-signalling mechanism reset.

In the main the author's conclusions regarding the danger and injustice of high-speed driving on the public roads seem to us reasonable and temperate; but we are not quite clear as to the soundness of his contention that the aim should be to adapt motor-cars to the existing roads rather than to adapt the roads to the new vehicles. We apprehend that argument was probably adduced when wheeled vehicles began to displace the pack-horse. Rather we would suggest improvement and adaptation on both sides. Certain is it that if no speed over twenty miles an hour were to be allowed, the use of the motor-car could be considerably extended, its production materially cheapened. With much lower gear ratios, much smaller and less costly engines and tyres could be used. The power required to drive a luxurious five-seated car up a long incline at twenty miles an hour, and to make it average that speed all day, is power which will drive the same car at something over forty miles an hour on the flat. Drivers are but human, and, with forty miles an hour imprisoned, so to say, under their heels, they will assuredly avail themselves of it on occasion. In justice, we are bound to say that we regard the average motorist as by far the most careful and watchful user of the road. But even care and watchfulness may not justify driving at a speed very much over twenty miles an hour—morally, we mean. The law is clear on the point. Mr. Hodgkinson's view merits all consideration. It is odd, by the way, that the artist who embellished the cover of this book of protest against the modern high-powered car should have drawn a type of vehicle which has been obsolete for some years.

MR. E. H. PEMBER.

IN Mr. E. H. Pember, K.C., who died on the 5th inst. in his 79th year, has passed away a man who not only played a conspicuous part in his chosen profession at the Parliamentary Bar, but had also made his mark in society and in the world of letters by his upright character, his fine culture, and his personal charm.

Educated at Harrow and at Oxford, where he took a first class both in Mods. and Greats and became a Student of Christchurch, Mr. Pember retained throughout a singularly busy and successful career at the Bar his ardent love of the classics, and cultivated by the study of the best models a fine taste also in mediæval and modern literature and in various forms of art.

When a comparatively young man, he published, in 1870, a poem entitled 'The Tragedy of Lesbos.' Its reception was apparently not such as to encourage the writer to court again the favour of a public to whom work of this class makes only a limited appeal. But his love of the poetic art was so keen that for his own pleasure he pursued it with unflinching zest, and for nearly twenty years from 1891 onwards he issued for the benefit of his friends a series of volumes printed privately at the Chiswick Press. These represent on the whole a

truly remarkable literary output for a hard-worked professional man.

The first volume, 'Debita Flacco,' contains free adaptations—"worked upon motives and incidents taken from modern life"—of some of the lighter Odes of his favourite Horace. In later volumes appeared admirable verse-translations of the 'Prometheus Bound' of Æschylus, the 'Œdipus at Colonus' of Sophocles, and the 'Hippolytus' of Euripides. Side by side with these actual reproductions of the classics were narrative poems in classical form, derived from stray hints and legends from Greek history or mythology, such as 'The Voyage of the Phocæans,' who deserted their city rather than submit to Persian rule, and sought a home in the island of Corsica; 'Adrastus of Phrygia'; 'The Death Song of Thamyras'; 'The Finding of Pheidippides,' in which the famous runner is visited in his old age by Alcibiades and a friend, and recounts his great feat and his lifelong devotion to the "great god Pan"; 'Pausanias and Cleonice'; and 'Er of Pamphylia' in which the poet, in his own words "laying reverent hands" on Plato's famous fable, "wove its threads of legend" into a connected story. In all these the writer shows himself deeply imbued with the Hellenic spirit, and the interspersed lyrics have at times real poetic beauty, though the attempted reproductions of Alcaic or Sapphic metres are not always successful. Now and again, as in 'Naaman the Syrian' and 'Jephthah's Daughter,' inspiration was sought from the Old Testament; while occasional renderings from Dante; a tale in blank verse; 'Le Cœur de Beaumanoir,' based on some legend of a French Monastery; and 'The Blind Girl of Bonn,' a "Dramatic Idyll," dedicated to Sir George Grove, show a yet wider range of interest.

Scattered through the seven volumes are occasional lyrics which bring out the writer's strong sympathy with Nature in all her moods. For Pember, with all his love of literature, was by no means a mere man of books. His zest for outdoor life, his love of trees and flowers, were no less keen, and he was as ready to talk, and with real knowledge, on these subjects, or on shooting and fishing, as on his favourite authors.

He was also a great lover of music and was a real authority on some of its branches. Thus he contributed many articles on early Italian composers to Grove's 'Dictionary of Music,' including an important one on Palestrina, which he revised for the recently issued new edition. He was for many years an active member of the Council of the Royal College of Music.

This mere outline of Pember's many activities, beyond the profession to which his life was mainly devoted, will sufficiently explain his great popularity in society; for to all this wealth of knowledge he added a most retentive memory, and an incisive, if sometimes caustic, habit of speech. Few men have been readier with an apt quotation, whether from ancient or modern writers; few have had a happier turn for epigram; while either professionally or in society he had met the most notable men of his time and was full of good stories about them. As will be seen by constant references in the Diaries of the late Sir Mountstuart Grant Duff, Pember belonged to three of the oldest dining societies in London—"The Club," "The Literary Society," and "The Society of Dilettanti." In all of these he will be greatly missed, but particularly in the last, of which he had for many years acted as Secretary in conjunction with Lord Welby. Its members will now more than ever congratulate themselves

that a year ago an admirable portrait of Pember by Sir Edward Poynter was added to their famous collection. As a further proof of the high esteem in which Pember was held as a man of letters and a critic, it may be added that he was chosen to be Perpetual Secretary of the "Academic Committee" recently formed in connexion with the Royal Society of Literature. Here, as elsewhere, his place will be hard to fill. By his large circle of friends his loss will be keenly felt; for although, as has been hinted, he could say severe things, and was sometimes vehement in controversy, his disposition was most kindly, and his keen interest in many sides of life made him a truly delightful companion. T.

'EDWIN DROOD.'

Shorwell Vicarage, Isle of Wight, April 4, 1911.

YOUR reviewer of last week thinks there is no reason why 'Edwin Drood,' which contains twenty-three chapters, should not have reached in happier circumstances to the proportions of 'Our Mutual Friend' or 'Bleak House.' He has curiously missed the fact that the length is exactly known, the contract with Chapman & Hall being for twelve monthly parts, of which we have six. Moreover it is erroneous to say that Datchery's wig is an assumption, and his disguise hypothesis. "The Datchery assumption" was Dickens's own phrase to Miss Hogarth. G. E. JEANS.

THE LATE MARY ELIZA ISABELLA FRERE.

April 8, 1911.

AS I knew the learned and talented author of 'Old Deccan Days' from 1863-4, the readers of *The Athenæum* will, I feel confident, find this brief note on her biography absolutely accurate, and I hope interesting also, and that not only in itself, but also as a convincing study in "eugenics."

Mary Eliza Isabella Frere, the eldest of the four daughters, and five children, of Sir Bartle Frere, was born at Bitton Rectory, near Bath, in the house of her grandparents Mr. and Mrs. Edward Frere. Mr. Edward Frere was the second son of Mr. John Frere of Roydon Hall, Norfolk, second Wrangler, and Fellow of Caius College, Cambridge, High Sheriff of Norfolk, and M.P. for Norwich, and the author, in *Archæologia* for 1800, of the paper 'On Flint Weapons at Hoxne in Suffolk,' in which the attention of scientists was first seriously drawn to the existence of these survivals of prehistoric man in Britain; his eldest son being John Hookham Frere, scholar, poet, and diplomatist, and the friend of Canning; another, Bartholomew Frere, *chargé d'affaires* at Madrid and at Constantinople; his fourth, William Frere, Master of Downing College, Cambridge, and editor of Lord Glenbervie's 'Reports of Cases,' 1813, and of the fifth volume of 'The Paston Letters,' and the father of William Howard Frere, editor of the *Journal* of the Royal Agricultural Society; and his sixth (and penultimate) son, James Hartley Frere, the writer on prophecy. Mr. Edward Frere married a daughter of James Green, M.P. for Arundel; and their son Henry Edward Bartle Frere, commonly called Sir Bartle Frere, married a daughter of Lieut.-General Sir George Arthur, Lieutenant-Governor in succession of Honduras, Van Diemen's Land, and Upper Canada, and Governor of Bombay, and his wife Eliza, daughter of General Sir Sigismund Smith.

Miss Frere was privately educated at Wimbledon, and there, as throughout her life, was continuously in the society of distinguished men and women.

She went out to India at the age of 18 with her mother, while her father was Governor of Bombay; and during the following year, when her mother was absent in England, she did "the honours of Government House" with the unfailing thoroughness, tact, and graciousness of one "born in the purple," twice folded about her. It was during this period, in travelling with her father through "the Districts" of the Presidency of Bombay, that she gathered together from her ayah the Indian folk-lore stories published in her 'Old Deccan Days' by John Murray, March, 1868. Miss Frere returned with Sir Bartle Frere to England when he was appointed a member of the Indian Council in 1867, and went with him in 1877 to South Africa, returning with him in 1880. While at the Cape she took the same keen and sympathetic interest in the life of the colonists there as she had taken in the people of India when dwelling among them; and it is unquestionable that with her father and mother, and her accomplished sisters, she contributed greatly to drawing the different races of colonists together in South Africa, and enkindling their loyalty towards the British Government, even as in Bombay, where Hindus, Muslims, and Parsis still look back to the Governorship of Sir Bartle Frere as the Golden Age of frank and hearty social intercourse, on equal terms, between Europeans and Indians.

After the death of her parents, Miss Frere lived principally at Cambridge, devoting herself largely to the study of Hebrew; and in the prosecution of these studies at one time she spent eighteen months in travelling through the Holy Land. Her last years were a ceaseless, but serene struggle against failing health; and she died at St. Leonards on Sunday, the 26th ult., in the 65th year of her age.

It is because she is the writer of 'Old Deccan Days' that I have prepared this bare outline of her life for *The Athenæum*. The book is remarkable in many ways. To Anglo-Indians it opened up an entirely new field of scientific research in India, which is proving of inexhaustible wealth; and it gave a fresh impulse to the study of folk-lore in the United Kingdom, and throughout Europe and the Americas.

In the five editions that have been published, it must have now found its way into the utmost English homes of "the four imagined corners of the world." I was an eye-witness of her conscientious labours on it; and its charming illustrations by her sister Miss Catherine Frere make it one of the most attractive volumes of authentic and scientifically treated folk-lore ever produced in this country, and of just the very character to place in the hands of people desiring to acquire a knowledge of its subject. Max Müller always spoke, and in several places wrote, highly of it; and it will secure for its author her enduring side niche in the temple of English fame.

I cannot help adding that what I have here written does little justice to the delightful personality that made Miss Frere so happy an influence for good both in Bombay and at the Cape. Her simple, ingenuous manner, her high plane of thought, her alert and strenuous helpfulness in every good work, her strong patriotism, and her deep religious feeling drew all hearts toward her; and with her wonderful wealth of long flaxen hair, as of "Our Lady of the Snows," the while she moved about with her mother

and younger sister in Government House, they ever recalled to me the vision of the House Beautiful and its three Shining Ones in 'The Pilgrim's Progress.' And when they all went back to England, people out there felt that the Vision had vanished with them, and left Bombay beggared—until haply transmuted by Sir George Sydenham Clarke once again to fairyland.

GEORGE BIRDWOOD.

A STOLEN MANUSCRIPT RESTORED TO FRANCE.

Fitzwilliam Museum, Cambridge, April 10, 1911.

It is, after all, my pleasant duty to write to you once more about the manuscript of 'Etymologiæ Moraliter Distinctæ' which was the subject of my letter of a fortnight ago. On learning from Messrs. Sotheby and from the French authorities that there could be no question as to the facts revealed by the late M. Léopold Delisle, its owner, Capt. Butler, though under no legal obligation to do so, withdrew it from the sale, and generously returned it to the Bibliothèque Nationale. In so doing he followed the lead of Mr. Pierpont Morgan, who returned the priceless Ascoli cope to its owners a few years ago, and set an excellent example to all collectors who may discover in their possession property stolen from national museums and libraries. S. C. COCKERELL.

A BOOKWORM'S PERPLEXITY.

RECENTLY Mr. Jenkinson, the very learned and accomplished Librarian of the University of Cambridge, paid me a visit to look over my books. In the course of his examination he came upon one little volume, just of the same size as a smart young lady's Prayer Book. It was printed at Luxemburg in 1619, and its author was "John Roberti," which, I believe, stands for John Robertson. The author was, among other things, a very prominent opponent of the Animal Magnetists of the seventeenth century and their coryphæus Robert Goclen, of whom a sufficiently elaborate account may be found in the 1876 edition of Augustin de Backer's 'Bibliothèque des Écrivains de la Compagnie de Jésus,' folio, vol. iii. p. 224.

The tiny little book is perfect and in good condition. Mr. Jenkinson, on asking me how I came by it, received the only reply that I could offer: "I know nothing about it except that it certainly was not given me; that I was, as I am, strongly of opinion that it has been in my possession for thirty years; and that I suspect I bought it in my Animal Magnetism days. I am also strongly of opinion that I paid money down for it."

Here comes in a question of ethics. Have I any right to retain the tiny little volume? What Statute of Limitations can be pleaded for protecting me in my rights over any property I may possess? How can I be sure that this little bookling came into my possession by purchase from some rogue who slipped it into his pocket and sold it to me? Am I in conscience bound to restore it to the Cambridge University Library because I know it, on the testimony of Mr. Jenkinson, to have belonged to Cambridge Library a long time ago, and to bear on its title a very old press-mark of that Library? AUGUSTUS JESSOPP.

RICHARD ROLLE OF HAMPOLE.

23, Montague Street, W.C.

I AM writing to inquire for information on two questions connected with a study which I am making of the work of Richard Rolle of Hampole.

In Dr. Morgan Cowie's catalogue of the manuscripts of St. John's College, Cambridge (published Cambridge, 1842), he refers (p. 14) to a "notice of the controversy as to the author of the 'Prick of Conscience' in the *British Critic*, No. 61, p. 23." This reference is evidently wrong, for the *British Critic* was not published in numbers. The article referred to perhaps mentions Thomas Ascheburne, a Carmelite of Northampton, since Dr. Cowie goes on to quote from Guest's 'History of English Rhythms,' the connexion of Ascheburne's name with the poem. I should be very grateful for a clue as to the real reference.

Again, Ritson ('Bibl. Poet.,' p. 37) refers to a manuscript of the 'Prick of Conscience,' "once in the possession of Dr. Monro," which was "left after the death of Hampole and his brother to the Society of Friars Minor at York." It would be of great interest to me to learn the whereabouts of this manuscript or of a description of it.

These questions are of special interest to me since I do not believe that Hampole wrote the 'Prick of Conscience,' and they are intimately connected with the question of its authorship. I should be very grateful for any assistance towards answering them, or any information what ever that might throw light on the larger question of the authorship of the poem. Please reply direct.

HOPE EMILY ALLEN.

OLIVER CROMWELL AS JUSTICE OF THE PEACE.

IN a case before the Court of Requests, 1637, between Anthony Warren and Edmund Druery, complainants, and Theodore Druery, defendant, the King appointed as Commissioners to examine witnesses four local gentlemen, among whom is Oliver Cromwell. The only part of the case preserved is the first page of the depositions. These, though familiar enough to record students, may be interesting to general readers.

"Depositions, taken at the signe of the George in Huntingdon in the Countie of Huntingdon, the tenth day of June in the 13th year of the raigne of our Sovereigne Lord Charles, by the grace of God of England, Scotland, France, and Ireland King, Defender of the Faith, &c., ann. Dom. 1637, before Oliver Cromwell, Esq., Thomas Pampline, Thomas Philipps, and Thomas Sheppard, gents, By virtue of his Majesties Commission issuing out of his Highness Courte of Whitehall att Westminster, to them directed for the examination of witnesses in a cause depending in the said Courte Between Anthony Warren and Edmund Druery, Complainants, and Theodore Druery, defendant, as followeth.

"Thomas Heaton of Saint Jues in the Countie of Huntingdon, Haberdasher, aged fiftie five yeares or thereabouts, sworn and examined, saith: "To the first interrogatory, That he knoweth the compls. and def., and hath known them by the space of nine yeares last past.

"To the third interr. this deponent sayth that he did see the acquittance and release now shewed unto him att the time of his examination bearing date the nynth day of March in the year of our Lord God one thousand six hundred and twenty nine, sealed and delivered by the complainant Edmund Druery as his acte and deede to the said defendant, and did sett his hand thereto as a witness, And that the said acquittance or release was read unto the compl. Edmund Druery before the sealing and delivery of the

same, and was freely and willingly sealed and delivered by him (as this deponent is very persuaded) And further deposeth not."

The page is signed by the four Commissioners, but no further depositions or proceedings follow (Court of Requests, Devon's Series, ii. 692). The case becomes interesting only as giving a good signature of Oliver Cromwell at that date.

C. C. STOPES.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Castells (Rev. F. de P.), *The English Bible*.

A sermon preached at Christ Church, Bexley Heath, on March 26 in commemoration of the 300th anniversary of the issue of the Authorized Version. A list of the translators of the A.V. is added.

Dickinson (G. Lowes), *Religion and Immortality*, 1/ net.

Four essays, one of which is the Ingersoll Lecture delivered at Harvard University in 1909. Part of the Modern Problems Series. Mr. Dickinson always writes with distinction and force.

Hebrew Prophets for English Readers, in the Language of the Revised Version of the English Bible, printed in their Poetical Form: Vol. III. Obadiah, Ezekiel, and Isaiah (XL.-LXVI.), 2/6 net.

Edited by Francis H. Woods and Francis E. Powell.

Holy Bible: a Facsimile in a Reduced Size of the Authorized Version published in the Year 1611, with an Introduction by A. W. Pollard, and Illustrative Documents, 31/6 net.

Illingworth (J. R.), *Divine Transcendence and its Reflection in Religious Authority*, an Essay, 4/6 net.

Maintains that the conception of Divine Transcendence is presupposed, and not precluded, by that of Immanence.

Meyer (F. B.), *Christ in Isaiah*, 1/ net.

Deals with the prophet's anticipation of the exodus from Babylon.

Morgan and Scott's Christian Life Series: Robert Annan, the Christian Hero, by the Rev. John Macpherson; Choice Sayings, being Notes of Expositions of the Scriptures, revised by Robert C. Chapman; Christian Living, and The Present and Future Tenses of the Blessed Life, by the Rev. F. B. Meyer; and "Tell Jesus," Recollections of Emily Gosse, by Anna Shipton, 6d. net each.

Mors Janua Vitæ: being Speculations on the Destiny of the Human Race after Death, with all Humility and Reverence; to which are appended a Creed and some Obiter Dicta, by a Layman, 1/ net.

Fine Art and Archaeology.

Chancellor (E. Beresford), *The Lives of the British Sculptors and those who have worked in England from the Earliest Days to Sir Francis Chantrey*, 12/6 net.

With 24 illustrations.

Drawings from the Old Masters, Fifth Series, 6d. net.

Garstang (John), *Meroë, the City of the Ethiopians being an Account of a First Season's Excavations on the Site, 1909-10*, 31/6 net.

With an introduction and chapter on decipherment by the Rev. A. H. Sayce, a chapter on the inscriptions from Meroë by F. Ll. Griffith, and photographic illustrations by Horst Schliephack.

Palestine Exploration Fund, *Quarterly Statement*, April, 2/6 net. Annual Report and Accounts for the Year 1910.

Temple (A. G.), *Descriptive and Biographical Catalogue of the Works of Art belonging to the Corporation of London*, 1/

Arranged chronologically as the works were acquired by the Corporation; also showing how each work was acquired, its size, and its present location.

Poetry and Drama.

Calderon (George), *The Fountain, a Comedy in Three Acts*, 6d. net.

No. 2 of Repertory Plays.

Douglas (Sir George), *Scottish Poetry: Drummond of Hawthornden to Fergusson*, 5/ net.

Lectures delivered in the University of Glasgow.

Lyre d'Amour: an Anthology of French Love Poems from Earliest Times down to 1866, 5/ net.

Selected and annotated by Charles B. Lewis. Masterpieces of Lyrical Translation, 6d.

Selected by Adam L. Gowans.

Pilgrim Songs on the King's Highway; The Songs of Old England, 5/ net each.

Both selected by W. James Wintle, and containing many full-page illustrations.

Wayfarer's Treasures, by C. O. G., 3/6 net.

A number of short poems.

Bibliography.

Bent (Allen H.), *A Bibliography of the White Mountains*.

With 17 portraits.

Lewis's Medical and Scientific Circulating Library, Catalogue, including a Classified Index of Subjects: Supplement, 1908-10, 6d.

Reader's Index: Mathematics, 1d.

Issued by the Croydon Public Libraries.

Philosophy.

Mickle (Alan D.), *The Great Longing: a Book for Vain People*, 3/6

Second edition of a series of ethical essays by an Australian writer.

Welles (Francis Channing), *Principles of Social Development; or, Universal Ideals and Religion: Books I.-VIII.*, 7/6; *Book IX.*, 1/; *Book X.*, 1/6 net.

Political Economy.

Sarkar (Jadunath), *Economics of British India*, 5/ net.

Second edition, rewritten and enlarged.

History and Biography.

Birch (Una), *Secret Societies and the French Revolution, together with some Kindred Studies*, 5/ net.

Essays republished from *The Edinburgh Review* and *The Nineteenth Century*.

Briggs (John), *History of the Rise of the Mahomedan Power in India till the Year A.D. 1612, translated from the Original Persian of Mahomed Kasim Ferishta: to which is added an account of the Conquest, by the Kings of Hyderabad, of those Parts of the Madras Provinces denominated the Ceded Districts and Northern Circars*, 4 vols., 30/ net.

D'Eon de Beaumont: his Life and Times, 10/6 net.

Compiled, chiefly from unpublished papers and letters, by Octave Homberg and Fernand Jousselin, and translated into English by Alfred Rieu.

Grisar (Hartmann), *History of Rome and the Popes in the Middle Ages*, Vol. I., 15/ net.

Authorized English translation, edited by Luigi Cappadelta.

Henderson (Archibald), *George Bernard Shaw, his Life and Works: a Critical Biography (Authorized)*, 21/ net.

With 33 illustrations.

Leiningen-Westerburg (Count Charles), *Letters and Journal (1848-49)*, 7/6 net.

Edited, with an introduction, by Henry Marezali. Done into English by Arthur B. Yolland.

Runciman (Sir Walter), *The Tragedy of St. Helena*, 10/6 net.

In his early sea-life the author was impressed with the pro-Napoleonic views of his fellow-sailors, and he is of opinion that the banishment of Napoleon to St. Helena was a senseless travesty of justice.

Strachey (Sir John), *India, its Administration and Progress*, 10/ net.

Fourth edition, revised by Sir Thomas W. Holderness.

Taylor (I. A.) *Life of Madame Roland*, 12/6 net.

With 15 illustrations.

Geography and Travel.

Boulger (Demetrius C.), *Belgium of the Belgians*, 6/ net.

With 32 full-page illustrations. Part of the Countries and Peoples Series. It has been the author's purpose to draw the attention of Englishmen to the affairs of Belgium in order to increase the mutual sympathy between the two countries.

Pleasure Guide to Paris, 2/6 net.

Translated from the new French edition by George Day. Illustrated by photographs, and a plan of Paris, showing the position of the principal sights and how to reach them.

Rendall (M. J.), *Sinai in Spring; or, The Best Desert in the World*, 4/6 net.

Illustrated from photographs by the author.

Trevor (Roy), *My Balkan Tour: an Account of some Journeys and Adventures in the Near East, together with a Descriptive and Historical Account of Bosnia and Herzegovina*,

Dalmatia, Croatia, and the Kingdom of Montenegro, 21/ net.

With a photogravure frontispiece, a map, and 104 other illustrations. Mr. Trevor has been in districts whose inhabitants had never seen a motor-car.

Wilson (W.) *Memories of a Country Village*, 7d.

Sports and Pastimes.

Affalo (F. G.), *A Fisherman's Summer in Canada*, 5/ net.

With many illustrations from photographs. Warner (P. F.), *The Book of Cricket*, 5/ net.

Illustrated with 32 photographs.

Eckenstein (Lina), *Comparative Studies in Nursery Rhymes*, 2/6 net.

Part of the Reader's Library.

Philology.

Classical Quarterly, April, 3/ net.

Harrison (Henry), *Surnames of the United Kingdom: a Concise Etymological Dictionary*, Vol. I. Part 14, 1/ net.

St. John (R. F. St. A.), *Burmese Self-taught (in Burmese and Roman Characters), with Phonetic Pronunciation (Thimm's System)*, 5/ In Marlborough's Self-taught Series.

School-Books.

Hall (H. S.), *A School Algebra, Part II*, 1/6 With answers.

Highroads of Geography: Book I. Sunshine and Shower, 10d.; Book II. Scouting at Home, 1/

Parts of the Royal School Series, illustrated by masterpieces of many well-known artists. Book I. is for very small children. Book II. is especially for boys under ten, the pupil being made to acquire all kinds of information by the use of his own eyes.

Shakespeare, *Much Ado about Nothing*, 2/

Edited by S. E. Goggin for the University Tutorial Series.

Siepmann's French Series for Rapid Reading: *La Jacquerie*, par Prosper Mérimée, and *Le Tailleur de Pierres de Saint-Point*, par Alphonse de Lamartine, 1/ each.

Science.

British Bird Book, Section IV, 10/6 net.

For notice of Section II. see *Athen.*, Nov. 26, 1910, p. 671.

Durand (Louis), *The Book of Roses*, 2/6 net.

With 16 full-page illustrations. One of the Handbooks of Practical Gardening. An interesting chapter deals with the relative fragrance of various roses.

Electrical Installation Manuals: *Are Lamps and Accessory Apparatus*, by J. H. Johnson, 1/6 net; and *Motors, Secondary Batteries, Measuring Instruments, and Switchgear*, by S. Kenneth Broadfoot, 1/ net.

Hole (S. Reynolds), *A Book about Roses: How to Grow and Show Them*, 1/ net.

New edition.

Kelvin (Sir William Thomson, Baron), *Mathematical and Physical Papers: Vol. V. Thermodynamics, Cosmical and Geological Physics, Molecular and Crystalline Theory, Electrodynamics*, 18/

Arranged and revised with brief annotations by Sir Joseph Larmor.

King (Irving), *The Psychology of Child Development*, 4/ net.

Second edition, with an introduction by John Dewey. One of the University of Chicago Publications.

Murray (J. Alan), *The Economy of Food: a Popular Treatise on Nutrition, Food, and Diet*, 3/6 net.

Fiction.

Bottoms (Phyllis) and Brock (H. de Lisle), *Crooked Answers*, 6/

A letter-book describing the winter adventures of two girls abroad, one in the High Alps, and the other in Italy. The story is told not only through the girls' letters, but also through the correspondence of various characters among their acquaintances.

Deeping (Warwick), *Joan of the Tower*, 6/

The story of a young monk at the end of the fourteenth century who runs away from his monastery in order to slay the dragons of the world.

Holt (Adelaide), *The Valley of Regret*, 6/

Betty Feverell, a girl of seventeen, has not been married five days before her husband comes to her drunk. After spending five years in prison he returns and is forgiven.

Kane (Lieut.-Col. F.), *Repton*, 6/

A tale of the reign of Queen Anne, when political uncertainty turned the friends of to-day into the enemies of to-morrow. The much-vexed question of how far the Jesuits made use of lay help to push their own interests is incidentally examined.

Kingsley's Hereward the Wake, 2/6

With introduction and notes. One of Macmillan's English Classics.
McCarthy (Justin Huntly), The King over the Water; or, the Marriage of Mr. Melancholy, 6/

A Jacobite romance. Mr. Melancholy is the Old Pretender.

Maxwell (W. B.), Mrs. Thompson, 6/

The strong-minded Mrs. Thompson is the sole proprietress of a high-class furnishing emporium.

Ransome (Arthur), The Hoofmarks of the Faun, 2/6 net.

A volume of fantastic tales, some of which have appeared in periodicals.

Richardson (Frank), Love, and Extras, 6/

A collection of forty humorous papers.

Schwann (Duncan), The Magic of the Hill: a Romance of Montmartre, 6/

The hero is an English public-schoolman, plunged, with little other preparation, into the world of diplomatic and Bohemian Paris.

Thackeray's Works: The History of Henry Esmond, The Newcomes, 10/6 net each.

In the Harry Furniss Centenary Edition. See *Athen.*, March 25, p. 331.

Vachell (Horace Annesley), John Verney, 6/

A picture of the political life of to-day, introducing the characters of 'The Hill' and the same theme, the eternal struggle between good and evil.

Vachell (Horace Annesley), The Waters of Jordan, 7d. net.

New edition. For notice see *Athen.*, Nov. 14, 1908, p. 602.

Warden (Gertrude), Haunted, 6/

The American hero comes to England in order to satisfy his romantic nature. On the day he leaves London he is drugged in a railway carriage, but fortunate enough to rescue the heroine from a red-haired madman in a moonlit wood.

Wintle (Harold), The Great Betrayal, 6/

To save the country which a Secretary of State is betraying, his stepdaughter shoots him; to shield her, the hero, who is a witness of the deed, fires also. Further disclosure we leave to readers of the book.

General Literature.

Anderson-Pelham (Major C. H.), Questions and Answers for Cavalry, Yeomanry, and Mounted Infantry, 9d. net.

Sixth edition, revised to date, in Gale & Polden's Military Series.

Atkinson (Capt. J.), Army Service Corps [Territorial Force]: Guide for Officers, Warrant, and Non-Commissioned Officers (with Specimen Examination Papers), 2/ net.

With an introduction by Col. S. S. Long. Second edition, revised to date.

Atkinson (Capt. J.), Guide for Officers and Non-Commissioned Officers of the Territorial Force (with Specimen Examination Papers), 2/ net. Second edition.

Borrow (George), Lavengro.

A new edition in Murray's Shilling Library, containing the unaltered text of the original issue, some suppressed episodes, and notes by the author of 'The Life of George Borrow.'

Cambray (Philip G.), Irish Affairs and the Home Rule Question: a Comparison of the Attitude of Political Parties towards Irish Problems, 3/6 net.

With an introduction by the Marquis of Londonderry. The book is written as an argument for the Unionist point of view.

Haggard (H. Rider), Rural Denmark and its Lesson, 6/6 net.

With 24 illustrations. Maintains that for a Free Trade Country of limited area, co-operation is essential for true agricultural success, and that this co-operation is only practised by freeholders.

Harris (G. Montagu), Problems of Local Government, 10/6 net.

The author endeavours to give a general idea of the contents of the papers submitted to the first International Congress on the Administrative Sciences and of the proceedings at the Congress itself.

Home University Library of Modern Knowledge: Evolution of Plants, by Dukinfield Henry Scott; Irish Nationality, by Alice Stopford Green; Parliament, its History, Constitution, and Practice, by Sir Courtenay Ilbert; William Shakespeare, by John Masefield; and The Socialist Movement, by J. Ramsay MacDonald, 1/ net each.

Mackenzie (A. S.), The Evolution of Literature, \$2.50.

A comparative and historical survey of the progress of literature from its earliest traces to present-day journalism.

Wagenvoort (Hendrik), De Horatii quæ dicuntur Odis Romanis.

* * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

MR. JOHN MURRAY'S new list includes Vols. V and VI of the 'Recollections of a Long Life,' by Lord Broughton; 'Rambles in the Pyrenees,' by Mr. F. Hamilton Jackson; and the 'Life of the Marquess of Ripon,' edited by Mr. Lucien Wolf.

IN fiction the same house promises, 'Chantemerle,' a story of the French Revolution, by Miss D. K. Broster and Miss S. Taylor; 'Ivor,' a romance of North Devon and the Isle of Lundy, by Mr. George H. Russell; and 'Mr. Wycherly's Wards' in which Mrs. L. Allen Harker carries on the story of her success of two years ago, 'Miss Esperance and Mr. Wycherly.'

BEFORE starting for their holiday in the Far East, Mr. and Mrs. Sidney Webb intend to complete two books, which will be published by Messrs. Longman in June next. One, entitled 'The Prevention of Destitution,' will contain the substance of their two courses of lectures at St. James's Hall and Caxton Hall respectively. This volume will set forth in plain terms a practical and constructive programme of municipal activity.

THE other book, entitled 'Grants in Aid: a Criticism and a Practical Proposal,' is designed to throw some light on the problem how to ensure that Local Authorities shall put Acts of Parliament into operation, so as everywhere to enforce the "National Minimum."

AMONGST the articles in the May issue of *Chambers's Journal* are the following:

'British Rule in India,' by Sir A. H. L. Fraser; 'Andrew Marvell,' by Mr. E. Beresford Chancellor; 'Some Morocco Coast Towns,' by Mr. H. A. Bryden; and 'Counting the American People by Machinery,' by Mr. Day Allen Willey.

MESSRS. J. BAKER & SON of Clifton will shortly issue a volume of 'Sussex Fairy Tales' by Miss Geraldine Hodgson, who is a Doctor of Letters of Bristol University.

WE are sorry to notice the death on Monday last, in his 76th year, of Sir Alfred Lyall, a highly distinguished public servant who added to administrative capacity a gift for writing and a full appreciation of literature. Apart from his Indian writings, of which 'Asiatic Studies' and 'Verses written in India' are, perhaps, best known, he was responsible for the 'Life of Lord Dufferin,' and a sound study of 'Tennyson' in the series of English "Men of Letters."

THE REV. JOCELYN PERKINS, Sacrist and Minor Canon of Westminster Abbey, has revised and enlarged his 'Coronation Book; or, The Hallowing of the Sovereigns of England,' published by Sir Isaac Pitman. Part II., which consists entirely of new matter, gives a full account of the crowning of Edward VII. Mr. Perkins, as one who takes part officially in the ceremony, has especial opportunities for furnishing details concerning it. The present edition is published at a cheaper price than the original one.

DR. SQUIRE SPRIGGE has been elected Chairman of the Managing Committee of the Society of Authors in place of Mr. Maurice Hewlett, who has resigned that position.

SIR THOMAS DE LA RUE, who died on Monday last, will be regretted by all who knew him. He joined the famous firm, after education at Rugby and St. John's, Cambridge, in 1871, and by his energy and grasp of detail did much alike for the business and those who worked in it. The printing of De la Rue has for years been of the highest standard, and Sir Thomas added to his considerate attention to his employes a generous interest in the Royal Hospital for diseases of the chest.

AT a Council meeting of the Canterbury and York Society held on Thursday in last week it was decided to issue another instalment of Bishop Grosseteste's register as the last part for 1910-11. The first part for 1911-12 will probably be the conclusion of the London register of Bishops Baldock, Newport, and Gravesend, which is expected to be ready in September.

THE death is announced, in his 65th year, of Mr. Craige Lippincott, President of the J. B. Lippincott Company, of Philadelphia. He was educated in the United States and in Europe, and entered the publishing business in 1866, succeeding his father as President in 1886.

SCIENCE

The Nāga Tribes of Manipur. By T. C. Hodson. (Macmillan & Co.)

MR. HODSON is to be warmly congratulated on having produced a work of first-rate anthropological interest and importance, and that though working within the gyves and fetters of a Government order. This way of putting it, however, is perhaps a little hard on the Government. Nothing could be more to the credit of the authorities of Eastern Bengal and Assam than the authorization of a series of publications dealing in comprehensive fashion with the idiosyncrasies of their various native charges. Indeed, the only possible ground of complaint that could be discovered against them would consist in the fact that these precious volumes have in the past occasionally proved somewhat hard to come by, presumably because the issue was small, and much of it was reserved for the use of officials at work in India.

If we speak of "gyves and fetters," then, it is merely in order to take due notice of the fact that a hard-and-fast system of categories, and very possibly a maximum length as well, have been included in Mr. Hodson's terms of reference. The artist, however, as Goethe says, is the man who can work within limits; and Mr. Hodson has managed to write a book which, though intensely concentrated and business-like, is at the same time in all respects organic and alive. Sternly repressing his native exuberance—an example of his livelier manner is to be found in a long and amusing citation from a paper of his on head-hunting that has appeared in *Folk-lore*—he has presented compactly under each prescribed heading his personal observations, correlating them carefully throughout with those of his predecessors; has further, with a few light but sure touches, indicated their bearing on the proximate topics of anthropology, whether general or "adjacent"; and—rarest virtue of all—has not been afraid to confess to uncertainty and ignorance in regard to certain points, realizing that it is the duty and privilege of all sound science to raise at least as many problems as it solves. In short, we have here that happy combination, adequate experience reinforced by adequate method.

To be sure, the Nagas deserve a pious historian. They are, in the fullest sense of the expression, a peculiar people. From the standpoint of material culture, indeed, they must be reckoned fairly advanced, since they forge excellent weapons and implements of iron, are expert weavers of cloth (the frontispiece shows a beautiful specimen), build substantial houses, and practise agriculture with a skill that in its highest flights

risers to terraced and well-irrigated fields. Mentally, however, they are in that condition which, despite the efforts of the anthropologist, still lacks its appropriate adjective; for certainly it is not hit off by the invidious appellation "savage." Their "little life is rounded with a sleep," they are encompassed in a vivid dream-life of their own imagining—that would seem to be the essence of the notion to be expressed. Some entirely new phrase—"myth-minded," "phantasiological," or what you will—needs to be coined in order to render the spiritual state of those whose sphere of experience lies in one of those remote corners which the long-handled besom of civilization has not yet deprived of its cobwebs.

The Nagas are doubly isolated—by hills and by the jungle that thickly clothes the hills. Hence they display a centripetal tendency, which is, however, tempered to some extent by migrations due to land-hunger. The village, rather than tribe, is the unit of social organization. Outside the village there prevails no law, but at most mere usages of convenience, such as that which bids a man, if moved to take unto himself a foreign wife, see that at least he weds within the circle of his own dialect. There are no inter-communal duties, nor, again, are there any rights; no tribal head is to be obeyed, no tribal protection is to be enjoyed. Within the village, on the other hand, there rules with universal sway that immemorial custom, pregnant with mystic associations, for which the nearest equivalent in civilized society is what we know as religion. Thus the family or extended household is constituted a distinct social element by the mystic obligations, positive and negative, which membership entails. The area of the house, as bounded by the limits of the eaves and the noonday shadow, is sacred. Here is the domain of the house spirit who presides over domestic life and to whom the head of the family must sacrifice. The birth of children, their naming, and the first occasion of hair-cutting or of ear-piercing, cause all inmates to be tabu, even temporary visitors, such as women acting as midwives. The birth or death of domestic animals on the premises is enough to impose a short period of tabu. To the sacredness of the house must likewise be attributed the curious prohibition on conjugal intercourse within the dwelling itself for the first few days after marriage.

The next social integer to be considered is the clan. This is of great importance as providing the basis of the marriage system. To marry within the clan is strictly forbidden. Were the rule broken, some dreadful calamity would overwhelm the community as a whole. Nevertheless, this tabu does not carry with it, save exceptionally, food tabus and the like, as theory might have led one a priori to expect. Dr. Frazer's recent attempt to disconnect exogamy and totemism here meets with support, as indeed in many other parts of India. At most a few straws point in the direction of Naga totemism. There is, for example, the

fact that the pig is forbidden to the men of Marām, for a reason embodied in a myth, which Mr. Hodson, like Herodotus, "knowing full well, prefers not to relate." Or, again, there is the warrior's full dress with its horns and tail, as displayed in an excellent photograph. Not but what Dr. Frazer, whilst placing the Nagas in the category of non-totemic peoples, has provisionally imputed totemism to their next-door neighbours, the Meithei, on the ground that their clans have severally their tabued object—for instance, a reed, a buffalo, or a fish. In an interesting Appendix Mr. Hodson argues that the relations between the social group and the tabued object under conditions of true totemism is one of friendship; whereas, in the instances in question, what is avoided is merely a source of danger, a cause of plagues, and so on. Surely this objection hardly goes to the root of the matter. The sacred as such, as he would be the first to recognize, is powerful for woe no less than for weal. It might easily happen, then, that the disadvantageous side of the relation should sooner or later tend to predominate. After all, in its proximate aspect a tabu must always rank as a burden, whatever be its ultimate yield of good.

On blood-revenge as a duty falling on the clansman Mr. Hodson does not say much. Those bloody fights between clans of the same village, to which other authorities allude, are ancient history, it is plain. On the other hand, he speaks of oaths between whole clans, as notably the oath on the cat, when the parties chop up the unfortunate creature between them, taking care to stain their knives with the blood—a form of covenant which presumably involves the principle of the conditional curse, as explained by Dr. Westermarck. An interesting outcome of clan solidarity is the custom of *mandu*, or bone-money, the fine claimed by the wife's relations from the husband should she die; though, with curious logic, they hold him responsible for what we call a "natural" death, whilst contrariwise to die by reason of childbirth is reckoned as a visitation—the "act of God."

Lastly we come to the village, that *ne plus ultra* of social organization, wherein the intermarrying groups find what Hegel would call their "higher synthesis." Here again the religious aspect of this unity transcends all others. As a village the folk must control or conciliate the many influences that beset their all-in-all, the rice-crop. Those anthropologists whose chief business is with vegetation deities will find plenty to interest them here. Dr. Farnell has already exploited Mr. Hodson's Assamese lore in favour of a theory of "trieteric" agricultural rites, over which heads have been freely broken in the learned world. The village "gennas," or tabus, again, are a subject which Mr. Hodson has made his own, to the no small profit of science. But space fails us, as we note one important topic after another, whereon the Nagas are sympathetically induced to shed

light. The extent of the ground covered within some two hundred pages may be gauged by consulting the excellent Index. We wish we could as unreservedly praise the accompanying map of the district. It does not do justice to the author's precise indications of locality, and may be suspected of having been handed out, slightly the worse for age, from a Government store.

PROPOSED ALTERATION IN THE CALENDAR.

Blackheath, April 7, 1911.

A PROPOSAL is under discussion for a drastic change in the calendar, affecting, not the accepted length of the year, as in the Gregorian reformation, but the distribution of the months. The principal object of the suggested change is to establish a correspondence between the day of the week and that of the month. It is difficult to see any great advantage in this, and it seems to me that the disadvantages of the means of obtaining it would far outweigh any gain. Four weeks make twenty-eight days, and that number cannot be made nearly an aliquot part of those in a year—365, or 366 in leap year. It is therefore proposed either to have thirteen months in a year, or (which would come to nearly the same thing) insert an intercalary week at the end of each quarter. Even this would make only 364 days in a year; so it is also proposed to make New Year's Day a *dies non*, and another such (about the middle of the year) in leap year. Now this would cause great inconvenience; a Bank or general holiday is simple enough, but to make a day no day at all, and not counted in the calendar, would be a very different thing.

Thirteen monthly divisions in the year would also be very awkward, as compared with the convenient number twelve, which can be divided into halves, quarters, and third parts. It is objected that the present unequal division into quarters is inconvenient. The first quarter consists of 90 (in leap year 91) days; the second of 91; the third 92; and the fourth 92, so that the second half of the year contains three days (once in four years two days) more than the first. But this could be easily rectified by going back to the original arrangement of Julius Cæsar, according to which February was to have twenty-nine days in common years and thirty in leap years; April, June, August, October, and December, thirty days; January, March, May, July, September, and November, thirty-one days each. Thus the quarters would contain 91 (in leap years 92), 91, 92, and 91 days respectively, which are as nearly equal as they could be made unless the duration of the earth's rotation or revolution could be changed. No position was given to Archimedes to enable him to move the earth; nor is it likely that our present would-be calendar-makers would find this more easy.

W. T. LYNN.

SOCIETIES.

ROYAL.—March 30.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'The Chemical Dynamics of Serum Reactions,' by Capt. A. G. McKendrick; 'Preliminary Note on a Method of measuring Colour-sensations by Intermittent Light, with Description of an Unfinished Apparatus for the Purpose,' by Mr. George J. Burch; 'On Variation and Adaptation in Bacteria,' illustrated by Observa-

tions upon Streptococci, with Special Reference to the Value of Fermentation Tests as applied to these Organisms,' by Dr. E. W. Ainley Walker; 'On the Interrelations of Genetic Factors,' by Messrs. W. Bateson and R. C. Punnett; 'A Case of Gametic Coupling in Pisum,' by M. Philippe de Vilmorin and Mr. W. Bateson; and 'On Gametic Coupling and Repulsion in *Primula sinensis*,' by Mr. R. P. Gregory.

SOCIETY OF ANTIQUARIES.—April 6.—Dr. C. H. Read, President, in the chair.—Mr. E. P. Warren exhibited a chest or cupboard from St. Sennan's Church, Bedwellty, Monmouthshire, having at one end carved panels of the five wounds and the emblems of the Passion, and in front panels carved with a tracery pattern. The chest appears to be of the early sixteenth century, although some authorities consider it to be earlier. Mr. Warren also added some notes on Bedwellty Church, an interesting point about it being that the Tower turret had evidently been used for a beacon fire.

Mr. W. Paley Baildon read some notes on a Wardrobe Account of 16-17 Richard II, 1393-4. The principal objects of interest mentioned were a number of white harts, Richard's well-known badge, one of which was made of "cokill," probably mother-of-pearl; three sets of reticulated horse-trappings, with pendants and bosses of laton, and cygnets in the interstices; a pair of "patyns" for the king; and a case of combs, containing also a mirror and a pair of scissors. Dealing with costume strictly so-called, Mr. Baildon traced the history of the sleeveless outer garment, known to brass-rubbers as the cyclas or jupon, from the Arabic *jubbah* or *jibbah*; this word became naturalized in English, through the French as *jupe*; though its proper English equivalent seems to have been petticoat. The jupe was worn by both sexes, at first as an outer garment, like the *jubbah*; in the fourteenth century it began to fit closer round the waist and developed a fullness in the lower part, approaching to a skirt. By the middle of the fifteenth century it had become an under garment, as it still continues; but while men have retained the upper portion, the waistcoat (called a petticoat in Kent as late as 1736), women have retained the lower portion, from the waist downwards, which they still call the jupe or petticoat.

Two remarkable garments were made for Richard, probably for a masque of some sort. One was a hanselin (a sort of loose cloak) of white satin, embroidered with leaches, water, and rocks, and embellished with 15 silver cockles and 15 whelks and 15 mussels of silver-gilt. The other was a white satin doublet, embroidered with gold orange trees, and adorned with 100 silver-gilt oranges. The large number of garments and other articles of green and white suggests that these were used by Richard as his livery colours at this period.

INSTITUTION OF CIVIL ENGINEERS.—April 4.—Mr. A. G. Lyster, in the chair. The papers read were 'The Improvement of Highways to meet Modern Conditions of Traffic,' by Mr. J. Walker Smith, and 'Recent Development in Road Traffic, Road Construction, and Maintenance,' by Mr. H. P. Maybury.—It was announced that 7 Associate Members had recently been transferred to the class of Members, and that 96 candidates had been admitted as Students.—The monthly ballot resulted in the election of 3 Honorary Members, 1 Member, 60 Associate Members, and 4 Associates.

MEETINGS NEXT WEEK.

WED. Meteorological, 7.30.—'A Report on the Grayson's Rulings presented by Mr. Conrad Beck,' Mr. E. J. Spitta; 'The Re-appearance of the Nucleolus in Mitosis,' Mr. E. J. Sheppard; and other papers.
THURS. Royal Numismatic, 6.30.—'A Find of Ancient British Coins of a New Type,' Mr. G. F. Hill.

Science Gossip.

MR. MURRAY promises 'The Great Star Map,' by Prof. H. H. Turner, a popular account of the scope of that work; and 'Science of the Sea,' an elementary handbook of practical oceanography, prepared by the Challenger Society, and edited by Dr. G. H. Fowler.

THE UNIVERSITY OF EDINBURGH has just established a Lectureship on Genetics, to which are attached opportunities for research. The choice of Mr. A. D. Darbishire, lately of the Imperial College of Science, as first holder of the chair, is excellent.

WE are glad to learn that it is intended to develop considerably the courses of lectures and demonstrations in entomology at the above mentioned College. We would call especial attention to the course on Diptera to be given in July next.

MR. C. A. MITCHELL, who has "done the State some service" in the application of scientific methods to the tracking of criminals, has written a book on the subject, entitled 'Science and the Criminal.' This will appear immediately with Sir Isaac Pitman.

MADAME CERASKI, examining photographic plates taken by M. Blazko at the Moscow Observatory, has detected variability in four stars—one in the constellation Lynx and the rest in Perseus. The first (var. 10, 1911, Lyncis) varies from 10½ magnitude to below the twelfth; its period is probably long. The second (var. 11, 1911, Persei) changes from above the tenth to below the twelfth magnitude. The editor of the *Astronomische Nachrichten* remarks that it has been found registered in a Potsdam photograph taken on October 15th, 1899, when its magnitude was 9.3, probably nearly a maximum. It does not appear on photographs taken there on January 12th, 1894, and January 31st, 1899. The third and fourth (var. 12 and 13, 1911, Persei) vary from about the ninth to the eleventh magnitude, but their type of variability cannot yet be assigned.

THE Sociedad astronomica de España will shortly begin to issue a review of work in astronomy, meteorology, and seismology, to be edited by Señor Comas Solá, President of the Society, and Director of the Fabra Observatory at Barcelona.

FINE ARTS

OUR LIBRARY TABLE.

Holland of To-day. By George Wharton Edwards. (Gay & Hancock.)—Mr. Wharton Edwards, the author of this handsome and generally attractive volume, is an American artist who spent some years in Holland, living in considerable intimacy with the people, and employing his time chiefly in painting or drawing the scenes and episodes of popular life that fixed his attention or took his fancy. Forty-four of the illustrations are prepared from these materials, and many of them are in colours. Those entitled 'A Bowl of Oranges,' 'A Tulip Field,' and an 'Antique Push Sleigh' are examples of the accumulation of striking colours. In addition there are many photographs of old Dutch silverwork. As a matter of fact, the illustrations form the outstanding feature and merit of the book, which, as the author is an artist, is not inappropriate.

The text is less satisfactory, and where it relates to history and statistics stands in need of careful revision. On pp. 13-14, for instance, there are several slips, and it is rather surprising to find a recent visitor

describing "Luxemborg as a Duchy under the Crown." That state of things ended with Queen Wilhelmina's accession. It would also puzzle Mr. Edwards to substantiate his statement that the Dutch navy is "manned by 75,000 hands"—the true total being only one-seventh of that figure. But probably the author would repudiate any intention of dealing with dry facts, and claim that he merely wished to give an impressionist account of the country and its people. There is a good deal of sentimental feeling in the Eastern States of America for Holland, and Mr. Edwards is only following in the steps of Motley when he expresses his admiration for the people of "the wonderful country which they have created and made to prosper in face of almost insurmountable difficulties."

Among the most entertaining of Mr. Edwards's experiences were those of boer life. The Dutch boers resemble the old yeomen of England. Once, when travelling near Haarlem, he was at a loss where to put up, and owed to the interest taken in his sketches an invitation to stay in a typical farm- or country house. Here he slept in one of those extraordinary bed cupboards which surround the sitting-room and have just enough space for a bed. Undressing in the sitting-room has to be effected with some skill and delicacy, and then the visitor slides back the panel to his receptacle, enters it, and carefully closes the door behind him. Mr. Edwards passed three nights under this roof, and seems to have enjoyed himself, although he had to perform his ablutions in a large basin behind the kitchen door. One would imagine that these miniature cubicles must be stifling in summer, but, as Mr. Edwards's experience was in winter, he cannot tell us. In any case, they are scrupulously clean, and he did not suffer from the hosts of fleas—called facetiously "the little birds"—which are not unknown in Dutch hotels. Mr. Edwards thinks the present generation of boers are not so attractive as their fathers, and to illustrate the difference he gives a vivid description of one of the last generation who drove him out to see his farm amid the polders, where he was shown two score of clean black-and-white cows and "the cleanest white pigs" he had ever seen. In Holland, alone of all countries, pigs seem to be washed by their owners.

There is a great deal in the volume about the children of Holland, and on the whole Mr. Edwards has given an interesting description of his experiences.

Great Masters of Dutch and Flemish Painting. By W. Bode. Translated by Margaret L. Clarke. (Duckworth & Co.)—We have received a copy of the reprint of this book, which we noticed most favourably on July 24th, 1909. As we then said, "it is scholarly in construction, wise in its general conclusions, and in every way worthy of its author. The eminent German critic has given us the results of well-stored information, laboriously garnered facts, and carefully sifted deductions."

It is all the more, therefore, to be regretted that steps have not been taken to alter such expressions as "documental certainty" (p. 318) and "unpretendingness" (p. 190), and to correct the misprints "Marlborough," "Pouissin," and "Lichtenstein"; while the pedigree of Terborch's 'Peace of Münster' is still incorrectly given. Dr. Bode is, nevertheless, to be warmly congratulated on his informing and well-written book.

British Fire-Marks from 1680. By George A. Fothergill. (Edinburgh, Green & Sons.)—During recent years curio-hunters have discovered new and singular objects of which to make collections. These are "fire-marks," that is to say, the metallic brands of particular fire-insurance offices which it was for a long time customary to affix to the outer walls of insured houses or other buildings. The present writer remembers that when he was a boy in the fifties of last century, it was his habit and that of some of his school friends to collect the names of different plates that they could find attached to houses. The plates were then of common occurrence, and his own collections—entered in a small memorandum book, in the same fashion as boys of a later date collected the names of locomotive engines—were chiefly gathered from Derby, Liverpool, and Bath.

The business of insuring buildings against the risk of fire was begun by one Nicholas Barbon, a doctor, in 1667, the year after the Great Fire of London. In 1680 this business was turned into a company called "The Fire Office." This company maintained an expensive brigade to extinguish fires in buildings which they had insured. Fire-marks or plates, usually of lead, were attached to the exterior of such buildings, stamped with the policy number. Other societies followed suit. The "Friendly Society" of 1684 stated in their proposals that, "to prevent fraud in getting any policy after a house was burnt, no house is to be esteemed a secure house till the mark hath been actually fixed thereon." This was the common practice of insurance companies for more than a century. At a later date wall-plates made of tinned-iron or copper were largely used for advertising purposes, and the policy-holder was generally admonished to see that one was maintained on the wall. But by 1860 or a little earlier the majority of the companies abandoned this practice, and householders did not care to allow the frontage of their residences to serve as a medium of advertisement. These marks came to be regarded as an eyesore, and for some time they were to be noticed only in the more obscure streets or upon out-of-the-way old manor houses. The zeal of collectors, however, during the last ten years has caused the remaining fire-marks to disappear with remarkable rapidity.

Mr. Fothergill in this entertaining book, with sixty illustrations by his own hand, gives some quaint particulars of the methods adopted by certain collectors, one of whom had the effrontery to secure the assistance of a burglar to obtain desirable specimens. The collector who wishes to secure a perfect museum of these metallic and embellished plates will nowadays find it an almost impossible and very expensive task, for 110 different fire offices are known to have issued marks or plates, and of these there are 253 variants.

EARLY BRITISH MASTERS AND OTHERS.

THE SPRING EXHIBITION at Messrs. Shepherd Brothers' Gallery offers an even greater variety of interest than we are accustomed to on these occasions. It is with the artistic rather than the historic and personal interest that we are specially concerned, though from the latter point of view we can imagine few more fertile themes for a writer of erudition than an annotated catalogue of the portraits which have appeared at different times on these walls. The enthu-

siasm of the historian blends imperceptibly with that of the lover of art when one contemplates such a superb illustration of eighteenth-century character as *Admiral R. Deans* (101), by Sir Henry Raeburn. From the point of view of pure æstheticism it is not quite a work of the highest class as painting, the disposition of the masses being somewhat clumsy and accidental, and the colour of the head developed as though the head were the whole of the picture. But as illustration it is unsurpassable. Never was a characteristic type more vigorously portrayed than when Raeburn, with the incisive energy of a Hals, whipped in this old seadog with his tough face and mop of red hair, which, though not long, has the appearance of never having known the barber, looking as if, in popular phrase, it had been "chewed off." By the perfection of the qualities it aims at, and complete absence of pretence at any others, this picture might rank as a masterpiece. S. de Wilde's small full-length of Lamb's friend *Dicky Suett* (96) has a similar interest on a lower plane of intensity. A Zoffany-like picture, it resembles that master not at the rare moments when his feeling for subtleties of colour raised him to greatness, but in his everyday practice of extraordinarily sustained dexterity, which enables us to forget almost the personality of the sitter in wonder at witty bits of painter's handling and adroit brushing of still life, such as in the present picture is offered by the painted firescreen, the original of which was apparently in a style so similar to De Wilde's as to make its differentiation from a real bouquet of flowers a matter of some subtlety.

The habitual subtlety of thought which underlies any high degree of mastery in what to the outsider appears the merely imitative art of painting explains the occasional difference between the painter's and the critic's estimate of a painter. In spite of its more frequent prejudice and its usually narrower range, the former judgment is as a rule the more purely intellectual. Few who have not themselves painted escape attaching a sentimental importance to subject-matter, even though at present the theme generally preferred is the humble transcript from everyday life which appears to mark complete liberation from the bondage of subject. It is not painters, but writers following the apparent lead of painters, who are responsible for the comparative neglect into which are fallen certain academic artists whose delight in the rhetoric of their art kept them contentedly within time-honoured conventions. Joshua Shaw in his little *Landscape* (153) finds sufficient inspiration in the methods and subjects of Berchem to produce a beautifully proportioned design, none the less delightful because it makes no effort to enlarge the landscape-painter's range of allusiveness. How much of the enthusiasm provoked by Rembrandt's 'Mill' was due to the sentimental attraction of a sunset, and to the merely intrinsic delicacy of a superficial blending of tones introduced somewhat at the expense of the firm maintenance of fundamental divisions! Yet the revolution in the art of landscape there inaugurated by the great Dutchman constitutes, in all but illustrative qualities, a doubtful advance on the classic methods of Claude or Wilson. We disguise the convention of a scale of evenly divided tones which they frankly recognized, but we have not really found a substitute for it. Lely's portrait of *Lady St. John*, again (136), is, despite an absurdly small right arm, an admirable work which is apt to be reckoned at less than its true importance. In it we see a virtuoso delighting in the free move-

ment through space which to a modern critic appears almost as aimless as a kitten's chase of its own tail, unless it expresses more definitely than on this occasion human sympathy of an intimate order. *Col. Sir John Hanmer* (133), by an unknown painter, is more in accordance with modern taste—a closer portrait, but a less compactly designed painting. Amongst other remarkable portraits in a show rich in such works are a brilliant *Duchess of Orleans* (132) by Mignard and *A Young Girl with a Rose* (125), by Catherine Read, the latter showing the beauty of colour and delicacy of paint of Gainsborough without his draughtsmanship; while the painter of No. 140 is probably to be sought for among artists having a similar relation to Largillière.

Among the landscapes we are glad to see again a delicate Crome, *The Mill Stream* (142), while a sketch of *Hampstead Ponds* (139) by Constable disputes pre-eminence with a large Wilson (*Italian Lake*, 113), admirable except for the two figures, which look a little like extraneous additions from another hand, though evidently admitted by the artist. This picture is noteworthy for its perfect state, being as fresh apparently as when it left the artist's studio.

MR. VON GLEHN AND OTHER PAINTERS.

At the Goupil Gallery the work of Mr. Wilfred von Glehn in the lower rooms, and that of the group of artists who occupy the floor above, have so much in common that they may conveniently be dealt with together. All are inclined to set an exaggerated value on violence of pitch. In some of Mr. von Glehn's water-colours this is not unpleasant. *San Michele, Venice* (30), is the best of all, catching well the look of desolate abandoned splendour which the florid architecture takes on when one comes upon it quite deserted in the silence of blazing noon. *The Pink Buoy, Venice* (6), *Night, Florence*, (22), and an *Architectural Study, Florence* (27), may be cited as other successful drawings wherein the necessity of making a brilliant combination with a few pigments gives a certain structural unity to the painting.

Mr. von Glehn's oil paintings, on the other hand, are executed in a monotonous impasto which gives the painter's hand an enormous number of tones to marshal. They do not group, like those of the water-colours, by their origin in the paint-box, neither do they group with any exactness by their significance as rendering the illumination of planes. The violent differences of adjacent colours which are characteristic of sunlight are captured, but the delicate sequences of colour which interlace to produce that brilliance of contrast are missed.

In the work upstairs Mr. Douglas Wells, if he shows no greater observation of nature's colour-structure than Mr. von Glehn, shows at any rate an eye occasionally for accidental pattern. *Autumn Mists* (15) may be mentioned. Mr. Patrick Adams has a number of interiors even more complex than the oil paintings of Mr. von Glehn. The colour-tones selected are very like those of nature, but the painter fails to keep the continuity of the line of cleavage between tone and tone, so that the eye is wearied with petty chopped-up forms. Mr. J. C. W. Cossaar has one pleasing water-colour, *Drawbridge, Amsterdam* (76); and Mr. Alexander Jamieson continues his studies of French gardens, though the large and

violent studies he now shows have hardly the charm of the smaller works in more neutral schemes of colour which he did ten years ago. Miss Thea Proctor's drawings are examples of violence of line as noticeable as the violence of colour of the pictures; her figures reel from side to side with much exuberance of curve. Mr. Gwelo Goodman seems definitely settling down as a disciple of Ziem; and the remaining artist, Mr. Arthur Friedenson, while painting on somewhat familiar lines, scores heavily by the relative quietness and modesty of his pictures. *October Afternoon* (117), *The Midday Rest* (134), and *The Chalk Cliff* (136) may be specially commended. All the artists showing at the Goupil Gallery are men of some ability, but most of them appear to be suffering from a passing fashion for incoherence.

THE PARIS PASTEL EXHIBITION.

THE exhibition of eighteenth-century English pastels which is now being held in the galleries of M. Charles Brunner in the Rue Royale, Paris, is one of considerable importance, and is likely to be largely attended between now and the 15th of June. An excellent catalogue has been prepared containing many biographical details. Since the names of a certain proportion of the artists are almost unknown to the general public, and even to such critics as have not studied in any great detail the English artists who worked in this medium, it should be of special value.

Few people will be familiar with the pictures of Samuel Cotes, the younger brother of the better-known Francis Cotes who has been called the "father of English pastel-painting"; Hugh Douglas Hamilton, who worked in Ireland, London, and Italy; John Joseph Kauffmann, the father of the insipid and uninspired painter Angelica Kauffmann, and Mary Benwell, the pupil of John Russell, and later the wife of Capt. Code.

Again, the frequenters of public galleries do not often come across the names of George Chinnery, an Irishman who passed fifty years in India and lived to be nearly ninety-nine years of age; James Ferguson, who was an astronomer as well as a painter; or William Hoare, "Hoare of Bath," who, after nine years' residence in Rome became one of the earliest members of the Royal Academy.

How rarely are we reminded of William Armfield Hobday, a friend of Hoppner; William Lawranson, many of whose pictures were engraved; William Locke, who came under the influence of Sir Thomas Lawrence; Gilbert Stuart Newton, a native of Nova Scotia and nephew of Gilbert Stuart; Christopher Pack, a Norwich copyist of many pictures by Reynolds; or Richard Phelps, whose 'Portrait of Handel, the Composer' is lent by Mr. Robert Dell, the *commissaire général* of the exhibition!

Perhaps the outstanding feature of the present exhibition is Daniel Gardner, who in recent times has emerged from obscurity. His 'Children of Sir Grey Cooper,' in pastel heightened in gouache, the property of Mr. Ernest Leggatt, is notable; and nearly forty works by the greatest of English eighteenth-century pastellists, John Russell, R.A., are a special feature of the Brunner Galleries. His 'Mother and Child' (127) portrays the features of a beautiful woman whose easy grace and maternal affection are lightly sketched in a masterly manner.

Considerable interest attaches to the caseful of "relics" of Russell, which include his sketch-book, some crayons, and a sample of the paper he used. Examples of the less accomplished art of the several members of his family are also exhibited. Paintings by his eldest son William, his eldest daughter Henrietta, his second daughter Jane, and Anne, the youngest, but most able of them, are grouped with good effect.

Close at hand also hang the 'Portrait of the Artist's Sister-in-law' by Constable, a 'Portrait' by Richard Cosway, ten portraits by Francis Cotes, and sixteen characteristic portraits by John Downman. The 'Portrait of Mrs. Harry Linton,' of 1785, is interesting, but lacks the charm seen in the art of his uncle Thomas Gainsborough, whose life at that date was well-nigh spent. To Gainsborough are assigned three works in the catalogue, which also refers at length to a few works by Sir Thomas Lawrence, Raeburn, and John Raphael Smith, the engraver.

Those who wish to study pastellists, cannot well afford to neglect this exhibition of 160 works, which is held on behalf of two well-known charitable institutions in Paris.

M. W. B.

PICTURE SALES.

THE principal feature of Messrs. Christie's sale last Saturday was a hitherto unknown work by Hoppner, forming part of the collection of the late Rev. Basil Beridge of Algarkirk Hall, Lincolnshire. This was a portrait of Mrs. Beridge, in white dress, cut low at the neck with gold trimming, and sash, seated on a sofa, and fetched 6,510*l.* A second portrait of Mrs. Beridge, by Wright of Derby, showing her in red dress, cut low at the neck, with blue sash, and resting her right hand upon the back of a chair, realized 420*l.*

The following pictures from various collections were included in the sale: Rembrandt, *A Philosopher, seated at a table*, 504*l.* Anonymous, *Portrait of a Gentleman, in black coat and hat, with white linen collar*, 409*l.* A. van Beyer, *Fruit, Lobster, Cups, and Objects of Still Life, on a table*, 945*l.* P. Longhi, *Portrait of a Gentleman, in flowered green coat, with a blue cloak over his shoulder*, 231*l.* Il Greco, *A Saint in Prayer before a Crucifix*, 199*l.* Raeburn, *Mrs. Cadell (née Susan Tod), wife of Col. George Cadell of the East India Company, in white dress, and white turban edged with yellow*, 714*l.* Q. Brekelenkam, *The Interior of a Cobbler's Shop, with three figures*, 252*l.* J. H. Tischbein, *The Duet, a lady, standing, playing a guitar, a gentleman, seated, playing a flute*, 273*l.* Sir W. Beechey, *Portrait of a Young Girl, in white dress, with a toy wheelbarrow*, 262*l.*

A pair of pastels by J. Russell, *Portrait of a Gentleman, in plum-coloured coat and yellow vest, with white stock and powdered hair*; and *Portrait of a Lady, in white dress with black shawl, and pearl earring*, brought 388*l.*

The following works belonging to the late Sir Charles Dilke were sold by Messrs. Christie on Monday last. Drawings: W. Blake, *The Stoning of Achan*, 48*l.*; Christ crucified between the Two Thieves, 28*l.*; Queen Katharine's Vision, 'King Henry VIII.,' IV. ii., 52*l.*; Satan tormenting Job, 157*l.* R. Caldecott, *A Farmer went jogging upon his Grey Mare*, 50*l.* Pictures: L. Cranach, *Portraits of a Girl, in rich gold dress and hat, and her brother in red dress and cap*, 231*l.* Italian School, *The Madonna and Child, with the infant St. John in a landscape*, 220*l.*

ETCHINGS AND ENGRAVINGS.

MESSRS. CHRISTIE sold on Tuesday and Wednesday in last week the collection of etchings and engravings belonging to Mr. Lee Hutchins of New York. The best prices on the first day were: C. Méryon, *Le Stryge* (W. 7), first state, with the verse, on green paper, 115*l.*; Tourrelle, *Rue de la Tixeranderie* (W. 13), first state, on green paper, 60*l.*; J. M. Whistler, *The Doorway*

(W. 154), early impression, printed by the artist, 147l.; The Riva, Number Two (W. 175), printed by the artist, 52l.; The Embroidered Curtain (W. 356), printed by the artist, 52l.

The following were sold on the second day: Industrious Cottagers, after James Ward, by W. Ward, printed in colours, 84l.; After Morland: The Thatcher, by W. Ward, printed in colours, 63l.; Alehouse Politicians, by the same, printed in colours, 94l.; The Last Litter, by the same, printed in colours, 50l.; The Thatcher, and The Warrenner, by the same, a pair, printed in colours, 120l. Lady Bampfylde, after Reynolds, by T. Watson, 65l.

Fine Art Gossip.

'THE IDEALS OF INDIAN ART,' by Mr. E. B. Havell, and 'Early Norman Castles in the British Isles,' by Mrs. E. Armitage, illustrated by Mr. D. H. Montgomerie, are two interesting books promised by Mr. Murray.

Two fine volumes of the concluding portion of 'The Domestic Architecture in England during the Tudor Period' will shortly be issued by Mr. Batsford. Mr. Arthur Stratton, who after Mr. Thomas Garner's death undertook to complete the work, has been engaged for nearly five years on it. Instead of the 180 plates promised to subscribers, there will be 192, and the text is much longer than was contemplated. No expense has been spared, and the book will, it is believed, be fully worthy of the subject.

At the last meeting of the Council of the Royal Society of Painter-Etchers and Engravers Miss M. K. Hughes was elected an Associate.

THE deaths within a few days of one another of George Augustus Holmes and Frederick Daniel Harvey, each at an advanced age, remove two prolific and painstaking artists who, in their day, enjoyed a full meed of popularity. They were almost exclusively painters of domestic scenes. They began exhibiting at the Royal Academy within a year of one another, and had been almost constant exhibitors ever since.

THE French caricaturists have started a paper on their own account, and *Les Humoristes* has made a promising start as a weekly at 20 centimes. Its appearance coincides with the opening of the first Salon of the Société des Dessinateurs Humoristes, held at 15, Rue de la Ville l'Évêque, Paris. The *comité de direction* consists of 13 artists, among whom are Forain, Willette, Léandre, and Veber, and each man is to edit the paper in turn! A pleasing variety of opinions should be the result, and a triumph over superstition, if the paper survives.

CONCURRENTLY with the appearance of the new paper, M. Dujardin-Beaumetz, the Under-Secretary of State for the Fine Arts, announces that in the new Luxembourg a room on the ground floor will be devoted to the works of "dessinateurs humoristes," who will be engaged for the mural decoration of the room specially devoted to their works.

M. DUJARDIN-BEAUMETZ has presented to the Luxembourg his own portrait, painted by M. Adolphe Déchenaud (a pupil of Benjamin-Constant), and exhibited at the Salon of 1906.

COMTE ISAAC DE CAMONDO, who died in Paris a few days ago at the age of 60, was well known in artistic circles, and was an active member of the Société des Amis du Louvre and of the Commission des Musées Nationaux.

Musical Gossip.

M. PACHMANN celebrated the centenary of Liszt's birth at his recital at Queen's Hall last Saturday afternoon. He first played six of Liszt's transcriptions of familiar Schubert *Lieder*. The particular numbers he selected are little known. Only two of the transcriptions, indeed, became really popular, the 'Erkling' and 'Hark! hark the Lark,' of which the former is constantly performed; neither, however, was included in M. Pachmann's programme. Liszt was further represented by a Concert Study, a Mazurka, and the Hungarian Rhapsody. All these pieces, transcriptions also, were rendered with finished technique and skill; but it was in a group of Chopin solos that the pianist achieved his greatest success. Of the six numbers, only one was unfamiliar. This was the Fourth Scherzo in E, which, if the least characteristic of Chopin's four Scherzos, was interpreted with marked vigour and brilliancy.

THAT the principal conductorship of the London Symphony Orchestra was offered to Sir Edward Elgar will cause general satisfaction; that he has accepted it is a guarantee that the orchestra will have at its head an able and sympathetic conductor. For the most part he has been engaged in London in interpreting his own works, yet on several occasions he has shown rare skill and judgment in dealing with the music of other composers. He is proud of the London Symphony Orchestra, and so are its members of him.

At the farewell concert given by that orchestra at Queen's Hall on Monday evening, Wagner, Beethoven, Bach, Brahms, and Sir Edward Elgar were represented. For the music of Sir Edward the great conductor has always shown much admiration and sympathy. All the performances were very fine; but Dr. Richter ended, as he began over thirty years ago, by showing himself supreme in interpreting Wagner and Beethoven.

THE opening ceremony of the International Musical Congress to be held under the presidency of Mr. A. J. Balfour from May 30th to June 3rd, will take place at the University of London. On the Tuesday afternoon an historical Chamber concert will be given at the Æolian Hall, and in the evening an orchestral concert (the Queen's Hall Orchestra) at Queen's Hall. The programme of the former will illustrate the Elizabethan and the Restoration periods, and even later. Vocal and instrumental music will be interpreted by Miss Evelyn Hunter, Mr. Frank Thistleton, Miss Hélène Dolmetsch, Mr. J. A. Fuller Maitland, and the Magpie Madrigal Society.

ON the Thursday afternoon at Queen's Hall, there will be a choral concert, at which the Huddersfield Choral Society will take part in Bach's eight-part motet "Sing ye to the Lord," S. Wesley's "In exitu Israel," Mr. Granville Bantock's 'On Himalay,' and a selection of madrigals and part-songs. In the evening at Queen's Hall, with the London Symphony Orchestra, the programme will include Sir Edward Elgar's Second Symphony in E flat, to be performed under his direction.

ON the Friday afternoon there will be a concert at the Æolian Hall of modern English music (Society of British Music), and, later, a striking contrast, a selection

of early Church music at Westminster Cathedral. On the Saturday evening an operatic performance will be given at Covent Garden.

ON the Wednesday, Thursday, and Friday mornings meetings of sections will be held at the University of London for the reading of papers.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	London Symphony Orchestra, 3.30, Palladium.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
WED.	Miss Beatrice Overton and Mr. Adolf Waterman's Vocal and Piano Recital, 8.15, Bechstein Hall.
FRI.	Miss Mary Dickenson's Violin Recital, 8.15, Æolian Hall.
SAT.	Vianna da Motta's Piano Recital, 3, Bechstein Hall.
—	John Dunn's Orchestral Concert, 3.15, Queen's Hall.
—	Royal Opera, Covent Garden. Opening Night.

DRAMA

The Doctor's Dilemma, Getting Married, and The Shewing-up of Blanco Posnet. By Bernard Shaw. (Constable & Co.)—There is only one writer for the stage who would care to call himself "a specialist in immoral and heretical plays," and he has ceased to shock the more knowing by such paradoxes. We understand our Bernard Shaw by this time, and are aware that his "immorality" proceeds from an earnestness and a passion for truth almost Puritanical. Every work of his, to be sure, is a challenge to the public, deliberately intended to startle and surprise. Every time he publishes a new batch of plays, along with the inevitable prefaces, he tramples, theoretically at least, on half-a-dozen or more respectable conventions and institutions. But those who have watched his career longest are by no means sure that "G. B. S.'s" revolutionary sentiments mask so very much more than a claim for freedom of thought, and especially for freedom of discussion. He likes to play with the glosses on current morality; he insists on being allowed to debate antinomian as well as the more accepted solutions of social problems. He holds, too, pious opinions, nay convictions, on sexual ethics, which he enjoys expressing in the most extravagant of terms. But there are limits, he has discovered, to his complacency towards the spirit of revolt. Thus he has no patience with foolish couples who send round cards announcing that they have entered on illicit unions, and he has had more than one "straight talk" with "young women" who have come to ask him "whether they ought to consent to marry the man they have decided to live with." There is no subject, he assures us, on which more dangerous nonsense is talked and thought than marriage. "If the mischief stopped at talking and thinking it would be bad enough, but it goes farther, into disastrous anarchical action." So, though he is all for making divorce as easy and cheap and private as marriage, his advice to rebellious spirits is to make sure of the wedding ring. And though he would like to establish the old maid's right to motherhood, he insists that clandestine arrangements are "neither dignified nor safe and comfortable." Mr. Shaw protesting against being supposed to hold advanced views, as he protests here concerning marriage, is a sight to set his more literal disciples staring with wonder; yet to those who have always held that his vocabulary was more extreme than his beliefs, and that his pose of anarchy was adopted mainly to secure the

fullest privileges of dialectic, his disclaimer will hardly come as a surprise.

How much less of an arch-rebel he is than he has been sometimes credited with being may be judged from a study of his delightful comedy 'Getting Married.' There you have a crowd of "advanced" men and women all canvassing the disadvantages of, and substitutes for, matrimony. Their objections to the institution and their suggested reforms are all set down on paper as soon as advocated. But when it comes to the point of their acting upon their theories, not one of the parties is prepared to subject them to the touchstone of practice. They talk boldly and violently enough; they one and all for different reasons shrink from the ordeal of living up to their notions. It is not by accident that Mr. Shaw makes his revolutionary debaters conventionalists and conformers in their own private affairs. You may indeed see "G. B. S." accommodating himself now to his surroundings in more ways than one. He, the hater of sentiment and romance, puts into the mouths of two of his latest heroines, Jennifer Dubedat and Mrs. George Collins, love-speeches at which once he would have pointed his satire; while you will find him in 'Blanco Posnet' frankly accepting the reality of conversion. Not even he, any more than Mr. Wells, can avoid, in matters of religion, repeating old doctrines in a new terminology; not even he can argue away the dominance of sex-feeling in human life.

Yet to insist that Mr. Shaw has been forced by experience to moderate his strong views and to compromise with the prejudices of his weaker brethren is not to deny that every fresh work of his is as good as a tonic to reflective readers. He is the intellectual masseur of his age. His stern logic and nimble wit are as invigorating as the cold bath before breakfast. However heartily you may disagree with him or even disapprove of him, he has only to start discussing a subject for you to feel obliged to think it all out *de novo*. In his newest prefaces he deals not only with the topic of marriage, but also with those of the medical profession and the stage-censorship. On the latter point the views of this journal are sufficiently near his own for there to be no need to quote his opinions. For a different reason it is not necessary to traverse his rather violent pronouncements on the themes of vivisection and vaccination; yet even readers who are least in agreement with him on these matters will hardly contest his assertion that medical men to-day are becoming as it were a new priesthood, and are adopting the privileges and authority of the confessional. The plays included in this volume have already been fully reviewed in our columns, apart from 'Blanco Posnet,' and this, a melodrama of the Far West, has little significance except in so far as it shows its author approximating—slowly as yet, it is true—to the religious sentiment of our day.

Dramatic Gossip.

MADAME LYDIA YAVORSKA, who has just concluded her season at the Court Theatre, will from Tuesday, the 25th inst., appear in Ibsen's 'A Doll's House' at the Kingsway Theatre. Miss Janet Achurch will also be in the cast.

PROF. MAX REINHARDT's highly successful production of 'Edipus Rex' was to have been given in an English rendering by Prof. Gilbert Murray at the Albert Hall, a building

sufficiently large to enable 500 to 600 characters to appear at the same time being essential for the success of the piece.

PROF. REINHARDT visited the Hall, and agreed that it would provide an ideal setting for the purpose; but it has recently been legally decided that it cannot be licensed for theatrical performances. Efforts are being made to secure some other place during the present season.

THE DUCHESS OF SUTHERLAND is lending Stafford House on May 11th for a matinée which Miss Italia Conti is organizing, and which will include a children's Japanese play by Mr. E. L. Shute. The only adult actor in this fantasy will be Mr. Rutland Barrington, and the music has been written by Mr. H. W. Hewlett.

MESSRS. BELL'S BOOKS.

Some Opinions on WILLIAM PITT AND NATIONAL REVIVAL

BY
DR. J. HOLLAND ROSE.

Illustrated.

Medium 8vo, xii+632 pp. 16s. net.

Mr. HILAIRE BELLOC in the *Academy*.

"Dr. Holland Rose's monograph is as thorough a piece of work as one can desire..... A fine piece of modern historical writing, in its research, its guise of evidence, and its neutrality. It is also a first-rate piece of controversy, excellently distinguishing between the balance of witnesses when their statements are combined and the acceptance of evidence from one witness or from another."

Mr. J. L. GARVIN in the *Observer*.

"Dr. Holland Rose established a high reputation at once by his vigorous and solid life of 'Napoleon,' but he has commenced what will evidently be a far more important achievement..... We regard the present volume as one of the foundation books of English historical writing..... Dr. Holland Rose's pages are full of wise reflections, permanently valuable to students of political method."

Mr. THOMAS SECCOMBE in the *Daily News*.

"As a contribution to the understanding of the one epic page in modern history, the present work, by reason of its scholarship, its impartiality, and its artistic restraint, establishes the author's position once and for all as a serious historian of the first rank."

The 'NATION.'

"Dr. Holland Rose has devoted so much time, care, and talent to the biography of Napoleon, that his long expected life of Napoleon's great opponent has been awaited with keen interest and curiosity. The first of the volumes in which he is to describe Pitt's career from the documents now available will not disappoint the hopes of his readers. It is a very thorough, patient, and scholarly piece of work."

Write for detailed Prospectus.

BOHN'S LIBRARIES, 1847-1911.

"Bohn's Libraries still hold first place in the estimation of those who value scholarly accuracy of text rather than ornateness of binding, and the comprehensiveness of scope has never yet been excelled in a uniform series..... Messrs. Bell have always shown commendable enterprise in taking advantage of the latest researches and revisions." *Outlook*.

LITERATURE

The Amazing Duchess: being the Romantic History of Elizabeth Chudleigh, Maid of Honour, the Hon. Mrs. Hervey, Duchess of Kingston, and Countess of Bristol. 2 vols. By Charles E. Pearce. (Stanley Paul & Co.)

THE fact that no critical or impartial narrative (if we except Dr. Hunt's lucid article in the 'Dictionary of National Biography') of the life of the supposed original of Beatrix Esmond has hitherto appeared is perhaps warrant enough for Mr. Pearce's book. He confesses at the end of it that he still finds his subject "a profound puzzle"; and only claims to have succeeded in showing, not what the woman was, but what she was not. The term "adventuress," which he repudiates, is somewhat vague. No one can deny that Elizabeth Chudleigh had adventures; but her birth was gentle and her character may not have been abnormally vicious. As a contemporary prophetically wrote: "Much will be said that she does deserve, and more that she does not." Mr. Pearce has at least done one just and necessary thing: he has placed the subject in its surroundings, and looked at it from that standpoint.

Much of the first volume is but loosely connected with the title of the work. The mad and merry doings of Lady Caroline Petersham and the fortunes of the Gunning sisters, the ill-marshalled coronations of the second and third Georges, and

"the extraordinary shifts" visitors were put to at that of the fourth, take up a great deal of space. Even the general reader must have encountered not a few of these topics in previous biographical publications. On the other hand, the soi-disant Duchess's adventures upon the Continent in her closing years, and especially the extracts from her autobiography in the Baronne d'Oberkirch's memoirs, render the second volume much less hackneyed; nor is Mr. Pearce's advocacy of the claim of Major Semple, as against Stoney Bowes, to have been the original of Barry Lyndon, devoid of point and plausibility. He has, upon the whole, dealt with contemporary sources in the right spirit; and he was, in our opinion, fully justified in printing Thomas Whitehead's letters almost *in extenso*, since these 'Original Anecdotes of the late Duke of Kingston and Miss Chudleigh *alias* Mrs. Hervey *alias* Countess of Bristol *alias* Duchess of Kingston,' however slight their biographical worth, are undoubtedly of value as a social mirror.

The author advances good reasons for adhering to the accepted date of Miss Chudleigh's birth, instead of putting it, with Mr. Baring-Gould, six years later. But he points out that, according to Lady Mary Coke's journal, the lady herself over-estimated it, if in 1768 she really "told the company at St. James's one night last week" that she was fifty. Perhaps, he adds, at that time of stress she looked older than she was and—she habitually overate herself. Yet we have the admiring Baronne d'Oberkirch many years later writing of the exiled sexagenarian bigamist as one who moved "with all the grace and majesty of a goddess," and comparing "the just proportions of her figure" to those of "our own lovely Queen"—Marie Antoinette before the Revolution.

There appears to be no record of Elizabeth Chudleigh's birth in Chelsea Hospital, where her father was Lieut.-Governor from 1715 to 1726. But according to the singular autobiography, couched in the third person, which she read to the Duchesse de Bourbon and allowed to be copied by Madame d'Oberkirch, she was reared at his country seat in Devonshire, where the peasantry said that she was "charmed," and fascinated both man and beast. If we are to accept as veracious this singular fragment, the frustration of Miss Chudleigh's love-affair with the young Duke of Hamilton (whose love she returned "with true affection as deep as her nature would allow her to feel for any one") was due, not to the interception of his letters by her aunt Mrs. Hanmer, but to "a fit of displeasure, excited by the report of his infidelity." The secret marriage at Lainston with the Hon. Augustus Hervey (whose father, Pope's "Sporus," Mr. Pearce incorrectly designates throughout his book) was entered into "to make their separation more secure," but was

soon regretted. Of the validity of the ceremony, however, there can be no doubt, though it suited Miss Chudleigh, when she wished to change the situation of mistress for that of wife to the Duke of Kingston, to get it invalidated by the Consistory Court of the Bishop of London. Previously she had been as anxious to authenticate it; and the judgment in the jactitation suit had only been arrived at by the collusion of Hervey, that gallant officer having apparently failed in his first proposal of a divorce. He seems to have been really in love at the time of his marriage, and to have had no doubts about the parentage of a child which Miss Chudleigh had in 1747; but his wife's aversion and manner of life changed all that, and the only question with him came to be how he could best get free from her.

The biographer does not stickle at maintaining Miss Chudleigh's *bona fides* in thinking herself free to marry the Duke of Kingston. His strongest point is the granting of a special licence by the Archbishop after due consideration, and consequent upon the decision in the jactitation suit. He also cites as confirmatory the wearing of marriage favours by the King and Queen, George III. and Queen Charlotte. As to her doubts concerning the regularity of the marriage with Hervey, he is hardly upon as firm ground. It is certain that when Miss Chudleigh thought there was a prospect of becoming Countess of Bristol she took decided steps to make sure of documentary evidence of her position; though the story that, when she had changed her views, she went so far as to tear a leaf from the Lainston register, is, as is pointed out, pure invention.

Again, as Mr. Pearce says, there is certainly no evidence that the so-called Miss Chudleigh had any hand in Prince George's affair with Hannah Lightfoot; but, if there was anything in the tradition, it would explain a good deal. It was passing strange that a lady who was notoriously the mistress of a duke, and whose real status as a married woman was more than suspected, should have remained a maid of honour to the Princess Augusta; still stranger that, without reproof, such a person should have been permitted, at the austere Court of Queen Charlotte, to give a birthday entertainment in honour of the Queen long before her position had been nominally regularized by the second ceremony. Miss Pendered's speculations, however slight their basis, were surely not without some justification.

Mr. Pearce seems to us fairly successful in rebutting the charge of cunning made against his heroine, but not so happy in controverting that of avarice and meanness. She might probably, had she chosen, have bought off the sole surviving witness of her first marriage at a trifling monetary sacrifice. In the case of Foote, as Mr. Fitzgerald admits, "Lady Kitty Crocodile" was carried along by the arts and interests of her agents.

In an unwary moment the author allows himself to term "Elizabeth's chief failing" a "delight in economy which amounted to meanness." But this, it seems, alternated with an extravagance which, she herself admitted, made her Duke "grieve extremely" and expostulate uselessly.

The audacity which the Duke of Kingston's widow showed at her trial before the peers for bigamy was certainly little less than sublime, tempered as it was with a touch of unusual discretion. Even the spiteful Walpole praises her "natural behaviour," and declares that "her presence of mind and attention never deserted her." She had been obliged, whilst in bad health, to hurry home from Rome to meet the charge, and is said to have compelled her banker there (who had been "got at" by her enemies) at the point of a pistol to furnish the necessary supplies.

In the autobiography the ex-Duchess attributes her unpopularity in England to her want of consideration for public opinion:—

"Two things that she did, and at which great offence was taken, were that she would not observe the Sabbath with all the strictness required by her fellow-countrymen, and, her neck and arms being very handsome, she very naturally wished to display them. These were considered unpardonable crimes."

But when she left England it was different. She was still acknowledged everywhere but at Vienna as Duchess, and was even created Countess of Wörth by the husband of her friend the Electress of Saxony. Catharine of Russia received her with open arms; the Polish prince Radziwill fêted her; and the French nobility supped with her and lauded her wit. In former years Frederick of Prussia and Pope Clement XIV. had been among her admiring hosts, so that, if the woman were an adventuress, she was clearly one of no mean calibre. She bought estates both in Russia and France—the latter, variously stated to have cost 50,000*l.* and 75,000*l.*, being for the most part unpaid for at her death. That event is said to have been precipitated by the loss of a lawsuit concerning another purchase of house-property at Montmartre, and by her insisting upon drinking two glasses of her favourite Madeira.

Mr. Pearce is generally accurate; but he should have known that Dunning, the Countess-Duchess's counsel at the bigamy trial, was at that time neither Attorney nor Solicitor-General, but in opposition; and that the Gordon riots were not in 1779, but in 1780. There were no such large creations of peers as seems to be implied (ii. 238) before the time of the second Pitt. The author writes incorrectly "Countess of Temple," "Earl Mansfield"; and the name of Catharine II.'s biographer always appears in his pages as "Walislewski." Amongst misprints we have noticed are "oratorios" (for *oratorios*, i. 107), "*Uppin* Ossory" (ii. 113), and "Meos ad sidera *Follo*"

(i. 196). The Index is very imperfect; but the illustrations are well reproduced, and some of them (such as the representation "from a scarce old print" of Miss Chudleigh as Iphigenia at the Somerset House ball) are highly curious.

History of the British Army. By the Hon. J. W. Fortescue.—Vols. V. and VI. 1803–9. (Macmillan & Co.)

MR. FORTESCUE'S 'History' has now entered a period of yearly increasing interest. The student, while he traces the preparation of the Army and its leaders, by service in various fields, for the ultimate struggle with Napoleon's forces, must ever bear in mind the political coefficients of each crisis, if he would appreciate the essential relationship of strategy and diplomacy, which is the keynote of Napoleon's career.

It was in India, as we learn from these pages, that Arthur Wellesley made himself once for all an expert in the vital questions of transport and supply: other commanders might be as skilful in point of tactics, might be better liked by their troops; but Wellesley avoided mistakes, and left nothing to the hazard of hunger. What the Mahrattas thought of his method of warfare in 1803 is to be seen from the description quoted from one of their chiefs of the capture of Ahmednuggur:

"These English are a strange people, and their General a wonderful man. They came here in the morning, looked at the pettah-wall, walked over it, killed all the garrison, and returned to breakfast."

Yet success was not so easy as it looked. Wellesley and Lake, the latter a different type of general, working on different lines, might win it; but others were only too prone to fail. Stevenson, Murray, Monson, in India, Macdowall in Ceylon, were generally feeble, and the records of their operations are not pleasant reading.

The years 1803–5 were a time of anxiety for the British nation at home:—

"Historians will debate for ever the question whether Napoleon really intended to invade England or not. Personally I have no doubt that he did so intend, provided that he could see any reasonable chance of transporting a sufficient force across the Channel.... The man was continually conjuring up attractive visions of conquests over the sea, and amusing himself and distracting his officials by executing them upon paper."

The expedients adopted by the British Government for maintaining the Regular Army at the necessary strength, and for creating and organizing an efficient force for home defence, produced an extraordinary confusion at home at a time when simplicity of obligation and sufficiency of service should have been the dominant considerations. Having dealt at length in a separate volume ('The County Lieutenancies and the Army, 1803–14,' published in 1909) with this

complicated and somewhat wearisome subject, Mr. Fortescue is able now to put the essential points almost within the limits of a single chapter, and thus to avoid a disagreeable interruption of continuity. Continuity, indeed, is well preserved in these volumes; yet it is in this connexion that we make just one criticism. In the Table of Contents the several spheres of operation are distinguished, chapter by chapter and within each chapter, but without regular indication of dates; in the text the date is given at the head of each page, but the spheres of operation are not distinguished. We suggest that in the volumes to come both date and sphere might be regularly indicated in Contents and text alike.

To an Englishman the autumn of 1805 means Trafalgar; but, as this history incidentally serves to remind us, the effect of the famous 21st of October was not felt for a long time after the disastrous capitulation of the Austrians at Ulm on the 20th of October, and the Russian defeat at Austerlitz on the 2nd of December—not, indeed, until the British Army could carry the war into the enemy's country. Meanwhile, that Army had received a most useful accession of strength in the King's German Legion, formed from the remnants of the Hanoverian forces.

The brilliant little victory at Maida—we wonder how many dwellers in the Maida Vale of to-day know where Maida is, or why a district of London should be so named—showed, as Wellesley's Peninsular triumphs were to prove again and again, "that the British troops, by good training and strict discipline, could disable at a range of fifty or a hundred yards an infantry which, however imposing in appearance, was powerless for deadly mischief at a greater range than thirty-six inches" (vol. v. p. 355). If we compare this battle with the amazing operations in and about Buenos Ayres in the same year (1806), we realize at once how diverse were the campaigns in which our troops might be engaged, how different the capacities of the officers to whom a long-continued and wide-ranging war gave opportunities of independent command. It is just because Mr. Fortescue draws character so well that he can guide us to a true judgment in such instances. In the intricate and often contradictory negotiations of these years disagreement was common enough between the politician or the diplomatist and the soldier; and in these volumes (as their predecessors have led us to expect) the soldier's case receives honest and adequate consideration. A bad commander is not spared; but neither is a Cabinet excused which mismanages recruiting, squanders soldiers in vague and vainglorious expeditions, and quarrels with its best generals. The high purpose of Pitt, the conscientiousness and the courage of Castlereagh, praiseworthy (and they are praised here) in themselves, cannot blind one to the difficulties which commanders like Craig, Cathcart, and Moore had to

encounter in the execution of their tasks. Questions of seniority only aggravated the trouble. Wellesley's victory at Vimeiro (in August, 1808) was literally won within hail of his official senior, Sir Harry Burrard, who had decided to remain for one night more on board the frigate which brought him to the Portuguese coast. It was only after a Court of Inquiry had declared Sir Hew Dalrymple's failure as Commander-in-Chief that Moore obtained his opportunity in Spain.

The famous operations culminating in the action of Corunna, admirably described and accurately appreciated, form a fitting conclusion to this portion of the 'History.' We see clearly the audacity of Moore's determination against the communications of the French, his abiding consciousness of almost insuperable difficulty, his determination to retreat when all the soldier in him wished to fight, the triumph of strategy over discontented generals and insubordinate troops. Moore's campaign was no disaster, for British troops were back in Portugal within three months; nor was it "the most brilliant stroke of war of all time." It was an example of true strategy; and its results were essentially strategic. Napoleon was checked by it in the immediate accomplishment of his purposes in the Peninsula. Mr. Fortescue answers the critics at considerable length, and sums up his estimate of the hero of Corunna in the following words: "No man, not Cromwell, nor Marlborough, nor Wellington, has set so strong a mark for good upon the British Army as John Moore."

The maps in these volumes are as good as ever. In due course it will certainly be advisable to reissue in a separate volume all the maps belonging to the 'History,' as was done in the case of Alison's 'History of Europe.'

The Making of Scotland. By the Right Hon. Sir Herbert Maxwell. (Glasgow, MacLehose & Sons.)

ONLY within the last eighty years has Scotland emerged from the political conditions which were perpetuated by her long struggle for national independence. The England of Edward I. had already outgrown feudalism as a system of government; but the Scottish Parliament, as Lord Stair reminded it in 1701, was never more than a "Baron Court"; and down to 1832 the Parliamentary franchise was confined, in terms of the Union, to some 2,500 feudal superiors and the corporations of sixty-six royal burghs. It was the three centuries of almost constant warfare, followed by a century of religious strife, in which Scotland was governed from London "through the post," that made constitutional progress impossible. The material prosperity thus sacrificed is evident from the fact mentioned in this work that the customs of Berwick,

the wealthiest town in Scotland, were accepted before the war as security for a debt of 2,197*l.*, "and this at a time when the whole customs of England amounted only to 8,411*l.*"

The stubborn resistance of the Scots is, however, inspiring and picturesque as well as momentous; and in these six lectures, which were delivered to a popular audience in the University of Glasgow, Sir Herbert Maxwell deals with it in a manner at once impartial and sympathetic. Perhaps, indeed, in his anxiety not to be unfair to "the greatest of the Plantagenets," he has rather overshot the mark. He is at pains to show that King Edward I. was invited to act as arbiter by both parties to the succession dispute, and that he had no thought of annexation when he insisted on the dubious overlordship; but it was one thing to press an ancient claim, and another to use its acknowledgment as a basis for aggression; and Sir Herbert need not have passed so lightly over the advantage taken by Edward of what Mr. Lang has called Balliol's "lamblike" character. Balliol had had to answer other citations than that of the Gascon merchant before he sought help from France, and the superiority for which Edward contended had never involved a right of appeal to the English courts.

Modern criticism makes free with the heroes and knaves of popular tradition. Instead of a William Wallace "sticking to the dead" the English Governor of Dundee, we have a possible William le Waleys, a fugitive thief; Sir John Menteith, having served his turn as the Judas of his country, is rehabilitated as a conscientious sheriff; and the caged Countess of Buchan is no longer exposed to the public view. Her cage is placed inside Berwick Castle; it is comfortably furnished; and she has five servants to do all "things necessary for the comfort of her chamber." Bruce, before he finally took arms in his own and the national cause, appears in no favourable light—now patriot, now renegade, pledging himself simultaneously to England and France, swearing and re-swearing fealty—five times in all—to King Edward, and in short, "acting with a duplicity extraordinary even in those times of divided allegiance." In the days of Wallace and Bruce the nobles were largely of alien birth and interest, and it is suggested that it was the priests, jealous of York and Canterbury, who secured to nationality its popular support. But "the perfect organization of the Church of Rome" is a phrase which requires much qualification as applied to Scottish parishes; and we doubt whether the prelates can have had anything like "complete control over the rural clergy and their people." The monastic vicar who presided in most of the parishes can have had little influence, and the parsonages, which survived as such, were not infrequently held by laymen. Sir Herbert works his way to 1364, and concludes with a survey of the subsequent Border warfare.

Without sacrificing the romantic side of his subject, he has been careful to eliminate legend from fact; and if his sketch falls short of completeness, it is only because there are few references—and these entirely favourable—to so large and dubious a factor in the struggle as the French alliance. He relates many stirring incidents, some of which are drawn from the 'Scalacronica'—a work, translated and admirably edited by himself, which was reviewed in these columns on August 3rd, 1907; and we notice an amusing foot-note. It seems that French long contended with English as the language of the Irish law courts, and in the seventeenth century it is recorded of a prisoner that he "ject un brickbat a le justice que narrowly mist." There are two maps—one of Bannockburn—but we regret to find no Index.

Encyclopædia Britannica: Religion (Abenezra—Inspiration). (Cambridge University Press.)

It so happens that the first article belonging to the section 'Religion' in the new edition of this great Encyclopædia invites criticism on a point of form. Why retain the barbarous and antiquated designation "Abenezra" instead of adopting the better and now generally current form "Ibn Ezra"? As a Jew of Spanish birth, the writer of genius to whom the name belongs was, in Arab fashion, known as Ibn Ezra. It was probably due to a Latinizing tendency that "Aben" appears instead of "Ibn" in a certain number of names borne by Jews in mediæval Spain and Portugal; and a Jewish lexicographer of the fourteenth century even turned the Arabic "Ibn" (son) into the Hebrew "Eben" (stone). But as, since the revival of Arabic learning in Europe some generations ago, bibliographers and historians no longer speak of "Abenezra," but uniformly use "Ibn Ezra," why perpetuate the antiquated form in a modern work like the present? A cross-reference from 'Abenezra' to the more current designation would have been sufficient to call attention to the divergence in spelling.

On passing to an examination of the bulk of articles now under notice, one becomes, however, impressed with the fact that the aim of presenting in a clear and modern form a vast array of important up-to-date information on religious topics has for the most part been realized in a far fuller measure than in previous editions of the Encyclopædia. The world of intelligent readers and busy literary workers should be thankful to find that there are learned theologians and critical investigators who can, when the occasion demands it, lay aside stiff and technical phraseology, and say their say in simple, direct, and perspicuous English. Religious ideas travel so often into the region of the emotional and the

poetic that it is perhaps more important here than anywhere else to abstain from clogging the understanding by heaviness of phrase, and one is therefore particularly glad to note that in their choice of learned writers the editors appear to have laid stress on considerations of style.

A large number of articles have been written for this edition by Mr. F. C. Conybeare, whose reputation stands deservedly high both as a scholar and a writer. Among his topics are 'Eucharist,' 'Anabaptists,' 'Ancestor-Worship,' 'Gregory the Illuminator,' 'Epiphany,' 'Holy Water,' 'Iconoclasts,' and a considerable variety of others, including 'Armenian Church,' on which he is particularly qualified to write. In entrusting so many subjects to one scholar, the editors must have aimed at securing a high degree of uniformity in the work. It may be doubted, however, whether the plan was altogether wise. Too much sameness of mental atmosphere is probably as disadvantageous in an encyclopædia of this kind as too much variety. A middle course would seem the best to adopt. It can hardly be right to impose one man's mode of vision on multitudes of readers. Nor is Mr. Conybeare, with all his learning and fluency, either always convincing or invariably a model in matters of style. A phrase like "St. Paul caps his argument" (in the article on 'Eucharist') is surely too colloquial to suit the subject. This is, however, only a small point. Mr. Conybeare's work as a whole is a considerable credit to the Encyclopædia.

It is interesting to note a contribution like that on 'Baal,' originally written by Robertson Smith, himself editor of the ninth edition of the Encyclopædia, the task of bringing the article up to date having been assigned to Mr. Stanley A. Cook. The highly instructive article on 'Cosmogony' contributed by Prof. T. K. Cheyne to the preceding edition appears now in an excellently revised and even more spirited form. 'Hebrew Religion' is dealt with in the true modern spirit by Prof. O. C. Whitehouse. The editors have been specially fortunate in enlisting the services of Prof. M. Jastrow for the subject of 'Babylonian and Assyrian Religion' and kindred topics. Satisfactory, too, is the elaborate contribution on the religion of Egypt by Mr. Allan H. Gardiner.

The practised pen of Prof. Rhys Davids has been employed to rewrite his earlier article on 'Buddhism,' which now appears under the separate headings of 'Buddha' and 'Buddhism.' On 'Brahman' and 'Brahmanism' we have fresh contributions by Prof. Julius Eggeling. The articles on 'Antichrist' and 'Gnosticism' are from the pen of the learned and thoughtful Prof. Wilhelm Bousset. The subject of 'Demonology' has been assigned to Mr. N. W. Thomas, who is able to draw upon the results of his own impressions in addition to information derived from books. Considerations of space had no

doubt due weight in the writing of articles of this kind, for in the present case, as also in that of 'Animism' by the same author, and in fact in many other instances, we should have liked the contributions to be fuller than they are. But a general encyclopædic work, however large of its kind, has limitations. Summaries are difficult things to make, and seldom please the specialist.

An article on 'Infallibility,' from the Roman point of view, has been contributed by Prof. A. Boudinhon. It would probably have been better either to have two articles, one from each point of view, or to entrust the subject to a writer who would, without indicating his personal bias, state the arguments on both sides with equal fullness. Prof. Boudinhon also supplies a history of the 'Index Librorum Prohibitorum,' besides other contributions. The article on 'Eschatology,' one of the burning questions of the day, has been written by Principal A. E. Garvie, who by no means favours the extreme views of Prof. Schweitzer, recently brought into prominence in this country. The article on 'Church' has been written by Dr. A. E. B. Burn, previously known as a worker in similar branches of study, and the reader will find besides contributions on 'Church Army,' 'Church Congress,' and a long paper on 'Church History.'

It would be impossible to speak in detail, in a review necessarily of limited length, of the many fresh and instructive contributions on Church Councils, Popes and other persons famous in religious history, or the great variety of further topics which come under the heading of religion. Nor can we do more than pay a passing tribute to the lavish attention paid throughout to illustration, which is shown in such articles as 'Altar,' 'Chasuble,' and 'Cope.' We will rather, by way of drawing special attention to the catholicity of spirit shown in the preparation of the Encyclopædia, mention, in addition to those already given, the names of a few contributors to its pages on religious topics. Among them are the Right Rev. E. C. Butler, O.S.B.; Mr. Israel Abrahams of Cambridge; Prof. Albert Hauck, editor of the 'Hauck-Herzog Realencyclopädie der Protestantischen Theologie'; Dr. J. Sutherland Black, who was assistant-editor of the ninth edition of the Encyclopædia; Dr. R. H. Charles, a specialist in apocalyptic and pseudepigraphical writings; and Prof. D. B. Macdonald.

In case a list of errata should be in preparation for the final instalment of the Encyclopædia, it might be as well to mention that in the article 'Abenezra' we have noticed the misprints "Pesohat" for "Peschat" and "Yōsōd Mēra" for "Yēsōd Mōra." These slips are probably owing to the article having been originally written in German. As a matter of fact, in English "Peschat" should have taken the place of "Peschat." In the article 'Agapē' we found "Motanist" for "Montanist."

NEW NOVELS.

The Patrician. By John Galsworthy. (Heinemann.)

It has become the fashion to hail Mr. Galsworthy as one of the pioneers of a new movement in fiction, and to hallmark his work in that supposition. There is, however, nothing in this novel which picks him out from compeers of the same ability and distinction. The quality of this work reminds one somehow, and a good deal, of Mrs. Humphry Ward's. It has the defect of her work in lacking humour, and it is a serious attempt at country house portraiture, on the whole quite successful. The Caradoc family is well sketched, from the Earl to his eldest son and his wayward daughter. It is odd that in the drama which Mr. Galsworthy has made for these people, who are all alive, he shrinks from any other than a conventional ending. He might reply that in life the characters would have resigned themselves to the force of tradition and the influence of family, as they do here. Possibly so, but somehow one had not looked for him to keep all the wheels on the coach. There are one or two characters—Lord Dennis Fitz-Harold and Courtier, for instance—who seem, if we may so put it, to "come out of stock"; but we are not displeased to renew acquaintance with them. The book is notable for its intellectual vigour and its imaginative insight into feminine character. It is an excellent piece of work, but we think that the author has done better. In any case, it does not advance, but only maintains, his reputation.

The Eldest Son. By Archibald Marshall. (Methuen & Co.)

MR. MARSHALL has a method and an atmosphere of his own, leisured, mellow, and eminently agreeable. If, in some measure, he derives his conception and manner of treatment from an earlier master, they are none the less proper to his individual literary temperament, which shows qualities of rare refinement and perfect sympathy with his subject at every turn. He is, indeed, one of the most pleasantly human of living novelists. Admirers of his other works, notably of 'Exton Manor,' will find, perhaps, even more enjoyment in the pages of 'The Eldest Son.' The narrative itself is simple enough, involving no violent issues or rough contrasts; it is virtually the old story of the stern but affectionate father, and the heir who desires to bring home a bride against whom his parent has been unjustly prejudiced. So delicate is the author's characterization, so vivacious his sense of humour, and so sympathetic his attitude, that the book charms and entertains from first to last. The portraits of the squire and his wife are admirably subtle studies; while even the characters that are merely sketched are convincing.

Captain Black. By Max Pemberton.
(Cassell & Co.)

MR. PEMBERTON seems from his Preface to take his pirate captain somewhat seriously. As oil engines have come into use since the publication of his 'Iron Pirate' nineteen years ago, so he appears to fancy submarines may become common in the future. There is little novelty in Capt. Black's ship, which recalls an earlier submarine invented by Jules Verne, even in its name; for Capt. Nemo was the hero of 'Twenty Thousand Leagues under the Sea,' and Mr. Pemberton's ship is the Nemo. Our quarrel with the author, however, is not that he has failed to invent a new ship, but that his story, opening in a Stevenson vein of coarser calibre, dissolves in a medley of bloodshed and violence and unintelligible passion. But we must bear witness to the strength of Mr. Pemberton's fancy, and the gusto with which he writes a lurid tale for the lovers of "sensation."

Moll o' the Toll-Bar. By Theodora Wilson Wilson. (Hutchinson & Co.)

FICTION with a purpose, melodrama, and romance, the last element preponderating, combine in this novel to produce a blend which is not entirely satisfactory. We see little exaggeration in the picture presented of social misery and oppression as they prevailed a hundred years ago; but the desired effect of grim reality is discounted by a female Quixote like Moll o' the Toll-Bar, who rides about quelling famine-riots, rescuing vagrant women from the whipping-post, and hypnotizing would-be murderers. From the romantic point of view, however, these habits, coupled with her mysterious though distinguished origin, make Moll an efficient heroine, and on the same grounds we can approve of her lover, the highborn soldier, and her humble admirer, the Methodist blacksmith. The tyrannical magistrate, on the other hand, and still more the diabolical Poor Law overseer, rather fail of their effect, and the scenes in the sheepstealers' cave are more repulsive than convincing.

The Case of Letitia. By Alexandra Watson. (Smith, Elder & Co.)

LETITIA'S case was certainly hard, and not the less so because she had mainly herself to blame. Her first matrimonial adventure had even less than the average success of the proverbial marriage in haste; but as this calamity produced a remarkable development of the more serious virtues hitherto lacking in her character, it was perhaps a blessing in disguise. She had, moreover, the good luck to be early left a widow, and to find the right man—rather a ferocious specimen of sterling merit—still in waiting. The first half of the story is the

more successful, especially the part which refers to the heroine's childhood; but the interest slackens after her separation from her objectionable husband.

Klaus Hinrich Baas. By Gustav Frenssen. Translated by Esther Everett Lape and Elizabeth Fisher Read. (Macmillan & Co.)

FRENSSEN'S chief merit as a novelist—and it is not a common one—is that he has a thoroughly individual outlook upon life, and expresses it with great vigour. One may refuse to accept it as adequate, and may object to the somewhat dogmatic fashion in which it is presented; but one cannot help acknowledging its force and sincerity. By virtue of these essential qualities the present story, ill-constructed and congested as it is, should hold the reader's attention to the end. The hero, an energetic Holsteiner of sound peasant stock, dowered both with imagination and business ability, is a remarkable study, and the history of his attainment, through hardship, labour, and passion, to worldly success and ultimate self-knowledge, is told with power and insight. The book lacks the idyllic charm of 'Jörn Uhl,' its scenes being laid for the most part far from country quarters; but the primitive passions, and notably that strain of frank sensuousness which has offended many readers of Frenssen's earlier works, are still much (perhaps too much) in evidence. The translation is strongly American in flavour, but good of its kind.

VERSE.

The Story of Nefrekepta from a Demotic Papyrus. Put into Verse by Gilbert Murray. (Oxford, Clarendon Press.)—The original of this poem is, as Prof. Gilbert Murray's brief Preface informs us, "in Demotic Egyptian, in prose, on a fragmentary papyrus dated 'the first month of winter, in the fifteenth year' of some king unnamed"; but disclaiming intimate conversance with Demotic, the Professor has derived his knowledge of the tale from the literal translation in Dr. Griffith's 'Stories of the High Priests of Memphis.' While attempting to adhere as far as possible to the original text, he owns to succumbing to occasional temptations, and we do not doubt that the reader will acquit him of all blame therefor. Indeed, the story of

Setne Khanmas, son of Rameses,
High Priest of Ptah;

of his attempted spoliation of the tomb of Nefrekepta, who "in days of old" had sailed "south to Coptos" to snatch the "secret Book of Hermes, which is Thoth," from its resting-place beneath the sea, in sixfold caskets

knotted with a ply
Of endless Snake; and round it for one league
Are scorpion, asp, and worm to make men die;

—which comprise, too successfully pursued, brought down the wrath of the gods upon the adventurers—is in itself sufficiently arresting, while the reward of Setne for his

sacrilegious intermeddling supplies a strange and moving climax.

There is nowadays a dearth of narrative verse, whether of home origin or translated, and Prof. Murray's volume sets a commendably high standard. He has selected the Omar Khayyam quatrain, which is probably as good a choice of metre as could have been made; and the mystical atmosphere of the tale is convincing throughout. Stateliness and simplicity are the key-notes of the verse and combine to produce an effect which is singularly impressive, but quotation presents difficulties, for it is as a whole that the poem must be read and appreciated. We may, however, cite the stanzas that describe the death of the boy Merab—the firstfruits of the anger of the outraged Thoth:—

And lo, a Power of God went forth, and fell
On all the river and lay invisible;
And Thoth said: "Nefrekepta shall come home
No more, nor one of those that with him dwell."

Then the boy Merab, singing, from the shade
Of Pharaoh's awning stepped; one step he made,
And, lo, the River took him, and his face
Was covered, and the will of Ra obeyed.

Then all about us cried with a great cry.
But Nefrekepta from his awning high
Called with a spell, and the dead boy rose up;
But over him that Power of God did lie.

Then Nefrekepta spake a written spell,
And the boy Merab told all that befell
About him; yea, the very words which Thoth
Spake at the throne of Ra he made him tell.

The volume is handsomely produced, and adorned by a frontispiece in colour, the work of Mrs. Sydney Cockerell.

A profusion of short miscellaneous pieces—the inevitable themes of Love, Death, and Nature being supplemented by satire, patriotism, philosophy, and a measure of political denunciation—make up the contents of *At Various Times: a Book of Verses* (Kegan Paul). That their anonymous author has his share of the lyrical instinct is evident from such poems as those entitled respectively 'Ghosts,' 'The Wind on the Hill,' and 'My Grave,' but his inspiration is often at fault, and mere zest for poetical composition will not of itself make atonement. He can, however, without attempting the higher flights of song, put his meditations into fluent, pointed verse with some success, in proof of which we may cite the stanzas called 'Biography':—

If I would write of one I know,
I know the man too well;
I'm either partizan or foe,
And love or hatred tell.

But if I write of one of whom
I nothing know at all,
I hold the scales impartially,
Which neither rise nor fall.

To write, therefore, I must not know,
And yet familiar be;
And either be as cold as snow,
Or full of sympathy.

And no man is as cold as snow,
Knows he another well;
Hence none can write of those they know,
Or a life story tell.

The craftsmanship throughout is of no high order: limping lines and inverted adjectives point to the desirability of revision: a certain inadequacy of similitude reveals itself in allusions to hail as "ice confetti," and to the "eagle with its airy staircase flight"; while the lines,

The man whose sword is ready, glib,
He has respect of rustling men,

illustrate one at least of the perils attendant upon facility.

Though Mr. H. E. Garden's *Ballads of the Boards* (Chapman & Hall) may awake sympathetic echoes among members of "the profession" we do not think that a

wider circle will be greatly stirred thereby. Mr. Garden writes with infinite zest, but his enthusiasm is not of the kind that communicates itself readily. For example, the views of the "Stage-door keeper" on the "Musical Comedy Girl," and of his wife on the stage in general, are deficient both in point and humour. Such a production as the following—

"Hello! What are you doing?"
That is the cry of all.
"Hello! What are you doing?"
You hear the query fall
Wherever actors meet,—
The Strand or Garrick Street,
Or in a pub,
Or at the club;
"Hello, old man!"
"Hello there! Dan,
What are you doing?"

is in itself enough to show that the author has much to learn, and something possibly to unlearn, before he has approached the secret of light verse. Mr. Kipling is, as usual, commandeered to furnish material for parody, but, though the stanzas thus inspired are undoubtedly superior to the rest, they attain no notable level, and the sense of the "Happy times" which the author has "had with the dear Girls and boys" has hardly survived the trial of cold print.

In *Private Music* (Cambridge, Heffer & Sons) Mr. Charles Sayle displays considerable lyrical taste, exercised at present upon trifles. While his attempts in the "Haikai," or seventeen-syllable Japanese verse-form, are remarkable less for imaginative qualities than for syllabic exactness, poems like 'The Mer-Child,' 'Autumn Sleep,' and 'The Sun-Dial' suggest potentialities of a more ambitious nature. His sonnets, too, are of excellent promise, scrupulous in technique, and showing but little sense of effort. We quote that called 'God's Grace':—

Dearest, if you could love me, even so
As a pale wind a hidden flower can bless,
Leaving the whole world in unconsciousness,
It should be all I would aspire unto.
Or if perchance you should more tender grow
And my fond dreaming meet with its success,
I would not ask for any dear caress,
But all day long in full content would go.
But now because I may not hold your hand,
Nor feel your love my loving can return,
Go by, pale wind, and leave forgotten me.
Go up and down the unregarding land.
Unseen, God make me still his lesson learn,
And give me grace to love you silently.

The volume is too slight, and its contents are, in the main, too personal, to furnish any clear prognostication for the future, but there are hints that, given themes more comprehensive, the author's talent will not be found wanting.

Passion and pain, "red desire" and "red roses," are frequent *motifs* in Mr. V. B. Neuburg's *Triumph of Pan* ('The Equinox' Office), much of which merits the ambiguous distinction of being unusual. Though by no means deficient in originality, vigour, or imaginative power, his verse is too often cumbered with the fantastic symbols of a species of erotic mysticism, into which we feel no desire to probe; while the lack of reticence consistently displayed constitutes an artistic blemish not lightly to be excused. The author's serene confidence in the immortality of his lays would be better justified were he to make some attempt to discriminate between the gold and the rubbish, and, incidentally, refrain from penning such grotesqueness as is contained, for example, in 'The Sun-

flower,' where we are informed how, among other portents,

a greater god arose,
And stole the earth by standing on his toes
And blowing through the air.

It is difficult to believe that the persons to whom certain poems are inscribed will experience any very lively gratification at the compliment.

OUR LIBRARY TABLE.

THE character of Sir Henry Craik's *A Century of Scottish History from the Days before the '45 to those within Living Memory* (Blackwood & Sons) was indicated in these columns (April 6, 1901) when it appeared ten years ago. The issue of an edition in one volume, with portraits and "a few very unimportant excisions," has not remedied its defects; but the century dealt with by Sir Henry has been too little studied, and it is perhaps satisfactory that his attempt to make the period more widely known has been welcomed by the public to which it appeals. Exactness and nice discrimination are not to be found here, and those who value such things may, after all, have to betake themselves to those tiresome people whom Sir Henry calls "the pedagogues of history." We are far from suggesting that he is not widely read in the literature of his subject or that he has not traced with substantial accuracy the progress of events and ideas; but the narrative is somewhat drowned by the lavish use of rhetoric; and the work would have gained in dignity and precision from a more sparing use of the words "faction" and "mob." To say that the Scottish Parliament (p. 24) had never been dissolved between the Revolution and the Union is to overlook an election of so much party significance as that of 1703. On p. 383 Dundas is represented as braving "the frown of the King who paid him the sincerest compliment—that of fear," at a time when he was eating his own words and making a submission which excited the good-humoured raillery of Fox; and Ebenezer Erskine (p. 250) was deposed for his opposition, not to patronage, but to the mode of electing ministers prescribed by the General Assembly where the patron did not exercise his right.

Shelburne Essays: Seventh Series. By Paul Elmer More. (Putnam's Sons.)—The seventh series of Mr. More's essays in criticism is as good as the first. We much prefer it to the intervening volumes. The able writer of the *American Nation* is still somewhat too much inclined to rely upon authorities when treating of our older writers. The paper on Shelley, with which the new collection opens, does little more than expand and rather overstate the case of the *advocatus diaboli* as put by Matthew Arnold. "It is questionable," concludes Mr. More, "whether the same man can heartily admire both Milton and Shelley." Surely the comparison is inapt. It is as useless as trying to make an instructive contrast between Bach and Schubert. Shelley no doubt had some of the wildest defects of the purely lyrical temperament; but, after all, he was a great lyrical poet, and it may be questioned if his want of judgment and solidity has had on modern literature a more disastrous effect than Milton's grandiloquence had on our eighteenth-century verse.

Mr. More finds, of course, much to admire in Wordsworth, the subject of his second essay; but here again he has little of high value to add to Matthew Arnold's

appreciation. When, however, he turns to Tennyson, William Morris, Francis Thompson, William James, and Mr. G. Lowes Dickinson, he is often both interesting and illuminating. In the case of Mr. Dickinson, it is fitting that the first attempt of importance to estimate his work should be made by a leading American critic. Mr. Dickinson is an Englishman who by a happy accident won in the United States the repute less quickly awarded in his native country, though here good judges have recognized his worth. A writer of the revolutionary school, he trenchantly attacks modern industrial civilization. This, perhaps, can be done without any great danger in our settled and slow-moving land; but to Mr. More, the spokesman of fading traditions of conservatism among an undisciplined democracy in which everything is in a state of flux. Mr. Dickinson is an accomplished scholar who has betrayed the cause on which all fine art, literature, and thought depend. We do not always agree with the Shelburne essayist; but he is a stimulating writer when he studies modern letters in close connexion with tendencies of modern life at present more fully displayed in America than in England.

The Khalifate of the West, being a General Description of Morocco. By Donald Mackenzie. (Simpkin, Marshall & Co.)—If we accepted the description furnished by its sub-title, we should be obliged to pronounce this an unnecessary book. As a general description of Morocco it falls behind a dozen other works, both in style and matter. It has one interesting feature, however, not alluded to in its title, and that is the description of the trading post and settlement founded by the author at Cape Juby, and subsequently transferred in 1906 for 50,000*l.* to the Moorish Sultan. This is well worth reading, for its account of an interesting experiment, and one which illustrated in a striking manner those qualities of adventurous enterprise, and determination in face of great difficulties, which we like to think of as British. Mr. Mackenzie showed real courage and perseverance, besides organizing ability of no mean sort, in his conduct of the Cape Juby venture; and it seems to the present writer that, if British foreign policy had permitted consistent backing of his efforts, a valuable commercial foothold might have been secured on the north-western shoulder of Africa, as the result of one man's initiative. Such considerations are, however, beyond the scope of these columns.

Mr. Mackenzie's views regarding the duties of civilized governments where slavery is concerned are tolerably well known. He believes also that Britain has an urgent duty to perform in the matter of reforming the prison system in Morocco, and the general protection of natives from the evils of bad government. His sympathies are warmly with missionaries, reformers, and representatives of the Howard Association. Unlike many other sympathizers in movements of this type, he possesses much native shrewdness, and a keen eye for commercial possibilities.

WE know of no shorter way of describing the purport of *Canada and the Empire*, by Mr. W. R. Lawson (Blackwood), than by making the following extract from what the author truly calls its 'Keynote':—

"Three kindred nations—the United Kingdom, the United States, and Canada—have suddenly run up against the question of what their future positions in the world and their relations to each other are to be. A far bigger and more momentous question, this, than House of Lords' Veto, Home Rule, or Tariff Reform. Without delay the three

countries have got to answer it, definitely and decisively. This may be their last chance to arrive at the right answer and the best for all of them. The time may have come for each of them to realize that mere kinship of race does not ensure to them a kindred and harmonious destiny. How the United States may solve the crisis is not our concern, but for the United Kingdom and Canada there is only one safe and honourable outlet from it. It is immediate and effective federation of the Empire. Let us silence for a time our electioneering shibboleths and—FEDERATE. What has been quietly and wisely done in Australia and South Africa, should not be impossible at Westminster."

This passage gives Mr. Lawson's point of view, and illustrates his style. It may fairly be taken, too, to illustrate his main theme, though this naturally embraces many facets of a huge subject: some Canadian history, sketched in with a big brush; an outline of Canadian finance, of which the author shows an excellent grasp; with some account of Canadian banking, trade, labour conditions, national development, and position in relation to Imperial affairs. Throughout Mr. Lawson is forthright, and, if we may say so without offence, "cocksure," as in the passage quoted. Confidence and bold action have proved eminently successful in many of the newer countries of the Empire, and Mr. Lawson would like to see the lesson taken to heart in England. It is characteristic that in the federation of Australia he should see reason to expect success for federation "at Westminster." But whereas, in the case of Australia, federation—still, by the way, in an immature stage—meant only the drawing together of the several divisions of a single island, federation for the British Empire means the formal drawing together of nations, peoples, and States now separated by all the seven seas—lands occupied by men and women of various races and speaking scores of different languages. The book is a spirited and well-informed presentation of the case for Imperial federation. That it is so largely concerned with Canada is natural and proper. Upon the future of the Dominion of Canada, the larger division of North America, the chances of a federated and united British Empire, within our time, largely depend. Mr. Lawson feels this profoundly, as do other writers who have studied Canada in the light of knowledge of the rest of the Empire.

He writes as a journalist and a student of finance; but also as one who thinks politically in a large way. We have read books dealing with similar subjects from the pens of statesmen of repute which have shown no more statesmanship than this. It is a vivid, thoughtful, plausible piece of work.

An Introduction to the Study of Local History and Antiquities. By John E. Morris and Humfrey Jordan. (Routledge & Sons.)—This closely printed and substantial book suffers from dealing with too great a variety of subjects. It is intended, we suppose, as a manual for young students, for it is dedicated to the past, present, and future boys of the Bedford Grammar School, of which Dr. Morris is an assistant master. The first sentence of the Preface also states that the book is the outcome of a circular of the Board of Education, issued in 1908, on the teaching of history in schools.

Parts of the volume form distinctly good summaries, and show a wide amount of reading and a considerable power of assimilation of diverse material. The long sections dealing with Pre-Celtic and Celtic Britain and also with Roman Britain are much to be commended; but we cannot say the same

of 'Mediæval England,' and especially of 'Ecclesiastical England,' wherein it is easy to point out faults. For instance, it is a mistake to write that the Austin Friars "lived as hermits"; and the statement as to the English mendicant orders becoming possessed of "land and other capital" is hardly borne out by facts. The description of mediæval hospitals is not complete; it would have been well if the writers had consulted Miss Clay's recent monograph on this subject.

The vexed question in ecclesiastical fabrics, of the meaning and object of "low-side windows," had better have been left alone, or treated in a fuller fashion. The most probable solution is confused on p. 252, where it is stated that the opening "was perhaps an aperture through which word was passed to the ringer who had to sound the angelus [*sic*] bell when the Host was elevated." The now generally accepted theory is that the altar clerk rang out of this aperture, or close to its grille when the shutter was opened, the sanctus bell at the usual periods of the Mass. The writers add to the confusion by a further note on the same subject on p. 389, wherein another theory is gravely set forth, namely, that priests heard at these apertures "the confessions of criminals guilty of such bad offences that it was impossible to admit them into the churches." We have pointed out more than once why this theory will not do. To take one point only, no ordinary parish priest or wandering friar could give absolution for the gravest offences. These were reserved for the bishops or the Pope himself.

An attempt has evidently been made to include all subjects about which the young student might desire information with regard to local history and antiquities. But from this point of view the volume is defective; for instance, there is virtually nothing concerning monumental remains such as those distinctly English memorials, engraved brasses. Moreover, the book is silent as to numismatics, which are year by year shown to be of distinct use in settling English topography, both in early and mediæval days.

On the other hand, certain sections as to old roads and coaching days might with advantage have been omitted. They are too sketchy, and leave out various salient points. The few lines about packhorse bridges tell us that such bridges "were ten feet wide, so as to give room for a beast of burden and its leader." The true packhorse bridge has just space for a single horse, with its burdens projecting over the parapets. Of these, fortunately several most interesting examples still survive, particularly in Somerset. Sundry pages are devoted to old roads and the records of coaching; but the opportunity of giving a good outline of the various main roads and the routes they followed has not been seized. Thus there is no mention of the old Holyhead post road established by the Stuarts, or of its important branch the Derby post road, organized in 1660. The Derby Road followed the Holyhead line as far as Towcester, whence the stages were Northampton, Market Harborough, Leicester, Loughborough, and Derby. Two hours were allowed for the mail between Towcester and Northampton, a distance of ten miles. Five miles an hour seems to have been the prescribed rate throughout. Nor do we find any reference to that important adjunct of stage coaches, the stage waggon.

In the earlier sections considerable use has been made of the essays on prehistoric

and early historic times which are contained in the various volumes of the Victoria County Histories. These are for the most part duly acknowledged, but there is a criticism of them in the Preface which deserves notice. Dr. Morris states that these volumes are useful, but might have been much more so, and complains of the system adopted. He says that "to study a single village, one has to plunge into several articles, and there are very few cross-references between the Prehistoric, Anglo-Saxon, Domesday, and Earthwork chapters." If Dr. Morris had looked at those later volumes which deal with the topography of each parish separately, he would not have penned such a sentence as the above. In those accounts he will find all the references he desires, and be saved much trouble.

Two of Marion Crawford's *Uncanny Tales* (Fisher Unwin) did duty in 1894 as a volume of their publisher's "Autonym Library"; but the remaining five include one little masterpiece of fantastic pathos—'The Doll's Ghost'—which is worth far more than the reprinted tales referred to. 'The Doll's Ghost' is concerned with a doll doctor or mender of dolls, who, having grown strangely fond of one of his patients, was justified in his affection by the conduct of its ghost after a second accident had irreparably damaged it. Some of the stories are told in the first person, and 'Man Overboard' is an example of this style of narration in which the author's nautical knowledge serves him well, giving an air of veracity to an anecdote which represents the ghost of a drowned sailor as haunting and finally destroying its fraudulent brother. There is a Poe-like closeness of atmosphere, without Poe's inexorableness, in 'The Dead Smile,' a tale of a malignant baronet who hoped that his heir would make an incestuous marriage.

A BOOKWORM'S PERPLEXITY.

DR. JESSOPP's case is both interesting and practical. If he put the difficulty before a Catholic priest, he would no doubt be told to restore the book. The law, as laid down in our manuals of theology, scarcely admits of any other interpretation. Thus H. Buesbaum writes:—

"Qui bona fide possidet aliquid, de quo postea melius cognoscit, tenetur, ne incipiat esse possessor male fidei et detinere alienum, id tantum et non plus restituere, quod ex ea re ipsi superest, una cum ejus fructibus si extent vel quatenus inde factus est ditior; præterquam si dominium sibi comparavit per legitimam præscriptionem. Ita communiter doctores."

It appears to me that Dr. Jessopp has but two chances of escaping the obligation of returning the book:—

1. On the ground of prescriptive right, since he has had the volume for some thirty years.

2. On the ground of uncertainty, as to whether (a) the volume ever really belonged to the University or (if that be granted) whether (b) the University did not part with it by sale or exchange. For there is no doubt that if, after careful investigation, the present possessor cannot clear up his doubt, he may take advantage of it, and keep his book, according to the old saying: "In dubio, melior est conditio possidentis."

JOHN S. VAUGHAN, Ep'us.

* * Further correspondence next week,

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS IN SECONDARY SCHOOLS.

A GENERAL meeting of the members was held on Saturday last at the Mercers' School, Holborn, when Mr. A. A. Somerville (Eton College), the Chairman of the Association, in his opening address on the year's work, said that the present time was characterized by energy, progress, and increase both of numbers and influence. New branches had been formed in West Lancashire and Cornwall, and the total membership was close on 3,200. Considerable progress was being made towards the solution of their three main problems, viz., adequate salaries, proper provision for old age, and registration. From the Ulster branch they had learnt of the unhappy state of Secondary education in Ireland, and the Executive was exerting its influence to induce educational authorities to improve salaries and prospects of teachers in that part of the United Kingdom. It could hardly be believed that the average salary in Irish Secondary schools was under 83*l.* a year. Having been invited to give evidence before the Royal Commission on London University, they had testified to the injury inflicted on education, on the schools, and on the University by allowing students to enter on their University work at the premature age of seventeen. It was to be hoped that Lord Haldane, who presided over this Commission, would not turn a deaf ear to this evidence, as he had done in the case of the Army Council, which under his presidency had ignored the protests both of the Head Masters' Conference and their own body against the lowering of the age-limit for Woolwich and Sandhurst.

The Chairman next alluded to the action of the Head-Masters' Conference in inviting this Association to a conference in December last on the subject of salaries of Assistant masters in Secondary schools. As a result of that interview, effective action on the part of the head-masters was awaited. National efficiency and scandalously underpaid teachers were incompatible. The question of superannuation had been receiving the attention of a committee, and the principles on which they and other bodies were agreed would be laid before a conference on May 6th, when Mr. Arthur Acland would preside. Mr. Runciman had on March 30th received a deputation of their members and given them much encouragement. Owing to the better prospects offered by the other professions, their own was not sufficiently attractive for the best men at the end of their University career. Better organization was imperative, and in this they must secure the co-operation of the head-masters. The Universities also ought to be brought into line and use their great influence. The first step was the formation of a Council representative of every branch of the profession, whose duty it should be to form and keep a register of those qualified to teach in their schools. Children of real ability should be able freely to pass from the Elementary to the Secondary school; but there should be no crowding of Secondary schools with pupils whose only title to promotion was the generosity of public bodies. They believed also that there were many teachers in the Primary schools well qualified to teach in Secondary schools, and their Executive Committee had passed a resolution affirming "that no obstacle should be placed in the way of promotion of any such teacher, provided he possessed the necessary intellectual qualifications." As teachers,

they all had in common the great task of organization and progress.

Mr. Fred Charles (Strand School) moved a resolution calling upon legislative and administrative authorities to join with governing bodies in a general effort to provide adequate salaries and a national scheme of superannuation allowances for teachers in Secondary schools. The higher efficiency of German Secondary schools was declared to be a result of better salaries and provision of sufficient pensions. The Scottish Act of 1908 must be their model, and teachers must reach an agreement among themselves, and then obtain their Act of Parliament to secure superannuation as in Scotland. After discussion, in which many members took part, the motion was carried. Mr. G. H. Heath (Mercer's School) moved, and Mr. J. Whitehead (Berkhamsted) seconded the resolution

"That in the opinion of this Association it is necessary and desirable, for the sake of national efficiency and for the benefit of the teaching profession, that there should be no further delay in constituting a Registration Council representative of the profession, in accordance with the Education (Administrative Provision) Act, 1907, to which shall be entrusted the duty of forming and keeping an effective register of teachers."

Great stress was laid on the importance of securing full representation of the Universities on the Registration Council.

The Chairman referred to the circulars issued by the National Union of Teachers and the conferences arranged by that body. He declared that their policy with regard to the National Union of Teachers was quite clear. They were ready to co-operate with that organization in all matters of common interest, but they insisted on preserving their own individuality. A good result of the circulars issued and conferences arranged by the National Union of Teachers had been a marked increase in the membership of their own Association. They as secondary teachers would welcome guidance from the Universities, but not from those whose experience gave no claim to act in such a capacity. That was their reason for advocating representation of the Universities on the Registration Council. They held that the Council must represent every branch of the profession, but that it must not be the instrument of any sectional ambition. Its object must be the raising of the profession and the good of Education as a whole. The resolution was carried unanimously.

UNPUBLISHED LETTERS FROM GEORGE DARLEY TO ALLAN CUNNINGHAM.

THE following letters from that fine poet and able critic George Darley to his friend Allan Cunningham have so much personal and literary interest that I need offer no apology for making them public. There is, indeed, nothing in them that is not honourable alike to the writer and the recipient of them. Both were constant contributors to *The Athenæum* in its early days; and Darley, I believe, remained on its staff until his death in 1846.

The letters, with the exception of the first, are all undated, or only dated with the day of the week or month. On most of them, however, the date of the year has been filled in (perhaps by Allan Cunningham) in pencil. All of them, except the first, if these pencilled dates are correct, were written in

1836. With this brief introduction I leave the letters to speak for themselves, only adding a few notes where they seem to be required.

Paris. May 22. 31.

MY DEAR ALLAN,—I cannot well devote a canonical hour to a more sacred office than that of fulfilling a duty long owed to a friend. There is in fact so much to be seen, heard, read, and recorded here by a visitor who may never return that he has little time to write idle letters such as the present. For, my dear Fellow! I cannot let you into one secret of state. We are all political prattleboxes here, it is true, but communicate so vast a quantity of knowledge that we have leisure to receive none. It is like all the winds of the horizon met together in a cave, and all puffing their souls out to catch other faces, yet not one being able to draw in a breath of air. Like them, too, we are exhaustless tho empty, and inflated, tho having only to look big at a shipwreck. After having brought heaven down in a deluge upon the Royal transports, we seem now inclined to blow it up into a fine blue bubble that will "make itself air" for the clouds to gather in. Here is all the State-information I am able to afford you—and perhaps you will say it is exactly as much more by its own length than you require.

Now let me speak of something much nearer my heart and yours. So we are about to lose the divinest particle of Himself which God has breathed into the nostrils of this generation—it has, perhaps before my letter tells you I lament it, become reincorporated with Supreme Intelligence. What a desolate race we shall be when he is gone! Miserable Pagans when our Delphic Oracle has ceased! Well, he descends like the Summer-Sun in full blazon, covered with the glory he himself has wrought into the world. He sinks in time too!—we are fast becoming a set of mechanical utility-mongers whom mock-suns and moon-calves, satellites and stars of the seventh magnitude, will be quite good enough to enlighten.

How do other affairs proceed in England? I do not mean as to breaking up constitutions, or laying out grounds for the new Utopia—I have as little interest in such things as acquaintance with their merits—but as to the Arts not political. Have your last two volumes succeeded as well as they ought? I read them with pleasure only inferior to that which the first two afforded me. Your Blake is the only thing better than your Flaxman, and your Hogarth than your Nollekens. I don't enter into a laboured critique of these little books, because you would rather have it in ten lines of your poetry. They are clever adequate things, and even were they more would be Albert Durers for beetle-eyed judges—Symphonies of Heaven for those who can relish nothing better than Lillibullero. You throw in a spice now and then for high-seasoned palates, just to show how rich you could make the dish if all who tasted were epicures, instead of the majority being beefeaters. What I would give for your talent and the Messiah's of "checking your thunder in mid-volley"—my little brimstone-flashes either set the object in a fume, or don't affect at all. When you know this, villain! what do you talk to me about Magazining? Unless I give myself as much trouble as would produce a fifth gospel, my essay is not worth a chapter of Generations.

By the by, is it too late to ask for our friend Kennedy's periodical? He seemed too free-spirited a fellow for an editor. I see a volume of poems advertised with his name. Does anyone read verses now in England besides those of the Bible? Indeed I often say what a superfluous set of people we are, you, I, K., &c. &c. to write poetry when there is so much of it in print unread. Ay, and of better than the pick of us could execute if our brains were beaten together. Have you ever read Webster? Why, my good Sir! there are passages in 'Vittoria Corombona' almost worthy of the Angel Gabriel. Don't mind what Campbell says—his criticism upon this Author is nearly as strong evidence against his own poetical genius as the 'Pleasures of Hope' is in favour of it. There are passages in that play every whit as good as—No! deuce take it that would be too bad!—but every whit as good as—damn it! that won't do either!—Well, Shakespeare and Milton excepted, there is poetry in Webster superior to that of any other English Author. If you have not 'The White Devil' by heart, get it.

To be sure it is a dead letter to the mob of readers, tho written as plain as a proclamation. But it is *not* a proclamation, and therefore they cannot understand it. Indeed they could not if they were promoted to the minds they will have in Heaven. Travesties on the Bible are

more to their taste—field-preaching bellowed forth in pentameters.—Then there is Andrew Marvel! have you read Andrew Marvel? Diamonds buried in dust.

Any more rapes on the Muses committed since I heard from you? Any more abortions or monsters?—Are you doing anything in the legitimate way yourself? Or are you disposed to let the present bad times go by (perhaps to bring worse)?—As to my own works on hand, my number is nearly that of the Beast. I interpolate comedy with romance, and clap a sonnet into the heart of a tragedy, relieving my philosophy with a few odd rhymes, and my lay-sermons with a bacchanalian. My romance has progressed farther than anything else, but I shall be a year licking it into bearable form. I have gone picture-mad—'tis odds but you see your poor friend one of these days a virtuoso!

How is Mrs. Cunningham? does she still persist in her foolish trick of making her friends happy round her fireside and supper-table?—I am afraid she is horribly given to poets, and they are the next things to distillers of cherry brandy.

I have written to Joseph, but indeed fear he has already far oustript the advice I gave him to direct his progress. There will be no bearing you, I suppose, when he rides home from Bombay on an elephant. Will Mrs. Jean be satisfied with the "grass for a cow" then? No I warrant! she will drive four in hand thro Dumfries, and the Marquis of Annandale may think himself well off to dress and curry her equipage.—Remember me to any who don't forget me.—Your's ever and ever sincerely,
G. D.

To whom does Darley allude in the second paragraph of the above letter? My first thought was that the reference must be to Coleridge, whose health was then failing; but a friend has suggested that it must refer to Sir Walter Scott, who had an apoplectic seizure about a month before this letter was written. I find it a little difficult to imagine that Darley—whose fault was certainly not that of being an over-lenient critic—could have written of Scott in quite such exalted terms; but I can think of no other author of the time to whom the expressions would be more applicable.

The Kennedy alluded to in the fourth paragraph of the letter is doubtless Charles Rann Kennedy, then well known as a barrister, and as the author of some legal treatises, as well as of the volume of Poems referred to. As to Darley's expression of opinion about Webster, though it is doubtless a somewhat debatable one, it is perhaps worth noting that Lamb probably, and Swinburne almost certainly, would have heartily concurred in it.

The "romance" alluded to in the next paragraph was probably never completed: certainly it was never published.

The Joseph mentioned in the last paragraph was a son of Allan Cunningham, and we shall hear more about him in the following letters.

27 Up. Eaton St.

8 July [1836?].

MY DEAR FRIEND AND FAITHFUL ADVISER,—I am perfectly conscious how just your censure is—a want of the humanities pervades my fragment. The truth is I am sick of them—so much has been said about the human affections and home feelings and sympathies of the heart, &c., not only by Lord Byron and Wordsworth and Mrs. Hemans, but by every young man and woman that can square a few lines into the form of poetry. I hate those humanities, not only as a surfeit, but because they have brought down, to my mind, the tone of our poetic genius. Every milliner (she or he) can scribble greensick verses about love and melancholy and sentiment skin-deep, but I defy them to affect imagination, which is at least as principal an attribute of poetry as feeling. You have said on other occasions that I was not wholly deficient of this latter—but unless my subject allows me to concentrate it I do not, or rather can not, find in it enough of excitement. My mind is sluggish by nature, liable to deep and long collapses, from which it is roused only by stimulants. That's a fault, I know, but we must rather follow our nature than force it. Well again, the third part of my 'Nepenthe' was to have contained my modicum of the humanities; as the first and second shew

the extremes of Aspiration and Dejection, with their evil effects, so the third was to shew the medium, Contentment with our human lot, and its effect, happiness. But after all, I confess the world of 'Nepenthe' would be a world apart, because in such a world does the author himself by necessity live, and is ignorant of all other. What is more piteously ridiculous than to hear a black-bird whistle "Now we're all met together" in an area?

What I have here said is to explain, not to defend, as I am quite willing to undergo any condemnation I justly deserve.—Yours thankfully, and unfeignedly ever bounden, GEORGE DARLEY.

Will you send me back the two 'Nepenthes' I gave you, as they contain some material errors of the press? Two others, corrected, go to you instead.

The above letter refers to Darley's most remarkable poem—that entitled 'Nepenthe'—and is valuable for the author's defence against the charge that it wants human interest. See Mr. Streatfeild's Introduction to his volume of 'Selections from the Poems of George Darley' for another explanation of his design, somewhat different in wording, but nearly the same in substance.

Monday, 1 Feb. [1836?]

MY DEAR ALLAN,—I told you I'd abuse you for your life of Sir Joshua—so transmit you the MS. that you may cut out any of the Billingsgate you don't like. I am a man that cannot measure my words, and indeed live so much out of the world that I do not know how words meaning no offence are translated there. After all, my charge against you is nothing beyond prepossession, and error of judgment, to which we are all liable.

I know too that the painters and picture-lovers are mortally offended with your memoir—so my onslaught may give you an occasion for defence against all your opponents at once.

N.B. There is a page or so more in the same spirit as those you see, but containing a final paragraph which does full justice to your intentions and talents.

However, I would prefer never writing another line to passing unkind censure upon one of your's.—Ever your well-wisher, and warm-hearted as hot-headed friend, GEORGE DOWNRIGHT.

Pray send the MS. after revision to Dilke as soon as possible—he wants it for this week.

Monday evg. [1836].

MY DEAR ALLAN,—Your answer is precisely what I expected from your noble heart. I have sent the review to press, as you make no material objection, and as I do think you deserve just such a *soft scoring*. Instead of harm it will do you good, like all other chastisement from a friend. As to the appearance of personality, it will vanish by means of the additional paragraph, and there will be two pages more all devoted to Beechey, whose 'Life' is but a fourth part of the publication.—Yours, as ever, G. D.

These two letters refer to the Life of Sir Joshua Reynolds in Cunningham's 'Lives of the Painters.'

[Undated.]

MY DEAR ALLAN,—Tho somewhat of a dreamer, I have little faith in dreams, yet a coincidence between one I had last night and the subject of your letter this morning is so strange that I cannot forbear mentioning it. I walked with a friend on the shore of a wild lake or river, on which a couple of swans with a family of young cygnets were floating along. We had great delight in looking at them. This was soon disturbed by a kite pouncing its beak at one of the cygnets, and tho the parents drove him away, the young one was killed and sank into the deep. On which my friend exclaimed "Poor bird" with much sorrow. "Poor bird?" said I,—"No! but poor *we*. The bird is now beyond all evil; it is we who have lost the pleasure of contemplating it, that are the real objects of pity."

This little vision would have been more applicable if the parent swans had thus communed—but as it is I thought there was some matter of consolation in it.—Stranger still, it was the arrival of your note which awoke me just after my dream had ended! But indeed the whole preceding night my thoughts were of death and sorrow.

I am glad to hear of your son's appointment. Anything in my power to fit him for success you may command. I have already done as much for him in the Elements of Geometry as I could—the rest he must do for himself. We now propose commencing with those of Algebra, and proceeding thro that in like manner. With a similar course thro Logarithms and Trigonometry he will be

completely made up in the elementary Mathematics. This can all be accomplished, even with a knowledge of Oriental languages attaining in the meantime, before next Christmas. To be a *Mathematician* however depends, as I said before, on himself.

I shall be at home this evening, perhaps at five, but certainly at six, and shall be happy to see him then, as well as every Monday evening after. A weekly lecture will be sufficient for the purpose mentioned, with industry on his part—an *hourly* one would be insufficient without it.—Do not think from this reiteration that I hint inattention on his part—quite the reverse—he seems willing and deeply interested. But I know that young men who have not acquired Academic habits, are quite unaware of the necessary severity in order to attain the end in view. This, and a profound sense of the great utility of these sciences (in every profession but *my own* and in few more than his) makes me wish to impress him with a still stronger determination to proceed enthusiastically with them.

Pray give my kind respects to Mrs. Cunningham, and believe me yours most sincerely,
GEORGE DARLEY.

27 Upper Eaton St.

Sat^y Ev^g [July, 1836?].

MY DEAR ALLAN,—I should have sent you Joseph's intelligent letter before, but have only just now had time to scan it particularly myself—it will no doubt interest you all at home, tho you have of course heard from him yourself. He does not find, it would seem, a nabobship quite so easy of acquisition as in the good old times of Rumbold and Clive—however, perhaps it is better for his mind as well as his soul that he should make his fortune by engineering than embezzlement and extortion. His letter shews you he is in high scientific trust.

I met all of a certain lady to-day but her eyes—yet they counted the hairs in my hat and whiskers, perused everything about my face, just to let me see that the face itself was not to be acknowledged! This is the cut direct to which she has been coming ever since I abused her husband—tho I asked leave never so courteously! What a daft wife! Well, I must wait till he gives me an occasion (which he surely will soon) to praise him with as bold a voice, and so reinstate myself perhaps in her favour.—Ever yours with steadfast "love, honor, and esteem," GEORGE DARLEY.

[Undated.]

MY DEAR CUNNINGHAM,—Tho' an Irishman, I have not the immodesty to think myself capable of the task your kind opinion, as kind as it is erroneous, would impose on me. I can merely scramble at the sense of a Latin book. Shall I add you know not what you ask? Our best scholars consider Latin Epitaphs to be of most arduous composition. The learned Canons of Christ Church only write a sort of dog (or rather hog) Latin, which would puzzle the Prodigal son himself, with all his knowledge of Swine language to make out.

But let me do a far more friendly office than attempting to write the version myself—namely, direct you to a competent scholar—our friend Cary—a poet also and writer, who knows the necessities of each department. Should you feel any reluctance to ask the favour of him, I will do so in your name, tho' believing your own request would be more influential.—Ever yours, as far as my possible, GEORGE DARLEY.

Up-getting time—Friday.

MY DEAR CUNNINGHAM,—Without the same excuse, our friend Cary had the same reluctance as myself to undertake the Epitaph. I hope however to have prevailed on him. Where little honor is to be gained, most persons dread exposure to a whole posterity of carping Cantabs and Oxonians, by Latin which may be very good yet not *monumental*. I do think nevertheless that Cary will oblige us both, else he would not have allowed me to leave the original with him.—Ever yours, G. D.

Monday even^g.

It is to be feared that George Darley is, to the majority of modern readers, not much more than a name. As to his verses, almost the only fact that is fairly well known about them is that in the early editions of 'The Golden Treasury' Darley's poem "It is not beauty I demand" was printed as a seventeenth-century lyric, instead of being credited to its real author. This is not the place in which an attempt can be

made to do justice to the genius of the unfortunate poet; but perhaps the publication of the above letters may induce some few readers to make themselves acquainted at least with the excellent selection from Darley's poems which I have already mentioned.

BERTRAM DOBELL.

"PRINCESS OF WALES."

West View, Pinner, April 8, 1911.

MRS. STOPES clearly shows in to-day's *Athenæum* that Mary Tudor, the daughter of Henry VIII., was designated "Princess of Wales" in a patent of the eighteenth year of her father's reign, and she has met with another document, not only calling her "Princess," but speaking of "her principality of Wales." Yet no patent or charter has been met with formally conferring the title "Princess of Wales" upon her. There is, however, a third document referred to by Mrs. Stopes in her letter which is no less to the point than the two others, though it deserves a word or two of comment. This is a letter which Lord Ferrers of Chartley wrote to a nobleman, beginning—to the effect, for I think these are not the exact words—"When you were admitted President to the Prince's Council in the Marches of Wales." This, apparently, is the letter No. 1872 in the 'Letters and Papers'; and if so, the word "Princes" should be spelt without an apostrophe in quotation. I do not, indeed, deny that it may mean "Prince's," treating the word "Prince" as of common gender. But "the Princes Council" may have been only a way of writing "the Princess Council"—that is to say, "the Princess's Council," as we should write it now.

There was no great need, at that time, formally to invest Mary with the title "Princess of Wales." She was "the Princess"—generally called so, because she was the only legitimate issue of her father, though it pleased her father, a year or two later, to treat her as a bastard. And being recognized as Princess, she had been, for lack of a male Prince, sent down to the Welsh borders to hold court at Ludlow, Wolsey giving instructions that no subpoenas should be sent to Wales or the Marches, but that every cause there should be tried before the local authorities. Afterwards, when her mother was no longer acknowledged by the Court as Queen, she was called simply "the Lady Mary." JAMES GAIRDNER.

THE BUTLER SALE.

ON Wednesday, the 5th inst., Messrs. Sotheby began the sale of the first portion of the library of the late Mr. Charles Butler. The most important lots were the following:—

St. Augustine, Cité de Dieu, French MS., about 1380, 80l. Biblia Sacra Latina, Anglo-Norman MS., 13th century, 810l.; another MS. of the Vulgate, Italian, 14th century, 100l. Livre de Jehan Bocace, French MS., 1462, 81l. Boniface VIII., Liber Sextus Decretalium, 1476, 25l. Brant, La Nef des Folz du Monde, 1497, 22l. Buch der Kunst, 1478, 21l. Capgrave, Nova Legenda Angliæ, 1516, 17l. Chronicle of St. Albans, 1483, 103l.; the same, 1515, 49l. Chronicon Nurembergense, 1493, 39l. Diversité de Courts, 1526, 26l. 10s. Empereurs de Rome, MS., 1497, 50l. Euclid, Liber Elementorum, 20l. Gould, Birds of Europe, 5 vols., 1837, 67l.; Birds of Australia, 8 vols., 1848-69, 185l.; Monograph of the Trochilidæ, 6 vols., 1849-87, 43l.; Birds of Asia, 7 vols., 1850-83, 43l.; Birds of Great Britain, 5 vols., 1862-73, 46l.; Mammals of Australia, 3 vols., 1863, 30l.; Birds of New Guinea, 5 vols., 1875-88,

20l. Gregorius, Decretales, MS., 14th century, 85l. Guillaume de Guilleville, Pelerinage de la Vie humaine, MS., 14th century, 530l. Hakluyt, Principal Navigations, 3 vols., 1598-1600, 30l. Hemp, Speculum Aurei, 1474, 28l. Officium Beatæ Mariæ Virginis, Lyons, 1499, 31l. Isidorus, Opera, 1483; Lyra, Postilla, 1482, 37l. Justinianus, Institutiones, 1478-9, 28l. Livy, Deche Historiate, 1493, 24l.; the same, Römische Historie, 1505, 19l. 10s. Lodge, Portraits of Illustrious Personages, 4 vols., 1821-4, 19l. Lorrin, Romant de la Rose, 1526, 19l. 10s. Lucan, Pharsalia, 1519, 15l. 10s. Ludolphus de Saxonia, Le grant Vita Christi, 2 vols., c. 1490, 35l. La Mer des Histoires, 2 vols. in 1, printed by A. Verard, n.d., 36l. Missale Romanum, printed at Munich, c. 1500, 23l.; another, Antwerp, 1701, in a contemporary silver binding, 20l.; Missale ad usum Surum, 1533, 21l. Musæus, De Herone et Leandro, c. 1494, 60l. Opera Nova Contemplativa, c. 1510, 35l. Orosius, 2 vols. in 1, 1491, 16l. Plutarchus, Vitæ, 2 vols. in 1, printed at Strasburg, n.d., 25l. 10s.; the same, 2 vols., Rome, 1470, 16l. Primer, English and Latin, 1538, 26l. Puttenham, Art of English Poesie, 1589, 21l. 5s. Rodericus, Speculum Vitæ Humane, 1471, 15l.; the same, 1475, 27l. 10s. The Shepherd's Kalendar, 1656, 15l. With many illustrations.

Study of History in Secondary Schools: Report to the American Historical Association, by a Committee of Five, 1/ net.

Geography and Travel.

Baedeker's *Eastern Alps*, including the Bavarian Highlands, Tyrol, Salzburg, Upper and Lower Austria, Styria, Carinthia, and Carniola, 10/ net. New edition, with 73 maps, 16 plans, and 11 panoramas.

Britishers in Britain: being the Record of the Official Visit of Teachers from Manitoba to the Old Country, Summer, 1910, 5/ net.

Edited by the honorary organizing secretary.

Devonport; Holyhead; Kingsbridge and Salcombe, Devon; and Kirkcudbright.

Official publications of the Burgh and District Councils.

'Queen' Newspaper Book of Travel, 1911, 2/6 net.

Shrubsole's Guides: Ballycastle, co. Antrim; Cushendall, co. Antrim, 6d. each.

With illustrations from photographs by the author, Edgar S. Shrubsole.

Sports and Pastimes.

Hittell (Theodore H.), *The Adventures of James Capen Adams, Mountaineer and Grizzly Bear Hunter*, 6/ net.

Education.

McMurray (F. M.), *How to Study, and Teaching how to Study*, 5/

The author is Professor of Elementary Education in Teachers College, Columbia University.

Folk-lore and Anthropology.

Gypsy Lore Society, *Journal*, January, 5/

McBryde (John M.), *Brer Rabbit in the Folk-Tales of the Negro and other Races*.

Reprinted from *The Sewanee Review* for April.

Seligmann (C. G.) and Brenda (Z.), *The Veddás*, 15/ net.

With a chapter by C. S. Myers and an appendix by A. Mendis Gunasekara. This elaborate study of the Veddás of Ceylon contains numerous illustrations, and forms part of the Cambridge Archaeological and Ethnological Series.

Philology.

Modern Language Review, April, 4/ net.

Wessely and Gironés, *English-Spanish and Spanish-English Dictionary*, 2/ net.

Revised by L. Tolhausen and G. Payn. One of Unwin's Pocket Dictionaries.

School-Books.

Blanchaud (R. de), *One Hundred Exercises on the Common Difficulties of French Conversation and Composition*, 4d.

Brown (W. C.) and Johnson (P. H.), *The Home of Man: Part I. The British Isles*, 2/6

Part of the New Outlook Geography, which for purposes of study divides the country into coalfields and deals with each of them separately.

Dumas' *Les Trois Mousquetaires*, Episodes from, 1/6

Edited, with introduction, notes, and vocabulary, by I. H. B. Spiers, for Heath's Modern Language Series.

Epitome of English Grammar for Use in Schools, 10d.

Racine's *Phèdre*, 1/6

Edited, with introduction and notes, by Irving Babbitt, for Heath's Modern Language Series.

Science.

Abbot (C. G.) *The Silver Disk Pyrheliometer*.

Vol. 56, No. 19, Smithsonian Miscellaneous Collections.

British Journal of Inebriety, April, 1/ net.

Edited by Dr. T. N. Kelynack.

Dean (Richard), *Chrysanthemums*, 1d.

One of the One and All Garden Books.

Dooley (William H.), *Textiles for Commercial, Industrial, Evening, and Domestic Arts Schools: also adapted for those engaged in Retail and Wholesale Dry Goods, Wool, Cotton, and Dressmakers' Trades*, 3/6

With 28 illustrations. The author is Principal of the Lawrence Industrial School, Massachusetts.

East Africa and Uganda Natural History Society, *Journal*, Vol. I. No. 2, 5/ net.

Eugenics Review, April, 1/ net.

Falconer (J. D.), *The Geology and Geography of Northern Nigeria*, 10/ net.

With notes by the late Arthur Longbottom, and an appendix on the Palæontology of the Cretaceous Deposits by Henry Woods. The book contains 5 maps and 24 plates.

National Physical Laboratory, *Report for the Year 1910*.

Wateridge (F. W.), *Prosperous Agriculture and Home Life: What It Means to the Nation*, 4/6 net.

Contains 16 illustrations.

Juvenile Books.

Cule (W. E.), *The Magic Uncle*, 1/

With illustrations by Rosa C. Petherick. Part of the Red Nursery Series.

Griffith (Helen Sherman), *A Wilful Girl*, 2/6

Haydon (A. L.), *The Quest of the "Wild Swan,"* being certain of the Early Adventures in the Life of Francis Flemyn—afterwards that Sir Francis Flemyn, Knight, who was High Admiral of Devon—as set down by his own hand in the Year of Grace 1610, and now for the First Time given to the World, 1/6

Lee (Percy T.), *A Northumbrian Rebel*, 2/6

A romance of the Jacobite rising of 1715, with illustrations by John F. Campbell.

Told through the Ages Series: Stories from Dante, by Susan Cunningham; Stories from Shakespeare, retold by Thomas Carter, 1/6 each.

Each volume contains 16 full-page illustrations.

Fiction.

Agnew (Georgette), *The Bread upon the Waters*, 6/

The story of an artist's model and actress, who dismisses her youthful lover for the sake of his father who had been good to her in her studio days.

Bridges (Philippa), *The Green Wave of Destiny*, 6/

The tale of a wandering Englishman, hampered by his sacrifices to a man who helped him through the Persian desert.

Carter (John L.), *The Pilgrimage of Delilah*, 6/

The story of a dancer. Jealousy causes the man who discovered her ready to murder her and then commit suicide, thinking that she was dead.

Clifford (Sir Hugh), *The Downfall of the Gods*, 6/

The scene is laid at Angkor, the capital of the great Khmer Empire. The novel relates the life-story of Chun, a hewer of stone and the unacknowledged son of one of the Brahman rulers of the land.

Curtis (Marguerite), *Oh, for an Angel!* 6/

Opens with the coming forward of a young man to preach in answer to an appeal from the pulpit.

Dickens Centenary Edition: *David Copperfield*, 2 vols., and *The Uncommercial Traveller*, 3/6 each.

Hobart-Hampden (E.), *The Price of Empire*, 6/ net.

Deals with European rule in India.

Hyatt (Stanley Portal), *The Land of Promises*, 6/

A tale of the workings of heredity in South Africa.

Johnson (William Samuel), *Glamourie*, 6/

A romance of Paris.

Lambton (Arthur), *The Splendid Sinner*, 8/

A Neapolitan romance of the days of Lady Hamilton.

Leblanc (Maurice), *The Hollow Needle*, 2/ net.

A story of Arsène Lupin, whose adventures and discoveries have had a considerable success on this side of the Channel. This story we have previously read in a cheap English form.

Morice (Charles), *He is Risen Again, a Vision*, 5/ net.

The manifestation of the immanent Christ in Paris is the sequel for such an epidemic of honesty that trade almost comes to a standstill, and He is asked to leave the city.

Orczy (Baroness), *A True Woman*, 6/

The story of a woman into whose humdrum existence there suddenly enters the element of a tragedy, the prologue of which tells of a crime committed in Paris, which presently finds its counterpart in London.

Reynolds (Mrs. Baillie), *The Queen's Hand*, 6/

A collection of short stories.

Rowlands (Effie Adelaide), *A Charity Girl*.

In Stanley Paul's Clear Type Sixpenny Novels.

Sherren (Wilkinson), *Two Girls and a Mannikin*, 6/

The author of 'Tumult' remains faithful to Wessex, but gives the humorous side of rustic life full play.

Warden (Florence), *Laidlaw's Wife*, 6/

In this story a spoilt beauty marries a grave-faced solicitor instead of his friend, a brilliant young physician.

Wiggin (Kate Douglas), *Robinetta*, 6/

A homely romance with its scene in the country.

Wilson-Barrett (Alfred), *Justus Wise*, 6/

Mr. Wise is a private detective whose adventures begin in the first chapter of the book with the discovery of a body in the chimney of his own office.

Wood (Mrs. Henry), *Dene Hollow*.

In Macmillan's Sixpenny Series.

General Literature.

Cargoes and Cruisers: *Britain's Rights at Sea*, by Civis, 2/ net.

With an introduction by Admiral Sir Cyprian Bridge.

Chapman (Hugh B.), *At the Back of Things*, 5/ net.

The author expresses in his preface the hope that the atmosphere of Jesus, after whom he believes that the Western world is genuinely longing, will be intuitively felt throughout this volume, though his immediate desire is to discover how much we actually believe of the popular truisms which are conventionally accepted by educated people.

Copping (Arthur E.), *The Golden Land: the True Story and Experiences of British Settlers in Canada*, 6/

With 24 illustrations in colour by Harold Copping.

Essex Review, April, 1/6 net.

Heelis (F.), *Modern Commercial Practice with Correspondence: Part II. The Export and Import Trade*, 2/6

In the Hooper & Graham Series.

Indian Review, 10/ per annum.

Edited by G. A. Natesan.

New Zealand Official Year-Book, 1910.

Open Window, Vol. I., 4/6 net.

Pocket Gladstone: *Selections from the Writings and Speeches of William Ewart Gladstone*, 1/ net.

Compiled by J. Aubrey Rees, with introduction by Sir Algernon West.

Ronaldshay (Earl of), *An Eastern Miscellany*, 10/6 net.

Deals mainly with the problems of Russia, India, and Japan.

Stevenson (Robert Louis), *Father Damien: an Open Letter to the Rev. Dr. Hyde of Honolulu*, 30c.

An American reprint of the first edition.

Where shall We Live? a Guide to the Residential Localities in and around London, 6d. net.

Edited by P. Row and A. H. Anderson. One of the Homeland Annuals.

Pamphlet.

London County Council: *Indication of Houses of Historical Interest in London*, Part XXXI., 1d.

Records memorials erected to Sir George Gilbert Scott at the Grove, Hampstead, and Sir Joseph Banks at 32, Soho Square.

FOREIGN.

History and Biography.

Literary Gossip.

It will be of interest to all admirers of Thackeray to learn of the discovery, by Lady Ritchie, of two unfinished MSS. by her father. One, entitled 'The Knights of Borsellen,' is part of a mediæval romance, accompanied by the author's own drawings; whilst the other MS., 'Cockney Travels,' describes tours in the West of England by coach and rail about 1842. This new material, which will appear in the first instance in *Harper's Magazine* and in *The Cornhill Magazine*, will subsequently be included in the "Centenary Biographical Edition" of Thackeray's works.

In *The Cornhill* for May Mr. Arthur C. Benson's subject in 'Leaves of the Tree' is Bishop Lightfoot. In 'Charlotte Brontë's Street in Brussels' Mr. Gerald Cumberland describes the original of the famous house in 'Villette,' which is soon to be demolished. Miss Flora Masson tells of 'The Scottish Homes and Haunts of R. L. Stevenson,' and Miss J. M. Callwell of 'Old Irish Memories.' Mr. Frederick Boyle writes on 'Taming Animals,' while 'The Bass-Fisher of St. Betts' is a sketch from life by Mr. Eric Parker. Short stories are 'Brother Judas,' by Lucia M. Cooke, and 'My House shall be called the House of Prayer,' by Mr. W. H. Hodgson. 'At the Sign of the Plough' gives the answers to the paper on Dickens by Mr. G. W. E. Russell, and questions on Walter Scott by Mr. Andrew Lang.

Blackwood for May contains a paper on 'The Foreign Legion,' the famous corps of the French Army. Other articles are 'About "Marie Claire,"' by "Moiria O'Neill"; 'A Mystery of Dickens,' by Mr. Andrew Lang; 'Lord Melville,' 'The Big Bass of Salajak,' by Mr. Arden Hulme Beaman; and 'Musings without Method.' A poem 'To Wilma' is by Mr. R. C. Lehmann. 'From the Outposts' comprises two characteristic sketches, 'My First Execution' and 'Retaliation'; and there are two stories in the number—'Space,' by Mr. John Buchan, and 'Mr. Tudor Carreg—and Norah,' by Capt. Owen Vaughan.

'THE FAMILY AND HEIRS OF SIR FRANCIS DRAKE,' by Lady Elliott Drake, which will be published by Messrs. Smith & Elder next Thursday, will include hitherto unpublished documents relating to Sir Francis's ancestry and circumnavigation, side-lights on national and county history, local politics, and the fortunes of several Devon families—all based on recent original research. Space has been accorded to many contemporary letters, and the illustrations comprise three photogravures and twenty pages of half-tone illustrations.

MESSRS. CHATTO & WINDUS, in association with Messrs. Cassell & Co., Mr. Heinemann, and Messrs. Longman & Co., will begin in the autumn the publication of a new and complete limited edition of Stevenson's works. This issue will be

named the "Swanston," after the house—still surviving—in which many of Stevenson's earlier essays were written; and will consist of twenty-five volumes, to be issued at intervals which will be announced in a few days.

MESSRS. MACMILLAN are issuing immediately Mr. J. Stuart Hay's study of 'The Amazing Emperor Heliogabalus,' with an introduction by Prof. J. B. Bury; and also Dr. Thomas Hodgkin's new book, 'The Trial of our Faith,' which consists mainly of lectures delivered to fellow-members of the Society of Friends.

PART II. of the third edition of Dr. J. G. Frazer's 'Golden Bough' is nearly ready. This section of the work will occupy one volume, and deals with 'Taboo and the Perils of the Soul.'

Harper's Magazine for May will include 'Among the Titans of the Patagonian Pampas,' by Mr. C. W. Furlong; 'My Lowly Teacher,' a study of a dog by Prof. J. F. Genung; 'Rabat the Inaccessible' by Mr. Sydney Adamson; 'Tapestries of Twilight,' fairy stories by Mr. Le Gallienne illustrated by Miss Elizabeth Shippen Green; and a scientific analysis of 'Bread' by Prof. R. K. Duncan.

A NEW novel, 'The Marriage of Quixote,' will be published on May 4th by Mr. Martin Secker. The author is Mr. Donald Pringle Armstrong, who is, we understand, of Australian birth, but Scotch extraction, being of the stock of Johnnie Armstrong of the ballad. Though this is a first novel, it is, we gather, the work of an assiduous student of letters.

It is desired to gather the letters of that fine scholar the late Henry Charles Lea in view of a biography. His correspondents are therefore requested to send originals or copies of letters to or from him to Mr. Arthur H. Lea, 2004, Walnut Street, Philadelphia.

THE SELDEN SOCIETY is about to issue to members the twenty-fifth volume of their publications, representing the year 1910. This is 'Select Cases in the Star Chamber: Vol. II. A.D. 1509-44,' edited by Mr. I. S. Leadam with a long Introduction. The work covers the reign of Henry VIII., and treats not only of such subjects as manorial tenures, villenage, the relations of monastic houses with their tenants, and the organization of sixteenth-century municipalities, but also of matters some of which are specially prominent at the present time, e.g., State policy in fixing prices and forbidding or controlling exports, and conflicts of interest between the artisan and trading classes. It also traces successive stages in the constitution and procedure of the Star Chamber.

MR. H. BEVERIDGE writes:—

"With reference to Sir. George Birdwood's remark about Miss Frere's wealth of flaxen hair, I remember a lady's telling me that once, at a parade in India, Tommy Atkins made a humble petition that the young lady would let down her hair for them to see. Miss Frere graciously consented and let the golden stream flow down to her feet."

THE English and Colonial rights of 'The Tracer of Lost Persons,' by Mr. Robert W. Chambers, have been transferred to Messrs. D. Appleton & Co.

IN 'Chalkstream and Moorland: Thoughts on Trout Fishing,' which Messrs. Smith & Elder will publish next Thursday, Mr. Harold Russell of the Inner Temple and Midland Circuit gives fishermen the benefit of many years of experience. This he does with the avowed object of amusing rather than teaching, having derived such great delight from what others have written about fishing that he hopes fishermen may get a little pleasure from reading his book.

THE same firm are adding to their shilling net books H. S. Merriman's 'The Sowers,' Mr. Rider Haggard's 'Jess,' F. Anstey's 'Vice Versa,' J. A. Owen's 'Woodland, Moor, and Stream,' Dr. Fitchett's 'Tale of the Great Mutiny,' and Sir H. W. Lucy's 'Sixty Years in the Wilderness.' The first two of these will be published on the 26th inst., two other volumes following on May 3rd, and the last two on May 10th.

MRS. MARRIOTT WATSON has completed a selection from the works of Mr. H. G. Wells which will shortly be published by Mr. Frank Palmer in the form of a Calendar, following the precedent of the same firm's G. B. S. Calendar. The selection constitutes a comprehensive and characteristic record of Mr. Wells's *sententiæ* and *obiter dicta*.

MISS GERALDINE HODGSON, whose forthcoming book we mentioned last week, should have been described as a D.Litt. of Trinity College, Dublin, not of the University of Bristol.

MESSRS. D. APPLETON & Co. will publish immediately 'Diaz: Master of Mexico,' by Mr. James Creelman; and 'The Obvious Orient,' by Prof. A. Bushnell Hart, which aims at including the things which come before the traveller's eye when he first lands in Asia. The author has analyzed and grouped experiences gained from residents, from discussion of problems with local administrators, and from the daily sight of streets and harbour life. Chapters on the Canadian North-west, Oregon, Washington and Alaska are included.

THE Prix (3,000 francs) known by the title of 'Jeune Roman' has this year been awarded to M. Jean Balde, author of 'Les Ébauches.'

AMONG recent Government Publications of general interest we note: Cost of Living in American Towns (post free 5s. 7d.); Scotch Education Grants to Secondary Schools (post free 1d.); Education, Scotland, Minute, 27th March (post free 1d.); Education, Scotland, Fund, Return (post free 1d.); Official History of the Russo-Japanese War: Part V. Sha-Ho (post free 5s.); Public Records, Ireland, Report for 1909 (post free 5d.); and Form and Order of the Coronation Service (post free 2s. 2d.).

SCIENCE

OUR LIBRARY TABLE.

The Stone Age in North America. By Warren K. Moorehead. 2 vols. (Constable & Co.)—This work is designed as an archaeological encyclopædia of the implements, ornaments, weapons, utensils, and other objects characteristic of the prehistoric tribes of North America. In more than 300 full-page plates and 400 figures, over 4,000 of these objects are illustrated. The author's qualifications for this great undertaking may be gathered from his exploration in 1889 of the earthwork called Fort Ancient, in Warren County, Ohio, followed in 1892 by a treatise on 'Primitive Man in Ohio,' and from his position as Curator of the Department of American Archaeology in the Phillips Academy at Andover, Massachusetts, and as a member of the Board of Indian Commissioners. He has embodied in his own observations contributions from nearly 50 other scholars of eminence in their respective departments; and has obtained photographs and other material from more than 300 persons.

The illustrations are commendable for two reasons: the scale is always clearly stated, and the descriptions at the foot of each are more than usually full and informing.

The author has chosen, perhaps rightly, to arrange objects according to class and type rather than according to the locality of discovery. The other plan might have led to much repetition and unprofitable discussion. The reader who desires to study specially the objects from any given place may do so by reference to the index, where these are specified. In another respect Mr. Moorehead has struck out a line of his own. He refuses to consider the arts of prehistoric times in the light of those of the present Indian tribes. He holds that the prehistoric arts are not to any appreciable extent the same with those which Lewis and Clark found to be practised among the Indians at the time of their historic expedition (1804-6), and that even in the century that has passed since that date arts have either become extinct among them or been greatly depreciated. He rejects also the evidence of the ceremonies practised by the tribes of to-day, on which reliance is often placed as illustrating objects of prehistoric art.

There would seem to be much to be said on the other side of this question. When we bear in mind that in the island of Tiburon in the Gulf of California and on the adjacent mainland of Sonora in Mexico, the Seri Indians are still in the Stone Age, we can hardly doubt that the analogy which has been found useful in other cases between prehistoric peoples and modern savages would be applicable to them. Upon the whole, however, the author's decision appears to be sound; and a work in which all the various "artifacts" (to adopt a word now in frequent use in America) hitherto discovered are described and classified under their several forms, without special reference to any other consideration than that of form, is likely to be of more permanent value than would have been one in which the current scientific opinion of the day had been also recorded. For example, Mr. Moorehead, while describing and figuring

implements resembling in type the palæolithic implements of Europe, declines to discuss the question of the antiquity of men in America, or of the evidence (such as it is) in support of the theory that there was a palæolithic period there. To assist those who desire to pursue the study of this and other questions, Mr. Moorehead has compiled an excellent bibliography of 42 pages, which he does not put forward as complete, but which is quite copious enough for the purpose he has in view. He introduces it with the significant observation that, "in view of the change in archaeological processes and opinions that has often occurred in a comparatively short space of time, the arrangement of the titles is made as a whole in chronological order."

Another instance of the conscientious limitations Mr. Moorehead imposes upon himself is his rejection of question-begging terms in describing objects of worked stone. Those which have frequently been called gorgets, amulets, plummets, ceremonial objects, and the like, he (in this following Prof. W. H. Holmes) frankly describes and classifies as "problematical" forms. Of them he says generally that they are distinctly American. He defies any one to pick a series in Egypt, Europe, Babylonia, or elsewhere that will, type for type, compare with them. Unless the word "series" is here used with some special application, this would appear to be a hasty generalization, for problematical forms are not unknown in Europe. There are many specimens figured to which it is difficult to assign any use; for example, two pointed objects from the collection of which he is Curator, similar to many others in American museums, which are not adapted by perforation or otherwise to any apparent practical purpose. In a coloured plate some beautiful objects of butterfly and other winged forms are figured. In another are various types of twice-hollowed or "bicave" stones, frequently called "discoidal." Of the objects called "plummets," Mr. Moorehead quotes from Dr. Peabody a table enumerating 26 different explanations of their purpose that have been offered by as many theorists. The attitude of the author in respect of these matters appears to us to be justified, and to be in accordance with the aim he has proposed to himself of furnishing a comprehensive storehouse of well-arranged facts for reference.

Shell, bone, and horn were, in addition to stone, used for many purposes, and a large selection of things worked in these materials is figured. Mr. Charles E. Brown contributes a chapter on objects in copper, of which as many as 20,000 have been collected in the State of Wisconsin alone, and the search for them is still proceeding. These appear to have been used in common with implements of stone before the coming of the white man. Textile fabrics and basketwork are only briefly dealt with, remains of undoubted prehistoric antiquity being comparatively few. Pottery is treated at somewhat greater length, and a number of typical specimens are figured; but the reader is referred for fuller information to the works of Prof. W. H. Holmes and Mr. Clarence B. Moore. Hematite was known to the Indians, and furnished them with paints and implements.

Dr. H. Montgomery, of the University of Toronto, contributes to the work a chapter on the Stone Age in Eastern Canada, Utah, and Dakota. In two final chapters Mr. Moorehead sums up his conclusions concerning the population in prehistoric times and the ancient culture-groups. We have said enough to show that the book deserves high commendation.

Death: its Causes and Phenomena, with Special Reference to Immortality. By Herward Carrington and John R. Meader. (Rider & Son.)—It is probable that a satisfactory treatise on Death would need the collaboration of a biologist, a general medical practitioner of long standing in his profession, and a physician skilled in mental disease and well acquainted with the laws of evidence. The biologist is wanted because life varies greatly in degree in the various groups of animals. There is latent life, such as may last for years, in desiccated rotifers, which reawaken as soon as they are moistened; there is the potential vitality of frozen fish or of frogs deprived of oxygen, and there is "mimetic death." The general medical practitioner's knowledge would be needed because it is his duty to attend many death-beds and he knows death in various forms. The alienist would assist with his knowledge of the different types of disordered human minds and of the part they play in arriving at inaccurate conclusions.

Mr. Carrington and Mr. Meader appear to take a different view of qualifications. The physiological portion of their treatise is so unsatisfactory that one is tempted to wonder whether they have had any actual knowledge of death and dead bodies, or whether all their information is not obtained at second-hand. Much of it is drawn from untrustworthy sources, and their conclusions are in consequence vitiated. Thus in speaking of the visual purple they cannot have consulted Kühne's original papers or looked into the valuable work done by Franz Boll, or it would have been impossible for them to write: "Certainly very little trace of any scene would be found on the retina twenty-four hours after death." Any one who has studied the visual purple knows the extreme difficulty of retaining it even for the shortest time. Post-mortem mottling is surely due to a transudation of altered blood pigment, and is not caused by the "exudation of blood"; nor is blood the active principle in decomposition. Death does not begin by coagulation in the capillaries, as is stated more than once. It shows a lack of critical faculty to quote without comment a statement that "there is no doubt that the number [of persons] annually put to death by the embalmers is sufficiently large to demand attention," and to state that "one person is buried alive in the United States every twenty-four hours."

A similar laxity of thought and expression pervades the book. Some strange advice is vouched for; for instance, "electricity, or even cold water, may be applied with great success in all cases of 'shock.'" There would certainly be great danger of killing a person when such a condition has occurred after a surgical operation. Perhaps the strangest thing in the book is the following story:—

"A patient lying in bed in a hospital was fast sinking into a moribund condition. Consciousness was fast slipping away, and it was quite certain to the attendant physicians and nurses that...she would soon become unconscious and within half-an-hour dead....Four nurses quietly posted themselves at the four corners of the patient's bed. At a given signal, just as this patient was losing hold of life and passing into an unconscious state, the four nurses simultaneously shrieked at the tops of their voices and forcibly wheeled the patient's bed out into the centre of the ward....From that moment she improved, and within two months was discharged from the hospital cured."

It would be interesting to have further details as to time, place, names of physicians, &c.

The psychological aspect of death is illustrated by some "photographs of the

soul" which convey nothing to the unbeliever in spiritualism, and the latter half of the book deals with the aspect of death as described by clairvoyants, trance mediums, and other mystics. Their evidence has been shown in many cases to be untrustworthy or fraudulent, yet this chapter is headed 'The Testimony of Science.' The conclusion reached is that

"the nature of death is likely to remain unsolved so long as we are ignorant of the nature of life. When the one is isolated and its innermost 'essence' known, then we shall know and understand the other."

There are appendixes on Vampires and other subjects; a Bibliography, and ten columns of index for 552 pages of text.

RESEARCH NOTES.

THE current number of the *Compte Rendu* of the Académie des Sciences contains a communication from M. E. Henriot on the radio-activity of the metals of the alkaline group. Like Mr. Norman Campbell, Prof. R. W. Woods (of Baltimore), Prof. McLennan (of Toronto), and others, he finds that the radio-activity of certain salts of potassium (the haloid salts, nitrates, and sulphates) is well marked, and that the same is the case with those of rubidium; but from those of caesium, which is so like rubidium that it can hardly be distinguished from it save by its greater atomic weight and different spectrum, he could get absolutely no reaction.

The same subject is popularly treated by M. Adolphe Lepape in the *Revue Scientifique* of the 1st of this month, wherein a lucid summary of the radio-active phenomena shown by the whole group is given. The conclusion he arrives at is that the Beta rays from potassium are emitted spontaneously, and come from the atom itself, and are not, as has been suggested, secondary rays excited by some external influence. Although no emission of Alpha rays has yet been shown to exist in the case of potassium, the researches of the Hon. R. J. Strutt made three years ago with the Stassfurt ores give rise to the hope that this may one day be done. Caesium, lithium, sodium, and the ammonia salts have, however, up till now shown no signs of radio-activity.

Yet the facts already acquired upset many of the theories of radio-activity formed shortly after the discovery of radium. If the absence of radio-active reaction among the majority of the alkali metals be due, as seems likely, to the emission by these last of an emanation so short-lived that its existence cannot be demonstrated, we have here a sort of parallel to what happens in the case of uranium, the parent of the radium series. But potassium is nearly the lightest metal of the alkaline group, having an atomic weight of 39 as against the 132 of caesium. What, then, becomes of the hypothesis that it was the excessive weight, and therefore complexity, of the highly radio-active metals, such as uranium and radium, which caused them to break up? M. Henriot, indeed, noting the curious approximation between the atomic weights of potassium and argon (39.88) on the one hand and krypton (82) and rubidium (85) on the other, has hazarded the suggestion that with potassium there is an "integration" rather than a disintegration of the atom, and this is partly borne out by the fact that hitherto no evidence of any lessening in the atomic weight of potassium after prolonged emission of Beta rays has been observed. It seems, therefore, that there still remain many problems for solution in the new study of radio-activity.

M. Lepape also collaborates with M. Ch. Moureu in a paper in the same number of the *Compte Rendu* dealing with the ratio of krypton to argon in gaseous mixtures. These members of the inert group of gases are widely diffused in nature, being met with not only in the atmosphere, but also in the gases emitted by many springs and (in one case) by a volcano. The last phenomena lend some colour to the theory that the inert gases are themselves a sort of by-product of radio-activity, as is certainly the case with helium. But the ratio of krypton to argon in nature seems to be constant, and MM. Moureu and Lepape account for this by supposing that in the primitive nebula which gave birth to our system all the elements existed in the gaseous state, and that the mixture was homogeneous thanks to the whirlpools and other commotions that went on within it. When the earth came to evolve from this, it was only the gases of the helium group which, by reason of their chemical inertia, remained free. Hence all the inert gases should exist on earth in the same relative proportions that they bore to each other in the nebula, and this would be so were it not for the modification produced by the disengagement of helium by radium and its congeners. This theory the authors partly justify by various experiments, and by the demonstration that the ratio of nitrogen, which they describe as relatively inert, preserves a more or less constant ratio to the other inert gases in the gases of springs.

In the current number of the Royal Society's *Proceedings*, Prof. Arthur Schuster has papers on the origin of magnetic storms and the periodicity of sunspots. In these he agrees with Kelvin's dictum that magnetic storms, although they may coincide apparently or actually with the occurrence of sunspots, cannot be due to the direct action of the sun, because the enormous amount of energy which this would suppose the sun to put forth would be beyond its power to produce. It has been suggested, however, that the sun may be the indirect cause of the storms if they are proximately due to the magnetic action of a swarm of corpuscles ejected by the centre of our system. Prof. Schuster examines this hypothesis, and shows on mathematical grounds that this also is untenable. He therefore concludes that if the sun has really any connexion with the magnetic storms observed on our earth, the ejected particles mentioned above must act by increasing the ionization of the outer regions of our atmosphere, and allowing the electromotive forces, always locally present, to increase the intensity of the electric circulation. The rotation of the earth, he goes on to say, which is the primary cause of the electromotive forces which come into play, thus becomes responsible for the energy required to produce the storms in question. If this be so, it would seem possible to adopt some means of protection against them in the interests of telegraphy and telephony.

In the *Journal de Physique* for March M. le Commandant Ferrié draws attention to some new and practical applications of wireless telegraphy. It can now be used, he asserts, to notify the hour of meridian at their port of origin to ships at sea, and thus to obviate, wholly or in part, the taking of daily observations; and he gives instances where this has been effected from the Paris Observatoire through the radio-telegraphy station on the Champ de Mars.

Wireless telegraphy can also be used, according to the same authority, to determine with great exactitude the geographical position of any point of the earth's surface

by a most ingenious process, of which he gives details. Such a method was employed with good results from the Eiffel Tower in 1909, the point to be determined being that occupied by the observatory at Montsouris; and the Bureau des Longitudes has tested the same system at Bizerta, and means to extend its experiments to Algeria, Dakar, Konakry, and other places, all which are to be placed in direct wireless communication for that purpose with the Paris Observatoire, "stations" in foreign parts being established by means of kites or balloons.

The third use for wireless telegraphy is the method of communication lately described in these Notes between land stations and balloons or aeroplanes. Commandant Ferrié warns aeronauts that they must never use the antennæ with which some of them are now supplied when drawing near clouds, or they may find that their vehicles act like a stick of ebonite between two electrodes charged at high potential with electricities of opposite sign, and produce a fatal discharge.

The compass for use at sea which depends for its action on two gyroscopes, and dispenses altogether with the use of magnets, has, it would appear, now been adopted by the German Navy, and was exhibited at the last meeting of the British Astronomical Association. It was briefly described in these Notes at the time of its invention some years ago, and a full description will, it is said, appear in the *Monthly Notices* of the Association in due course. In the meantime, those interested in the matter may be recommended to read a letter appearing in *The English Mechanic* for the 8th of this month, in which the writer sets forth in clear terms his explanation of the reason why the gyroscopic system used always points to the north. The desirability of such an invention, now that the free use of electric currents on board ship has come to reinforce the power of the large masses of iron employed in the construction of vessels to cause unexpected deviations of the magnetic needle, needs no demonstration; but it may be as well to await some description of the means employed for rotating the gyroscopes before warranting its practicability. The invention, it may be noticed in passing, was not originally a German one.

M. E. L. Trouessart has a paper in the *Compte Rendu* quoted above on the origin of the domestic dog, who, he tells us, appeared suddenly in Western Europe in the neolithic age, his remains being first found in the kitchen middens of Denmark and the lake dwellings of Switzerland. Two distinct races were known even then, one being *Canis palustris*, or "chien des tourbières," and the other the Bronze Age dog, which he compares to that sheep-dog which Buffon rightly pointed to as the most typical member of his race. Prof. Jeitteles (of Vienna) a few years ago pointed out the likelihood of *Canis pallida*, or the Indian wolf, being the ancestor of the neolithic dog; but his proofs were not entirely satisfactory, and as late as 1905 Prof. Studer (of Berne) declared the question to be an open one.

M. Trouessart has now made an exhaustive study of the animal skulls in the Musée National at Paris, and finds that those of all the other wolves and jackals differ notably from that of the sheep-dog, the conformation of the bony arch of the eye being much more prominent in the dog than in the wild animal. The only exception to this rule is *Canis pallida*, which shows, besides, the feebler jaw of the domesticated beast. During the Quaternary Age, says M. Trouessart, India must have possessed a more advanced civilization than the North and

West of Europe, which was then mostly covered with ice, and he thinks that both the neolithic varieties of dogs migrated from India by way of the steppes of Russia and the Danube valley. It is the want of prominence in the arch of the eye which gives the wolf, he says, its traditionally stealthy and furtive expression; but one would like to know whether the same cause accounts for its appearance in many colliers, particularly those of the so-called "Welsh" variety.

MM. Desgrez and Cains draw attention in the *Compte Rendu* last quoted to the ptomaines found in fish preserved in tins, such as sardines. They have lately investigated a great quantity of boxes containing tunny-fish, sardines, herrings, and mackerel in oil, and also tins of lobster and salmon. In all of these they found ptomaines to the extent of .20 gr. to .60 gr. per kilogramme immediately upon opening the receptacle, those containing whole fish having more in proportion than when the contents were sliced, as in the case of tunny, lobster, and salmon. The ptomaines were in greater numbers in the centre of the box than at the sides, and no gas of putrefaction or otherwise was found on opening. From this the investigators gather that the ptomaines already exist in the fish before they are put in the receptacle, and think that oil rather favours their growth than otherwise. In all cases the ptomaines increased enormously in number in two days after opening. They promise further experiments as to the existence of some of the organisms noted in live fish, and also as to their toxicity; but they point out meanwhile that in weak doses many of them probably exercise a stimulating effect on the appetite and nutrition. M. Armand Gautier is quoted by them as having come to the same conclusion with regard to bacilli sometimes thought deleterious in cod-liver oil.

As investigation into the life-history of microbes progresses, the impossibility of avoiding the taking of them into the system becomes daily more apparent; but MM. Grenet and Salimbeni announce the discovery of a means by which they can at least be kept out of drinking-water. M. Metchnikoff, as the result of researches made by him and his assistants at the Institut Pasteur, some time ago, announced that a thin film of collodion was absolutely impermeable by the microbes themselves, although it will let through culture liquids and certain bacterial products. MM. Roux and Nocard showed later that the films will arrest germs which pass freely through porcelain filters, infusorial earth, charcoal, and the like; and M. Malfitano has proved that thin collodion will not allow colloids to pass. The difficulties in the way of using collodion for filtering purposes has hitherto been that it splits as soon as dry; but MM. Grenet and Salimbeni now show that this can be avoided by plunging a Chamberland filter cylinder or "bougie" into collodion and then putting it at once into a bath of water containing 50 per cent of glycerine. Thus prepared, a filter after one year's use still gave water "bacteriologically pure."

The administration of radium by the process called cataphoresis, or the passing of drugs through the unbroken skin by means of an electrolytic current, has been tried by MM. Haret, Danne, and Jaboin. After experiments made on rabbits, calves, and finally the human subject, they report it to be perfectly trustworthy and free from all harmful consequences, while the radium is afterwards found in the skin, the muscular tissue, and the bones. F. L.

SOCIETIES.

ROYAL.—April 6.—Sir Archibald Geikie, President, in the chair.—The Bakerian Lecture was delivered by Prof. the Hon. R. J. Strutt, on 'A Chemically-Active Modification of Nitrogen Produced by the Electric Discharge.'—The following papers were read: 'The Association of Lead with Uranium in Rock-Minerals, and its Application to the Measurement of Geological Time,' by Mr. A. Holmes,—and Prof. E. T. Whittaker 'On the Dynamical Value of the Molecular Systems which emit Spectra of the Banded Type.'

GEOLOGICAL.—April 5.—Dr. C. W. Andrews, V.P., in the chair.—Mr. F. Elgee and Mr. M. D. Williams were elected Fellows.—The following communications were read: 'Trilobites from the Paradoxides Beds of Comley, Shropshire,' by Mr. E. Sterling Cobbold, with notes on some of the associated Brachiopoda by Dr. C. A. Matley,—and 'The Stratigraphy and Tectonics of the Permian of Durham (Northern Area),' by Dr. D. Woolacott.

ASIATIC.—April 11.—Sir Raymond West, Director, in the chair.

Sir J. George Scott read a paper on 'Buddhism in the Shan States.' In Mr. Leslie Milne's 'Shans at Home' a chapter by the Rev. W. W. Cochrane states it as a probable fact that Buddhism, and with it writing and literature, were introduced among the Tai by the Talaings and Cambodians. The paper disputed this; pointed to ancient pagodas and evidence of the connexion between Tibet and the Ngai-lao Kingdom long before there was any connexion between Môn and Khmêr races and the Tai; and also showed that there are signs that Buddhism was formerly the religion of the Lahu and other hill races, now included in the Tai country, and that it was certainly not introduced among them from the south. It seems, therefore, right that decision on the point should be suspended pending further research.—A discussion followed, in which Mr. Penny, Mr. Sewell, Mr. Blagden, and Sir Charles Lyall took part.

LINNEAN.—April 6.—Dr. D. H. Scott, President, in the chair.—Mr. Norman Miller and Mr. Moore Betty Fullerton were admitted Fellows. Mr. G. H. Wailes was elected a Fellow.

The President announced that the Council had elected Count Hermann zu Solms-Laubach to receive the Linnean Medal.

Miss Sarah M. Baker read a paper, illustrated by lantern slides, entitled 'On the Brown Sea-weeds of the Salt-Marsh.' A discussion followed, in which Mr. Shenstone, Prof. Oliver, Mrs. Gepp (visitor), and Mr. E. M. Holmes engaged.

A conjoint communication followed on the genus *Salicornia*, in which Dr. C. E. Moss (visitor) gave a history of the genus from Linnæus, 'Species Plantarum,' ed. 1, 1753, to the present time. Mr. E. G. Salisbury then gave an exposition of the characters of the species comprised in the genus; and Dr. Ethel de Fraine dwelt on the anatomy of certain species. Lantern slides illustrated each section of the communication. The President opened the discussion, and was followed by Mr. W. C. Worsdell, Mr. F. N. Williams, Dr. O. Stapf, Mr. Henry Groves, and Prof. Oliver.

ZOOLOGICAL.—April 4.—Dr. H. Woodward, V.P., in the chair.—Dr. H. B. Fantham and Dr. Annie Porter exhibited some diseased bees and combs infected with a minute pathogenic Protozoal parasite, apparently the same as *Nosema apis* found by Zander and Dollein in diseased bees in Bavaria. Microscopic preparations and drawings of the parasite, *Nosema apis*, were also shown, as well as healthy bees and combs in contrast. The material exhibited was obtained from Cambridgeshire and Hertfordshire in March.—Dr. R. T. Leiper gave a demonstration of Nematode parasites obtained from animals in the gardens during the year ending November, 1910.—The Secretary read a letter from the Governor of Seychelles on the subject of the herd of land-tortoises at Government House, Mahé.—Mr. R. I. Pocock exhibited the body of a newly-born cub of the masked palm-civet (*Paradoxurus*

larvatus) from Szechuen.—Mr. F. E. Beddard read a paper on some mammalian tapeworms which had been collected from animals that had died in the gardens.—Dr. S. F. Harmer communicated a paper, by Mr. J. A. Mörch of Christiania, on 'The Natural History of Whalebone Whales,' throwing light upon some of the problems connected with the migrations of the larger Cetacea.

INSTITUTION OF CIVIL ENGINEERS.—April 11.—Mr. Alexander Siemens, President, in the chair.—It was announced that two Associate Members had recently been transferred to the class of Members, and that five candidates had been admitted as Students.—The monthly ballot resulted in the election of four Members and five Associate Members.

MEETINGS NEXT WEEK.

- MON. Surveyors' Institution, 8.—Adjourned Discussion on 'The Conservation of our National Water Resources,' and 'Judicial and Parliamentary Decisions with Regard to Rights in Underground Water since 1907.'
- TUES. Royal Institution, 3.—'Cardinal Manning,' Mr. J. E. C. Bodley.
— Colonial Institute, 4.—'Imperial Telegraphs,' Mr. C. Bright.
— Statistical, 5.—'The Application of the Method of Multiple Correlation to the Estimation of Post-Censal Populations,' Mr. E. C. Snow.
— Institution of Civil Engineers, 8.—Annual Meeting.
— Institution of Mechanical Engineers, 8.—'Steel,' Lecture II. Dr. W. Rosenhain.

Science Gossip.

THE three English parties — i.e., the Government Expedition from the Solar Physics Observatory, under the charge of Dr. Lockyer; that of the Joint Permanent Eclipse Committee, under Father Cortie, of Stonyhurst College; and a private expedition conducted by Mr. J. H. Worthington — sent to observe next Friday's total eclipse of the sun arrived safely at Sydney last month, and are probably now at Vavau in the Tonga Islands, on which most of them propose to select their stations.

The Meteorological Report from Stonyhurst College for 1910 shows that the highest thermometer reading was 78°·0, on June 9th and July 13th, and the lowest 13°·5, on January 27th; the mean temperature of the year 47°·2, which is a little above the average; the number of hours of bright sunshine 1,262, which is 85 below the mean for the past 30 years; and the total rainfall 53·3 inches, of which 8·4 fell in January, the wettest month of the year.

THE orbits of two spectroscopic binaries — 93 Leonis and ε Ursæ Minoris — have been determined, by Messrs. J. B. Cannon and J. S. Plaskett respectively, from plates taken at the Dominion Observatory, Ottawa. The period of the former is 71·7 days; that of the latter, 39·5 days.

FINE ARTS

THE INTERNATIONAL SOCIETY OF
SCULPTORS, PAINTERS, AND
GRAVERS.

BETWEEN the historical critic who sees modern art as an ever-descending movement towards utter decadence and the more up-to-date enthusiast who appraises his contemporaries in proportion as they break in revolutionary fashion from the whole art of the past, mediation is a thankless—an almost impossible—business. No *via media* has the picturesqueness of these extremes, or even plausibility such as belongs to any simple expression of a fundamental truth which both may claim. We admit that each of the alternative schools lays before us a general law which inevitably permeates artistic development; but actuality is more complex than any of its constituent elements, and the bias of much modern criticism makes it see in artistic production very much what it expects to see, and tends to depress artists.

As regards the historic critic, his depressing influence is evident enough. It is ill working in face of convinced pessimism. The present exhibition of the International Society, however, is an example of the equally deleterious effect exercised by the apostles of revolution *per se*, who, whatever their faults, can at least claim to have been the advocates—for years past almost the only advocates—of “the younger school.” At the Grafton Galleries are the painters, then, who have been encouraged by their admirers in the press to be innovators at all hazards. “De l’audace et de l’audace, et encore de l’audace,” has been their motto, and we can foresee that exhibitors at the present show will be taken to task for having fallen away from that sublime maxim.

With respect to the many pleasant little works which are to be found in this as in other recent exhibitions of the Society, it must be admitted that we feel their slightness the more keenly when their novelty has worn off. This is true of the landscapes of Mr. F. Foottet (86), Mr. P. H. Padwick (93 and 125), Miss Maud Button (95), and Miss E. F. Boyd (97 and 175); of the interiors, so agreeable in colour, of M. E. Vuillard (189 and 327); and of M. Louis Legrand’s etchings, Nos. 273 to 277, though No. 278, *Réveil*, compels admiration by the power which is added to its dainty impudence.

M. Vuillard (represented also by a large landscape, *Pélouse*, 310) offers perhaps the most typical instance of the modern view as to the proper way for an artist to develop his powers. Few artists spring fully armed at birth into the arena, and the old-fashioned pedagogic advice was that each should strive, even at the cost of evident effort, to make good his natural deficiencies. Modern taste, on the other hand, is so opposed to respectability in art—so much more concerned that a painting should be new than that it should be excellent—that the artist is encouraged to eliminate from his ambition any qualities which are temperamentally difficult for him. In so far as this has occasionally resulted in his pushing further than did his predecessors the special line of study, the special train of thought, which remained to him, this tendency has given a certain freshness of interest to the

work of the modern painter. The demand for innovation, however, was too urgent and too uncritical to be kept pace with by such means, and more and more we have come to be satisfied with innovation of merely negative order. Boldly to refuse the exactions of any of the older canons of art which might put a rein on his fluency has sufficed to make an artist interesting for us, without our inquiring whether he has imagined for himself fresh requirements as subtly exacting in a new direction. M. Vuillard is a little of this order of talent. He has a natural instinct for colour relations, but we do not feel so much that he has developed it to an unprecedented pitch as that, by throwing over every other demand, he has left himself free to express it with a perfect ease and spontaneity which are not without charm, doubtless, but which leave his art with a slender intellectual basis. Mr. W. J. Leach, with a native gift rather less, has developed his sense of colour with more conscious logic, and will probably surpass M. Vuillard in the long run. At present his persistent choice of subject-matter limited almost entirely to the three elements of sky, water, and snow, enables him to restrict his art almost oppressively to pure mathematics. Mr. T. Millie Dow in *A Northern Shore* (53) tempers what may easily become purely scientific painting with a lyrical feeling for patterning which seems inspired by the example—speaking at a guess, we should almost have said the comradeship—of that poetic artist the late William Stott of Oldham. It is one of the most charming works of the show.

Other pictures which emerge rather less definitely from the class of painting we have till now been considering are Mr. Livens’s *Solitude*, 78 (the sky of which fails to join in the scheme of massive design which should be the artist’s justification for a certain habitual inelegance in handling oil paint), and Mr. Clifford Addams’s excursion into humorous journalism, *The Old Guard at Trafalgar Square* (107). The latter undeniably amusing, if somewhat cruel, skit caricatures the appearance of the copyists more shrewdly than their works. We have never seen a copy in the National Gallery of which the work here shown on the easel would be a truthful representation or a characteristic misrepresentation. It must be Mr. Addams’s ideal, and his version of the ‘Warrior Adoring’ by Catena which enters into the background of his picture fails sufficiently, either in intelligent sympathy, or witty distortion, to give some of his victims a consoling sense of superiority.

It is perhaps the virile facing of difficulties shown by Mr. Strang in his fine composition *Spring* (50) which makes the work of the other exhibitors look flimsy. It is obviously, indeed defiantly, open to criticism, but, except for certain decorative paintings recently shown at one of the Whitechapel Exhibitions, the artist has produced no painting of the same order. It is a worthy successor to that fine series, with an added logic in the use of colour as a means of clarifying a complex scheme of modelling, if with rather less perfection in the proportioning of a colour-pattern. The touch throughout is refreshingly firm and sensitive; the colour-scheme cool and clear-cut, with a margin of crispness for time to mellow. Few modern painters make that allowance. In his treatment of line certainly Mr. Strang is at present more quaint than significant, but even here the frankness of the oddity is, at any rate, pardonable. Mr. Pryde’s design *The Vestibule: Costume Ball* (100), if not quite so inspiring as Mr. Strang’s picture, is a work of considerable

interest. Mr. Pryde is not in the least inclined to discard the accumulated wisdom of previous painters, but is disposed to sum up its essence in a highly generalized form. We doubt if he understands fully the underlying logic of the processes he would resume and this makes him an imitative painter, dependent upon his instinctive sense of the practical gist of his predecessors’ practice rather than any critical understanding of the principles upon which they proceeded. Whether in this he differs from most of the painters of the golden age of art we are by no means certain. Painters when they were effective were probably always quicker to do a thing with their brush than to argue why they did it, and the shame attached to copying another artist’s methods is a modern invention. Perhaps it was rather the advantage the earlier painters had in copying their masters in procedure as well as in result which made their equally imitative outlook more successful.

There is much advantage, however, in the interchange of hints between two students working on a similar problem, and the similarity of aim of Messrs. Nicholson, Pryde, and Orpen has doubtless been fortunate for all of them. Mr. Orpen’s *Knacker’s Yard* (64) shows natural ability complementary to that of Mr. Pryde. The latter has the greater gift for making a limited sequence of tones a symbol for infinity of modulation. Mr. Orpen has the logical apprehension of the line of demarcation between light and shade as an implied silhouette disguised by perspective which makes Mr. Pryde by comparison an uncertain draughtsman; yet Mr. Orpen in his use of whites is some way behind his brother artist.

Among the sculpture we must mention a delicately carved *Sleeping Child* (354) by Mrs. Ottilie Wallace and M. Rodin’s *Visage émerveillé* (160), sensitively modelled also beneath the piebald disfigurement of its sham-antique patina. The French master’s marble group *L’éternelle Idole* (104), on the other hand, cannot be called one of his successes. The preoccupation with the large enclosing planes of a figure which is the typically sculptural quality of his work ceases with the extremities, which are “finished up” cautiously, it is true, but with what looks almost like a concession to the British taste for prettiness. Certain details, like the hands, are executed in a manner which seems almost incredibly at variance with what we have hitherto regarded as the master’s attitude of mind.

‘INDIAN DRAWINGS.’

Bombay, March 29, 1911.

I SHOULD like to say a few words about your review of the above book on February 18th. It is printed, not with Morris, but with Caslon type. I do not understand what is referred to by your reviewer as ‘Seated Sage (Figure IV.)’. You are right in remarking that Indo-Chinese would be a more significant term than Indo-Persian. But it is time the latter term was used with more discrimination; there are both Indian and Persian styles, and the term Indo-Persian should be applied only to work which is a combination of these. The religious painting of the Rajput school in particular has nothing to do with Persia.

My book is about ‘Indian Drawings’ in the seventeenth century—the reference to Ajanta is historical and introductory. It is absurd to complain that I leave out of

account such drawings as 'The Musicians' and 'The Princess with the Lotus' (and the mythical "Figure IV."). The Ajanta work is just 1,000 years earlier than that with which my book is primarily concerned: to have treated it at length, as your reviewer seems to wish that I had, would have been quite inappropriate.

A. K. COOMARASWAMY.

Fine Art Gossip.

MESSRS. MACMILLAN will publish soon 'The Training of Memory in Art and the Education of the Artist,' translated from the French of Lecoq de Boisbaudran by Mr. L. D. Luard. The volume contains 'The Training of Memory in Art'; 'A Survey of Art-Teaching'; and 'Letters to a Young Professor—Summary of a Method of teaching Drawing and Painting.' These three pamphlets give the fundamental principles of artistic education as seen by the French teacher whose pupils included Cazin, Fantin-Latour, Legros, Lhermitte, and Tissot, among painters; Rodin and Dalou among sculptors; Gaillard, the engraver; and Solon, the designer of pottery. The book is illustrated by reproductions of memory-drawings and original paintings, and will be introduced to English readers by Prof. Selwyn Image.

THE same firm hope to have ready shortly a new work by Mr. A. L. Baldry on 'The Practice of Water-Colour Painting.' It will be illustrated by pictures and sketches lent by distinguished modern artists, who have also given the author details of their manner of work.

THE Report on the National Gallery for 1910 has just been published as a Parliamentary Paper (post free 6d.).

AN important addition to the National Gallery of Ireland is Hogarth's 'The Denunciation,' which has been presented by an anonymous donor who has shown a similar generosity to other institutions. The picture, which was painted about 1730, is in perfect condition. Other acquisitions include a large landscape, 'In Wharfedale,' by Cecil Lawson.

AT the end of this month Messrs. T. C. and E. C. Jack will publish the work by Mr. Arthur Morrison on Japanese art which has been expected for several years. Mr. Morrison bases his book on the articles he contributed nine years ago to *The Monthly Review*, but those only form the foundation. The author has had the assistance of Japanese experts, and has had access to sources of information not generally available. The work, which will be richly illustrated in colour and collotype, will deal with the history of the various schools of painting, and not merely with the colour prints by which Japanese art is known popularly in this country. It will be called 'The Painters of Japan.'

THE Académie des Beaux-Arts last week elected Anders Zorn, the Swedish painter and engraver, a Corresponding Member in place of Fritz von Uhde.

M. ANTOINE LUMIÈRE, who died in Paris last Saturday at the age of 72, began life as a sign-painter, but developed into an artist of no mean ability. He made his chief success, however, as a manufacturer of

photographic dry plates. He studied art under various masters, and until recently exhibited landscapes at the Salon.

PROF. BERTHOLD RIEHL, the well-known writer on art, whose death at the age of 52 is announced from Munich, was the author of several valuable works, among them 'Die Gemälde von Dürer und Wolgemüt' and 'Deutsche und italienische Kunstcharaktere.'

THE EARL OF CARLISLE, who died on Monday last, added to high rank a keen interest in artistic and intellectual things. He sat on the Chantry Commission, and, being an accomplished amateur in painting, was an Honorary Member of the Old Water-Colour Society besides contributing to the Academy and the Grosvenor Gallery.

THE beautiful "Maison des Musiciens" at Rheims, a thirteenth-century building, the façade of which is adorned with five admirable statues, has at last been acquired for the city. Some years ago the house narrowly escaped being taken down stone by stone in order to be reconstructed by an American purchaser on the other side of the Atlantic. The fact that it was the property of two owners who were unable to agree as to its sale averted this danger. In 1905 a part of the building was purchased by subscription, and recently the society known as "Les Amis du vieux Rheims," by purchasing the other half of the house, secured it for the city.

THE Piazza delle Erbe at Verona, so recently menaced, if not with destruction, at least with the loss of its original character and picturesque charm owing to the proposed erection of modern buildings, has fortunately escaped the threatened danger and has been declared a national monument, which means that it will now be preserved intact and secured against vandalism in the future.

THE year of Paolo Veronese's birth has been a much-disputed point, and 1527, 1528, 1530, and 1532 have all been named. Freiherr von Hadeln, the well-known German writer, seems now to have decided the question, and, after a close examination of all the documentary sources, has declared in favour of 1528.

MR. ARTHUR G. LANGDON, who died recently at the age of 54, was an architect by profession and a native of Launceston. He practised for some years in London, but owing to ill-health he returned to Cornwall, and devoted his time to the study of Cornish antiquities. His authoritative book on 'Old Cornish Crosses' (1896) was the result of twelve years of study and research. His work in the first volume of the 'Victoria History of Cornwall' is equally valuable.

M. EUGÈNE NAPOLEON VARIN, who died last week in his 81st year, belonged to a family of medallists which goes back to the time of Louis XIII. Two of his brothers were medallists, and Eugène studied under one of these, Amédée, and also at the École des Beaux-Arts. The list of his own works and those he executed in collaboration with his brother is very long. He was born at Épernay in 1831, and, owing to failing sight, had for some years ceased to exhibit at the Salon.

EXHIBITIONS.

Sat. (April 22).—Mr. Max Beerbohm's Caricatures, Private View, Leicester Galleries.
— Mr. Walter Bayes's Smaller Works, Chonell Gallery.
— Mr. Rupert Bunny's Paintings, 'Days and Nights in August'; Copperfield Intaglio Colour Prints; and Anne Estelle Rice's Paintings, Baillie Gallery.
— Mr. Nelson Dawson's Water-Colours of the Alps, Private View, Leicester Galleries.

MUSIC

The Pianoforte and its Music. By Henry Edward Krehbiel. (John Murray.)—Since Sir Henry Wood began to give Symphony and Promenade Concerts at Queen's Hall the taste of the public for orchestral music has rapidly developed. Some maintain that chamber music has thereby suffered. That may be so to some extent, but pianoforte music still holds its own. Not only is the literature for that instrument wonderfully rich, but also amateurs have the double advantage of hearing constantly the works of all the great composers from Bach to Brahms, and of practising and playing them in their own homes; and many can interpret them with marked skill and taste. Mr. Krehbiel's volume therefore appeals to a large circle. He devotes two chapters to 'Prototypes of the Pianoforte,' and one to that instrument itself. In them, and indeed throughout the book, he manages to convey useful information within a moderate space, and in a clear, concise manner.

Pianoforte music proper virtually only began after the death of Bach in 1750, but our author notices the music of the English virginalists, the French and Italian clavecinists, and the German School, of which Bach and Handel were the chief representatives; and he does this with good reason, since much of it forms part of the repertory of all pianists of note. He gives some interesting details showing how in the seventeenth century English music was known all over the Continent, and how English musicians held high appointments at different foreign Courts. He mentions several, and among them "John Price in Dresden." Price went there in 1629, but already in 1625 he was a member of an "Engelländische Compagnia," mentioned in the public records of Stuttgart, the other members being John and David Morell and John Dixon.

Mr. Krehbiel, in referring to 'The Well-Tempered Clavier,' mentions the three copies, in Bach's handwriting, of the first set of twenty-four Preludes and Fugues, and adds that "of the second there is no complete autograph." He might, however, have said that the autograph of the second set in the British Museum is complete all but for three numbers, as of the three autographs of the first part not one is complete. There is a short passage concerning Beethoven which deserves quotation, though we do not like the last word of it:—

"When the extremists of to-day appeal to him as the destroyer of form, they disclose crass ignorance of one of his highest artistic qualities; they have no understanding of his attitude toward the most important element of artistic construction. It was not form, but formalism, or formula, which Beethoven antagonized."

In referring to National Schools, the writer justly names the Scandinavian as the first distinctive one. Among the composers mentioned by him, Grieg is not forgotten; but J. P. E. Hartmann, the Dane, according to Dr. Walter Niemann, was the real founder, and his immediate successor was Gade. They were certainly pioneers, but Grieg, as our author admits, gave to that school its individuality and potency. He also discusses Chopin, who "has been held up persistently as a paragon among national composers." In his Mazurkas we "hear a Parisian idealization of the characteristic Polish dance modulated to the key of the

French salons." But surely one ought to distinguish between the early and the later Mazurkas. The French salons, it seems to us, only gradually exerted their influence over Chopin.

Mr. Krehbiel's book not only displays thought, but also suggests it. At the opening he says: "I am more desirous to instruct than to entertain," but he has succeeded in doing both.

LADY HALLÉ.

LADY HALLÉ, who died at Berlin last Saturday, was for many years a notable figure in the musical life of London. She appeared here for the first time on April 30th, 1849, at the Princess's Theatre, and in the same year at a Philharmonic Concert, when she performed a concerto by De Bériot. During the twenty years which elapsed before her second visit, the record of her career is scanty. She visited Russia, played at the Paris Conservatoire in 1864, and about that time married Ludwig Norman, a Swedish musician.

In 1869 she made her second appearance at the Philharmonic Society, and became leader at the series of Monday Popular Concerts before Christmas of that year. From that time down to 1898 she was constantly playing at the Popular Concerts, the Philharmonic, the Crystal Palace, Hallé's Recitals, the Manchester Concerts, &c. Dr. Joachim at an early period of her career declared that she was an artist of paramount excellence, and time proved that his judgment was sound. Her technique was faultless and her tone beautiful. She was an able and earnest interpreter of classical music, and her leadership, especially of the quartets of Haydn and Schubert, was delightful. Joachim is justly regarded as the protagonist of the cause of Brahms both in Germany and England, so that one is apt to forget the part played in that cause by Charles Hallé and Norman Neruda. Her marriage with Hallé took place in 1888, but as early as 1872 Brahms's Pianoforte Quintet was performed at a Hallé Recital, while in 1877 Hallé announced that at each recital of his series a work of Brahms would be given; and in both years Norman Neruda was his violinist. The latter was evidently influenced by him, and, to mention only one instance, her fine rendering of the Brahms Concerto a few seasons ago at Queen's Hall proved that she was in thorough sympathy with the music.

Wilma Neruda came of a musical family. Jakob Neruda, a noted violinist, flourished at Prague towards the close of the seventeenth century. Both his sons, Chrysostom and Baptist Georg, became eminent musicians. A son of the latter was the grandfather of Josef Neruda, organist of Brunn Cathedral and father of Wilma. Her brother Franz is a noted violoncello player; and her other brother Victor and her two sisters were all musical. Wilma studied with her father, and afterwards with Jansa.

In 1890 and 1891 Sir Charles and Lady Hallé paid visits to Australia, and in 1895 to South Africa, and were everywhere received with great warmth. At the end of 1895 Sir Charles died, and about two years later Lady Hallé went to live at Berlin, paying only occasional visits to London. Before her departure a committee, of which King Edward (then Prince of Wales) was president, organized a public subscription in her honour. With the fund raised, the deeds of a palace at Asolo were handed over to Lady Hallé by Princess Louise (Duchess of Argyle).

Musical Gossip.

KING GEORGE has consented to be the Patron of the forthcoming International Musical Congress. It is the first Congress of the kind ever held in this country, and this act of the King will no doubt increase the interest in the undertaking. A fresh prospectus has been issued, giving the list of works to be performed at the Orchestral Concert, with the Queen's Hall Orchestra, on Tuesday evening, May 30th. They are as follows: Symphonic Variations in E minor (Parry); Second Irish Rhapsody (Stanford); Scena from 'Ossian' (F. Corder, a first performance); Overture, 'Land of the Mountain and the Flood' (Hamish MacCunn); songs for baritone (Walford Davies); Norfolk Rhapsody, No. 1 (Vaughan Williams); Symphonic Poem, 'In a Balcony' (Von Ahn Carse); and Tone Poem, 'The Raven' (Joseph Holbrooke).

At the second Orchestral Concert, with the London Symphony Orchestra, on Thursday evening, the provisional programme is as follows: Scotch Rhapsody No. 3, 'Ride of Tam o' Shanter' (A. C. Mackenzie); Second Symphony (Elgar); 'Phantasy of Life and Love' (Cowen); selection from Symphonic Suite (German); song, 'Onaway' (Coleridge-Taylor); Tone Poem, 'Villon' (W. H. Wallace); Symphonic Poem, 'The Shepherd' (W. H. Bell); and Overture (Ethel Smyth).

THE season at Covent Garden opens this evening with Delibes's 'Lakmé,' the title-part of which will be taken by Madame Tétrazini. Mr. John McCormack will impersonate Gerald, and Mr. Edmund Burke, Nilakantha. Signor Panizza will conduct.

ON Monday evening Saint-Saëns's 'Samson et Dalila' will be given, with Madame Kirkby Lunn and M. Dalmorès in their accustomed parts. 'Rigoletto' is announced for Tuesday, with Madame Tétrazini as Gilda, and Signor Sammarco as the Jester; 'Pelléas et Mélisande' on Wednesday with a strong cast; and on Thursday Signor Amedeo Bassi will impersonate Ricardo in Verdi's 'Un Ballo in Maschera.'

THE "SHAKESPEARE CONCERT" given last week by the Dublin Orchestral Society was an interesting and successful experiment. The programme included Liszt's Symphonic Poem 'Hamlet,' the Love Scene from Berlioz's 'Romeo and Juliet,' Schumann's 'Julius Caesar' Overture, and a new work by Dr. Esposito, an Overture, in the manner of a Symphonic Poem, on 'Othello.' The last work contains some fine passages of orchestral writing.

PERFORMANCES NEXT WEEK:

- | | |
|-----------|--|
| SUN. | Concert, 3.30, Royal Albert Hall. |
| — | Sunday Society Concert, 3.30, Queen's Hall. |
| — | National Sunday League Concert, 7, Palladium. |
| MON.-SAT. | Royal Opera, Covent Garden. |
| MON. | Mr. Graham Boys's Vocal Recital, 3, Bechstein Hall. |
| — | Miss Vera Brock's Pianoforte Recital, 3, Aeolian Hall. |
| — | New Quartet Chamber Concert, 8.30, Bechstein Hall. |
| TUES. | Olga de la Bruyère's Song Recital, 3, Bechstein Hall. |
| — | Misses Edith McCullagh and Helen Anderton's Concert, 3, Aeolian Hall. |
| — | Miss Myra Hess's Pianoforte Recital, 8, Bechstein Hall. |
| — | Mr. Herbert Withers's Sonata Concert, 8.15, Aeolian Hall. |
| WED. | Paolo Martucci's Pianoforte Recital, 3, Bechstein Hall. |
| — | Madame Lula Mycz-Gmeiner's Vocal Recital, 8.15, Bechstein Hall. |
| THURS. | Mr. Hans Bottermund's Cello Recital, 3, Bechstein Hall. |
| — | Misses Una and Irene Trumann and Mr. D. Brooks's Pianoforte Recital, 3, Steinway Hall. |
| — | Signor Livio Boni's Cello Recital, 8.15, Bechstein Hall. |
| — | Miss Palgrave Turner's Vocal Recital, 8.30, Aeolian Hall. |
| FRI. | Miss Cary's Vocal Recital, 3, Steinway Hall. |
| — | Miss Leila Duart's Vocal Recital, 3, Bechstein Hall. |
| — | Miss Myrtle Elvyn's Pianoforte Recital, 3.15, Aeolian Hall. |
| — | Mr. J. Harrison and Mr. E. Martin's Concert, 8.15, Aeolian Hall. |
| — | Miss Wallace Revill's Vocal Recital, 8.15, Bechstein Hall. |
| — | Mr. F. Dawson's Pianoforte Recital, 8.30, Steinway Hall. |
| SAT. | Mr. Albert Spalding's Violin Recital, 3, Aeolian Hall. |

DRAMA

THE WEEK.

HIS MAJESTY'S.—Revival of 'A Midsummer Night's Dream.'

SIR HERBERT TREE made a happy choice when he decided to inaugurate his Shakespeare Festival this year with a revival of 'A Midsummer Night's Dream'; for though half-a-dozen plays at least might be enumerated in which the poet's genius took a loftier flight, this vision of fairyland and of Nature bathed in the magic of moonlight has a perfection all its own by virtue of the pure beauty of its effects, yet is characteristically English in the inspiration which has blended poetry, fantasy, and fun. Hermia and Helena and their swains may be talked of as having wandered from the Court of Athens, Nick Bottom and his fellow-yokels may act their interlude before Theseus and his queen, but after all the lanes and woods of Warwickshire are their real home, and it is in the atmosphere of an English summer night that we listen to their story, or watch the revels of Titania's fairies. Puck may boast that he can put a girdle round the earth in forty minutes, but it is the forest of Arden to which his rogueries really belong, and which should be made their setting. Rightly therefore at His Majesty's, when once we pass into the night and the open air, we are plunged into typically English woodland scenery. Silver birches lift their slender stems to the skies, clouds of bluebells spread a mist of colour across the turf, while in the background a brook trickles down a mossy bank, or we have vistas of the sea. Amid such surroundings we are in the rural England of the poets, the month being rather May, when in kindly mood, than mid-June.

It is difficult in any modern presentation of the play to keep all three elements of its scheme in due proportion. However carefully the cast may be selected, one of them is pretty sure to be subordinated to the rest. In Sir Herbert Tree's present revival the quartet of lovers whose affairs Puck so quaintly muddles suffer eclipse, and the honours of prominence are divided between the fairies and the village clowns. To say this is not to imply that the parts of Lysander and Demetrius or of their sweethearts are "let down" by their interpreters. The kittenish Hermia of Miss Laura Cowie, so ready to snuggle softly into her lover's arms, yet prepared also to scratch and spit under provocation, is a delightfully fresh reading of the character; and Mr. Swinley, a new-comer from the School of Dramatic Art, shows promise as Demetrius. The manager has been singularly fortunate, too, in his choice of the fairy king and queen. His Oberon, Miss Evelyn D'Alroy, may impart too much feminine emotion to her

rhetoric, but she phrases admirably and is able to sing, being allowed, oddly enough, to render the lullaby over the sleeping Titania; moreover she contrives to convey an air of majesty as well as grace. About Miss Margery Maude's Titania there is a curious charm not easy to describe—it is made up partly of girlish ingenuousness, partly of spiritual delicacy and refinement; it is phantasmal almost; and her fairy queen fits in naturally with the dancers of her train. In sharp contrast is the Puck of little Burford Hampden, a boy of precocious talent, impish and highspirited, but rather too perky to suit the company of such a Titania and Oberon.

If to raise laughter at all costs be the function of the comedian, then may Mr. Bouchier as Bottom and the troop of drolls he leads claim to be successful indeed. This Bottom does not need to play the Lion. He roars almost unceasingly, and never so much so as when he stalks the stage in the robes of Pyramus and woos Mr. Robson's grotesquely solemn Thisbe. He is evidently a village autocrat, huge of size, overbearing, almost beyond measure noisy; well up, too, in the tricks of the ranting actor and inventive in the mispronunciation of English, thus in making an extra syllable out of the word "prologue." Mr. Bouchier's is a performance full of boisterous humour and keen self-enjoyment.

GLOBE.—*A Butterfly on the Wheel.* By E. G. Hemmerde, K.C., and Francis Neilson, M.P.

AN obvious appeal to sensation is afforded by stage scenes in the law courts. The contest of wits between a counsel equipped by the resources of long training and knowledge of the law and some poor hunted victim who has been caught in its meshes seems to appeal to the instincts alike of authors and audiences. Trial for murder is common on the stage, but rarely, if at all, has the Divorce Court been represented, though our drama of late years has offered plenty of private inquisitions into the morals of heroines. Messrs. Hemmerde and Neilson's piece carries us into this Court, and their big scene shows a truculent counsel cross-examining a young wife who has been frivolous, pleasure-loving, and indiscreet, but is, as we are permitted to learn from earlier chapters of her story, innocent of the charge brought against her and a lover in whose society she has been curiously careless of her reputation. She had let him separate her from her party and bundle her into a train going to Paris; she had permitted him to take rooms adjoining hers in the hotel at which they stopped; she had received him, while her husband was trying to get into touch with her on the telephone, long after midnight; she had only feebly checked his overtures of passion; and in the witness-box her admissions, prevarications, and self-contradictions seriously prejudice her defence. The title of the play, indeed, well describes

her predicament. When she is under the ordeal of cross-examination, forced to face the consequences of a tissue of lies of her own manufacture, the only successful struggle she makes occurs when, in an outburst of hysteria, she protests against the machinery of man-made and man-worked justice, and passionately asserts her innocence despite damning evidence of guilt. That long duel of counsel and woman, and the acting of Miss Madge Titheradge, touching in its display of feminine weakness and pain, yet full of nervous force, are the only features of significance in the production.

The playwrights have been very adroit in their handling of the law-court incident. Mr. Hemmerde has allowed his legal experience to be modified by tact. While producing the illusion of reality, he has saved us from the tedious moments, which too faithful a copying of actual routine would have involved. As a lawyer describing the process of the law, he confines himself to the single passage of cross-examination, and the quintessence of the trial. But the play, of course, is written round that passage, and only there is the authors' instinct unerring. The rest of the plot—the predicament in which the heroine has allowed herself to be involved, the anonymous letters sent to the husband by his wife's false friend, and the blotting-book by means of which the lover is able to wrest from the lady a confession of her treachery—all that is pure melodrama, as artificial as the Divorce Court act is impressive and convincing.

This is not, it will be seen, Mr. Lewis Waller's play, though it is produced under his management. The male interest such as it is, is divided between him as the lover and Mr. McKinnel as prosecuting counsel. Throughout the trial scene the former is condemned to an almost unbroken silence. On the other hand, Mr. McKinnel, though he contributes a masterly performance, does not appear in any other scene. Mr. Guy Standing, again, as the husband, is even worse off than Mr. Waller, for the latter is granted a fervent love-scene in the first act and has a fresh chance in the blotting-book episode. The chances of the play belong to Miss Titheradge, and hers is the triumph. The delicacy and naturalness of her art in the lighter moments of the story, and the ringing sincerity of her emotion in the butterfly-woman's defence of her honour, reveal her as an actress not only with a future, but also with a present already made good. With this achievement she has forced her way to the front rank of her profession.

LITTLE THEATRE.—*Fanny's First Play: an Easy Play for a Little Theatre, with Induction and Epilogue.*

THE dramatist has always claimed the right to hit back at his critics. Molière did so, and exercised the right. But there is a great difference between answering reviewers or censors, and singling out

one special critic, dressing up an actor in his semblance, reproducing his mannerisms and tricks of phrase, and holding him up to ridicule. The anonymous author of 'Fanny's First Play' has adopted the latter course in his Induction and Epilogue, and left us in no possible doubt either as to the subject of his satire or his own identity. It is true that Mr. Trotter is not brought on alone; he and three journalistic colleagues are among the guests specially invited to witness and judge Miss Fanny O'Dowda's 'prentice effort. Fanny's father, a Count, who, like Byron, prefers Italy to England, is staging the piece by way of a birthday present to his daughter, and real actors have been engaged; critics too—they, we are assured, were more cheaply obtained. The characters and points of view of these journalists are hit off in advance; but, though one of them tells us afterwards he cannot begin discussing a play till he knows the author's name, while another is spoken of as a sort of sea-green incorruptible, only one is so portrayed, alike by his stage interpreter and by the dialogue put into his mouth, that playgoers can label him unmistakably. The allusions to Aristotle, the critic's description of his notices as impressions, his fondness for France, his reiterated assertion that Mr. Shaw's theatrical works are not plays, tell their own tale, if there were not the Tussaud-like model (which Mr. Claude King provides) confronting the audience. It is good fun for the critics who escape attack and the crowd who look on, but it is in indifferent taste, and suggests a personal grievance behind it.

But there is the play itself to consider. It really looks as if Mr. Shaw—why keep up the mystery?—had determined to take up his critic's challenge and make them eat their words. "Come," he seems to have said. "You say I cannot write a play as you conceive it. Very well; I will sacrifice my ideal of one unbroken conversation. You shall have your play in three acts, with the scene once at least varied." And this he has done. "I cannot tell a story. You shall have a story with a vengeance—plenty of story." The result is that he fixes up a hero who is own brother to the young scamp of Mr. Galsworthy's 'Silver Box,' and has very similar experiences. "I don't consider sufficiently," Mr. Shaw seems to have added, "your stage conventions. You shall have them." If his hero has undergone fourteen days' imprisonment for being drunk and disorderly in doubtful company, he is paired off with a sweetheart who has met with a more innocent but similar adventure. The dramatist for once is prepared to duplicate his plot, to deal in symmetry and make full use of coincidence. "Do you want domestic atmosphere?" asks he; and he gives it in two bourgeois households, utterly respectable with Mid-Victorian respectability and eager to rise in the world. They live at Denmark Hill, and here the anonymous playwright seems to have taken a hint from Mr. Granville Barker. But the attitude of the children towards their parents, their ruthless disrespect

and irreverence towards the old folks' ideals, are strictly Mr. Shaw's; the *motif* of this play has been that of half a dozen Shaw "discussions," and the recriminations of husband and wife, followed by conciliatory good sense, and the audacious notion of introducing a girl of easy virtue into a circle conventionally old-fashioned, are characteristic of the specialist in "immoral" plays. Still, he has tied himself down here to the old technique, and only once, when he makes a Frenchman stop the action to deliver an elaborate panegyric on England as opposed to France, does he attempt to shake off his fetters.

What judgment are we to pass on his experiment? We can at any rate better his burlesque critics, who find between them traces of Pinero as well as touches of Granville Barker and Bernard Shaw. The author being undoubted, the question remains, What advance does he show in his art? Mainly that of handling types which are out of sympathy with his own opinions, and doing that without too topsy-turvy a treatment. Technically that is no progress, unless going back is such. We have always known that Mr. Shaw could fill the old skins of dramatic forms with his new wine up to bursting point. But he has not fashioned any further that new medium of which there was a promise in 'Getting Married.' He has returned to travesty.

He concludes his play by making his Count O'Dowda, a romanticist who is shocked at the author's realism, claim at any rate praise for the acting. That praise is deserved. All the actors give colour and character to the author's inventions. Like Ibsen, Mr. Shaw seems to inspire his interpreters.

GARRICK.—*Kismet: an "Arabian Night."*
By Edward Knoblauch.

THOSE playgoers who saw 'Sumurun' will have a good idea of what the new Garrick entertainment is like, though it is staged on a far more elaborate and grandiose scale. It plunges us into the atmosphere of the 'Arabian Nights.' At one moment we find ourselves in a bazaar, full of the noise of chaffering, picturesque alike in the silks and satins displayed in the shops and in the varied aspects of the crowds who pass by as it were in procession. At another we are in a quiet courtyard, and see a maiden as beautiful as Scheherazade entertaining the Caliph unawares, and listening bashfully and glancing ardently as this young gardener (so he seems) promises to wed her before sunset. A little later we are shown the Diwan of the Caliph's palace; and here for a moment the face of Tragedy jerks itself into view in an attempt made to assassinate the Commander of the Faithful. Hajj, the beggar, makes this attempt, and it is a day in the life of Hajj that we are watching.

He has had a strangely crowded day. In the morning, while begging outside a mosque, he was thrown a bag of gold mockingly by the enemy who had robbed him of his wife. That money enabled Hajj to cheat bazaar-merchants and deck

himself out in fine robes. His robes brought him before the Wazir, and his wit enabled him to escape punishment and be taken into the service of this Oriental Nero. The Wazir even promised to wed his lovely little daughter—only poor Hajj must turn assassin. So we see Hajj, after failing in his attempt to assassinate the Caliph, cast into prison, and lo! his old enemy is there. Mighty with a Samson's strength, the beggar breaks his chains, strangles his foe, and, dressed in his clothes, escapes into daylight. There is one more deed for him to do: he must wreak vengeance on the Wazir, who is proposing to torture Hajj's innocent daughter in his harem. So Hajj finishes his day's work with the rescue of Marsinah and the drowning of the Wazir in his own hammam. Marsinah weds her Caliph, but Hajj is banished from her sight.

Spectacle rather than acting makes this pageant, and Mr. Oscar Asche has mounted it with prodigal magnificence. He himself as the beggar hero, whining and meek one minute, the next savagely brutal and implacable, gives a performance that is exactly in the right key. Equally in the picture are the winsome Marsinah of Miss Lily Brayton, the cruel-looking Wazir of Mr. Grimwood, and the Caliph to whom Mr. Ben Webster lends an air of distinction. But indeed every member of a huge cast contributes his or her share towards creating an impression of harmony and colour and movement. Their author helps them. He offers everything in the way of a romantic story except style in its telling. He should not have tried to compete with the poet who wrote the Song of Solomon.

'MIXED MARRIAGES.'

Dunheved, Villa Road, S.W., April 11, 1911.

MENTION in your issue of the 8th inst. of the production at the Abbey Theatre, Dublin, of a four-act play 'Mixed Marriages,' prompts me to note that a three-act farcical comedy of my own was produced with this identical title at Hastings on June 3rd, 1895. As the new piece, according to your correspondent, is "a vivid and trenchant study of life in the North of Ireland," and mine was a fanciful sketch of late Victorian middle-class life in London—it included even a representation of that now-forgotten social terror, a wedding breakfast—there is, of course, no likelihood of the two being confounded, even though their titles are the same. But, perhaps, for my would-be humorous effort may be claimed some small share in the modern history of the English stage, for it gave Mr. Granville Barker the opportunity for one of his earliest "creations"—even if not the very earliest—of a part, that of a priggish young solicitor who fancied his fascinations to be irresistible, his performance of which remains a most pleasant memory to me now.

ALFRED F. ROBBINS.

Dramatic Gossip.

STRATFORD-ON-AVON has decorated itself even more gaily than usual for its commemoration this year. The plays opened

on Bank Holiday afternoon with 'Much Ado about Nothing,' in which Miss Violet Vanbrugh gave great pleasure as Beatrice.

In the evening 'The Merry Wives of Windsor' suited the audience. Miss Constance Collier did not take the part of Mrs. Page, as expected, but it was brightly filled by Miss Farebrother. Mr. Nicholson, a versatile actor, made a very creditable Falstaff for one of his inches, but the rest of the comedy was rather overdone, and degenerated at times into farce.

AN appeal has been made through the press to put the Shakespeare Head Press on a permanent basis by public subscription. Such an appeal is unusual, but in this case it is worth the consideration of all who have the cause of good literature and learning at heart. Mr. A. H. Bullen, who founded the Press at Stratford in 1904, is an excellent Elizabethan scholar, and proposes to add to his fine "Stratford Town" edition of Shakespeare other publications of Shakespearean literature which will add to our knowledge of the period.

'THE MOLLUSC,' one of the few perfect comedies of our time, has left every playgoer in debt to Mr. Hubert Henry Davies, and disposed to look on his earliest experiments with indulgence. 'Cousin Kate,' which Mr. Cyril Maude has revived at the Playhouse, calls for rather less than the ordinary apologies we extend to the drama of conventional sentiment because it is redeemed by wit and humour. Undeniably it belongs to the school of the teacup-and-saucer play, but the hero makes love in so dashing a way that the artificiality of the scheme of the play and the device by which the course of true love is rendered smooth do not call for severe criticism. Mr. Maude has greatly improved on his original performance. His Irish lover now shows dash and has pace; the performance has mellowed and gained in strength, and is pleasantly in harmony with the consummate comedy acting of Miss Ellis Jeffreys. Her "Cousin Kate" still remains one of the most radiant and sympathetic of her impersonations.

TO CORRESPONDENTS.—B. F. L.—H. G. S.—J. M. O. H.—L. W.—W. B.—C. B.—Received.

G. N.—G. B.—Many thanks.

No notice can be taken of anonymous communications.

LITERATURE

Criticisms and Appreciations of Charles Dickens' Works. By G. K. Chesterton. (Dent & Sons.)

It was waggishly observed of Forster's 'Life of Dickens' that it might with equal aptitude have been termed Dickens's 'Life of Forster,' and a like conceit may be held applicable to Mr. Chesterton's 'Criticisms and Appreciations of Charles Dickens' Works.' Though Dickens be the prime instigator of the brilliant series of Prefaces contributed by Mr. Chesterton to the "Everyman" edition (which series is here collected and issued in a volume), it is the Chestertonian point of view which is the thing, and our author, for all that he indulges in generalities as much as other men, adheres to the ultra-personal note in criticism with all his customary vigour. He says, in effect, "This is my opinion of this or that novel, character, or situation. Of such a thing was Dickens thinking when he wrote this or that passage. If you do not agree, you are wrong, and there's an end of it." There is much that is attractive in this attitude of mind, for the age is full of second-hand and cautious echoes; confidence of any kind engenders confidence; but the canons of criticism—such of them as survive—are apt thereby to be neglected, while dogmatism, uncontested, soon gets out of hand. Hence it is that many Dickensians, as ardent as Mr. Chesterton himself, while admiring the somewhat

boisterous sincerity of his appreciations, together with their stimulating and suggestive quality, may yet cavil at their critical value. For example, the Wordsworthian test of the essence of true poetry, the capacity to detect similarities between things totally dissimilar, becomes especially perilous when applied to criticism. We are told that "Ally Sloper" was certainly stolen from Mr. Micawber, and the only concrete grounds alleged in support of this certainty are "the bald head and the high shirt-collar." Grotesque remarks of this sort remind us of the extraordinary discoveries made by Dickensians who have no critical taste, and little idea of character.

Mr. Chesterton deals generously in paradox, but now and again a worthier humour prevails, as in the following:—

"Our relations with a good joke are direct and even divine relations. We speak of 'seeing' a joke just as we speak of 'seeing' a ghost or a vision";

or a crisp philosophy like the query:—

"Why should equality mean that all men are equally rude?"

while his readjustment, so to say, of the characters in 'Our Mutual Friend' is an admirable piece of criticism, viewed in the abstract and without any reference to the novelist's feelings. In relation to the more inspired figures in that work, and the spirit of prophecy involved in inspiration, Mr. Chesterton aptly, but quite incorrectly observes, "Dickens knew that the South African millionaire was coming, though he did not know his name," in proof whereof he cites the obviously Hebraic origins of Mr. Veneering, Mr. Lammle, and Fascination Fledgeby, contrasting them with the saintly "old patriarch named Aaron (alias Riah)," who is declared to be traceable to no known ethnological species, as well now as at the date of his first attempt to irritate an over-indulgent public. Mr. Chesterton confesses to bewilderment as to whether this phenomenon is rightly to be ascribed to "unconscious observation or fiendish irony"; but the bewilderment is surely academic. Excellent, too, is his summing-up of the miserly symptoms developed by Mr. Boffin, and of their (official) explanation: "It might have taken years to turn Noddy Boffin into a miser; but it would have taken centuries to turn him into an actor." Yet it is only one degree more difficult to believe the Golden Dustman guilty of mean and sordid greed than to conceive serious villainy on the part of the genial fancy which could create, for its own innocent delectation, the bright images of Miss Elizabeth, Master George, Aunt Jane, and Uncle Parker.

To speculations like these, however, there is no end, and certain trifling matters present themselves to which the scrupulous Dickensian may well take exception. It has long been the habit of critics (and pedagogues) to assume that in penning the title 'Our Mutual Friend' Dickens himself was guilty of a grammatical

solecism. Thus writes Mr. Chesterton: "The very title is illiterate. Any priggish pupil teacher could tell Dickens that there is no such phrase in English as 'Our Mutual Friend.'" Mr. Chesterton glories in what he conceives to be "this mistake," because he, personally, would object to see Dickens "absorbed by modern culture and good manners." "No university man would have written the title," he says, adding, by way of handsome compensation, "No university man could have written the book." We are becoming more or less habituated to the kind of criticism which affects to regard a university education as an effectual bar to all achievement, whether literary or otherwise; yet, whatever be the truth as to the latter half of this critic's proposition, the former is very dubious. Neither would the friendly counsel of a "priggish pupil teacher" necessarily have exercised an enlightening influence. For the phrase "Our Mutual Friend" is not, strictly, the author's at all. It is used, markedly, by Mr. Boffin, whose claims to a university education are negligible, and to whom doubtless the good offices of pupil teachers, priggish or otherwise, would have been productive of much grammatical good. Had inverted commas been employed, the misapprehension would never have arisen, but inverted commas do not add to the elegance of a title-page. Dickens may have used the phrase believing it to be good English; but, on the other hand, internal evidence tends to show that he did nothing of the kind.

Mr. Chesterton's passion for antithesis leads him into technical error. Of 'Bleak House' he writes:—

"Little Jo dies pathetically like Little Paul; but for the death of Little Paul we can only blame Dickens; for the death of Little Jo we blame Chancery."

Apart from the fact that the system called "Chancery" was as much to blame for the death of Jo as the system of modern municipal government would be for the death of a man run over by a steam-roller, it is nowhere stated, or even implied, that Jo was of diminutive stature, whereas the smallness of Paul Dombey is his principal pathetic asset.

Again, John Jasper was not, as stated on p. 224, an "elderly organist," but a precentor (which is not necessarily the same thing), and not so elderly at that.

Space does not permit us to enter into more of the numerous fields of controversy, some greater, some smaller, suggested by Mr. Chesterton's illuminating pages. That they should arouse opposition is at least a tribute to the zest which has inspired them, while occasional critical irresponsibilities are balanced by comments so refreshingly sound as those on the conclusion of 'David Copperfield,' or on the solutions that have been put forward for the Drood mystery.

Mr. Chesterton's style tends more and more to the rhetorical tricks of repetition

and redundancy, which add little to the clarity of his argument, and lead to numerous divagations. He is, we suppose, by this time beyond that discipline which even writers unhampered by an academic education, such as Dickens, have applied to themselves with advantage. He seems to do everything in a hurry, and consequently to waste his own and his readers' time. "Nothing that is worth doing is worth doing as well as possible" seems an eminently sound maxim for the busy journalist, but hardly for the writer of books. The volume is embellished with numerous portraits of Dickens, well reproduced, but there is no Index.

The Holy Bible: a Facsimile in a Reduced Size of the Authorized Version published in the Year 1611. With an Introduction by A. W. Pollard, and Illustrative Documents. (Oxford University Press.)

The Holy Bible: an Exact Reprint in Roman Type, Page for Page, of the Authorized Version published in the Year 1611. With an Introduction by A. W. Pollard. (Same publishers.)

Records of the English Bible: the Documents relating to the Translation and Publication of the Bible in English, 1525-1611. Edited, with an Introduction, by A. W. Pollard. (Same publishers.)

THE publication of these three volumes by the Oxford University Press is a commemoration worthy of the occasion, the publishers, and the editor. Mr. Pollard, as students do not need reminding, is our foremost English bibliographer, and his whole life has been devoted to the study of questions such as arise when the history of the English Bible is inquired into. The connexion of the University Press with the Authorized Version is intimate and of long standing, and no printing house could more fittingly or adequately perform the national task it has undertaken.

The first volume under notice is a photographic facsimile of the earliest issue of the Authorized Version of 1611. It is slightly reduced in size—to less than a foot high, in view of the modern dislike of folios—but the reduction only makes for sharpness of outline and increased legibility. It contains all the matter found in original copies of King James's Bible, including Speed's genealogies, together with Mr. Pollard's bibliographical Introduction and copies of some sixty-three documents illustrative of the history of Bible translation and publication, and may be specially commended to libraries and to those who wish to have the Bible in the form in which it appeared in 1611. The second volume, an exact reprint of the Authorized Version in roman type, reduced from the 1833 edition, has Mr. Pollard's Introduction without the documents. The third is a reprint of the Introduction and the documents issued as a separate work.

The second form, printed in ordinary type on Oxford India Paper, is that which most purchasers will prefer for constant use and reference. The reader of the Authorized Version is as a rule not aware that the copy he uses differs in any way from that which left the revisers' hands in 1611: it is therefore a timely service to put in his hands in a convenient form this reproduction of the most accurate reprint of the original that has ever been issued, the 1833 line-for-line reprint of the Oxford University Press. There is nothing sacred or worth emphasizing in seventeenth-century spelling as such, but the slightest departure from the original opens the way to unexpected errors, and it is well that a convenient means of detection should be at hand.

Apart from this Mr. Pollard's Introduction and collection of documents form a work of high value. We cannot say that any one of these documents is absolutely new to scholars, but on the other hand the fact that some of them have never been printed and that the others are scattered over a great variety of volumes, many of them not readily accessible except in the largest libraries, justifies us in recommending the book for a place on the shelves of every literary student as a compendium of original authorities, while on its merits it claims the attention of any ordinary reader interested in the subject. We may suggest that "cuttshoes" (p. 120) stands for cut shoes, i.e. sandals, and that "subvertere" (p. 99) is not used in its classical meaning "overthrow," but rather for "pervert." The reference on p. 191 only holds for the 1886 edition.

The history of the modern English Bible seems to begin with Tyndale. Mr. Pollard has abandoned the fascinating theory that Tyndale founded his version on the earlier Wycliffite translation, we think a little prematurely, considering the number of coincidences of rendering which exist. It is true that in an age of manuscripts a poor man, as Tyndale was, was not likely to own, or even have access to, a complete version; but on the other hand the active propaganda carried on by the Lollards up to the Wars of the Roses makes it nearly certain that an enormous number of fragmentary manuscripts existed and passed from hand to hand. The New Testament, and especially the Gospels, would have been the portions selected; the merchant class of London their most frequent possessors. The records of the early searches for translations of the Scriptures in 1526-30 fall little short of actual proof of the existence of these manuscript copies. Tyndale's method of translation, as far as it can be conjectured from the fact that he was dependent on the services of a skilled assistant, seems to have involved a constant collation and comparison inconsistent with the way in which a direct translation from a single text is made, even in days when dictionaries were not available. A statement of this obligation to his predecessors, if it existed—and the coincidences between

the Wycliffite text and Tyndale's are sufficiently numerous to be inexplicable on any other hypothesis—does not lessen our debt of gratitude to him as the translator of the English Bible, whether by himself or by his sometime assistant and pupil Miles Coverdale.

Lollardism had found its chief support among the trading classes in London and the Eastern Counties, and the rise of Lutheranism found in turn ready sympathy in them, and especially in foreign settlements like the Hanse at Antwerp, where ecclesiastical supervision was somewhat relaxed. London and Antwerp merchants were the supporters of Tyndale during the active years of his life as a translator. The help they gave him must have been considerable, since it allowed him, for example, to undertake the printing of an edition of 3,000 copies of the New Testament in a city where he was unknown and personally without credit, and immediately after to do the same in another city still further removed from any possible market. Mr. Pollard retells the story of how the enterprise was ruined at Cologne, and finally carried out at Worms. He seems disposed to accept without question the ordinary assumption that the Cologne New Testament was printed by Quentell: it is more likely to have been printed by Hiero Fuchs, who issued a Flemish New Testament there the same year in a closely similar type. Be that as it may, from the moment that news of the printing arrived in England, a fierce war against it began. Of the 30,000 Testaments printed within the next few years, hardly thirty imperfect copies exist: of the numerous tracts issued by Tyndale and his fellows, some are altogether lost, the majority are known only in single copies. But their work was accomplished: the suppression which had seemed possible in 1529 was by 1539 replaced by official recognition and support, and thenceforward the English Bible took its place as pre-eminently the book of the English people.

The Authorized Version of 1611 is only the last of a succession of authorized versions, and the one of them which has least visible claim to the title, no other authority for it being seemingly in existence than the line on its title-page. Many suggestions have been made—the most promising being that some authority may be found on the Close Rolls. Since the discovery of the Black Rubric of the 1552 Prayer Book on the Close Rolls of the year, and its exact date, 22 October, in the Register of Signed Bills, it has been thought not impossible that some similar entry might have been made in 1611. As there are fifty Close Rolls every year at this period, the search would be a long one, and the analogy is not complete, as the Black Rubric was evidently intended to be an additional Article, and is so designated in the Register. The Privy Council Registers for 1610 and 1611 were destroyed by fire, but the register of documents passing the king's signature still

exists, and shows no trace of any instrument which could have authorized the new version. It seems most probable, as Mr. Pollard says, that the statement was a pure assumption justified by the circumstances.

The Life of John Oliver Hobbes, told in her Correspondence with Numerous Friends. With a Biographical Sketch by her Father John Morgan Richards, and an Introduction by Bishop Welldon. (John Murray.)

ABOUT twenty years have passed since the present writer made the acquaintance of John Oliver Hobbes in the person of a vivid and smiling woman who, clad from head to foot in white fur, had, in the leathery and despondent atmosphere of a publisher's waiting-room, the aspect of a fairy queen. Irony had already given the finishing touch to her sentimental education, and her grimly symmetrical novelette 'Some Emotions and a Moral' was about to make her pseudonym familiar to thousands of readers. In the elegant perfection of her physical presence she seemed to give dramatic expression to the charm of the incongruity between grace and bitterness. Dying in 1906, she left one's sense of this charm but little impaired. Fashionable among the fashionable, one year a heroine in the mural population of the Royal Academy, another year the guest of a Viceroy at a gorgeous ceremony, in her public life Mrs. Craigie contrasted strangely with John Oliver Hobbes whose austere mind was manifest in fiction illustrative of conscientiousness in action, and lit by humour rather than sunlight. But John Oliver Hobbes opened to her a world as real and brilliant as that to which Mrs. Craigie, the daughter of wealth, had access. It brought her into contact with renowned authors, actors, and dramatists, so that her biography was bound to be interesting to the vast reading circle which is hypnotized by famous names.

Obviously the present bundle of biographical material is not an ideal form of a Life; but it has the great merit of revealing its subject through her own letters and the reminiscences of her father, who supplies with affectionate candour the homely details without which a biography seems artificial. Thus, in telling of the visits of Pearl Richards to Mrs. Weldon's orphanage, he quotes from the latter's journal:—

"1877. April 10.—Pearl so impudent to her mother. I was not pleased—but laughed inside. She is such a clever monkey."

The first important literary influence on Mrs. Craigie's life was Dr. Joseph Parker, who published in his magazine *The Fountain* two short stories written by her in her ninth year. Dr. Parker, whose Church the Richards family attended, was an exceptionally witty man, despite his defiant affection for his own puns;

to him we find Pearl Richards writing a chatty anecdotal letter of over 500 words when she was only seven and a half years old; and her father informs us that "she never lost the impression that Dr. Parker was the finest pulpit orator she ever heard."

Married in 1887, Pearl Craigie definitely parted from her husband in 1891, studied Greek and Latin, and "applied herself with extraordinary energy to her literary work." She joined the Roman Catholic Church in 1892.

In the third and longest section of the book—an anonymous compilation—we have a very interesting example of the ministry of art to the ego of the artist, the way in which art feeds and enlarges vanity; also we have a revelation of the sympathies created by love of art. To opinion Mrs. Craigie was keenly sensitive, and where, with diagrammatic neatness of plot and tragic absurdity of situation, she had failed to fascinate and convince, as in the case of her Carlist tragedy 'The Repentance,' she would become pathetically explanatory.

Amusement may be derived from the series of letters which Mrs. Craigie wrote to Mr. C. Lewis Hind during his editorship of *The Academy*, of which paper Mr. Richards became proprietor in 1896. In two of them the editor is treated to a list of "vulgars and not vulgars," from which we cull the pontifical remark,

"Flaubert was a man of diseased genius. He was vicious—never vulgar. De Maupassant was also diseased, but he was not a genius and he *was* vulgar."

Some light is shed on this criticism by Mrs. Craigie's statement (January 30th, 1897) that the highest compliment she ever received on her work was paid by a Jesuit Father, who says "it is absolutely free from sensuality—and that it is *unique* in that respect." The climax of the list of "vulgars" is "William Morris—vulgarity itself."

Her admirations were not, however, at the mercy of a nervous dislike of indelicate details in works of art. The warmest eulogists of 'Esther Waters' and 'Jude the Obscure' are not more fervent than Mrs. Craigie in her tribute to these works. With Mr. George Moore she had a collaborator's friendship, and touches in her letters to him have a feminine charm to which it must have been pleasant to submit and respond. To him she writes on January 28th, 1894:

"The silence of my life overwhelms me. I dined out last night and met very charming people: I have seen visitors to-day...but the silence...the silence of it all...I cannot face the loneliness of a crowded drawing-room...God only knows how I need a friend—an honest one. I try to forget myself in other people...I choke my soul with work, and yet—and yet!"

Then the writer, after referring to her and Mr. Moore's comedy 'The Fool's Hour' (the incompleteness of which is not

explained), interrupts herself to relate that her

"little boy rolled down the stairs, and on reaching the floor unhurt, arose and said, 'How did I do that, mother?' He was for a second venture, but I warned him that miracles are not to be worked by practice—they happen!"

In reading Mrs. Craigie's letters one is sensible of a literary combativeness formidable to her opponents. She would, for instance, make a clever pinthrust at a critic in a letter to the business manager of his paper. A hasty reader might easily gather that the mere friction and fray of literary life gave her pleasure and absorbing occupation, and that fame and the indulgence of her own creativeness would have made her fairly contented to remain in the world. It was not so, however, and again and again in this book is sounded the dolorous note of a person not really in contact with her kind. The Dean of Manchester seems to write a thought too solemnly of her periodical disappearances into "the Convent of the Assumption or elsewhere," to cultivate "her own spiritual life." Her friends, he tells us, "knew not, they scarcely dared to ask, where she was." The true inwardness of this reluctance is obvious. It is the world's lack of sympathy with other-worldliness. Mrs. Craigie frankly longs for a death in harness as near to her end as March 13th, 1906; she asserts in the same year that "the gospel narratives of the Passion move me so profoundly" that "they unfit me utterly for work, for companionship, for the business of life." Difficult as it is to discount the pleasures of unlimited sight-seeing, luxury, popularity, fashionableness, it is easy to believe that they did not satisfy a soul like hers. When one takes a bird's-eye view of her meditative life, as one can take it in 'Life and To-morrow' (Miss Zoë Procter's selections from her writings), one feels its essential joylessness. John Oliver Hobbes was, in fact, a philosopher whose vogue attests the power of wit to sparkle in or round thoughts of disillusion and to attract worldlings to the side of duty.

In taking leave of this interesting record a word of praise should be devoted to its admirable illustrations, which include several portraits of Mrs. Craigie, and even one of the author of 'Leviathan.'

The International Law and Custom of Ancient Greece and Rome. By Coleman Phillipson. 2 vols. (Macmillan & Co.)

WE have before us a learned and elaborate treatise from a writer who has already given us specimens of his work as a literary lawyer. It professes to be "the first comprehensive and systematic account of the subject that has appeared in any language." Starting from this ambitious position, the writer has also endeavoured to be "concise and to the point in his

argument and the propositions issuing therefrom." These phrases in the Introduction show that he is not afraid of criticism, and that he is not very diffident regarding the result. We may at once say that, so far as he attacks those who have held that international law, or rather formulated international customs, were not understood by the ancients, and were only the discovery of Hugo Grotius and his school, he has certainly won a complete victory. But we do not feel that his adversaries were particularly formidable. Any well-read scholar ought to know from the evidence all through the Greek and Roman historians that there was much the same feeling then as now regarding the mutual concessions and restrictions, the mutual privileges and restraints, which neighbouring nations, like neighbouring families of men, must adopt for the enjoyment of their life and property. The author might have told us that Grotius in his great work takes far the larger part of his illustrations from this civilized ancient history, and any reader of Thucydides should know that, even if the dictates of humanity were often violated in the furious political feuds of the Greeks, they were also appealed to constantly, and often with success. Those who have denied ancient international law must be jurists with little knowledge of the evidence of Greek and Roman literature.

While, therefore, we have to thank the author for having collected this great mass of evidence and arranged it under various heads, we do not find that there is anything specially novel either in his theories or his evidence. He generalizes but seldom; he spends all his time in offering concrete cases, and often in refuting the views of the many foreign critics whom he quotes in the original and also translates for us in his text. This practice prevents him from carrying out his desire to be concise, and it spoils his style. There are many pages in his book which are a mere mosaic of quotations, and where either the original or his excellent translations would have been perfectly adequate. Similarly he not only supplies passages from standard English versions of Thucydides and Polybius, but he also prints the Greek in his foot-notes. Surely no reader wants this corroboration in the case of Jowett's or Shuckburgh's translations.

On the other hand, he should have given us more of the epigraphic evidence which is collected by Dittenberger and others, either in complete text or in literal translation. For, if all scholars have a Thucydides at home to verify what he reports, not many own Boeckh's 'Corpus,' or even Dittenberger or Michel's precious collections. In one case only has he been more than liberal, though hardly concise: he has printed the curious Locrian text of the treaty between Oeanthea and Chaleion (which he calls Chalaëum) twice over, and from transcriptions differing widely, in that the one gives the very curious Greek *literatim*, whereas the other turns it into the ordinary alphabet. Nor does he let fall a hint that

he has perceived the difference. Yet he is explicit enough to tell us that *ἀνδροληψία* means "a seizure of men, a term derived from *ἀνήρ*, *ἀνδρός*, a man, and *λαμβάνω*, *λήψομαι*, to take, to seize"—a remark which must have survived from some of his youthful notebooks, and can hardly be intended for people who are to read Thucydides as they read French or German.

These matters are, however, superficial, and may easily be corrected in a new edition, which might also be considerably improved in style. Here is a specimen: "Philosophical speculations and abstract analyses constantly intersected a system of rules derived from actual practice and custom, and the result of such action and reaction naturally tended to become more and more heterogeneous." This is to tell us that *jus gentium*, *jus naturæ* of the Romans were not precise terms either in definition or in use! The author thinks he may say (quoting from a German) that the ancient law is subjective, the modern objective. We think the phrase at least so obscure that the explanation given makes it no clearer, and we might just as well maintain the opposite, and say that ancient law, accepted from the gods and some ancient legislators, was objective, whereas modern codes, thought out by men, and professing to be such, are subjective.

But we will rather turn to some more serious omissions, as a suggestion for another edition. It would indeed be a marvel if any author, writing a book of such myriad detail, had not overlooked something. We miss throughout the chapters, and in the Index, any reference to the peculiar objection the Greeks had to representative government, and its consequent rarity in ancient history. We have been told by Freeman that the great Delphian Amphictyony lacked importance because, being representative, it was regarded as only religious. Probably the ingrained jealousy of the Greek made him repudiate anything but direct assemblies for political purposes.

In the list of advances made by the Greeks over savage nations—a long and important list—the author should have added the (perhaps tacit) agreement not to use poisoned weapons, and not to mutilate either the dead or captives. Indeed, mutilation of youths by a slave-dealer is mentioned with peculiar horror by Herodotus. On the other hand, these civilized Greeks, who had agreed in all ordinary wars to ransom captives at a fair tariff, had made no allowance for the very different case of male and female prisoners. The latter were for the time so completely slaves that their purity was sacrificed as a matter of course. From Chryseis in the 'Iliad' downwards, there is no higher tariff offered for a female captive treated with respect, and what the average Greek feeling was is plain from a casual remark of Xenophon ('Hiero.' 3): *ὅταν γε ἀφροδισιασθῇ κατὰ συμφορὰν τινα γυνή, οὐδὲν ἥττον τούτου ἐνεκεν τιμῶσιν αὐτὰς οἱ ἄνδρες*, provided their affection

has not been tarnished. This is so fundamental a difference in sentiment between moderns and Greeks that it was well worth noticing. But was there any contrast between Greek practice and that of the Thirty Years' War in Germany in this respect?

The author, in referring to the group of inscriptions found at Teos, most of them giving this island international privileges in various cities, should surely have added that these were due to its being the home of a great Dionysiac guild of actors, who were welcome everywhere, as such artists are nowadays. We think that he underrates the amount of international custom in Greece in its best epoch, and when he says that "further development was impossible," and gives among his many reasons "the imperfect notion of comity and of balance of power, and the comparatively small international intercourse," we feel that he has not fully appreciated the completely modern complexion of Greek social life. The facts he himself adduces of wars to preserve this balance, and of the widespread adoption of arbitration to settle quarrels, are enough to persuade any careful reader that he is in presence of a civilization not ancient except in date and probably more developed than that of the republics of Italy in the Middle Ages, with which Mr. Phillipson might frequently have made comparisons to the profit of the reader.

We do not like his method of giving chapters on the Greek and Roman treatment of ideas alternately. It would, we think, have been much better to devote the first volume to Greece and the second to Rome; for although these civilizations present many analogies, these are weakest in this very department of international customs. This is obvious from the fact that in the great majority of Roman cases, Rome is the superior dealing with inferiors, and in every case is the single consistent power pursuing certain very definite legal principles, whereas the conflicts and concessions among the divers Greek polities were often among equals, and often among those who, in the course of a generation, exchanged their former positions of superior and inferior by reason of war or decay of trade. Hence we find necessarily a variety and inequality in the Greek evidence which we miss in Roman history. Such treaties as the oldest between Rome and Carthage, which the author rightly accepts as genuine (against Mommsen), present a very different picture from the treaties with Italian tribes or Greeks of Magna Græcia. After the crisis with Hannibal was past, it was not till the days of Parthian greatness that the Romans felt the check of an equal whom they could not subdue. There were often pretended treaties with allies called free and independent, but all men knew how little this really meant in the minds of the Roman Senate.

Yet the point on which the author will, perhaps, find it hardest to obtain agreement is his general view of the contrast between

Greek and Roman character. He quotes with approval a Belgian jurist Laurent (whom he often censures) for saying that "the Greeks never had the idea of extending their domination over the world; their ideal was not universal monarchy, but the city." Now this is false. Every ambitious Greek—Alciades, Agesilaus, Dionysius of Syracuse, not to speak of Alexander—dreamt of empires far beyond the limits of Greece, of a world-dominion, so far as he knew the world. The contrast next stated regarding the Roman is equally unsound: "The Roman chafed against territorial limits, and thirsted for constant expansion of power." The whole of Roman history contradicts this. If ever a people of great and solid qualities drifted into empire, it was Rome. There was never a great military genius to dazzle the Romans with splendid foreign conquests. The great Scipio Africanus was no Napoleon, but a Wellington, a brilliant servant of the State. Step by step, as Mommsen has admirably shown, the Senate was almost dragged on from conquest to conquest, and the notion that it was carrying out a grand national policy of conquering the world is not in accordance with true history.

These strictures do not mean that Mr. Phillipson's book is wanting in great value. Many of his chapters, especially those on 'Hostages,' on 'Neutrality,' on 'Aliens,' and 'Ambassadors,' are excellent; so are his discussions of words. The only author worth criticizing is the one with whom we generally agree.

NEW NOVELS.

Brother Copas. By Q. (Bristol, Arrow-smith.)

'BROTHER COPAS' is clothed with an atmosphere so charming, and pervaded with a philosophy so acute and contemplative, that one cannot help surrendering to the delightful impressions it makes as one reads. Yet it is extremely slight, and not wholly human. It would almost seem as if "Q." had set out to ventilate political and ethical opinions in a medium which could not be challenged. The book strikes us as largely subjective. The scene is the St. Hospital of the City of Marchester, which we must assume to represent part at any rate of the traditions of Winchester and St. Cross. The story, such as it is, is concerned with the squabbling and internal politics of the brethren, who have as master a venerable divine, and as chaplain a Ritualizing parson. We cannot avoid the inference that "Q.," through Brother Copas, dispenses his personal views on several topics. Brother Copas is a cynic, but he is a kindly cynic, and has a heart of gold. Somehow at the end a jarring note is struck by the introduction of a Pageant arranged by aliens. However, this gives Brother Copas fresh opportunities for his little stings.

Brazenhead the Great. By Maurice Hewlett. (Smith, Elder & Co.)

CRITICS and the public have only themselves to thank if they have by their enthusiasm confirmed Mr. Hewlett in his mannerisms. His style is as bizarre as ever in this his latest mediæval record, which recounts episodes in the history of Salomon Brazenhead, whom we have met before. Mr. Hewlett's Preface strikes the note which he maintains throughout the narrative. It is in Erceles vein, and reminds one forcibly of those mighty lines of Tamburlaine, also the Great. Brazenhead, instead of crying "by Cock," might well have mouthed the words of any Elizabethan swashbuckler as depicted in the pages of Marlowe or Kyd. But for our part we find it difficult to believe that Mr. Hewlett is not consciously producing a travesty. His tongue must surely be in his cheek when he offers such adventures as those contained in 'The Duke of Milan' or 'The Countess of Picpus.' But it is even more in the concluding adventure that we suspect him of fooling us, for here the swashbuckler is disposed of in a manner smacking of such extravaganza as Don Quixote appeared in.

As of old, Mr. Hewlett's command of language, particularly language out of date and curious, is fierce and brilliant. He bristles with strange words, as his hero with strange oaths, and the very vigour of his style carries one along curiously. The extravagance of the adventures may not detract from their popular interest, but we fancy it may puzzle many of the author's former admirers. The whole performance is an astonishing *tour de force*.

The King over the Water; or, the Marriage of Mr. Melancholy. By Justin Huntly McCarthy. (Hurst & Blackett.)

MR. MCCARTHY continues in the romantic vein as enthusiastically as any liege of that pleasant kingdom. Yet we must confess to a feeling that, writing as he apparently does with one eye on the stage, he misses the finer effects which we know are possible to his equipment. In reading one is conscious often of a dramatized version, occasionally of the hollow insincerities and conventions of the boards, and of cruder colours than become Mr. McCarthy at his best. This tale is a case in point. It is deftly put together, "novelized" if the word may be used, but throughout we hear the creaking of the flats, and listen to the voices of the stage carpenters. Apart from that, the theme is rather old and worn, being the love of a deputy for his King's bride. The "King" is James III., and the bride a Sobieski. The hero, not for the first time in fiction, is Wogan. Mr. McCarthy's style is brisk and vivid, and his sentiment is wholesome.

The Street of To-day. By John Masefield. (Dent & Sons.)

THERE is something not wholly convincing about Mr. Masefield's story. In a way it has the seal of the idealist, who is moreover rather an amateur. This is not precisely the work of a professional novelist, and many people may welcome it all the more on account of what may be considered its freshness. Yet it is difficult to find out where the atmosphere becomes unreal. The characters are all excellently sketched, and the philosophy is often weighty and always clever. The asides are those of an acute intellect. But the impression left on the reviewer's mind is one of doubt, Would people behave just as they do here? The character of Rhoda is a conscientious piece of work, and very successful. As a type of the modern young woman she is decidedly instructive, and Mr. Masefield can be congratulated on her portrait. There are, however, other characters who elude us—for one, Mrs. Drummond, a lady of seven-and-forty who never quite places herself for us. Yet the author evidently designs her as his chief figure. Mr. Masefield's principal quality seen in these pages is the sensitiveness of his imagination, which, in no uncomplimentary way of speaking, may be styled feminine.

Vittoria Victrix. By W. E. Norris. (Constable & Co.)

MR. NORRIS, like the sculptor in his novel, maintains a certain level of achievement. He is not a literary Rodin, but a sound technical craftsman, and, it may be conjectured, will leave work historically valuable for its portrayal of society. He is no more exciting than Jane Austen or Trollope, but he has more than a scintilla of their photographic gift. In the present case the gracious Vittoria herself, with the amiability, perhaps Italian, which makes her apt to meet kindness halfway; the commonplace, but clean and honest young nobleman; and the equally honest, but shrewd American, who is the general dissolver of knots and resolver of puzzles, are as lifelike as their atmosphere is unromantic. Vittoria's valetudinarian father and his unconsciously selfish sister are also true types of their class and time.

The Complications at Collaroi. By Rose Boldrewood. (Ouseley.)

COUNTRY LIFE, sport, and travel are described with evident accuracy by Miss Boldrewood, who has an hereditary gift and was herself born on an Australian station in the bush. She has also had some experience of civil and military life in India. The result of the chronicle, which includes much feasting and flirtation, is to leave us with a general impression of hospitality and rustic, if not simple

life. There are honest men and bonny lasses in plenty on the stage, but their "complications" are of a commonplace order. The unstable Dick is too much favoured by fortune, and the faithful Mary too little, when the death of her husband in a "paper-chase" enables her to return to her first love.

Ingram. By R. H. Gretton. (Grant Richards.)

MR. GRETTON terms his attempt to weave a novel out of the politics—or rather the political atmosphere—of the period following the downfall of the Unionists in 1906 "an exercise in the Disraelian manner"; but, in the process of toning down the Disraelian colour, he has neglected to provide the illusion of movement towards some desired goal or state. Consequently an essay could hardly be less dramatic than this novel, which is nevertheless worth perusal. The title-character is a Liberal member of Parliament, who, without exciting the reader, rises to Cabinet rank, and participates in much refined and intelligent conversation on the mechanism and ingredients of Parliamentary life as distinct from the subjects of party programmes. The author is an impressionist, skilful in depicting the attitude of the crowd at election-time, the inside of a poor man's club, and the aspect of men and horses at a racecourse. Some of his dicta have pith and wit; the vigour of a clear thinker is shown in his political portraiture; and there is a love-element in the story, in pleasant contrast to its somewhat arid intellectuality.

John Christopher: II. Storm and Stress.
By Romain Rolland. Translated by Gilbert Cannan. (Heinemann.)

THIS volume comprises 'L'Adolescent' and 'La Révolte.' The translation is in general close and vigorous, though a few passages set us wondering whether the author had not altered his text after its first publication, and in one place a whole paragraph written to conclude an episode has been made to serve as the beginning of a new chapter. Such liberties are, however, rare, and on the whole no better translation from the French has appeared for some time. The adventures of Christopher in search of his soul are followed from adolescence to early manhood: they are not always exciting or even interesting, but the duller passages are relieved by the effect of intense observation, and after all the book is one of those which no one can afford to neglect. Every now and then comes a passage of the first order—some finely seen episode, some seemingly chance illustration which reveals the deep thinker, the critic of life. It is in the favour of the English reader also that the author's style is not dependent on the genius of the

language for its chief merits: the translation can nearly equal the original, and Mr. Cannan, when he takes the trouble to find the equivalent of the French before him, gets quite as good an effect.

PLACE-NAMES.

The Place-Names of Berkshire, by the Rev. Walter W. Skeat (Oxford, Clarendon Press), and *The Place-Names of Berkshire: an Essay*, by F. M. Stenton (Reading University College), though bearing the same title, differ so much in scope that the two books can scarcely be regarded as rivals. Prof. Skeat's work is an etymological dictionary of Berkshire place-names, while Mr. Stenton's essay treats of the historical inferences to be derived from the local nomenclature, the etymology of certain selected names being given by way of proof or illustration of general conclusions. With a little adjustment, the two might not inappropriately have appeared as parts of one treatise. As they stand, there is of course some repetition, and there are also some few discrepancies of interpretation, most of which would certainly have disappeared if the authors had been able to confer together before publication.

As was to be expected from Prof. Skeat's scholarship and his careful use of the documentary material, most of his etymologies, so far as he himself regards them with confidence, are beyond reasonable dispute. In some instances, however, we are convinced that he is mistaken, and occasionally a decisive piece of evidence which he has overlooked has been noted by Mr. Stenton. Swallowfield, for example, was named not from swallows, but from the river Swallow (*Swaluwe*, A.D. 1300), now called the Blackwater. Arborfield, which Prof. Skeat says is "a comparatively modern name" derived from the word which survives as *arbour*, occurs in a document of the thirteenth century, and is no doubt much older. The early forms *Edburgesfeld*, *Erburgesfeld*, *Herbelgiresfeld*, show clearly that the etymon is a woman's name ending in *-burh*. Whether Mr. Stenton is right in identifying this with Hereburh, found in *Hereburge byrig* (Harbury, Warwickshire), may well be doubted. The forms are not decisive, and the chances are rather against the preservation of this rare name (borne only by one known person) as the eponym of two places so far apart.

Prof. Skeat, again, has failed to perceive that *Waneting* (Wantage, in Domesday *Wanetinz*), *Lacing* (Lockinge), and *Gæ(g)ing* (Ginge, in Domesday *Gainz*) appear in Old English lists of boundaries as names of streams. There can, we think, be little doubt that the inhabited places were called after the brooks, and not contrariwise, for the suffix *-ing* in these names (which is found also in other river-names) differs from the ordinary *-ing* of place-names in having a palatal instead of a guttural *g*. Prof. Skeat is aware of the phonetic anomaly, but apparently does not consider it significant. He regards the three names as "patronymic" derivatives from Old English personal names not otherwise known to have existed. It is probable that, like most other names of streams, they are (apart from the suffix) of pre-English origin.

The name of Blewbury (which Mr. Stenton leaves unexplained) appears in pre-Conquest documents as *Bleobyrig*. Prof. Skeat would identify the first syllable with the Old English word *blēo*, colour, complexion, appearance,

and thinks that the name may be literally translated "show-borough." Apart from the intrinsic unlikelihood of the supposed meaning, the known senses of *blēo* do not support the interpretation. In all probability, *Bleobyrig* is a hybrid formation like Salisbury or Manchester; that is to say, the first syllable is a fragment of a British name, which perhaps belonged to the adjacent Blewburton Hill.

Prof. Skeat explains the name of Sinodun Hill as "synod-down," pointing out that *synodus* was adopted into Old English in the form *seonoð*. We suspect, however, that the name, although it has now acquired some popular currency, is merely one of Leland's many figments, suggested by the *Sinadowne* of the romance of 'Libeaus Desconus.' In the French romance, from an older form of which 'Libeaus' was translated, the name is spelt *Senaudon*. It looks very much as if the author had got hold of the English name Snowdon (*Snāw-dūn*), and arbitrarily applied it to the imaginary castle of his story. Of course, if the Berkshire Sinodun can be found mentioned by any writer before Leland, all this falls to the ground.

Mr. Stenton is professedly rather an historical student than a philologist, but his philology is generally satisfactory. There are one or two misplaced marks of vowel-quantity in Old English words; and the suggestion that Ginge represents "O.E. *gæing*, a sewer," is decidedly unhappy. As a contribution to the study of place-names in their relation to local history the essay has considerable value. We heartily commend both these books to all who are interested in their subject.

No traveller in Wiltshire can fail to be struck by the beauty of Wiltshire names. To read of Market Lavington and West Lavington, Tilshead, Shrewton, and Imber in the one-inch Ordnance map is to become conscious of romance suddenly. Mr. John C. Longstaff in *Notes on Wiltshire Names: Vol. I. Place-Names* (Bradford-on-Avon, W. Dotesio), shows that these names are as interesting as they are beautiful; for few things indicate more pointedly than the map of Wiltshire the Celtic, Roman, Saxon, Scandinavian, and Danish elements that have combined to produce England.

As our author justly observes, the oldest, and, he might have added, the most beautiful place-names—the names of hills, woods, rivers, fords, and valleys—are generally Celtic; whereas the names of the towns and villages that grew up amongst them are more often Saxon. Thus the oldest moon-rakers called their highest hill Hack Pen, while the Saxon invaders called what is destined to become the largest town in the county Swindon, or the swine's dune. Mr. Longstaff has an ingenious explanation for every name in the book, and his learning and acumen entitle him to theorize; but it must be understood that judgments in the matter of derivations are apt to be upset. As the author wisely remarks, "in no case is the presentation of one meaning to be held as excluding all others."

The town of Brechin in Forfarshire once enacted, with something of an heroic spirit, that the ancient as well as the modern names of its streets should be painted up to keep them in the public memory. Such an arrangement would have obvious inconveniences. It would be better to have the origin and history of the ancient names recorded, as Mr. G. M. Fraser has ably and learnedly done in *Aberdeen Street-Names*:

their History, Meaning, and Personal Associations (Aberdeen, W. Smith & Sons). As Mr. Fraser remarks in his Preface, the study of street-names has been so much neglected that we need to be reminded of its scope and interest. Early street-names are all valuable: first, as illustrating historical and topographical conditions; and second, because, rightly understood, they are always the centre of a variety of suggestive historical and personal interests. One might generally say that it is impossible for a street-name more than fifty years old to be uninteresting; and hence one can see how rich in historical and personal interest are the street-names that are as old as a town itself.

Mr. Fraser's book, of course, appeals chiefly to Aberdonians, who will no doubt be astonished to find that names familiar to them from youth have such a wealth of interesting story attached to them. But there are many points of general import to be gathered from its pages. Thus the fact is again emphasized that early street-names were not really names at all, but natural descriptions of the various thoroughfares. Hence it is that we find Castlegates and Cowgates and Gallowgates and Causeway-ends and Vennels in most of the older Scottish burghs. It is curious to note that "Cruden's Court" preserves a memory of the compiler of the famous Concordance; curious also to observe the old French influence on Scotland. Thus, in place of "wharves," we have "quays" (the French *quai*)—Waterloo Quay, Regent Quay, Trinity Quay, and so on. One street-name, "The Guestrow," has hitherto remained a puzzle. It is the only "Guestrow" in existence, which implies that the name must have had a purely local origin. Mr. Fraser's researches have brought out the fact that "Guest" is really a corruption of "ghaist" (ghost). The street was near a churchyard, and the residents, imagining that the ghosts of the dead nightly "walked" there, came to speak of the "Ghaist-row." In old Latin charters Mr. Fraser has found the name in the form of "Vicus Lemurum."

We wonder why John Ewen is described as the "reputed" author of 'The Boatie Rows.' In accounting for the name "Craigie Loanings" Mr. Fraser says "a 'loaning' is, of course, merely a lane." But a loaning is not "merely" a lane. In the old song of 'The Flowers of the Forest' we have "Now there's a moanin' on ilka green loanin'." The word in that case means a milking-field; and there are other definitions, such as "a paddock," "a small common." The book has many interesting illustrations, and there is a good Index.

OUR LIBRARY TABLE.

THE general body of Stevenson's admirers, who have been unable to secure the elaborate and limited editions of his works, will welcome the issue, in the familiar blue buckram, of *Lay Morals, and other Papers* (Chatto & Windus). We doubt the inclusion of 'Father Damien,' separate editions of which have been available for some years. A few more notes like those on p. 151 and p. 183 would have been agreeable, but readers will not grumble at their absence, being only too glad to add to the long row of books the papers here printed. As a piece of impassioned and deadly invective 'Father Damien' overshadows the rest of the volume, but the fragments of romance are tantalizing in their promise, and the

'Lay Morals' is, if amateurish, characteristic of Stevenson's mind. The 'College Papers' are not of the author's best, but have that charm of style which was ever his. We have not here the feeling of immature work which distresses us when we come across scraps of writing by the eminent which the diligent enthusiast insists on printing and views with the bias of the discoverer.

More Leaves from a Life. (Eveleigh Nash.)—There will soon be no need to go to Vallombrosa for a time-honoured metaphor, if these home-grown 'Leaves' go on falling so thickly. But in the present shower there is perhaps a suggestion that the exuberant author's energies are not inexhaustible. She continues to pour out her opinions on all subjects with a fine contempt for consistency, though not without a biting shrewdness, and a queer sentimentality which contradicts her assumed cynicism. The flow of talk despises such aids to heedless readers as division into paragraphs: great solid pages march on in an unbroken procession with no obvious regard for the connexion of the subjects, "albeit" (there is a plethora of "albeits") even the author now and then realizes the discontinuity and apologizes, "but this is a digression."

The whole volume is a digression round a simple central theme, which reminds one of a familiar type of old-fashioned novel. There is the wicked "pantherine" woman, with her lovely grey eyes, beautiful shoulders, exquisite feet, glorious black hair, and languorous movements. We recognize her immediately, and are prepared to find her wedded to a "good grey head," distinguished, handsome, soldier and baronet, but pious and dull—and many years too old for "Pantherina," who naturally (it is in the plot) is occupied with the little, plain, short-sighted, pure-hearted painter, "Basil Hodges," in the temporary absence of more attractive game. Among the minor characters we are not in the least surprised to notice the gruff but kindly country doctor and the well-bred vicar; and even the vicar's less fastidious elderly sister, who insisted on marrying that good-looking fisher-boy Jago (who does not appreciate his luck), does not distress us by any excessive novelty. These minor parts are all "adequately played," and give a faint, welcome touch of humour to what is in fact a dreary tragedy, of a familiar kind, though not the less painful for all concerned, including the narrator, who did her best, if ineffectually, to straighten things out.

But it is not a novel that we are reading, it seems; it is a true story. "Basil Hodges" was a real and well-known painter, whose work was often hung "on the line"; and the pantherine's son is the present baronet, happily married and endowed with offspring. What, we must ask, was the use of raking up such a scandal, and the shame of an honourable house, under fictitious names? Had it been done in the form of a novel, the best judgment would have been that it was in bad taste. We do not see that it is any the better for being cast into the shape of reminiscences. The scandal is, on the author's showing, too recent to be forgotten by those who knew the actors in it, and its recital with emphasis must pain many survivors; while the only effect on the general public who do not know the names will be to stimulate a curiosity with which we have no sympathy. If the author's object was to vindicate that "beloved" young painter "Basil Hodges" she has so far succeeded that she has partly justified his foolish heart, very much at the expense of his head.

Turkey of the Ottomans. By Lucy M. Garnett. (Pitman & Sons.)—Miss Garnett knows Turkey in Europe, and some of the more accessible parts of Asiatic Turkey, better perhaps than any other woman, and she has made the women of Turkey her special study ever since the days when (if we are not mistaken) she collaborated with Lady Blunt of Salonika, a lady of much experience in the Levant. Indeed, Miss Garnett has written so often and so much on the different races which are assembled, but never coalesce, under the Ottoman flag that it must be difficult for her to say anything fresh. In the present convenient volume, however, she has presented her accumulated knowledge in an orderly and interesting manner, and those who wish to be informed about the manners and customs, religions, education, industries, and government of Turkey can scarcely do better than read 'Turkey of the Ottomans,' where they will find a large number of closely packed details on most branches of the subject clearly and impartially set forth.

The very first chapter will surprise the ordinary reader, with its account of the democratic character of Muslim society, and the entire absence of any aristocracy and even of hereditary gentry—except a few relics in some country districts. The lack of family pride is curiously seen in the fact that the Muslim Turks have no family names, whilst the ancient law of gavelkind, practised in Turkey as well as in France, wholly prevents the evils and the advantages of primogeniture. Another point for which many readers will not be prepared is the preponderating strain of European blood—often from distinguished sources—which may be traced not only in the line of the Sultans, whose mothers have not seldom been highborn European ladies, but also in the mass of the people, who owe not a little of their fair complexion to the girls whom their ancestors carried off from Christian lands. Perhaps this is why the Vlachs, although they are Christians, "make use of refined language to every one," according to M. Picot, "including their wives." Miss Garnett's account of the other races who make up the population of Turkey is well worth reading, especially her notice of the fine tribes of the Albanians, and her distinctions between the two contrasted races of Circassians, and also of Bulgarians and Kurds. Another curious fact is that the Mohammedans of Crete, who object so strenuously to be annexed to Greece, are "no more Turkish than are their Christian fellow-islanders," but are almost wholly of Greek and Venetian blood.

In her space Miss Garnett can but indicate and suggest the many interesting ethnological problems connected with Turkey. In such concrete matters as ceremonies and ritual her book is rich; and her views for the future of Turkish government are optimistic, though she prudently excludes the law courts from her general approval, and holds out no hope of the abrogation of the Capitulations. It is agreeable to learn that the present Sultan beguiled his long seclusion as heir apparent with music, of which he is a cultivated amateur—rumour says a fine performer on the pianoforte. A few slips need correction: as "eighteenth century," for nineteenth, p. 24; and Mahmoud II. in 1670, p. 44. That the latest Armenian massacre (Adana) "has been indubitably proved to have been commanded from Yildiz Kiosk" is denied by the most recent authority, Mr. Charles Woods, who examined the evidence on the spot. The volume is illustrated by excellent photographs, and has a tolerable Index.

MR. W. N. FERGUSON, who appears to be a medical missionary and agent in China for the British and Foreign Bible Society, explains in the Preface to *Adventure, Sport, and Travel on the Tibetan Steppes* (Constable & Co.) how he came to write the book. He describes it as "mainly an account of two journeys taken through China and Tibet by the late Lieut. Brooke, F.R.G.S.," in 1906-7, and in Western Sze-ch'wan and Eastern Tibet during 1908. He was killed on December 24th of the latter year in the independent Lololand.

Brooke was born in Yorkshire in 1880, and in due course joined the Yeomanry, and served in the Boer War so creditably as to get a commission in the 7th Hussars. He soon resigned and took to exploration, first in East Africa, and next in and around Tibet. On his second journey, that of 1908, he was accompanied by Mr. C. H. Meares, now with Capt. Scott in search of the South Pole, who otherwise would have performed the task which has devolved on Mr. Fergusson. The result, from a literary point of view, is disappointing, and that part (chaps. i.-v.) which consists of "what story I can make... out of Mr. Brooke's diary" is the least interesting, chiefly, we imagine, from difficulties in editing.

Nevertheless there is much to attract geographers, and in a lesser degree sportsmen, though some of the tales seem to require the application of a coefficient of discount. Thus (p. 113) the goral, or Himalayan chamois, a little goat or antelope some four feet long and standing at most two and a half feet high, was "picked off the top of a rock at 1,000 yards, much to the admiration of the natives," by Mr. Fergusson, whilst "Mr. Brooke shot another a few minutes later, which the dogs brought to him." It is difficult to say whether the author's shot or the retrieving by the dogs is the more remarkable performance. All the same, the artless manner and evident sincerity with which the sporting adventures are related have their attraction, though the reader may not always correctly apprehend them. Fuse guns, mentioned occasionally, are, it is presumed, matchlocks; "peimuhchi" (p. 112), "a bird as large as a turkey which lives on these mountains," reads like the capercaillie, the largest of the grouse tribe, but so far as we know it has never been heard of in Southern China; it might be a pheasant, or one of the snow partridges, *Tetraogallus*, which are widely spread and of many kinds.

Of rare quadrupeds the takin or budorcas was found and killed by Mr. Meares, and is thus described by Mr. Fergusson:—

"This little-known animal stands as high as a small bullock, but is much more heavily built. Its legs are especially short and thick, and its feet are shaped like those of a goat, only much larger. I have seen some tracks as much as six inches in diameter. They have Roman noses, black curved horns, and short cut-off ears; the hair of the cow is creamy white, but most of the bulls have a reddish-grey coat, a short tail like a goat, and to some extent resemble the musk ox."

Jerdon, writing of the serow or forest goat, *Nemorhaedus bubalina*, remarks:—

"Near this group should be placed that very remarkable animal the takin, *Budorcas taxicolor*, Hodgson, from the Mishmi hills at the head of the valley of Assam. It has something of the aspect of the Gnu of Africa."

In spite of its lack of attention to detail seen in the spelling of names one way in the text and another on the maps, the book is well worth reading;

many of the remarks are full of local colour, and characteristic of the people. Thus we read of the oranges and groves of Chung King:—

"Every half mile along the road they passed a heap of the lovely golden balls, still dewy from the trees. Large, luscious, loose-skinned mandarin oranges—twelve a penny, or sixteen a penny if you give the skins back—and other delicacies," &c.

Again we are introduced to the duck farmer who artificially hatches thousands of eggs, and drives the ducklings about the fields with a long bamboo rod just as if they were sheep; and incidentally are told of a grand scheme of irrigation whereby water enough to supply 100,000 acres is diverted from the river Min, and carried north, through a cut in the mountains nearly 1,000 feet high, to the Yangtze at Lucheo, 300 miles distant. And this great scheme was projected by Leo Ping, a Chinese mandarin 300 years before Christ.

Many of the spellings seem somewhat gratuitous, such as "Muska Cumba" (p. 190), the latter word being surely the familiar "Gompa" or "Gonpa"—monastery, and the word "Ula" is constantly used without explanation; sometimes from the context it might mean a yak, at other times it would seem to be used for baggage or transport.

Drawbacks and deficiencies notwithstanding, the book will be read by travellers with great pleasure and interest; it is a testimony to the aptitude of the author for ingratiating himself with the chiefs and people of the wild tribes through which he travelled, acquiring their confidence, and thereby ensuring success.

Diocesis Herefordensis, Registrum Johannis de Trillek, Pars Prima. (Canterbury and York Society.)—Part XXV. of this Society's proceedings consists of the first 250 pages of the Register of John de Trillek, Bishop of Hereford from 1344 to 1361. His monument describes him as *gratus, prudens, pius*, and this verdict is singularly confirmed by his act-book and the summary of it set forth by Canon Capes, the editor of this Register. Contrary to the habit of not a few contemporary prelates, Trillek devoted himself to the administration of his diocese. He took no part in the business of the outside world during the stirring days in which he lived, and but rarely left the centre of his see, and then only for occasional visits to London, or to his houses at Prestbury and Goldhill.

Although there are no particular details given of his parochial or monastic visitations—the result of these was probably entered in a separate book no longer extant—there are abundant incidental references to his visiting the rural deaneries or parishes throughout his episcopate. Thus in 1346 Trillek issued his mandate to the Dean of Frome concerning the visitation which he proposed to hold in the churches of Bromyard, Much Cowarne, Frome Bishop, Cradley, Bosbury, and Ledbury. The dean was ordered to summon the whole of the clergy as well as representative laity from each church or chapel, and clergy were to bring for exhibition their titles to orders and benefices. In 1346 the Forest deanery was also visited, and subsequently all persons found guilty of offences at those visitations were ordered to appear before the bishop at the church of Newent to receive due correction. Pressure of business caused the visitation of the deanery of Archenfield to be deferred; but the deanery of Ross was duly visited. There is an interesting record of Trillek's visitation held in the church

of Chetton on June 17th, 1353. He then ordered that each married person of Cleobury North should contribute one halfpenny at Pentecost to the mother-church of Hereford, and each unmarried person one farthing.

Other details of local administration, both usual and exceptional, abound. The enormous amount of game on the bishop's chase at Ross is shown by the fact that his agent, Walter Moton, was called before the Court of King's Bench, as it was alleged that he had carried off 500 red deer, 500 fallow deer, and 300 roe deer, and that he had also broken into the episcopal free warrens at Ross and other places and taken away 500 hares, 1,000 rabbits, 1,000 partridges, and 200 pheasants. In 1347 the Vicar of Leominster was ordered to excommunicate the evildoers who had broken into the house of the treasurer of Leominster Priory, stealing his swans and killing his peacocks.

Perhaps the most interesting of these local entries are those which refer to the terrible "Black Death" of 1348-9. A mandate was issued in August, 1350, to restrain the exorbitant demands for their services which were being made by priests without cures, and to compel them to fill the many churches vacant through the plague. Two years later the bishop united the parishes of Great and Little Collington on the petition of the patron, clergy, and parishioners, as there was scarcely maintenance for a single priest, for the plague had reduced the inhabitants and impoverished the land.

In the brief English summaries of each entry there are a few matters worthy of correction, but of minor importance. The word "sanctuary," on p. 10, as applied to the church of the Dominicans at Hereford, is equivocal and not warranted by the Latin.

Esmond, the Humourists, The Four Georges—these are the contents of the two latest volumes of the "Thackeray Centenary Biographical Edition" (Smith & Elder), a bill of fare which it is not easy to exhaust in a brief paragraph. 'Esmond' has been particularly fortunate in its illustrator, since, if one could fancy it illustrated at all, it would surely be by the author of 'Trilby.' One, at least, of Du Maurier's designs could hardly be surpassed, namely, that of the duel between Castlewood and Mohun in Leicester Fields—a composition which, one thinks, might even have satisfied Thackeray himself. With the *bellezza folgorante* (as Gautier would have called it) of Beatrix Esmond the artist was scarcely so successful. The drawings for the 'Humourists' and 'Georges,' now reinforced by portraits of the monarchs, are of varied merit; and we note that the publishers have usefully borrowed from the second of Sala's Hogarth papers his own presentment of "Mr. Gamble's Apprentice." We note also a hitherto unpublished portrait of Thackeray by Samuel Lover, and a number of new Thackeray sketches, including Dr. John Brown's 'Johnson and Goldsmith' from *The North British Review*. Among the additions to the preliminary matter we are glad to see that Lady Ritchie has found an opportunity for inserting a fine quotation from George Meredith's "Introduction" to 'The Four Georges' in Blackie's "Red-Letter Library."

To the new "Dickens Centenary Edition" (Chapman & Hall) have just been added *Dombey and Son* (2 vols.) and *Great Expectations*, with the original illustrations to each,

by "Phiz" and Mr. Marcus Stone respectively. Twenty-one out of the projected total of thirty-six volumes have now appeared, and we notice with pleasure the continued maintenance of the high standard of production which makes this handsome reissue a miracle of cheapness. For the Dickensian of small means, and, for the matter of that, for the affluent likewise, we can conceive of no more profitable investment.

Indexes to Irish Wills. Edited by W. P. W. Phillimore.—Vol. I. *Ossory, Leighlin, Ferns, Kildare.* (Phillimore & Co.)—Mr. Phillimore earns the gratitude of all genealogists by his enterprise in printing the *Indexes of Irish Diocesan Wills* in the Dublin Public Record Office, of which this volume is an instalment. We do not, however, understand why that Office did not print the Index itself, since it was copied in the Office by Miss Thrift, and the Index to the Dublin Diocesan Wills appeared in the 26th Report of the Deputy Keeper of the Irish Records—a valuable work which, by the way, is out of print, and should be reprinted without delay. It is curious how frequently Government offices under- or over-estimate the number of copies that are likely to be sold of their publications. They ought to consult a competent bookseller, who would tell them that an important work of reference, such as an index of wills, commands a much larger sale than a report of the progress of arrangement of documents in the bays of the Record Room. The Stationery Office, not the Record Office, is probably to be held accountable for these unfortunate errors of judgment. We wish Mr. Phillimore success in his undertaking, and the first volume undoubtedly deserves it by its careful transcript, clear Preface, and good type and paper. "Kilmoliver" (p. 15) for Kilm'Oliver is a slight slip, and we suspect "Coolemarig" (p. 54) may be another. If an index of places had been added, the usefulness of the volume would have been increased; but as it is, all Irish genealogists must possess it.

IRREMEABILIS UNDA.

I sit and watch the weary, weeping weather,
The clustering rain-drops thicken on the pane;
I hear the waters and the winds complain
O for the years when we were young together.
The dripping branches and the drenched dark heather,
The low grey clouds that shroud the lonely height,
Weigh on my heart that once had found them light.
O for the years when we were young together.
Time, the implacable, has us in his tether,
And Memory's self turns traitor—when I seek
Her hoard of golden lore she will not speak—
O for the years when we were young together.
Though still may fall a tide of halcyon weather
With sun to gild such treasures as remain,
What Time has taken he cannot give again—
O for the years when we were young together.

ROSAMUND MARRIOTT WATSON.

MR. PASSMORE EDWARDS.

MR. PASSMORE EDWARDS, the well-known philanthropist, died at the ripe age of 87 on Saturday last. Born in the Cornish village of Blackwater, he was the son of a carpenter in a humble way, and the architect of his own fortunes. In Manchester he began his journalistic career on *The Citizen*, but shortly moved to London, and started a monthly magazine of his own, characteristically entitled *The Public Good*, in which he ventilated his views as a strong supporter of Bright and Cobden. *The Public Good* was not a success with the public any more than the *Poetic Companion*, *The Biographical Magazine*, or *The Peace Advocate*; and Mr. Passmore Edwards's earlier enterprises, in spite of unremitting labour on his own part, landed him in bankruptcy, from which he emerged with honour, paying all his creditors in full.

In the sixties *The Mechanic's Magazine* and *The Building News* proved valuable properties to him; and he made a fortune out of *The Echo*, bought in 1876, and *The Weekly Times*. *The Echo* had the monopoly for years of the halfpenny public, and was made a vehicle for the vigorous didacticism of its proprietor; its sincerity and earnestness atoned for its ventilation of the views of "cranks."

Mr. Passmore Edwards when he had reached commercial success still retained the idea that it was to be used rather as a chance to instruct than a means to amuse or flatter the vagaries of public taste. He was something of a Puritan and ascetic, apt to be exacting as an employer, and parsimonious in small ways in order to be generous in large. Late in life he began in his native county and in London to put up the many buildings with which his name is associated. The Passmore Edwards Libraries, begun in 1892, are now a familiar feature, and represent the donor's wish to give others the facilities for education which he himself missed. This result would have been better achieved if adequate endowment had at the same time been made for librarians. The Passmore Edwards Settlement in Tavistock Place and the University building used by the London School of Economics are successful embodiments of his zeal for social advance.

Dominated from youth by strong political views, he was a reformer all his life. It is easy to see the limitations of such a character—more useful, perhaps, to recognize the steady pursuit and realization of ideals in an age in which the mere accumulation of money seems an adequate end in itself.

A BOOKWORM'S PERPLEXITY.

April 15, 1911.

I THINK I can relieve Dr. Jessopp of all reasonable doubt of the righteousness of his retention of the volume that would appear to have been at one time in the possession of the Cambridge University Library. Capt. Butler and Mr. Pierpont Morgan rightly resigned their purchases, for they have been proved to have been stolen goods, and stolen under, so to say, our own open eyes. But Dr. Jessopp's little book in all probability found its way into the market through having been deliberately sold, as so much rubbish and lumber, by some predecessor of Mr. Jenkinson. That is the simple explanation of the occasional appearance of our "Public Records" on the stalls of second-hand booksellers in London. I will cite only one proof of several I could give of this incredible fact.

In *The Athenæum* of Feb. 22, 1873, p. 247, I wrote of how, when the business of the H.E.I. Company was sequestrated to the Crown by the Imperial Parliament in 1858, one of the first acts of the new masters of the India House in Leadenhall Street was to make a great sweep out of the old records that from 1726 had been preserved there with a scrupulous solicitude similar to that shown by the proprietors of Child's Bank in the conservation of their old ledgers. They swept away—and it was Mr. Herman Merivale and Sir John Kaye who did the deed!—300 tons of these records out into the vats of Messrs. Spicer, paper-makers, to be boiled, bleached, and bashed into low-class paper pulp. From one of the cart-loads of them, a paper was blown off by the wind, and picked up by a passer-by, of whom, on my providentially making his acquaintance some years afterward, I purchased it, giving him as many pounds as he asked me shillings for it. It was a letter, dated Newmarket, 28 Nov., 1619, from the Duke of Buckingham (Fenton's man), to the Earl of Warwick (Robert Rich), remitting to the latter his interest in the East India Company's shares that had been assigned to him (the Duke) out of the forfeiture incurred to the Crown by the Earl. The paper is sealed with the Duke's own seal, as fresh and sound as when stamped nearly 300 years ago; and is duly signed by the Duke of Buckingham, and addressed: "To my loving friends, the Governours and Company of East India Merchants"; and duly endorsed as received Nov. 28, 1619—the very day it was written. Clearly the India Office had no right in it; and after using it there for the purpose of securing for the future a safer custody of the Office records, I gave it to a friend who had better claims than myself to the possession of so piquant a relic of a great historical English title.

I can see no right of the Cambridge University Library in Dr. Jessopp's "treasure trove"; and if I held it, and felt my own right to it not absolutely clear, I should solve the doubt on the principle of "pecca fortiter!" Conscience is the handmaid, not the master, of reason; or we might strip ourselves of all we have down to the bare bones of us.

In the roof of the Town Hall of Bombay I stumbled on a manuscript of the 'Divina Commedia,' engrossed within 30 years of Dante's death, the illuminations including a portrait of him. But suspecting it to have belonged at one time to the Bombay Branch of the Royal Asiatic Society, I examined the Society's records for 50 years back, and found it had been presented to the Society by Mountstuart Elphinstone on his leaving Bombay, he having bought the precious volume of the Secretary of the Ambrosian Library, Milan. After my return to Europe the Council of the Society wanted to sell it—I valued it at 10,000*l.*—but I peremptorily stopped this by a letter to the editor of *The Times*. Of course if they parted with it, they were bound in reason and conscience to return it, frankly and freely, to the Ambrosian Library: "The Dones of God are given, not sold."

Between these two cases, I think Dr. Jessopp need indulge himself in no manner of dilemma over his thoroughly well-earned "good luck" in a "find" he can appreciate and apply to the public advantage better than any of its previous possessors.

GEORGE BIRDWOOD.

BEFORE a claim for the restoration of Dr. Jessopp's book can be put in by the Cambridge authorities, they should be able to show how the book left them, by stealing,

sale, or exchange. If they cannot do this they are so careless about their books and so indifferent to their own history that they do not deserve any consideration. If there is a doubt, as Bishop Vaughan says, it should certainly be in favour of a person who not only possesses the book, but also presumably read it, as he paid for it. Books are meant to be read, and it is quite likely that this one, because it was never asked for, was sold by the University authorities, or exchanged for some more popular work.

CANTAB.

ANOTHER SHAKESPEARE AND HATHAWAY MARRIAGE.

It is only a coincidence, but it is curious, that a hundred years after the poet's, there was another Shakespeare-Hathaway marriage, with a considerable amount of uncertainty as to its details. In Chancery Proceedings, Bridges, 287 (38), b. 1714, we may read about it. On May 14th, 1689, John Sheakspear, free mason, of Alderley, co. Gloucester, complained that in May, 1676, he married Alice, daughter of Thomas Hathaway of Kingscote, co. Gloucester, innholder, and Mary his wife; that Thomas had promised him 30*l.* as marriage portion with his daughter; and that he had not received it, though Thomas had left it by will, his wife Mary being executrix, with sufficient goods to perform the will, &c.

John Sheakspear must have employed a very cheap lawyer: the parchment is poor, the writing not clerkly, and the details not well arranged.

Mary Hathaway had meanwhile married again; her second husband, Richard Baker, was co-defendant, and their attorney was a better clerk. Mary denied that the marriage had been performed in 1676, as stated, but acknowledged that it had taken place in 1682, though she had not know of any intent of marriage until after it had been solemnized. There never had been any promise of 30*l.* as a marriage portion, "with her good liking." But after the marriage she had said to her husband Thomas that they should give their daughter something, and with his consent she gave Alice 10*l.*, and goods to the value of 5*l.*, which was esteemed "her full child-part, and much more than Thomas left to his other four unmarried children. His personal estate amounted to 84*l.* 2*s.* and no more, and his debts came to as much more." Thomas Hathaway employed Daniel Wellstead to make his will on the 17th day of March, 1683, and died soon after, leaving Alice 5*s.* and no more, and small legacies to the other children. His widow was executrix, and proved the will in the ecclesiastical Court of Gloucester. She denied that 25*l.* was left to Sheakspear as his wife's marriage portion, or that she had persuaded her husband not to give it to him. The said Sheakspear "doth follow his art or craft of a free mason, but she doth not know what advantage he hath thereby." About the time of the marriage he pretended he had an interest in a tenement after his mother in Alderley.

Richard Baker knew nothing about the 30*l.* promised, or the 25*l.* said to have been left as part of it. He had married Mary Hathaway, widow, received most of the personal estate of Thomas Hathaway, and paid his debts and the legacies of the children, which came to much more than the whole value of the goods received.

This was probably the John Shakespeare, mason in Dursley from 1704 to 1739. (See my 'Shakespeare's Family,' p. 133.)

CHARLOTTE CARMICHAEL STOPES.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Carpenter (J. Estlin), *The Place of Christianity among the Religions of the World*, 2/ net. Second edition.

Cope (late Rev. F. L.), *A North-Country Preacher: Sermons*, 3/6 net.

With a memoir by the Dean of Lichfield.

Degroot (J. J. M.), *The Religion of the Chinese*, 5/6 net.

Field (G. C.), *The Doctrine of the Trinity in Recent Apologetic*.

In the Unitarian Penny Library.

Hodgkin (Thomas), *The Trial of our Faith, and other Papers*, 7/6 net.

Consists mainly of lectures delivered during the last forty years to members of the Society of Friends.

Ryder (Rev. Henry Ignatius Dudley), *Essays*, 9/ net.

Edited by Francis Bacchus. The essays treat of Savonarola, Manning, Auricular Confession, Anglican Orders, &c., and several of them are reprinted from magazines and reviews.

Simpson (W. J. Sparrow), *The Resurrection and Modern Thought*, 15/ net.

The history of this doctrine is traced from the Apostolic age to our own.

Law.

Bircham (B. O.) and Morris (Frederick G. C.), *Public Companies: a Treatise on the Law and Practice relating to the Formation and Flotation of such Joint-Stock Companies limited by Shares as invite the Public to Subscribe for their Capital, including an Appendix of the Rules and Regulations of the Stock Exchange relating to Special Settlements and Quotations*, 2/6 net.

Comb (R. G. N.), *Law of Light*, 25/

Fine Art and Archæology.

Benson (Arthur Christopher), *Ruskin, a Study in Personality*, 7/6 net.

Consists of seven lectures on the life and work of Ruskin delivered in the Hall of Magdalene College, Cambridge, during Michaelmas Term, 1910.

Foley (Edwin), *Decorative Furniture, Section XI.*, 2/6 net.

For notice of earlier parts, see *Athen.*, Aug. 20, 1910, p. 216.

Furst (Herbert E. A.), *Chardin*, 12/6 net.

With 45 plates.

Gade (J. A.), *Cathedrals of Spain*, 21/ net.

Hok'sai, *Two Drawings by*.

From the collection of W. Rothenstein.

Petrie (W. M. Flinders), *The Revolutions of Civilisation*, 2/6 net.

With many illustrations. In Harper's Library of Living Thought.

Portrait Book of our Kings and Queens, 1066-1911, 2/6 net.

A commemoration of the Coronation, with supplementary notes on the ceremony. Edited by T. Leman Hare, with historical and Coronation notes by Charles Eyre Pascoe.

Stabb (John), *Some Old Devon Churches, their Rood Screens, Pulpits, Fonts, &c.*, Vol. II., 7/6 net.

With 162 illustrations from photographs by the author. For notice of Vol. I. see *Athen.*, Feb. 6, 1909, p. 173.

Poetry and Drama.

Literary Gossip.

'AN OUTPOST IN PAPUA,' by the Rev. A. K. Chignell, priest of the New Guinea Mission, which Messrs. Smith & Elder will have ready next Thursday, is a study, in popular form and with photographic illustrations, of native life and character in British New Guinea.

ON May 11th the same firm will publish, under the title 'A Budget of Tares,' a collection of Post Office and other stories by Mr. Austin Philips, the author of 'Red Tape.'

MESSRS. MACMILLAN will publish next week the following American works: 'A Short History of the American People,' by Miss E. H. L. Turpin, with an Introduction by Dr. S. C. Mitchell, President of the University of South Carolina; 'The Country-Life Movement in the United States,' by Prof. L. H. Bailey; 'Southern (American) Field Crops,' by Prof. J. F. Duggar; and 'The Practical Flower Garden,' by Mrs. H. R. Ely, a well-illustrated book by an amateur of experience.

No trouble has been spared in the acquisition and arrangement of materials and illustrations for 'The History of Wexford' by Capt. Philip Herbert Hore, a work representing a labour of more than thirty years. Mr. Elliot Stock now announces the sixth and last volume, which deals principally with the ancient castles and towns of Ferns and Enniscorthy, with notices of the power, influence, and actions of the Clan Kavanagh and some of the Clan O'Byrne.

MR. ELLIOT STOCK also announces 'A Coronation Sermon' by Archdeacon Wilberforce; and a new work by Phyllis Browne, entitled 'The Young Idea: being Talks with Mothers on the Home Training of Children.'

THE new number of *The Journal of Theological Studies* contains a leading article on 'L'Origine du Symbole d'Athanase,' by the Rev. G. Morin; and notes and studies by Dr. M. R. James, Mr. Martin Rule, Prof. F. C. Burkitt, the Rev. W. D. Sargeant, the Rev. G. Margoliouth, and other scholars.

IN view of a memoir of the late John Viriamu Jones, his widow, Mrs. S. Kate Viriamu Jones, will be glad to have on loan any letters written by him. They will be returned with care to those who are so kind as to send them. Address at 203, Abbeyfield Road, Sheffield.

DR. JUSSERAND is to deliver on July 5th the first annual Shakespeare Lecture of the British Academy, and has chosen as his subject 'What to expect of Shakespeare.'

A MEETING of the Johnson Society will be held in London on Thursday next. The chief gathering will take place in the Mansion House under the presidency of

the Lord Mayor. The programme also includes visits to places of Johnsonian interest.

MR. F. C. CONYBEARE writes:—

"While thanking you for your friendly notice of my theological articles in the new edition of 'The Encyclopædia Britannica,' let me remark that your criticism of my English style is hardly borne out by the example you give. You write thus: 'A phrase like "St. Paul caps his argument" (in the article on "Eucharist") is surely too colloquial to suit the subject.' Nevertheless the 'New English Dictionary' gives examples of the phrase *to cap an anecdote*, *proverb*, *quotation*, &c., from Peele (who wrote in 1584), from Shakespeare, from Bishop Barlow's sermons (1606), from Brinsley (1612), from Richardson's 'Pamela' (1741), from R. Vaughan's 'Mystics' (1860). We have in the same work examples of *to cap* in the sense (closely allied to the above) of *to overtop*, *excel*, *outdo*, from Charlotte Brontë, General P. Thompson, and J. R. Green, all of them fairly serious writers."

Our criticism concerns a matter of taste, on which opinions, of course, differ.

MR. C. R. L. FLETCHER AND MR. RUDYARD KIPLING have written for the Oxford University Press a new 'School History of England' from the earliest times to 1911. The prose narrative is the work of Mr. Fletcher, and Mr. Kipling contributes twenty-three new poems, specially written to illustrate periods and episodes. There are as many pictures as poems—in colour and black and white—drawn by Mr. Henry Ford, and seven maps.

'SHAKESPEARE AT WHITEHALL' will be the subject of a paper by Mr. Ernest Law on the occasion of the visit by the London Topographical Society to the sites and remains of old Whitehall Palace next Saturday. Lord Rosebery, President of the Society, will take the chair in the "President's Room" at the Board of Trade, in Whitehall Gardens; and it is hoped that Lord Welby, Vice-President of the Society, will conduct the party to the site of the "Cockpit," in the Treasury building on the opposite side of Whitehall.

NOVA SCOTIA has been called the fairest province of Canada; yet for some reason or other, in spite of its great natural resources, it has not received adequate notice. Mr. Beckles Willson, in a book to be published by Messrs. Constable, recounts his travels through this part of the Empire as he saw it last year.

YONE NOGUCHI writes:—

"Not only in your notice on 'Lafcadio Hearn in Japan' (*Athen.*, Dec. 24, 1910), but in quite a few others, I have been written of as a student in relation to the late Mr. Hearn. The truth is that I was only able, when I returned home from America, where I went in my eighteenth year, to attend his funeral at Kobutera, Tokyo, his beloved temple. I shall be glad for your kindness in making the above fact known to your readers."

THE first draft of Swinburne's 'Atalanta in Calydon,' entirely in the author's writing, has just been presented to the Fitzwilliam Museum, Cambridge. The literary autographs in the Museum already included several volumes of poems by William Morris and Rossetti, and a prose work by Blake.

THE publishing firms of George Allen & Sons and Swan Sonnenschein & Co. have been amalgamated; and the combined businesses will in future be carried on by a new company under the title of George Allen & Co., Ltd. The offices will be at 44 and 45, Rathbone Place, Oxford Street; and after June 30th the premises of Messrs. Swan Sonnenschein & Co. will be closed.

IN *Scribner's Magazine* for May Mr. Price Collier describes his visits to the native rulers of India; and there is an article on 'Frank Brangwyn' (illustrated with his etchings).

THE title of Mr. Justin Huntly McCarthy's novel 'The King over the Water,' which we review elsewhere to-day, has now been discovered to be that of an historical work by Miss A. Shield and Mr. Andrew Lang. This fact is no news to those interested in Jacobite literature. Publishers talk of the difficulties of avoiding the repetition of titles, but do not appear to take the trouble to consult the 'English Catalogue of Books,' where a conspectus of titles for many years is readily accessible.

THE May number of *Guth na Bliadhna* will include Gaelic articles on 'The Folklore Music of Scotland,' by Calum Mac Phàrlain; 'The Motor-Car in Scotland,' by Aonghas Mac Eanruig; 'The Art of Dònnhnull Mac Eacharn'—the late Gaelic essayist—by the editor; and a paper dealing with the astronomical lore of the Gaelic Celts, by Dr. Hugh Cameron-Gillies. Among English articles will be one on 'The Czech Language Revival,' by Count Lützow; and a paper by Mr. Angus Henderson on 'The Origin of Golf,' in which some fresh light is thrown on a much-debated matter.

AT a meeting of the Glasgow Archaeological Society held last week, Prof. W. B. Stevenson showed a series of nine unpublished Voltaire papers and letters recently discovered in Glasgow. They refer to a lawsuit in which Voltaire was involved in 1751, and had belonged originally to the famous German jurist Socceji, one of the judges who tried the case.

AMONG recent Government Publications of interest we note: Board of Education, Report, 1909-10 (post free 10½d.); Report of the Department of Agriculture and Technical Instruction for Ireland, 1909-10 (post free 2s. 4d.); Year-Book of Edward III., Year 20, Second Part (post free 10s. 6d.); and Recent Publications of Military Interest, April, 1911 (post free 2½d.).

SCIENCE

OUR LIBRARY TABLE.

Human Physiology.—Vol. I. *Circulation and Respiration.* By Prof. Luigi Luciani. Translated by Frances A. Welby. Edited by Dr. M. Camis. (Macmillan & Co.)—Italy taught physiology to Europe during the sixteenth and seventeenth centuries. English students gained from her that stimulus to original thought and power of research which made Oxford famous during the later Commonwealth and early Restoration period. Physiological research then shifted to Holland, thence to France, afterwards to Germany. The Cambridge School of physiology owed much of its early force to German methods, but the genius of Michael Foster soon gave it a direction of its own and made it a world centre. Italy suffered eclipse, but the admirable work of Prof. Luciani, the Director of the Physiological Institute of the Royal University at Rome, shows that she is again ready and willing to teach in her old way, looking more to facts and their correct observation than to theories. The Italian textbook which has long been well known in its original language as well as in French and German translations appears at last in English. It has already been translated into Russian.

The present rendering has been made by Miss Frances A. Welby from the third edition, now appearing in four volumes under the editorship of Dr. Camis of the University of Pisa. No higher praise can be given to Miss Welby's work than to say that she has made it appear as if the book had been written in good English, and that she has preserved the remarkable lucidity of the original.

The first volume deals with the circulation, respiration, and the lymph. It is introduced by a Preface from the pen of Prof. J. N. Langley, and is complete in itself, with an Index of Subjects and an Index of Authors. It is admirably illustrated. The historical side of each subject is dealt with fully, and the bibliography is so marked a feature of the book that Dr. Camis has prepared additional lists of the recently published work of English authors.

The volume is of peculiar interest to English students of the history of medicine because the Italian physiologists of the sixteenth and seventeenth centuries laid the foundation of our present knowledge of the circulation and respiration. Prof. Luciani refers with justifiable pride to the teachings of his great predecessors. He contests, naturally enough, Harvey's priority as a discoverer of the circulation of the blood, and points out—what has long been known—that the main facts were appreciated by Harvey's Italian teachers. The circulation itself seemed so obvious to Harvey that he taught it annually in his Lumleian Lectures at the Royal College of Physicians in London for twelve years before he issued his *opusculum aureum*, 'De Circuitu Sanguinis,' at Frankfurt in 1628. Harvey's claim to remembrance is that he brought together the various facts known to other physiologists, tested them by his own experiments, and then gave a clear and logical account of the circulation in so few words that the theory and its importance could be understood by every one who was interested in the matter. The discovery was enunciated so plainly

as to rouse the violent opposition of nearly all his contemporaries. This drew public attention to it; the younger generation examined it for themselves, and Harvey had the satisfaction of seeing it built into the fabric of medicine.

Plant-Life on Land: considered in some of its Biological Aspects. By F. O. Bower. (Cambridge University Press.)—The ten chapters of this little book do not unite to form a complete survey of the science of plant-life, but are rather of the nature of individual, popular essays on a few subjects of more than academic interest. There is no preface, but in the last chapter the author says: "What has been attempted has been to illustrate along various lines of thought, each suggested by common features of the country, the outlook of Modern Botany." The attempt is successful, and is well worth reading. Golfers who have an intelligent interest in the links should enjoy not only the chapter which has been specially written for them, but also several of the others leading up to it.

The professional botanist may be left a little breathless when he reads the meditations on the bracken fern, which conclude with the remark, "Truly the life of such plants may be described as amphibious." But the outlook of the whole book is so distinctively fresh and original, as well as trustworthy and in close touch with recent work, that it forms a welcome contrast to many popular manuals.

The Open Book of Nature: an Introduction to Nature-Study. By the Rev. Charles A. Hall. (A. & C. Black.)—This pleasantly written book is well fitted to arouse in young people an interest in the study of nature, while many of older growth will probably find in its pages much that is not unprofitable reading. Mr. Hall takes his reader for a ramble in the country, keeping his eyes open for any natural object about which he can chat as they go. Nothing comes amiss to him—flowers or butterflies, birds or beasts, rocks or fossils, all in turn are the subject of bright and instructive gossip. The writer is evidently an enthusiastic lover of natural history, in the widest and best sense of the term; and that reader must indeed be unresponsive who fails to catch something of his spirit. As an ardent advocate of open-air study, he has a horror of reliance on mere bookwork, though it must not be forgotten that every naturalist is bound to gather much of his knowledge in his library. Mr. Hall adopts an extremely familiar style, addressing the reader throughout in the second person; calling his sons, to whom he dedicates the book, his "chums," and dropping occasionally into such inelegancies of expression as "Don't funk a few big words."

The chief difference between this book and most others on nature-study is the prominence which it gives to geological subjects. In many localities objects of geological interest are comparatively rare, and probably it is, to a large extent, for this reason that geology has not found its proper place in many popular schemes of nature-study. Even when geological specimens are readily procured, they often need for their interpretation more serious study than is required by plants and animals. Living near Paisley, Mr. Hall writes within sight of a range of old volcanic hills, and his interest in rocks and earth-sculpture has thus become so keen that he is led to devote much of the early part of his book to an introduction to geology.

The 'Open Book' is copiously illustrated. Most of the illustrations are in black and white from the author's own photographs, but there are a few coloured plates, those of birds being especially good. Many of the figures in the text illustrating fossils and geological subjects are old friends which appeared originally, if we mistake not, in Jukes's 'Manual of Geology' nearly half a century ago, but we do not suggest that on that account they are a whit the worse.

An Introduction to Bacteriological and Enzyme Chemistry. By Gilbert J. Fowler, D.Sc. (Arnold.)—Dr. Fowler of the University of Manchester has done well in producing this little book on a department of chemistry which he has made his own. The number of people directly interested in the chemistry of enzymes and bacteria is rapidly increasing, and embraces those concerned in the scientific conduct of huge industries and industrial processes; e.g., agriculture, purification of water, sewage disposal, brewing in all its various forms, and the production of indigo, tea, coffee, cocoa, and tobacco. To the medical officer of health, the engineer, or the manager of such industries as above indicated, this book cannot fail to be of value and interest, especially if he has a fair grounding in general chemistry; the writer has presented the matter in as simple a form as possible without sacrificing scientific accuracy, and many unprofessional readers will derive pleasure and profit from it. There are 4 full-page plates and 28 figures in the text.

Dr. Fowler calls formic aldehyde the simplest carbohydrate; would he also call acetic acid and lactic acid carbohydrates? We have no satisfactory definition of a carbo-hydrate, but most chemists would not include these three compounds. There are a few slips or misprints in the book; e.g., butter fat is hardly correctly described (p. 170) as "a compound of glycerine and butyric acid": it contains but a small percentage of butyrin. The biuret reaction is mentioned on p. 105 and p. 184, but the descriptions of the results are a little difficult to reconcile. In the matter of spelling we find "thrombose" and "thrombase" (both of which occur in the Index also), "glycocol" and "glycocol." There is a misprint in the formula of Lysin on p. 198, and in the formula on the last line of p. 266. These are but minor blemishes, or specks, on a fair book whose success, we think, is assured. The chapters, all too short, in which is discussed the further advancement of industries like the production of natural indigo, and of the art of agriculture, are full of interest and suggestion.

Inorganic Chemistry. By F. Stanley Kipping and W. H. Perkin. (W. & R. Chambers.)—The first part of this volume, 306 pages, was published in 1909; the second part a few weeks ago (see *Athen.*, Feb. 18, p. 194). The whole is now issued in one volume.

The authors anticipate that students will be using this textbook through a three years' course, during the latter part of which organic chemistry will also be mastered. Part I. is considered suitable and sufficient for the first year's course. The arrangement of the matter differs in some respects from that in most textbooks, but is well adapted for those who can give sufficient time for working through the whole book. The use of equations is postponed until later than usual, that is, until after the description of the properties of a good number of

compounds. The subject-matter of Part I. is virtually the same as that of the Syllabus of Chemistry of the London University for the external Matriculation examination, and of the Board of Education for Stage I.

The Professors of Chemistry of University College, Nottingham, and Victoria University, Manchester, have done their work well, and their textbook will probably be adopted in many classes besides their own.

SOCIETIES.

ROYAL NUMISMATIC.—April 20.—Dr. Arthur J. Evans, V.P., in the chair.—Mr. Leonard P. Johnston was elected a Fellow.

Mr. W. J. Hocking exhibited specimens of recent Imperial and Colonial coins, and a composite medal to illustrate the effect of blows from dies in striking. Mr. Garside showed a proof crown of 1879, and Mr. F. A. Walters a very rare second brass coin of the Empress Domitia, struck at Alexandria. Dr. Evans showed a series of ancient British coins illustrating the gradual degradation of the types.

Mr. G. F. Hill read a paper on a hoard of Roman and British coins found in Hampshire, near the Dorset border. It contained 677 pieces, including 13 Republican *denarii*, dating from the period 172–151 B.C. to Octavian; two *denarii* of Tiberius and Vitellius; 21 *asses* from Claudius to Hadrian; imitations, made in Gaul or Britain, of *denarii* and *asses*, including two of Julius Cæsar and Vitellius evidently by the same hand; 83 silver and 206 copper British coins of the usual S.W. type; 9 silver British of another known type; 1 silver and 1 copper coin of a type hitherto known to occur only in the Channel Islands; 2 blanks for striking coins; and—the special feature of the hoard—over 300 cast copper coins showing the final degradation of the native British type, the head on the obverse being represented by a Y-shaped object accompanied by pellets, the horse on the reverse by an arrangement of pellets. Some 40 varieties of this type were distinguishable in the hoard. Previous finds have shown that the struck copper coins, from which the cast ones were derived, were in circulation to about the end of the first century after Christ. The Roman coins found with this hoard show that the native British coinage, in its final state of degradation, went on to about the middle of the second century.

METEOROLOGICAL.—April 19.—Dr. H. N. Dickson, President, in the chair.

Mr. W. Marriott read a paper on 'Variations in the English Climate during the 30 years 1881–1910.' The warmest months were August, 1899, July, 1900, and July, 1901; while the coldest months were February, 1895, January, 1881, and December, 1890. During the last 14 years the temperature in October was above the average, with only one exception, viz., 1905. On the average April is the month with the least rainfall; and October the month with the heaviest rainfall; while June has the least number of days of rain. The wettest months during the 30 years were October, 1903, and October, 1891; and the driest months were February, 1891, and April, 1893. The years with the heaviest rainfall were 1903 and 1891; and the years with the least rainfall were 1887 and 1893. The wind diagram showed that the prevailing winds were from the south-west and west, but that in April, May, and June north-easterly winds were more pronounced than in the other months of the year.

Two papers by Capt. C. H. Ley were also read, viz., 'The Value of the Two-Theodolite Method for determining Vertical Air Motion' and 'An Automatic Valve for Pilot Balloons.'

MEETINGS NEXT WEEK.

- Mon. Institute of Actuaries, 5.—'Notes on the Insurance Act, 1910, Dominion of Canada,' Mr. T. Bradshaw.
— Royal Institution, 8.—Annual Meeting.
— Surveyors' Institution, 7.—Discussion on 'The Land Clauses of the Finance (1909–10) Act, 1910.' (Junior Meeting.)
— Society of Engineers, 7.30.—'The Protection of Water Supplies,' Mr. H. C. H. Shenton.
— Aristotelian, 8.—'A New Law of Identity,' Miss Constance Jones.
— Institute of British Architects, 8.—Annual Meeting.
— Society of Arts, 8.—'Rock Crystal: its Structure and Uses,' Lecture I., Dr. A. E. H. Tutton. (Cantor Lectures.)
Tues. Royal Institution, 3.—'The Decay of Idealism in France and of Tradition in England,' Mr. J. E. C. Bodley.
— Faraday, 8.—'Hydro-Electric Plants in Norway and their Application to Electrochemical Industry,' Mr. A. Scott-Hansen; 'Electro-Metallurgy in the Steel Foundry,' Mr. Verdon-Cutts; 'Two Simple Forms of Gas-Pressure Regulators,' Mr. E. Stansfield.

- Wed. Archaeological Institute, 4.30.—'The Sculptured Figures on West Front of Exeter Cathedral Church,' Miss E. K. Prideaux.
— Entomological, 8.—'South Africa, and a few Australian Aculeate Hymenoptera in the Oxford Museum,' the late Col. O. T. Bingham.
— Society of Arts, 8.—'Improvements in the Transport and Distribution of Goods in London,' Mr. A. W. Gattle.
Thurs. Royal Institution, 3.—'The Optical Properties of Metallic Vapours,' Lecture II., Prof. R. W. Wood. (Tyndall Lectures).
— Royal, 4.30.—'Some Phenomena of Regeneration in Sycon, with a Note on the Structure of its Collar-Cells,' Mr. J. S. Huxley; 'Cancerous Ancestry and the Incidence of Cancer in Mice,' Dr. J. A. Murray; 'Motor Localization in the Brain of the Gibbon correlated with a Histological Examination,' Dr. F. W. Mott, Dr. E. Schuster, and Prof. C. S. Sherrington; 'Immunization by means of Bacterial Endotoxins,' Dr. R. T. Hewlett.
— Linnean, 8.—'On John Vaughan Thompson and his Polyzoa, and on Vautonthompsonia, a Genus of Sympoda,' Rev. T. R. Stebbing; 'On Polytrema and some Allied Genera,' Prof. S. J. Hickson; and other Papers.
— Chemical, 8.30.—'The Constituents of Bryony Root,' Messrs. F. B. Power and C. W. Moore; 'Note on the Action of Hydrogen Dioxide on Thiobenzanilide,' Messrs. H. Leete and E. de B. Barnett; 'Purification of Acetic Acid,' Mr. K. J. P. Orton, Miss M. G. Edwards, and Mr. H. King; and other Papers.
— Society of Antiquaries, 8.30.
Fri. Royal Institution, 9.—'New Organic Compounds of Nitrogen,' Prof. Martin O. Forster.
Sat. Royal Institution, 3.—'William Morris; or, The Craftsman and Art,' Prof. Selwyn Image.

Science Gossip.

SIR ISAAC PITMAN & SONS have in hand a pocket volume for students and collectors entitled 'British Ferns.' The author, Mr. F. G. Heath, treats of all the native species and their habitat. The book is fully illustrated.

THE same firm are publishing immediately for Mr. John Ernest Hodgson, Manager of the Ashanti Rivers and Concessions, a work on 'The Dredging of Gold Placers.'

THE BOMBAY NATURAL HISTORY SOCIETY is endeavouring to obtain funds to carry out a zoological survey in India, Burma, and China. It is stated that no systematic collection of the animals of India has ever been made, except in certain parts of the country by Hodgson, Horsfield, Elliot, Sykes, Jordan, and Blandford, and the latest of their efforts is already forty years old. The comparatively small sum of 30,000 rupees (2,000*l.*) is needed, and of this one-fourth has already been promised. If the amount is raised, two or more trained collectors can be employed on the work.

WE note the appearance, as a Parliamentary Paper, of the Report of the Astronomer at the Cape of Good Hope for 1910 (post free 1½*d.*).

THE death of Prof. T. Rupert Jones in his 92nd year has removed a geologist who linked in a marked manner the present with the past. As far back as 1850 he became Assistant Secretary of the Geological Society, and for many years edited its *Journal*, thus laying the foundation of that wide acquaintance with geological literature for which he became distinguished. As Professor of Geology at the Royal Military College at Sandhurst, and afterwards at the Staff College, he acquired, by his consideration towards the younger men and his genial nature, much popularity as a teacher. Such leisure as he could spare from a busy life he devoted to the study of fossil Entomostraca and Foraminifera, on which he was recognized as a high authority. Prof. Jones also took special interest in the geology of South Africa, even at a time when its gold and diamonds were virtually unknown.

THE DIRECTOR OF THE PARIS OBSERVATORY (Dr. Baillaud) presented his *Rapport Annuel* for 1910 to the Conseil on February 3rd. Great regret is expressed at the death of M. Lévy, a member of the Council (elected on it in 1891), and of the distinguished astronomer M. Leveau, of whom a notice has appeared in *The Athenæum*. Mention is made of a change in the staff, M. Giacobini

having been transferred from Nice to Paris, whilst M. Schaumasse has taken his place at Nice.

THE work of the great meridian circle has been continued with accustomed regularity (except in so far as the unusually persistent rains interfered with the observations) under the superintendence of M. Boquet; and that of the garden meridian circle under the charge of M. Renan. The sun, the moon, and the large planets have been kept under observation; the special work on stars has been applied to those needed for reference in the photographic atlas of the heavens. Many circumpolar and other stars were observed with the great meridian circle in the daytime. A loss in that department occurred in December through the removal of M. René Baillaud to the Nice Observatory. Several improvements have been made in the instruments for the longitude service, and it is intended shortly to exchange signals between Paris and Bizerte, on the north coast of Tunisia.

PHOTOGRAPHY has been pursued, chiefly experimentally with the equatorial *coudé*, under M. Puiseux; whilst the equatorials of the upper terrace and the department of meteorology have been superintended by M. Bigourdan, special attention having been given to the comets of Halley and of Faye. Spectroscopical and photometric work has been actively continued under the immediate charge of M. Hamy; but in this also the bad weather was unfavourable during a great part of the year. The Paris section of the photographic chart of the heavens is virtually completed: in the discussion of the plates several proper motions of stars have been detected, and two small planets have been discovered. Many important calculations have been made and investigations published during the year by members of the staff of the Observatory, most of which have appeared from time to time in numbers of the *Comptes Rendus de l'Académie des Sciences*.

THE death is announced of Dr. François Joseph Charles Terby, F.R.A.S., which took place at his native town, Louvain, on the 20th ult. in the 65th year of his age. He had devoted himself principally to planetary observations, particularly of Mars, on which he published in 1875 a separate work, 'Aréographie, ou étude comparative des observations faites sur l'aspect physique de la planète Mars depuis Fontana (1636) jusqu'à nos jours (1873).' He also studied Venus and Jupiter closely and supported Schiaparelli's view respecting the long period of the rotation of the former. He diligently followed the great comets of 1874, 1881, and 1882, and was also a careful observer of meteors, auroræ, and meteorological phenomena generally.

WE regret to notice the statement by Prof. Pickering, Director of the Harvard Astronomical Observatory, in his annual report that it will be necessary to abandon the work at Arequipa, Peru, for lack of funds.

THE moon will be full at 6h. 10m. in the morning (Greenwich time) on the 13th prox., and new at 6h. 24m. on that of the 28th. She will be in apogee on the evening of the 15th, and in perigee on that of the 28th, when higher spring tides than usual may be expected.

THERE will be a penumbral eclipse of the moon on the morning of the 13th, but in this country the moon will set (at 4h. 7m.) soon after the first contact.

MERCURY will be at inferior conjunction with the sun on the 5th prox., but will be

visible in the morning during the second half of the month, nearly stationary in the constellation Aries. Venus will be brilliant in the evening, moving from the eastern part of Taurus into Gemini, and passing due south of Castor on the 29th. Mars rises earlier each morning in Pisces, and is slowly increasing in brightness. Jupiter is in the western part of Libra: due south at 11 o'clock on the 14th, and at 10 o'clock on the 27th. Saturn is in Aries, and will be in conjunction with Mercury on the 29th prox.

FINE ARTS

THE ROYAL ACADEMY.

(First Notice.)

WE are inclined to wonder, in dealing with the present exhibition at Burlington House, how much longer the opening of that show will continue to be regarded as the principal artistic event of the year, though it has been thus regarded for so long that the idea has become habitual. A line of cleavage is gradually making itself felt between painters of serious intention on the one hand, and exhibitors at Burlington House on the other, and, although the division is not complete, yet again and again of recent years we have seen the Academy in its elections, strengthening itself with the public by choosing an artist who did not belong to the second class. We look forward in the immediate future to the time when the likeliest candidate for Associateship will be found among the artists who never send to the Spring Exhibition, and after these, perhaps, among the men who send, but whose pictures are usually either skied or rejected.

It may seem strange that by this policy of concession the exhibition should not get into touch with the more vital movement of art going on outside, and, indeed, the cynical observer may find ground for criticizing the critic in that the latter systematically depreciates, after their acceptance by the Royal Academy, the same individuals, the same artistic movements, which he admired fifteen years before. To complain of this undoubted fact is to fail to realize the elementary conditions of growth, culmination, and decline, to which schools and individuals alike are subject. Nothing in the world stands still for long, and the Academy, by waiting till a painter or a movement is universally accepted before offering its support, finds itself too often the patron of a spent force.

Mr. Sargent has been an exception to the law of inevitable change, maintaining in his portraits an astonishing level of excellence for an unusual period of years. We have found them latterly, however, somewhat mechanical and perfunctory in their accomplishment, and *The Archbishop of Canterbury* (206) suggests that the painter has now reached the limit of his endurance, and that the art of literal presentation, which he had carried frequently to such a high pitch of photographic perfection, interests him no longer. His hand is tired—his interest flags, nor do we doubt that this lapse of interest is largely due, not to any decrease of vitality, but to a transference of energy to another sphere. We do not refer to the landscape paintings which, much admired as they are, reveal the same photographic outlook which makes his later portraits

by comparison, uninspired. *A Waterfall* (94) is vividly literal, but undistinguished; *The Loggia* (545) is no better, though as a *morceau* the foreground figure is of unusual reticence and charm. To produce such photographs of nature is not essentially different from doing photographic portraits, though a certain variety of subject—more apparent than real—together with the pleasanter conditions under which the work is done, may give it the appearance of fresh inspiration.

In his essays in decoration, on the other hand, Mr. Sargent grapples with fresh difficulties, and we take it as of good augury that he should be giving more attention to such work rather than repeating what are by now habitual successes. There is a general reluctance to attach great importance to this decorative work, due in part to the taste for packing away a painter into a mental pigeon-hole in which he is expected to remain, and the disposition to regard the highest artistic powers as Heaven's gift to genius, not to be acquired by study—in part also to the fact that such pictures (this of Mr. Sargent's in particular) do not look their best in these exhibitions, while the knowledge of decoration which might enable one to make allowances for changed conditions is absent.

Yet to the sympathetic critic the power and promise of *Armageddon* (482) are surely at least as evident as its shortcomings. No other figure painting on the walls shows a like control, or, indeed, any noticeable control, of plastic design. Doubtless it will be singled out for reprobation as chaotic, yet in fact, it is a better-knit composition than any other in the exhibition. The subject, and not the treatment, is chaotic—purposely, yet in one or two particulars unfortunately so. We are not informed of the destination of this lunette, but we are inclined to regard it as a part of a ceiling composition. Whether it is thus to be regarded as on a horizontal plane or, as now shown, on a perpendicular, the architectural fragments are puzzling. We cannot tell whether they are supposed to be stationary or tumbling headlong, like the chariot and its late occupants. To paint at all a pair of figures and a chariot and two horses falling upside down through space seems almost an outrage to a public trained to regard painting as a literal record of obvious facts, and apt to resent anything like imaginative power. Certainly we admit that the painting would have gained either by a more reserved and abstract method of presentment, or, if realism must be, by a more vehement characterization of the figures. The painter's realistic training clings to him somewhat unfortunately in his dealing with the accessories. Thus in painting the falling tripod the thing of paramount importance was surely to maintain it beneath the shadow of the falling horse, which combines with the arch of figures to make so finely vault-like an impending mass. The second horse, again, to the spectator's right is insufficiently formalized—the contour breaking up into many and ineffective angles which make the creature obtrusive by sheer diffuseness. A certain insistence on trivialities interferes with the impressiveness of what is, after all, a sustained and coherent effort of the imagination such as we cannot find elsewhere in this year's exhibition. The fact that it is a close-packed composition, perfectly suitable as a filling to contrast with flat spaces elsewhere in a ceiling, does not make it a pleasurable thing to come upon in an already crowded picture gallery. Inevitably, it is a picture with large open spaces, which here are a relief, just as in the

Arena at the Albert Hall an open composition looked meagre and unfurnished in surroundings which sated the desire for space. Mr. Sargent's composition is well distributed, however, and as part of a scheme with a due foil of flat spaces might probably satisfy the demand for restfulness as a decorative quality.

By their response to this demand Mr. Stott (*Hagar and Ishmael*, 181) and Mr. Clausen (*From my Window in the Small Hours*, 268) are welcome contributors; both picture show imagination of the receptive rather than constructive order, which public opinion accepts less doubtfully than a decorator's rhetorical unreality. Mr. Stott's picture, delightful in quality, suffers somewhat from the vague draughtsmanship of the figures, which shirks any clear statement as to the direction of the light. Mr. J. W. North's *Dead Heron* (2) is another example of delicate charm of a more artificial kind. Fancy also rather than imagination is the quality of Mr. Charles Sims's terrace scene (174), wherein the cupid is surely a perfunctory addition introduced for no artistic reason. This pretty picture suffers somewhat by comparison with the more scholarly standard maintained in the picture above it, No. 175, *A Room at Twilight*, by Mr. J. H. Lorimer, whose subtle execution is here pushed to perfection. No more than Mr. Stott is Mr. Lorimer a powerful figure draughtsman, and the absence of figures from this interior is not entirely regrettable. It leaves the logic of his illumination the more perfect because freed from a certain trick of finishing up the contours of his personages which he seems to find necessary for their characterization. A similar sensitiveness to natural lighting was some years back one of the chief beauties of the work of Mr. Sims. The imaginative exercises with which at first he so charmingly enlivened our exhibitions made him almost necessarily less exacting in this respect. As his inventions become yearly more flimsy and incoherent, we are disposed in increasing degree to regret the departure which first we welcomed: his largest work, *Legend* (221), is with one exception the most disjointed he has yet produced, a mere medley of unrelated objects, some of them dexterously painted. In compactness of design, as in logic of illumination, the standard in the Academy is so fatally lax that membership is dangerous to an artist. Mr. Orpen's *Claude E. S. Bishop, Esq.* (771), is sturdy enough, but then he is new to the debilitating atmosphere for which the critic almost unconsciously finds himself making allowances.

OTHER EXHIBITIONS.

MR. MAX BEERBOHM's caricatures at the Leicester Galleries are clever and amusing, but do not fulfil the promise of artistic development of a couple of years back. The best drawings exhibited are those that have been already shown. The portrait of Mr. Balfour with the militant Tariff Reformer might be singled out as an exception. Mr. Seymour Hicks and Sir Gilbert Parker are less subtle in their delineation. The fact that Mr. Beerbohm handles them with something less than his usual gentleness does not make, however, for ineffectual caricature.

Mr. Nelson Dawson's water-colours of the Alps, shown at the same galleries, are not so subtle as his pictures. In the attempt to introduce many details he loses continuity of line and in the sequence of his tones.

At the Baillie Gallery an extraordinarily fine Chinese screen, whereon the draughtsmanship is sustained throughout at a high pitch of perfection, makes it difficult to accommodate oneself to the lower level of the contemporary European work alongside of it. Miss Anne Estelle Rice and Mr. Rupert Bunny are both painters of some ability. The former is inclined to attach undue value to violence of pitch, which is occasionally, however, as in Nos. 3, 5, and 11, allied to some observation of values. The latter hampers himself by the repetition of a narrow range of subject-matter of which he seems somewhat tired.

Mr. Eli Nadelman contributes to Mr. Paterson's Gallery a perfectly sound elementary statement of artistic principle, and a number of works in marble possessing the qualities of symmetry and largeness of scale in details which are certainly valuable in plastic art. The examples are somewhat deficient, however, in grasp of anatomical structure, and expressed throughout in forms of an excessive roundness which does not make for direct carving.

ARCHÆOLOGICAL NOTES.

THE excavations at Telloh begun by M. de Sarzec, and carried on with much skill and success by his successor, M. le Commandant Cros, continue to yield important results for the early history of Babylonia, and the instalment of *Nouvelles Fouilles de Tello* just published is most interesting. Among the objects found in 1904-5 recorded here was the inscribed statue of a dog made "for the life" of Sumu-ilu, King of Ur, whose date Mr. King puts somewhere between 2150 and 2100 B.C. There was also a cylinder seal in white marble made "for the life" of King Dungi some two centuries earlier, showing the god Ningishzida, with bare head, long curling hair and beard, seated on a throne consisting of an extraordinary animal which M. Toscanne, commenting upon it in the *Recueil de Travaux*, described as a dog, but which looks more like some species of feline with a much elongated neck like that found on the slate shields of the Egyptian king Nar-mer. The identity of this quadruped, which is certainly neither camel nor giraffe, and which has not the prick-ears of the Somaliland gazelle found on another Egyptian slate of something like Nar-mer's date, is more puzzling than ever. The god on the cylinder in question has two wavy lines terminating in barbed points like a harpoon springing from his shoulders, which M. Toscanne took for serpents, and which, according to him, represent thunder; while an inscription in two columns narrates that the cylinder was dedicated to Ningishzida the king by Nig-kalla, keeper of sheep. The cylinder is now in the Louvre.

In the April number of the Royal Asiatic Society's *Journal* is a paper by the Honorary Secretary, Dr. J. F. Fleet, on the Kaliyuga Era of B.C. 3102, which clears up several misunderstandings. Dr. Fleet tells us that the idea lately put forward that this is a real historical era, founded in Vedic times and actually in use from B.C. 3102, is erroneous, and that "the reckoning is an invented one, devised by Hindu astronomers for the purposes of their calculations some thirty-five centuries after that date." He also shows that Kaliyuga means simply the Iron Age, and forms the last (and worst) of the four ages in the Hindu system of cosmical periods, following upon the Golden,

Silver, and Brazen Ages respectively. This, it will be noticed, is in fair correspondence with the tradition recorded by Hesiod and the "Orphic" poets, although they made the series longer by inserting an age of "heroes" between the Brazen and Iron Ages. The peculiarity of the Hindu system is that the "Ages," instead of being indefinite in length as among the Greeks, begin with a period of 432,000 solar years for the Iron Age, and go back, by a kind of arithmetical progression, until they reach the figure of 1,296,000 years for the duration of the Golden Age, showing, as Dr. Fleet says, that the general conception of the Hindus supposed "a graduated deterioration of religion and morality and shortening of human life." Although this conception seems to have been traditional in India some time before the reign of Asoka, who alludes to it in his inscriptions, Dr. Fleet thinks that the calculations upon which the beginning of the era was based were not made till the introduction of Greek astronomy into India, which he puts at a period between 350 and 400 A.D. All mystical notions founded upon the supposed antiquity of Hindu chronology therefore fall to the ground.

In the current number (Janvier-Février) of the *Revue de l'Histoire des Religions* appears an article by M. Eugène de Faye on the formation of the Christian idea of the Deity in the second century of our era, which is written with a great deal of insight into the religious history of the time. In it is shown, step by step, how the wild notions of the Gnostics then current forced the Fathers of the Church to define and formulate their idea of God, and thus to get further and further away from Judaism on the one hand, and from Hellenism on the other. This was the more necessary because, as he says, the Apostolic writers, such as Clemens Romanus, the author of 'The Shepherd' of Hermas, Barnabas, and Ignatius of Antioch, were all of them "men of the people," entirely untrained in philosophy or dialectic, and having at best but a very misty notion of a few of the teachings of Plato and other Greek philosophers which had then passed into daily use among the learned. This was the more timely, because it was at the beginning of the second century, according to Dr. Harnack and other "moderns," that the Christian Church abandoned the belief in the nearness of the Parousia, or Second Advent, and set herself seriously to work to organize her followers with a settled form of government. One is not sure that everybody will agree with M. de Faye when he says that the conceptions of the Fathers about God differed most amazingly from each other, and that the one feature that they had in common was monotheism, or the reference of everything to one common source. Yet his article is well worth reading in this as in other respects, and brings out clearly the capital part played by the Gnostic sects in acting, as Renan said, as a bridge by which the world passed from heathenism to Christianity without knowing it.

Another important contribution to the history of religions is to be found in the number of the *Journal* quoted above, in the shape of a translation, by Dr. A. von Le Coq, of the prayer entitled "Khuastanift" found by Dr. Aurel Stein at Tun-huang in 1909. This is the first document of the Manichæan faith which has come down to us direct from the sect itself, instead of being reported to us by the pens of adversaries, who had no idea of giving a fair or impartial rendering of their opponents' tenets. Its accuracy is also in part guaranteed by the existence of a copy written in the Uighur character, now in St. Petersburg, which has

been published in German by Prof. Radloff under the title of 'Chuastuanit.'

The prayer was written for recital by the "auditores" or "hearers" of the Manichæan community, who occupied, as is known otherwise, an inferior but highly advantageous position in the sect, being free from most of the austerities practised by the "Perfect" or full members of the Manichæan Church, and being besides at liberty to make outward profession of any other religion they pleased. The prayer is, in effect, a confession which they were called upon to recite of all the sins that they may have wittingly or unwittingly committed, and asking for pardon with a refrain which Dr. von Le Coq translates "Remit my sin!" In the course of it we get light upon some hitherto obscure points in the Manichæan theology, particularly with regard to what is here called the "Five-fold God" or Heavenly Man, who forms a sort of mediator between mankind and the First Cause of Good. We also learn from it that besides the Perfect and the Hearers, there was a still higher order in the Manichæan Church called "the Masters," which the author of the paper apparently considers a body of clerics like the Sacred College of Cardinals in the Roman Catholic Church, and as set over the seventy-two Manichæan bishops. It is to be hoped that the translation of other of the Manichæan documents found in Chinese Turkestan by the many scientific missions which have lately visited it may follow.

Not altogether unconnected with this is M. Salomon Reinach's article on 'La Tête Magique des Templiers' in the number of the *Revue* above quoted. Here the ingenious Secretary of the Académie des Inscriptions develops at great length his theory, previously mentioned in these Notes, that the legend of the Baphomet or idol of the Templars was in effect but the echo of an earlier story told in Walter Mapes's book 'De Nugis Curialium,' written in England between 1182 and 1190. Mapes records that a pirate of Constantinople found in a tomb the original head of Medusa which petrified all who looked upon it, and that, by reason of the power conferred by its possession, he married the daughter of the Byzantine Emperor, who, learning the secret, ordered both her husband and his terrible head to be thrown into the sea, where it formed a whirlpool known as the Gulf of Satalia. This, as M. Reinach says, is manifestly a survival of the legend of Perseus, which at the time of the Templars' downfall must still have been current in the islands of the Mediterranean. From this he draws the rather inconsequent conclusions that travellers from the East told of knights in possession of a magic head giving riches and power to its possessors, identified these knights with the Templars, and converted the head into an idol worshipped by them because they were suspected of being secretly converted to Islam. It may be so; but to some of us it will seem as if the mystery, if any there be, surrounding the fall of the Order and its Baphomet were not yet dispelled.

The current number of the *Annals of Archaeology* published by the University of Liverpool is rather a thin one, but contains an interesting paper by Dr. T. Ashby on Lampedusa, Lampione, and Linosa, three little-known islands in the Western Mediterranean, which have just been visited by him on behalf of the British School at Rome. He found many signs that the first-named of these was inhabited in prehistoric times, a considerable number of Punic tombs containing pottery, and buildings belonging

to the Roman period. The sponge fishers now dwelling upon it frequently bring to light Roman antiquities, but these do not necessarily come from the Roman occupation, as they may just as well have come from wrecks. But there is a chapel of the Virgin there which is said to have been used by both Christians and Turks in the Middle Ages, the priest in charge having been willing to profess either religion to suit the taste of his visitors. The Turks also had a legend that if anything was stolen from it, the thief would be unable to leave the island until he had returned it; and further, that fearful apparitions were sometimes seen there. Altogether it looks as if some traces of a pre-Christian religion may have lingered on the island, and it would be curious to investigate these further. No place, perhaps, was so likely to escape the inquisitors of Justinian and other Christian emperors anxious to destroy the relics of their predecessors' faith.

The English excavations in Egypt have not this season met with much success, the exception, so far as appears, being those which Mr. Howard Carter has been conducting on behalf of Lord Carnarvon at Thebes, where a large quantity of gold and other jewellery has again been discovered. The Egypt Exploration Fund's work at Abydos under Prof. Naville has produced but scanty results, and these, by arrangement with the American subscribers, will all go to the United States, where an exhibition of them will be held, probably at Boston. Prof. Garstang has been fairly fortunate at Meroe, and looks forward to an exhibition to be held probably at the Society of Antiquaries' rooms in July, on the lines of last year's show.

The Royal Asiatic Society have been in trouble about the termination of the lease of their premises in Albemarle Street, and have been looking for a house elsewhere. After a committee had examined several other sites, however, arrangements were found practicable which will probably result in their staying where they are. The necessity for some centre like the *Hôtel des Sociétés Savantes* in Paris, where learned societies can obtain a large meeting-room to be used in turn, together with smaller offices where the secretarial work of each society can be carried on, becomes more pressing every year.

SALES.

MESSRS. CHRISTIE sold last Saturday the following drawings: T. S. Cooper, 105*l.* T. M. Richardson, 'The Castle of Graffenburg, Moselle, 105*l.* Mr. Dendy Sadler's picture, 'Over the Nuts and Wine,' fetched 304*l.*

The same firm sold on Wednesday last the following engravings. By C. Méryon: *Le Pont au Change* (W. 18), first state, 94*l.*; *L'Abside de Notre Dame* (W. 22), second state, 86*l.* Miss Kerr Gordon, 'Angels' Heads,' after Reynolds, by P. Simon, printed in colours, 152*l.* Louisa, by and after W. Ward, printed in colours, 115*l.* Drawings: W. Hamilton, *Bat, Trap, and Ball*; and *Blowing Bubbles*, with an engraver's proof of the latter by Gauguin, 194*l.*

The following coins and medals were included in Messrs. Sotheby's sale of the 20th and 21st inst.: George IV. Pattern Crown by Mills, 14*l.* 5*s.* Military General Service Medal, Chrystler's Farm, 17*l.* 10*s.* The Afghan Medal, 17*l.* Henry IV. Quarter-Noble, 14*l.* Among the numismatic books was Cohen, *Description historique des Monnaies frappées sous l'Empire Romain*, 8 vols., 1880-92, 26*l.* The total of the sale was 1,187*l.* 8*s.*

Fine Art Gossip.

The Burlington Magazine for May has two coloured plates of some recently discovered mural paintings in a church at Pedret in Catalonia, with some interesting notes describing them by Señor Pijoan. Mrs. Hungerford Pollen, an authority on the subject, discusses 'Early Design in Lace,' illustrating some beautiful specimens from her own collection. Mr. A. M. Hind writes on Piranesi, some reproductions being given from rare plates of the "Carceri" recently acquired by the British Museum. Mr. Veitch concludes his series of articles on Sheffield Plate with a discussion on the Device Mark period; and Mr. G. Simonson has a note on a newly discovered picture by Guardi of a gala ball at Venice, which will be seen at the Burlington Fine-Arts Club exhibition. The editorials deal with the King Edward memorial, and the loss of Lord Lansdowne's Rembrandt.

THE FITZWILLIAM MUSEUM, which has within the last two years received gifts of portraits of Browning and Swinburne by Rossetti, of Rossetti by himself, and of Edward FitzGerald by Spedding, has just acquired by gift from the trustees of the late Sir Charles Dilke a portrait of Keats by Joseph Severn. It has also acquired, through the Friends of the Fitzwilliam, Blake's 'Vision of Queen Katharine,' an illustration to Shakespeare's 'Henry VIII.' which was among Sir Charles Dilke's pictures recently sold at Messrs. Christie's.

MR. C. H. LEE writes:—

"In the article on the eighteenth-century English pastels in Paris (April 15th) there is a paragraph which conveys a somewhat doubtful meaning.

"After alluding to a good many of the artists represented, your correspondent goes on to mention that there are 'ten portraits by Francis Cotes, and sixteen by John Downman. The "Portrait of Mrs. Harry Linton," of 1785, is interesting, but lacks the charm seen in the art of his uncle Thomas Gainsborough."

"Whose uncle is here referred to? The context would lead one to suppose that John Downman was T. Gainsborough's nephew, which he certainly was not."

For the celebration of the Imperial Coronation at Delhi the Museum of Archaeology in that city, which at present occupies rather cramped quarters within the Fort, is to be transferred to a more commodious building outside, and great efforts are being made to augment the present collection with loan exhibits of historical and archaeological interest. These will relate especially to Moghul rule, and it is hoped that the collection will offer an interesting means of studying the Court and private life of the old emperors.

THE forthcoming exhibition in Paris of the works of Ingres, to which reference has already been made in this column, is expected to include the portrait of Louis Philippe at Wood Norton: the artist's own portrait, and that of Bonaparte as First Consul will be lent from Liège; and that of Napoleon as Emperor from the Musée de l'Armée.

THE LOUVRE has recently obtained a terra-cotta bust of Madame Favart, the well-known eighteenth-century actress, by J. B. Defernex.

M. AUGUSTIN MONGIN, the French etcher who won the Médaille d'Honneur at the Salon of 1901, died last week at Châtillon-

sous-Bagneux. He was a pupil of Léon Gaucherel, and had been a regular exhibitor at the Salon since 1874, when he sent an etching of Meissonier's 'L'Ordonnance.' He was born in Paris in 1843, and was at one time president of the Société des Aquafortistes. He was a prolific worker, and among his best known renderings are those of Munkacsy's 'Christ before Pilate' and Alma Tadema's 'Death of the First-born.'

THE Spanish correspondent of *L'Art et les Artistes* states that three new works by Goya have been added to the Prado Museum—two portraits of Charles IV. and one of his Queen, Marie Louise. Though not to be reckoned among the artist's best, they form nevertheless an interesting addition to the royal portraits in the Museum.

THE same writer alludes to Señor José de Arma's attempt to prove that the Prado possesses the original of the 'Mona Lisa,' and states that the Director of the Museum, who apparently is not of this opinion, is dealing exhaustively with the question in a forthcoming article. Señor de Arma's theory aroused considerable attention at the time in Italy, though it seems incredible that it should ever have been taken seriously. Numerous versions of the 'Gioconda' are known to exist in museums and private collections, but not one, including the example at Madrid, approaches the Louvre portrait.

AN interesting series of portraits by Hans Asper (1499-1571) are now exhibited in the new Museum at Zurich. Many of them are admirable examples of this vigorous master's work, and show how closely he followed Holbein.

Two allegorical statues by the Milanese sculptor Tommaso della Porta, 'Fides' and 'Religio'—fragments of the tomb of Pope Paul IV.—have not long since been placed in the passage leading to the sacristy in the church of S. Maria sopra Minerva, Rome. They have recently been photographed by Anderson, and are reproduced in the *Cicerone* (Heft 5) by Dr. Steinmann.

THIS writer gives some interesting information relating to other churches in Rome. The cloisters of S. Paolo fuori le Mura, the work of Pietro di Capua (1220-40), have been restored, and the statue of Boniface IX. of c. 1400, the authorship of which is much disputed, has been placed there. Trecento frescoes have been discovered in the church of the Quattro Coronati; and beneath the floor of S. Crisogono, the original church has been found, with paintings and sarcophagi comparatively intact. The excavations, which extend to a great depth underground, are being carried on by electric light. It is satisfactory to learn from Dr. Steinmann that the windows recently placed in the Sistine Chapel—a gift from the Prince Regent of Bavaria to the Pope on the occasion of his Jubilee—harmonize well with their surroundings.

THE celebrated Bossard Collection at Lucerne, with its many rare and choice examples of goldsmith's and silversmith's work, is to be sold at Munich at the end of May. The *Cicerone* (Heft 8) gives a short account of some of the chief treasures collected by Herr Bossard (himself a goldsmith of distinction) in the last thirty years of the nineteenth century.

MR. JAMES STARK FLEMING is publishing with Mr. Alexander Gardner of

Paisley an elaborate quarto on "The Ancient Castellated Structures of Ireland." It will include 400 illustrations of drawings by the author.

EXHIBITIONS.

- SAT. (April 29).—Royal Academy Summer Exhibition.
 — Mr. Simon Bussy's Pastels of Italy, the Riviera, &c., Goupil Gallery.
 — Contemporary Works of Art chosen by the Hon. Neville Lytton, Carfax Gallery.
 — Miss Helen Donald-Smith's Water-Colours of Venice and London, Dowdeswell Galleries.
 — Hawkshaw Collection of Japanese Kozuka and Japanese Paintings by Kwason, Seitei, Koson, Konen, and Koko, Dudley Galleries.
 — Mr. Baragwanath King's Water-Colours of Bonnie Scotland, Mount Street Galleries.
 — Mr. William Nicholson's Paintings, Goupil Gallery.
 — Pictures of Devon by Bertram Nicholls, and Studies of Children by Garnet Wolseley, St. George's Gallery.
 — Mr. Frank Short's Mezzotints, Rembrandt Gallery.
 — André Wilder's Pictures, Stafford Gallery.
 MON. Mr. Tom Simpson's Water-Colours of Cornish Scenery, Press View, Victoria Galleries.
 TUES. Alpine Photographs, Press View, Alpine Club, 23, Savile Row.
 WED. Mr. Arthur Meyrick's Water-Colours, 'By Land and Water,' Private View, Modern Gallery.

MUSIC

THE WEEK.

COVENT GARDEN.—*Lakmé. Samson et Dalila. Rigoletto.*

THE season at Covent Garden opened last Saturday evening with Delibes's 'Lakmé,' a work which was given at the Gaiety Theatre in 1885, but not heard at the opera-house until last year. There are two songs in it, the 'Légende' and the "Bell" song, which appeal to soprano singers with flexible, high voices. The opera was revived last year for Madame Tetrassini, who again appeared in it on Saturday, and with success. In the second act, by far the best of the three, there is dainty ballad music, while certain touches show that the composer possessed dramatic instinct; his individuality, however, was not strong enough to produce a really interesting work. Of Gerald and Nilakantha, the lover and the Brahmin priest, Messrs. John McCormack and Edmund Burke gave effective impersonations. Signor Panizza conducted.

On Monday another French opera was performed, namely, 'Samson et Dalila,' by Saint-Saëns. The success obtained by this work when given here for the first time in 1909 has been steadily maintained. When it was produced at Weimar in 1877 the composer was accused of Wagnerism, though the traces of that influence are not deep. Moreover, it was not of long duration; Saint-Saëns, as is fully shown in a chapter of his 'Portraits et Souvenirs' never became a disciple of the Bayreuth reformer. 'Samson' is one of his finest works, and the clear and clever writing, the restrained yet attractive orchestration, and the melodic charm of the Dalila music fully account for its popularity.

The rendering of the work on Monday was excellent. Madame Kirkby Lunn and M. Dalmorès impersonated Dalila and Samson with skill and convincing power. Signor Campanini conducted.

On Tuesday evening Madame Tetrassini appeared as Gilda in 'Rigoletto,' and, although her voice was not in the best order, she sang extremely well. Madame Kirkby Lunn was the Maddalena; Mr. John McCormack as the Duke achieved a legitimate success; while Signor Sammarco was forcible as the Jester. Signor Panizza was the conductor.

BECHSTEIN HALL.—*Senhor da Motta's Bach Recital.*

A WHOLE pianoforte recital dedicated to Bach was given by the excellent Portuguese pianist Senhor Vianna da Motta last Saturday afternoon. The only other instance we can name of a similar kind is the series of recitals of the whole of the '48' by Charles Hallé many years ago. Senhor da Motta interprets Bach not only as if he understands the music, but also as if he loves it. He first played the Partita in E minor, but the selection of Preludes and Fugues from the '48' which followed, being probably more familiar, made a stronger appeal. They were all presented with admirable skill and rhythmic life. There were, however, a few touchings-up which disturbed our enjoyment. The programme included the wonderful 'Goldberg' Variations.

THE SHEFFIELD FESTIVAL.

THE Triennial Festival opened on Wednesday morning with 'The Messiah,' while Bach will be represented by his Mass in B minor and the 'Matthew' Passion. Sir Henry Wood, the Festival conductor, has been his own chorus-master, so that the performances ought to be specially good. This, we believe, is a new departure, and only an earnest musician like Sir Henry would have undertaken the double duty. There is no question that festival choirs must feel the change from choirmaster to conductor, while the latter, however gifted, has only limited time, at the final rehearsals, to give finishing touches, and establish mutual understanding between choir and orchestra.

Of the performance of 'The Messiah' it will only be necessary to say that it served to show the excellence of the Festival choir, both as regards quality of tone and balance between the different voices. The singers were Miss Agnes Nicholls, Miss Phyllis Lett, and Messrs. Ben Davies and Frederick Austin.

In the evening was performed, for the first time in England, 'Ruth,' a sacred cantata by Prof. Georg Schumann, conductor of the Berlin Singakademie. It was originally produced at Hamburg in December, 1908. The story of Ruth lends itself well to musical treatment, and the composer, who prepared his own libretto, introduced scenes which bring about contrast and animation, such as 'In the Harvest Field,' with its bright, secular Chorus of Reapers; and the

fantastic, clever Chorus of Nocturnal Spirits in the following section.

In his cantata Prof. Schumann seems halting between two styles: the old and the new. The former is evidently the one in which he was brought up, but as an intelligent musician he has refused to ignore what is going on around him at the present day. Now and again the mixture of styles is disturbing. Old forms of melody and old cadences ill assort with the *arioso* and dramatic recitatives. This transitional stage will do the composer no harm if he presses steadily forward. We say "if" because at times he seems sinning against his better self; in other words, he seems consciously making concessions to public taste.

Judicious use is made of representative themes. The music is sometimes reminiscent. One phrase, indeed, is mentioned by the analyst on account of its striking similarity to one in 'Tannhäuser.' We almost think that it is intended as a quotation. The orchestration is often very effective, yet at times the music sounds too heavily scored. It is an unequal work, though on the whole decidedly interesting.

An excellent performance was given under the direction of Sir Henry J. Wood; and the soloists (Madame Agnes Nicholls, Madame Kirkby Lunn, and Messrs. Thorpe Bates and Robert Radford) rendered all justice to their respective parts. The choral singing was bright and intelligent.

Musical Gossip.

AT the tenth concert of the London Symphony Orchestra at Queen's Hall on Monday, May 15th, the programme will include a new Symphony by Dr. Walford Davies, also Mr. Joseph Holbrooke's Poem, No. 5, 'Queen Mab.'

MISS MARIE BREMA, having received many applications from persons anxious to obtain experience of choral and dramatic work, has decided to found the Marie Brema Orpheus Society for the rehearsal of plays and short operas. A public performance is to be given each term.

PERFORMANCES NEXT WEEK.

- SUN. Concert, 3.30, Royal Albert Hall.
 — National Sunday League Concerts, 3.30 and 7, Palladium.
 7, Queen's Hall.
 MON.—SAT. Royal Opera, Covent Garden.
 MON. Mr. Fritz Scavinius's Pianoforte Recital, 3.15, Aeolian Hall.
 — Mr. Arrigo Scrato's Violin Recital, 3.15, Bechstein Hall.
 — Miss Alice Verlet's Vocal Recital, 3.15, Queen's Hall.
 — Miss Vera Brock's Pianoforte Recital, 3.15, Aeolian Hall.
 — Miss Lois Barker's Concert, 8.30, Steinway Hall.
 — Miss Gladys Honey's Vocal Recital, 8.30, Bechstein Hall.
 TUES. New Symphony Orchestra, 3, Queen's Hall.
 — Mrs. Ingo Simon's Vocal Recital, 3.15, Bechstein Hall.
 — Miss Rosamond Ley's Pianoforte Recital, 8.30, Aeolian Hall.
 — Miss May Mukle's Orchestral Concert, 8.30, Queen's Hall.
 WED. Ysaye and Pugno's Sonata Recital, 3, Queen's Hall.
 — Mr. William Murdoch's Pianoforte Recital, 3.15, Bechstein Hall.
 — Miss Eva Digby O'Neill's Recital, 3.15, Steinway Hall.
 — London Trio, 3.30, Aeolian Hall.
 — Mr. Theodore Byard's Vocal Recital, 3.15, Bechstein Hall.
 — Miss Edith Walton's Pianoforte Recital, 3.15, Aeolian Hall.
 THURS. Mr. Charles de Souza's Pianoforte Recital, 3, Aeolian Hall.
 — Madame Ernestine Enriquez's Song Recital, 3.15, Steinway Hall.
 — Miss Katharine Goodson's Pianoforte Recital, 3.15, Bechstein Hall.
 FRI. Mr. Paulo Gruppe's Cello Recital, 3.15, Bechstein Hall.
 — Miss Beatrice La Palme's Vocal Recital, 3.15, Aeolian Hall.
 — Miss Mary Dickenson's Violin Recital, 3.15, Aeolian Hall.
 SAT. "In Memoriam" Concert, New Symphony Orchestra, 3, Queen's Hall.
 — Mr. Ernest van Dyck's Lieder Recital, 3, Bechstein Hall.
 — Mr. Ronald Nicholson's Vocal Recital, 3.15, Aeolian Hall.
 — Herr Schonberger's Pianoforte Recital, 3.15, Steinway Hall.

DRAMA

THE WEEK.

PRINCE OF WALES'S.—*Better Not Enquire : a Three-Act Comedy.* Adapted by Gladys Unger from the French of Alfred Capus.

'LES DEUX ÉCOLES' seems to have aged rapidly. It represents a mode with which younger Paris is beginning to be a little impatient, and it comes to London in an English form just at the time when our playgoers have grown rather tired of that sort of farce which has infidelity for its motive and "the surprises of divorce" for its complications. Truth to tell, the mechanism of M. Capus's piece was always rather worn, while its motto—"Whoever the man a woman marries, she must expect to be deceived and had better not ask questions"—expresses a philosophy of sex which is drearily and wearily cynical. It was the style of this witty play which redeemed it and recommended it some years ago, when it was presented over here in its original language—that and the art of its interpreters, Jeanne Granier, Brasseur, and above all the piquant Lavallière.

Now it is just the style which Miss Gladys Unger has missed reproducing in her otherwise admirable and very adroit adaptation. She has compressed four acts into three without any serious damage to such plot as there is. She has preserved, except for certain necessary alterations, the humours of the famous restaurant scene in which the heroine and her divorced husband meet in company with their latest partners, and, comparing the old love with the new, rediscover their former attraction for each other. Further, she has arranged that, while the French names of the characters are kept and the French setting, the situations in which they figure shall seem as appropriate to London as to Paris. But the conventionality of the whole scheme—the impression that the new morals can lend themselves to just as much artificiality of design as old-style sentiment—forces itself on our notice all the more because the Gallic sparkle is absent from the dialogue.

There seems a fashion just now for giving the young girl a chance on our stage. It is a reaction, no doubt, from the practice which invited actresses nearing middle age to assume youthful parts. But reaction may go too far, and it is a mistake, for instance, to cast so talented yet so young a player as Miss Marie Löhr for a character such as Alix Maubrun, who has had seven years' experience of marriage and jealousy. Apart from certain little bursts of emotion, Miss Löhr's is the merest acting, intelligent of course, but never carrying conviction

or suggesting temperament. The naughty Estelle, again, is made pretty and to no little extent seductive by Miss Enid Leslie, but she is rather tame and unreal when compared with the temptress of Mlle. Lavallière. On the other hand, Mr. Charles Hawtrey plays the philanderer and liar with all the careless gaiety and lightness of touch we associate with him, and he obtains a capital foil in Mr. Holman Clark as the solemn official who proposed to take the husband's place in the affections of Alix. Whether any of M. Capus's English interpreters convey an idea of Paris life or types may be doubted, and there are one or two members of the cast who furnish unmistakably British performances. Still, shortcomings notwithstanding, the playgoer may count on a very amusing entertainment at the Prince of Wales's, even though he may vote it a trifle old-fashioned.

CORONET.—*Mr. Robert Arthur's Repertory Company in 'As You Like It.'*

THERE is one great merit about the performance of 'As You Like It' with which Mr. Robert Arthur has opened his stock season at the Coronet, and that is the merit of youthfulness. The members of his company are most of them young and alert, with the result that we get Shakespearian acting of a pace that is agreeably brisk and spirited.

The Rosalind of Miss Alice Crawford sets the fashion, and the actress proves her right, by temperament and talent as well as physical qualifications, to assume the part on which every English actress looks with longing in the heyday of her career. Miss Crawford may miss some of the poetry of the character, may give us a rendering that is rather exuberant than refined; but her Rosalind is a delightfully warm-blooded creature, full of the challenge of sex and of ardent femininity. This heroine is of the most "coming on" disposition; never have doublet and hose seemed less of a disguise than in her case. The intensity which she puts into her share of the mock love scenes ought to have opened the eyes of the dullest of Orlandos. She is, indeed, fathoms deep in love, and cannot help betraying her state by a hundred little tricks of restlessness. Perhaps she is over-much preoccupied with the sentiment of her part, and therefore inclined to do less than justice to that phase of the heroine which is expressed in the indignant protest, "My father was no traitor." Certainly her appeal is frankly and engagingly sexual; she may cry "Woo me! woo me!" to her lover, but it is she who does the wooing, and never more so than when in her bridal robe, all green and flower-decked, she delivers, archly yet simply, the famous epilogue.

In the Orlando of the revival, Mr. Frederic Worlock, Mr. Arthur seems to have discovered a romantic actor of promise. Commended by a picturesque

appearance and an easy if rather too conversational style of diction, he makes a pretty foil to his Rosalind, if only because, while she is all animation and nerves and joyous vitality, he is quiet and dreamy and almost shy. He needs more vivacity, a more ringing declamation, and perhaps also a suggestion of more virility. The Celia of Miss Dulcie Greatwich is seen to best advantage in shepherdess garb; her childishness, though it pleases, hardly suits the princess at Court. The Audrey of Miss Maidie Hope strikes the right bucolic note; and Mr. Ben Field as Touchstone is unobtrusive in his humour and has some capital by-play. A performance which has real distinction is that of Mr. Clifton Alderson as Jaques. Make-up and manner are alike perfect, and his delivery of the Seven Ages speech, as if it were extemporized, is one of the best of recent years. The scenery of the revival is adequate, notably that for Arden Forest, which looks very pretty with its carpet of dried leaves, though this litter rather troubled the dancers in the Masque of Hymen.

OUR LIBRARY TABLE.

Dramatic Values. By C. E. Montague. (Methuen & Co.)—If these notices and papers, reprinted mainly from the columns of *The Manchester Guardian*, are representative of its dramatic criticism, it may be heartily congratulated in that respect. Mr. Montague writes from a definite standpoint—the standpoint which wants to see our drama a vehicle of ideas as well as of emotions; he has thought and felt intensely about the theatre, and pays it the compliment of taking it seriously; he has an æsthetic of his own, and well-considered standards of value; he is exceptionally equipped in scholarship and knowledge of classic and foreign stage-art; and he is the possessor of a pretty and fastidious style. The one reproach to which he lies open is almost inseparable from the enthusiasm of talented youth—he is too much inclined to adopt the pose of the superior person. His writing takes on too often a quality of preciosity, his judgments betray now and then a touch of arrogance. Yet who shall say that an analysis such as his—singularly trenchant and exact, although it is so contemptuous—of the "wholesome play" and its eulogists is not needed in these days, when our theatre seems the refuge of sentimentality and cant and mental indolence? Who can help smiling at the good-humoured irony with which Mr. Montague affects to excuse productions of conventional romances and sham costume-comedies on the ground that they are "fiscal measures" that help to subsidize art, and then with a prick or two bursts these bubbles, looking on the while in mock solicitude? Much can be forgiven to a writer who combines wit with enthusiasm, and never writes commonplace phrases. There is original thought behind his studies of Ibsen and Mr. Bernard Shaw and Synge and Oscar Wilde, and no reviewer in this country has appreciated more happily than he the qualities of Coquelin's art.

The surprising thing about Mr. Montague's book is his silence about that younger school of our drama with which, we may suppose, he is in full sympathy. He has

scarcely a word to say of Mr. Granville Barker or Mr. Galsworthy—indeed, he has hardly an allusion to Mr. Maugham. What is stranger still, he does not reprint a single notice of any of the ventures of Manchester's pet enterprise—the repertory playhouse which is under Miss Horniman's management. Why this policy of suppression?

Oedipus, King of Thebes, by Sophocles. Translated into English Rhyming Verse, with Explanatory Notes, by Gilbert Murray. (George Allen & Sons.)—Prof. Gilbert Murray's version of the 'Oedipus Rex' opens up the whole vexed question of poetical translation. Such work must at the very best remain an experiment, more or less successful, according to the adequacy of the mould chosen by the translator for recasting the thought of the original. Perfect success comes only when the result is an English poem, capable of making its appeal as such, and this has been done in rare instances, even at some cost to the original. An old, though notable example is Ambrose Philips's adaptation of Sappho's 'Ode to Aphrodite': "Blest as the immortal gods is he," although there the later stanzas fail. It is a little surprising that Mr. Murray, who is perfectly alive to the peculiar difficulties of Sophocles, should have chosen to pursue the path he followed in his Euripides. There, if he did not always succeed, he achieved good and even brilliant things now and then, and the perilous experiment of writing in rhymed couplets did not altogether jar on the more romantic spirit of his author. But a translator of Sophocles must not yield to the modern shyness of the "grand manner." For the "singer of sweet Colonos and her child" it must be the grand manner or nothing. Sophocles verse is so clear-cut, his expression so lofty and polished, that the blurred outlines and familiarities of the Celtic school, traceable in this translation, destroy the essentially Sophoclean feeling. The reader is teased by a consciousness that this, with all its merits, is Sophocles in disguise. Had Mr. Murray chosen blank verse for his dialogue passages, and dared to be more literal in his choruses, even to a striving after some retention of the mere order of words in the Greek, he would, we think, have been happier in his work and happier in his result. Rhyme in dialogue has been his bane. The frequent ending on "blood" has in nearly every case forced an unpleasantly loose assonance; so, too, most of the endings on "-er." In alternate distichs, dread of the jingling couplet has led him to seek an ingenious distribution of rhymes so that the last speaker's last line shall rhyme with the first of the next. It is some help certainly towards the effect of blank verse, but it only makes one regret the more keenly that that form was not chosen boldly. We may, perhaps, be bigoted in desire for literalness, but the rendering of

ὥστ' ὠνομάσθης ἐκ τύχης ταύτης δὲ ζῇ

by

From that they fain
Must call thee Oedipus, "Who walks in pain,"

seems to do at once too much and too little. For the general reader the explanation may be useful and necessary, but if his enlightenment were the object of the paraphrase, a rather stricter philological adherence to the exact meaning of "Oedipus" might not have been amiss. The example, if minute, is typical of what, we contend, is the chief defect of the work.

In the choral odes, particularly the superb opening song, perhaps the happiest lines are

those describing the flight of the pest-spel souls:—

We have seen them, one on another, gone as a bird is gone
Souls that are flame; yea, higher,
Swifter they pass than fire
To the rocks of the dying Sun.

And yet, even here, have we the stately majesty of the Sophoclean close?

ἀκτὰν πρὸς ἐσπέρον θεοῦ.

The image is hardly caught, and "rocks" is almost unaccountable. No, the Sophoclean ode must not be approached in the lightly-girt spirit of the 'Bacchæ,' where it is all very well to "ply a white foot in the night-long dance." Sophocles demands discipline in his translator.

MESSRS. BELL'S BOOKS.

ENGLISH PASTELS

(1750-1830).

BY

R. R. M. SÉE.

With an Introduction by G. C. WILLIAMSON, Litt.D.

A critical and biographical study of upwards of one hundred artists who painted in coloured chalks during the second half of the eighteenth and the beginning of the nineteenth centuries.

LIMITED EDITION OF 750 COPIES.

One large 4to volume bound in white forel.

With 20 Full-Page Plates in Colours and 40 in Black and White.

NOW READY, 2l. 2s. net.

Write for a Prospectus and Specimen Plate.

Fcap. 4to, 3s. 6d. net.

SOME SUPPOSED SHAKESPEARE FORGERIES.

An Examination into the Authenticity of certain Documents affecting the Dates of Composition of several of the Plays.

By ERNEST LAW, B.A. F.S.A.,

Author of 'Shakespeare as a Groom of the Chamber,' &c.

WILLIAM PITT AND NATIONAL REVIVAL.

By Dr. J. HOLLAND ROSE.

Illustrated. Medium 8vo, xii+632 pp. 16s. net.

Write for detailed Prospectus.

NOW READY. 2 vols. 3s. 6d. each.

BIOGRAPHIA EPISTOLARIS.

(Being the Supplement of Coleridge's 'Biographia Literaria'.)

Edited, with numerous additional Letters, by ARTHUR TURNBULL.

Write for the New Catalogue of Bohn's Libraries, to which these volumes have just been added.

"The most remarkable single volume ever published."

WEBSTER'S NEW INTERNATIONAL DICTIONARY

CONTAINING OVER

400,000 DEFINED WORDS and PHRASES.
2,700 PAGES. 6,000 ILLUSTRATIONS.

Prices: Bound in Cloth, £2 net.

Bound in Sheepskin, £2 10s. net.

Also in various other styles.

The "NEW INTERNATIONAL" is undoubtedly the clearest, most complete, and most informative dictionary in existence. This sweeping statement can readily be tested by any conscientious searcher who will devote a single half-hour to the examination of the new book.

Write for fully descriptive Prospectus and Specimen Pages.

London: G. BELL AND SONS, LTD.,
York House, Portugal Street, W.C.

SATURDAY, MAY 6, 1911.

LITERATURE

The Digressions of V. By Elihu Vedder.
(Constable & Co.)

To know oneself is admittedly man's first philosophical duty, and to review oneself may perhaps be held a literary corollary for an author, however disconcerting to the professional critic. Mr. Vedder, at all events, has cunningly forestalled most of the things we might have been inclined to say about his book. He confesses he is "appalled at the meagreness" of its contents:—

"A few impressions, — a few moods, — a few doings and happenings, — a few reflections of doubtful value, — and a few stories, equally of doubtful value, — and a great deal of self. However, as this last is what I aim at, I now give it to my friends. And as there may be in this great big world some who are not friendly, to avoid the evil eye, I use an old incantation—I spit three times and say garlick—with a *k*."

We for our part, in great apprehension, especially of the *k*, hasten to dissociate ourselves most emphatically from the unfriendly. No one, indeed, could help being grateful in the first place for a book full of delightful drawings by the delicate imaginative pencil which the illustrations to FitzGerald's 'Omar Khayyam' first made famous. Nor can any one, we think, who knows the joy of life and its sadness, fail to enter with understanding into Mr. Vedder's chequered moods, jovial, rollicking, reckless, sympathetic, melancholy, sentimental, by turn; frivol-

ous on the surface, serious at heart; and always and above all kindly, warmhearted, a friendly man. He stands as a Bohemian in days when true Bohemia has been wiped out of the map, a denizen of the Quartier as it once was, though hardly in his time, a rolling-stone who is perpetually lamenting his poor show of moss, yet, if he had to roll it over again, would infallibly roll the same way. He is not one of the groaners over spilt milk, and repentance is not his devotional attitude. He tells the story of how he met a friend at the club and asked, "How about drinking nowadays?" "Ah," was the reply, "as for trinking, I have quvite giffen it up; dat is to say, except ven I am in gompany or ven I feel lonesome." So, adds Mr. Vedder, "I am still unrepentant, and drink just as much as nephritis will allow. But perhaps I am bragging."

Mr. Vedder has a deserved reputation as a raconteur, but every one knows the difference between the spoken and the written word, and how much a tale loses when deprived of gesture and expression. Victor Hugo's grandchildren, when they demanded another recital of the oft-told story of "the good flea and the wicked king," always rigorously insisted on having "les mouvements" with it, and Mr. Vedder cites this in deprecation of the apparent flatness of some of his own anecdotes. Not that "the motions" are unattended with risk. Rinehart, we are told, "had a habit when dining, no matter where, of throwing out his hands; then, of course, all the glasses in his vicinity went by the board," to the detriment of gowns.

"He was always breaking things and always asking pardon. And this was his way to the very last; for when he was dying, surrounded by his grief-stricken friends, his very last act was to throw out his arms in the old way, sweep a glass off the night-stand, and say, as he heard it break, 'I beg your pardon.'"

We miss the explicatory "motions," however, in many of the stories in this book, which, we are sure, were spoken very differently from the way they read; and we are convinced that the author has a fund of other "yarns" which could be told adequately only "in Spanish" or some other discreet and learned tongue. As it is, there are some good specimens of the kind of humour which is cultivated in the United States. There is wit in the following:—

"William Hunt, aside from being one of the most fascinating and loveable men I have ever known, was also an accomplished swearer. My brother Alexander once said to me, 'Ell, I wish you wouldn't swear. Not that I object to the swearing, but you do not do it gracefully.' Now Hunt did do it gracefully. He could swear in any society, and did so; and, although I never heard him, I am persuaded he could have sworn in church with perfect propriety. He had his days; there were days when he swore constantly; on others he seemed to have sworn off swearing, and only swore intermittently."

There is humour of another sort in the story of the Roman cabman who, when remonstrated with for yelling at the top of his voice to attract "fares," and asked why he did it, "answered with a smile 'Hunger!'" A Jew's sense of incongruity is well expressed in the case of "Simmit," who, when on a walk in the Campagna, fell to on ham and eggs like any Christian:—

"But we were not prepared for what followed. The sky darkened, there was a muttering of thunder, and the rain began to fall. Simmit went to the door to see what our chances were of getting to Rome with dry skins. Just then there came a blinding flash of lightning, followed by a tremendous roar of thunder, and all Hell seemed to break loose. Simmit, coming back to the table, sat down, and quietly remarked, as if to himself, 'By Jove, what a fearful pother about a little pork!'"

This anecdote is not exactly new, but perhaps worth repeating to a generation which has no remedy.

But we confess a good many of "V.'s" stories leave us as cold as the audience who listened to Artemus Ward's lecture at New York:—

"Artemus was most sympathetic. He looked so frail and delicate that he gave an impression of one doomed to die young. There was something comically pathetic as he patiently waited for the audience to catch on to his jokes; no wonder, for it was often a case of pearls. It was to him the man said after a lecture, 'I say, it was just as much as I could do to keep from laffin' right out two or three times.'"

We did not "keep" ourselves, but we could have wished to laugh oftener. Some of the jokes strike us as what Mr. Vedder calls "Chippendales," but we have not heard before the story of the lady who asked for Max O'Rell's 'John Bull and his Isle' at Piale's Library, and was told by the young man, "Madame, I think you have made a mistake. Marcus Aurelius has never written anything about England—at least not recently." Whence we deduce the disadvantage of studying the classics through French.

Mr. Vedder's disadvantage is different: he is in the sad position of the lady during the siege of Paris who was reduced to eating her favourite dog, and murmured, "How poor Fido would have enjoyed these bones!" Most of the old friends about whom his 'Digressions' cluster are dead, and from an English point of view some of them never lived: they may have been familiar figures at New York or at Rome, but they never reached the eye of the Briton. This makes the book peculiarly one for a small circle, and we do not forget "V.'s" statement that he writes "expressly for friends." But this does not affect the fact that the 'Digressions' make only a limited appeal to the general reader. Those who do not either know personally Mr. Vedder or did not know his circle of friends in America and Italy will, we fear, discover little point in some of the trivial incidents and anecdotes here related, though we can realize their interest for the few.

Least of all should any one open this volume in the hope of information. "V." need not have warned us that there would be no emulation of the instructive "Murray." The whole book, as its title warrants, is a chaotic collection of digressions, including a 'Digression on Digressions' (a sub-title in which the author was anticipated by Swift), and, but for a very useful list of paintings at the end, interspersed with biographical jottings, we should never know where we were, at what period of the author's life, at New York, or with his father in Cuba, at Paris or Rome. But what is to be said to one who blandly confesses, "I fear those fond of chronology will here get mixed up a bit, but they cannot become more so than I am myself"? He remembered, indeed, a great comet: "it was a most impressive sight, and has served me as a date ever since—only I have forgotten in what year it occurred." "One of the hardest things to resist," he adds, "is the tendency to prattle." We can honestly say that no attempt at such resistance is discoverable in these pages; nor does the author show any false affectation on the subject.

"What am I to do with a memory like mine? And then what am I to do about my fear of degenerating into mere prattle? It is a fear I cannot overcome. 'But, V., what do you call prattle?' 'Just what I've been writing.'"

This is "V.'s" cunning way of taking the wind out of our sails.

We shall not contradict him. He wrote to F. Millet, in a letter he never sent: "If the thing doesn't speak for itself, will anything I can say mend it? It may turn out that there are more people who will like this sort of thing (high prattling) than you or I wot of." We trust there are, and that they may be in the right mood—it all depends on that—to appreciate these characteristic sketches of men and things, not by any means omitting "girls." Some may think 500 pages of prattle, even "high prattle," exuberant; but let them remember the head-pieces and stray stanzas of quaint verse, and the blank pages, and the pictures—no one could wish fewer of them—and then, as the kindly author says in his generous way, "there is such a thing as skipping, which might here come in very well." Only let none skip the records of the Vedders of Schenectady, who all married other Vedders if they did not marry Veeders, and among whom was that precise grandfather of "V.," a "good, honest, solid, pigheaded old Dutchman," who ate his eggs with the shell on, followed a "religion which was simplicity itself" (the nature of it may be read in these lively pages), and, when the day of his death came, wound up his watch, announced the hour of his departure just as if he were fixing the time for a cab, and went.

The Speakers of the House of Commons from the Earliest Times to the Present Day. By Arthur Irwin Dasent. (John Lane.)

WE should like to praise this outcome of conscientious research without reserve, but its lack of concentration is too obvious. Mr. Dasent has attempted to combine the biographer with the historian, the topographer, and the antiquary, and the result is sometimes chaotic. As an extreme example of his want of method we may take his remarks on Sir Thomas Lovell, Speaker in the reign of Henry VII. Lovell was a bencher of Lincoln's Inn, and as such originated the fine old gatehouse in Chancery Lane. The gatehouse being near the chapel, Mr. Dasent is prompted to make a vigorous onslaught on Lord Grimthorpe's "restoration" of that building. Lord Grimthorpe's name in turn suggests "Big Ben," and so we get back to Westminster. It is all very readable, but hardly *ad rem*. Elsewhere, Trafalgar Square being in proximity to St. Stephen's, we find our attention called to some suggestions for its improvement. If these were occasional excursions on Mr. Dasent's part, they could be readily forgiven; but throughout the book there is a constant shifting from Parliamentary custom and precedent to the occupants of the Speaker's chair, and back again. The figures fail to stand out from the background for the most part, though Lenthall and Arthur Onslow are adequately treated, nor is there much amiss with the character of truculent Sir Fletcher Norton.

Mr. Dasent's learning enables him incidentally to clear up certain disputed points of more or less relevance to his subject. Thus he has discovered some writs of summons to knights of the shire and burgesses dated 1275—"an imperfect Parliament," no doubt, as Stubbs would have called it, but still an important move towards popular representation. The first meeting-place of the Commons is also established to have been, not, as has been generally supposed, the Chapter House of Westminster Abbey, but the Painted Chamber, whence they migrated to St. Stephen's Chapel in 1547.

Later, an early, perhaps the earliest, instance of a contested election to the Chair, was when, in 1566, Richard Onslow, the first of three Speakers of the same name and family, was chosen by eighty-two votes to sixty. In 1738, we get an early reference to the custom of separating the Government from the Opposition in the House. Mr. Dasent might have noticed that a few years before, when Walpole and Pulteney made their famous classical bet, they were certainly sitting side by side. We are also duly reminded that Speaker Denison was the last of his line to exercise the right of speaking and voting in Committee. But the topic of the publication of debates and division lists is somewhat confusedly treated. It is taken up at the appearance, in 'The Court Kalendar' for 1732, of the

names of those who protested against the employment of the Hessian troops, and then Mr. Dasent harks back to the journals of Sir Symonds D'Ewes and the famous notice: "These are the Staffordians, Betrayers of their Country."

Mr. Dasent has drawn up a more complete list of the mediæval Speakers than we have had hitherto. There is no certain knowledge about any of them until William Trussell, "Procurator totius Parliamenti" on the deposition of Edward II., is reached. He was sufficiently famous to be buried in Westminster Abbey. But the Speakers soon attained the position of champions of popular rights, notably Peter de la Mare, the fearless opponent of Alice Perrers. It was a change, indeed, to the "servile lawyers," as Mr. Dasent not unjustly calls them, who filled the chair under the Tudors. Here we touch on one of Mr. Dasent's difficulties. These men regarded the Speakership as a mere stepping-stone to judicial appointments, and sometimes held it in plurality. No wonder that their biographer finds it hard to make up his mind when to take them up and when to drop them.

Of the numerous good stories scattered about Mr. Dasent's book, there is human interest in Speaker Widdrington's blunder. The poor man had been kept dinnerless in the chair all day, and when it came to giving his casting vote at nine o'clock in the evening, he ejaculated, "I am a Yea, a No I should say." The character of a later Speaker, Harley, is incorrectly drawn by Mr. Dasent. "Brilliant" he assuredly was not. Harley was dull, though he had a knowledge of men, and he illustrated the general rule that those who have been successes in the chair have failed as political leaders. Spencer Compton, Addington, and Grenville are later examples. Mr. Dasent has some apt remarks on the gradual evolution of the non-partisan Speaker, chosen for the most part from the ranks of the country gentlemen, though Gully was a reversion to the lawyer type. Personal knowledge lends an interest to the sketches of recent occupants of the chair.

We must not conclude our notice of Mr. Dasent's book without congratulating him and his publisher on the admirable collection of portraits and illustrations of historical buildings which adorns its pages. Mr. John Lane's erudite note tells all about them, and the assiduity with which they have been brought together from country houses, churches, and other sources deserves every praise.

Some Principles of Liturgical Reform. By W. H. Frere. (John Murray.)

THOSE who follow the newspapers of the day cannot fail to be aware that the Church of England is mildly agitated by proposals for the revision of her Book of Common Prayer. The discussion of the subject has hitherto been violent, but the

interest of it has been ephemeral. With the exception of a report by certain bishops submitted to the Upper House of the Convocation of Canterbury, nothing has resulted from the alarms and excursions which is likely to have any enduring place in theological literature; and they must be sanguine indeed who imagine that the proposals of the Committee of the Lower House on the revision of the Prayer Book are likely to be accepted by the Church. Up till now the proceedings have been like those which accompany the proposals made from time to time for the "restoration" of an ancient building. A number of persons who have no expert knowledge have expressed their opinions with forcible lucidity, and a society for the protection of things ancient has stepped in with criticism at once violent, justifiable, and pedantic. What is found so difficult to obtain is the union of expert knowledge and common sense.

Now at last, after much negligible clamour, we have in the volume before us a careful consideration of "some principles of liturgical reform" by an expert who has a practical knowledge of practical needs. Dr. Frere's book is to be welcomed, then, by the hesitating Churchman as well as the inquiring student. It is the sensible book of a learned man.

Dr. Frere will have none of the "non possumus" attitude: he brushes aside the people who say that the Church of England is not sufficiently united to revise her forms of worship, and dare not risk the intervention of an ignorant and unsympathetic House of Commons. As a matter of fact, he says, in the past the Prayer Book has always been revised in times of controversy; and the State, after the appointment of a Royal Commission, and the issue, as a consequence, of "letters of business," would stultify itself if it did not give every facility to the Church. The Church

"will not be guiltless if it does nothing, or if it allows the beginnings that have been made to lead to no end. Inaction would be worse than a crime; it would be a blunder too. For if the Church were to pronounce itself incapable of using the opening which has been given to it, not only would it be stultified, but the State would be bound itself to legislate on behalf of the Church that had declared its own incompetence or unwillingness to reform. Our choice at present lies between a fresh revision or a fresh Public Worship Regulation Act, and all that that implies."

Now that is common sense which appeals to the plain man. More sensible still is the statement which follows, though antagonists have utterly obscured its truth and point in their vehement vapourings: "There is no hurry; the Church can hardly be said to have taken the matter seriously in hand yet." After an immense amount of dust and turmoil the unprejudiced expert tells us quite plainly that the Committee of the Upper House has done good work, and produced a report of "immense value,"

while what has been done by the Lower House is valuable "rather by way of warning that in any other respect." Nothing really can be done till it is decided that as much pains are needed to revise the Common Prayer as were needed to revise the Authorized Version, and that a committee, not of deans and archdeacons, but of scholars, should be entrusted with the work. When this body has reported, the issues must be submitted to the Convocations, to the Houses of Laymen, to Diocesan Conferences, and to the Churches who, in two hundred languages, use the present book.

Then Dr. Frere dwells, in language as wise as it is witty, on the dangers of "insularity" and "incongruity." He uses certain recent productions, which are "nothing but a shuffling of familiar materials," as a terrible example:—

"It is as ludicrous to make a new prayer cut of bits of others as it is to try to make a poem out of tags of existing poems; as ludicrous to compile a service by shuffling the familiar material as it would be to try to make a new Shakespearean play by shuffling different scenes from the authentic plays."

Nor is it less true that the English rite has a distinct character of its own, which is destroyed by the introduction of foreign ceremonial or incongruous liturgical expression.

So far Dr. Frere deserves not only to be read, but also to be accepted by all sensible people. When he proceeds further to elaborate his own opinions and make definite suggestions, there is a great deal in what he says which is worthy not only of attention, but also of acceptance. All that he has written should be read by any one interested in the subject as scholar or as practical worker, and especially by persons in authority, to whom, in matters of liturgical knowledge, neither reading nor writing comes by nature. But we certainly do not anticipate universal acceptance for all the suggestions which Dr. Frere puts forward. Some of them show a curious absence both of historical sympathy and of a sense of actuality. Is it, for example, at all likely that the Church will now agree upon a fixed date for Easter, after 1900 years? Would any Englishman who cared for the history of his country consent to abolish the feast of St. Crispin, or declare that the reason for retaining it was "a similar plea" to that for St. Brice's day? What scholar who is acquainted with the history of the cult—one might almost say who has any knowledge of art—would agree that St. Anne "should be deleted" from the Calendar? And, while wishing to do this, Dr. Frere would preserve St. Faith! He would also delete the Conception, and the Nativity, of the B.V.M. in favour of the Assumption (but he would call it "the Repose"). Indeed, his vagaries on the subject of the Calendar, which we need not further particularize, are remarkable. We will only observe that he does well in advocating the commemoration of Patten and Hannington.

But he ignores the fact that the commemoration of Charles I. was definitely ordered by Convocation and Parliament, neither of which authorities has withdrawn the order; and he states, without any support from authentic history, that Becket "emphatically gave his life" for "the cause of the English against the foreigner."

As regards the reform of the Prayer Book services his suggestions are for the most part practical and deserve careful study. He appears to be against the use of the imprecatory Psalms or the Athanasian Creed; he favours a wholesale revision of the use of Psalms and lessons, and the creation of a Sunday cycle distinct from that of the weekdays.

He wishes to reduce the fast days after a scheme of his own. He would play quaintly with the Litany, and retranslate the Lord's Prayer. Some of these things will be regarded as the eccentricities of genius. On the other hand, his explanation and history of "rubrics" form an admirable instance of the wise popularizing of expert knowledge; and he points out with equal sagacity that Disestablishment would still leave the State full power over Church legislation, since this would not be valid without the assent of the Crown.

A Dictionary of Oriental Quotations (Arabic and Persian). By Claud Field. (Sonenschein & Co.)

In spite of some obvious limitations, this volume will be found interesting and useful by those who wish to make a bowing acquaintance with the two great literatures of Islam. It is not, indeed, so representative as it might have been, since the compiler has drawn his material almost entirely from English translations, which in comparison with the untranslated literature are but a tiny oasis in the surrounding desert. His dependence on one very partial source of supply has had the unfortunate, but inevitable result, that the Persian quotations far outnumber the Arabic, though the latter language boasts an unrivalled store of memorable sayings both in prose and verse, which have stamped themselves on the Eastern mind by sheer weight of meaning and pungency of expression. Such are the following from Zuhair and others.

Of all the verses which thou hast made, the fairest in praise
Is that whereof, when they hear, men say, "Yea, that is the truth."

Add not to ill-doing its sister; the worst ill-doing is to do ill twice.

Reckon thou all mankind thy dwelling-place, and fancy all the earth thy home.

The tongue is a man's one half, the other the heart within.

And I know not when bound for the land of my quest if my portion shall be
The good which I hope for and seek, or the evil that seeketh for me.

When Qais died, it was not one who went down
the way of death;
A people it was, whose house with his death in
ruin fell.

Against him the wild days dash, he meets them
with cunning mind.
Is one of his nostrils stopped? He breathes
through the other free.

The reader may justly complain that Mr. Field has given specimens of such quality with a grudging hand. The Koran is well represented, usually in the version by Rodwell, and there are about twenty of the Prophet's *obiter* and *other dicta*—surely a scanty allowance for one who said so many good things during his life, and was credited with a large share of those which fell from the lips of pious Moslems in the following ages. The Caliph Ali, whose wisdom was no less renowned than his bravery, appears only once in this collection, as the author of some verses on mortality:—

O tenant of the lofty palace,
Know that thy grave shall soon be filled!
It has an angel who cries daily,
"Draw nigh to death, for ruin build."

We may observe in passing that the last line is not rendered correctly. It should run,

Get sons for death, for ruin build.

The excellent translations of Arabian poetry by Sir Charles Lyall and Prof. Margoliouth are too few to satisfy us. We have looked in vain for several famous and favourite passages from the 'Mu'allaqât' or 'Suspended Poems.' Of Imru'ul-Qais, the chief of the ancient bards, we find nothing except the four opening lines of his best-known ode. Among the moderns Abu 'l-Alâ and Tughrâ'i alone obtain recognition; not a word is quoted from Abu Nuwas, Abu 'l-Atahiyâ, or Mutanabbi. It would be unfair to blame Mr. Field for all these omissions, as the last-named poets are not accessible in English; but we regret that he did not take fuller advantage of the translations which he has utilized. He has effectively illustrated the style and matter of two Arabic books, the Koran and the 'Maqâmât' of Hariri, and the space allotted to them is not greater than their importance demands. The rest is, approximately, silence.

In making the Persian anthology Mr. Field was able to cast his net further, and he has laid before us an admirable selection from the works of eminent Persian writers on ethics and mysticism, the principal contributors being Sa'di, Jalaluddin Rumi, Omar Khayyam, Hafiz, Jami, and the author of the 'Anwari Suhaili.' Sa'di's 'Gulistan,' an abridgment of all that is pleasant and unpleasant in Persian morals, provides countless familiar quotations, many of which are translated here. It is surprising not to find what is perhaps the most celebrated sentence in the whole book: "A well-meant falsehood is better than a malicious truth." If Sa'di portrays the light and shade of the Persian character as it appeared to a keen observer and accomplished man of the world, its higher and deeper qualities are revealed by

Jalaluddin Rumi, a poet and mystic of the first rank whom Mr. Whinfield and Dr. R. A. Nicholson have made accessible to English readers. The copious extracts given by Mr. Field will undeceive those who imagine that Haji Baba is the only true mirror of his fellow-countrymen:—

I was ere a name had been named upon earth,
Ere one trace yet existed of aught that has birth,
When the locks of the Loved One streamed forth
for a sign,
And Being was none save the Presence Divine!
Named and name were alike emanations from Me,
Ere aught that was "I" yet existed, or "We";
Ere the veil of the flesh for Messiah was wrought,
To the Godhead I bowed in prostration of thought.
O Thou who art my soul's comfort in the season
of sorrow,
O Thou who art my spirit's treasure in the bitter-
ness of dearth,
That which the imagination has not conceived,
that which the understanding has not seen,
Visiteth my soul from Thee; hence in worship
I turn towards Thee.

Since Jalaluddin always subordinates art to truth, he does not lose by translation so much as Hafiz, the most exquisite of Persian literary artists, whose haunting melodies are sadly to seek in Bicknell's or any other English version. Mr. Field should not have forgotten the well-known lines, thus freely rendered by Sir William Jones:—

Sweet maid, if thou wouldst charm my sight,
And bid these arms thy neck infold,
That rosy cheek, that lily hand,
Would give thy poet more delight
Than all Bocara's vaunted gold,
Than all the gems of Samarcand.

When Timur (Tamerlane) rebuked him for his freedom in giving away two imperial cities, the poet is said to have replied: "Sire, it is by such acts of generosity that I have been reduced to my present state of indigence." This, however, is fable, not history. Timur was a ferocious barbarian, with as little taste for poetry as for honeydew, and Mr. Field is mistaken in ascribing to him the verse,

If thou canst not soar like the Simurgh to the
heights of Caucasus,
Be thou small like the sparrow, and fold up thy
wings and feathers.

Among classical Persian authors the worst treated is unquestionably Firdausi, who is represented by two brief specimens, one from the 'Shâhnâma' and the other from his lyrics.

The Arabic and Persian quotations are printed in Roman type, and arranged in alphabetical order. Although the transliteration is faulty, it will enable students to trace any passage which they may desire to verify in the original, and we are grateful to Mr. Field for the labour it must have cost him.

NEW NOVELS.

Joan of the Tower. By Warwick Deeping.
(Cassell & Co.)

BROTHER PELLEAS, the hero of Mr. Deeping's latest story, has been brought up among the monks of Roding Abbey, and in the opening chapter he runs away from them because the indulgence of the

librarian had allowed the viper of French romance to coil itself in his bosom.

When Don Quixote left La Mancha to put in practice what he had read of knight-errantry, he took with him both horse and arms—of a kind. But Pelleas, sallying forth before dawn from Roding, takes only a young oak staff for a club, and trusts to his two feet to win him through his adventures. These come hot upon one another's heels: in one place the emancipated monk himself is lost in wonder at the queer way things happen in the world, and we ourselves have to own a share in his surprise. But Joan of the Tower is a story of King John's time, and since he was certainly no puritan, such adventures as the author describes may well have taken place in his day. Whether they did or no, the recounting of them makes pleasant reading. The author's style is attractive, but it was unnecessary as well as inartistic to introduce an Epilogue in order to assure us that Pelleas married Joan.

The Major's Niece. By George A. Birmingham. (Smith, Elder & Co.)

THE author is in danger of carrying a good thing too far. He invented an excellent character in the Rev. J. J. Meldon, who was quite a new kind of curate as well as a new kind of Irishman, and we have already had two amusing novels about him. The third leaves us slightly tired of him. There is plenty of humour in 'The Major's Niece,' but it is sometimes rather forced, and "J. J.'s" thrills have become so familiar as to be nearly irksome.

The story turns on the discovery that the niece whom the Major is to receive and house is not, as the curate supposed, a young lady, but a little girl. Meldon's pranks are frequently amusing, but the story is by no means so effective as 'Spanish Gold.' If we are to judge from the prefatory dedication, some of the author's readers have misunderstood the part his red-haired curate plays, which, he explains, is that of a villain.

The Magic of the Hill. By Duncan Schwann. (Heinemann.)

To convey the magic of the Bacchic and lyrical features of life in Montmartre, Mr. Schwann sends there the heir of a wealthy English baronet, and pictures the young man observing the lighthearted sensuality flourishing around him, without losing his self-control in compliment to the charms of a French siren. He incurs the danger, however, of marrying a titled English widow who had been false both to her husband and her lover. The ranting of this woman when she is at bay has an artificial sound, and the process of her exposure is crude.

One is more interested in the minor than the major characters of the novel, because the former, which include a

French disease, are in harmony with the author's vivid Parisian local colour. The jollity of Montmartre seems fairly to beckon to Mr. Schwann's reader from some of his pages, and it is therefore easy to be lenient to his artistic deficiencies.

The Valley of Regret. By Adelaide Holt. (John Lane.)

THE author has a delicate way of narrating the most lurid incidents that makes them appear not only probable, but even vivid and actual. The story is concerned with a marriage between two highly exceptional natures, a girl remote and passionate, a man gifted and headstrong. But the character of Edward Charteris has one defect: he has inherited a craving for drink. He makes the acquaintance of a Jewish financier, who discovers to him the delights of unbridled speculation. Between drink and Oppenheim he falls desperately—and, to the author's credit, with remarkable convincingness—and husband and wife are parted. In what manner good is brought out of this evil is told in an entertaining fashion. The book is written with a good deal of wit, and, in a measure, is noteworthy for the deft way in which the melodramatic threads are woven into the general fabric.

The Land of Promises. By Stanley Portal Hyatt. (Werner Laurie.)

THE reader who could enjoy Mr. Hyatt's story where it touches England and English life would have to be very young and crudely revolutionary. But for the most part the narrative is concerned with Africa, and, as in previous tales from his pen, the author has a certain rough fluency, and a theatrical sense of the telling features of melodrama which enable him to carry the reader with him, careless of crudities of diction, and genuinely interested by the rapid movement of the tale. The philosophizing about English society is inadequate. Mr. Hyatt's bitterest scorn and detestation seem reserved for everything that he labels "Victorian," from furniture to morals, and from dress to art, literature, and religion.

Repton. By Lieut.-Col. F. Kane. (John Murray.)

'REPTON' is a somewhat tedious story of the Court of St. Germain in the time of the Young Pretender. The narrative wavers between an attack on the Society of Jesus and the alarms and excursions of the Jacobites. Charles Repton is destined by his father to become a Jesuit, and accordingly is sent to the college of St. Omer, where he discovers much of which he disapproves. He returns to the world, becomes involved in an intricate mesh of Jacobite intrigue, meets a woman who captures his affections, and steadily becomes

alienated from the faith in which he was bred. The purely technical question of the manner of Repton's baptism is made to play an important part—not a very effective device for the purposes of the story-teller. It cannot be said that the author has contrived his plot skilfully, nor do his mild attacks on the Roman Church afford us much entertainment. The book is written in a style meant to recall the period.

The Black Spider. By Carlton Dawe. (Eveleigh Nash.)

The Window at the White Cat. By Mary Roberts Rineheart. (Same publisher.)

WE notice together two volumes which come under the designation of detective stories. Mr. Dawe's introduces us to a series of jewel robberies in the Riviera complicated with a love-interest, because the thief is an attractive and admired woman. Her guile in the case with which we are concerned was fairly obvious, and the story does not move with sufficient rapidity at the beginning, where too much time is spent on doubts and surmises. The thief is throughout tolerably clear to the expert. The classic advice to dash "in medias res" is still, we believe, sound for narratives of crime.

The second volume before us answers these demands much better. It is a highly involved and ingenious mystery based on the financial disasters due to dishonest American politicians. It shows, too, a sense of character which is more developed than usual in such narratives, yet does not delay our interest in the main business. The gradual disclosure of the complicated plot is bound up with a love-story and an innocent escapade. The volume is one of the best of its sort that we have seen recently.

The Irresistible Husband. By Vincent Brown. (Chapman & Hall.)

THE author, who begun with books of much promise, appears to us to be developing increased cleverness rather than growing wisdom. There is a kind of flippancy about the present tale of matrimonial indiscretions in a Scottish hydro which does not please us at all. The story has no priggishness about it—a negative sort of commendation not always earned by this author—but it seems to us to lack the feeling and sincerity of his best work.

The Casement: a Diversion. By Frank Swinnerton. (Chatto & Windus.)

THROUGH "the casement," which is presumably the window of her boudoir, Mr. Swinnerton's chief heroine watches unawares the arrival of her lover that is to be, and the circumstance that he is likewise an old love of her married sister's pre-nuptial days supplies the chief of the slender threads from which the

author has suspended his "comedy of sentiment." Analysis throughout preponderates over action, and, as there are but five persons immediately concerned, a good deal of dissection falls to the lot of each. We use the metaphor advisedly, for after a promising opening, in which we are introduced to two fascinating feminine creations, a change comes over the story whereby the characters seem gradually to lose vitality. The two timber merchants, husband and wooer respectively to the two attractive sisters, fail to kindle our interest greatly; while a neurotic youth of aristocratic origin, whose mental instability prompts him first to amateur burglary in quest of rare books, and afterwards to attempt a less venial offence, is far from convincing. Mr. Swinnerton's psychology is, in fact, over-elaborated, and handicaps his insight and ability.

The Socialist Countess: a Story of To-day. By Horace W. C. Newte. (Mills & Boon.)

JANE, LADY DERWENTWATER, the "Socialist Countess," is a species of aristocratic Mrs. Jellyby, without that lady's straitened means and general inkiness, whom a penchant for press-cuttings has driven to espouse the cause of Socialism with as much comprehension of the issues involved as was enjoyed by her predecessor concerning Borrioboola Gha. Her daughter, fresh from a convent school in France and thrust into the vortex of her mamma's dimly perceived ideals, becomes engaged, not unnaturally, to a silver-tongued, noble-featured apostle of the Cause, who is at the same time a mechanic working in Stepney. The little circle of East-End characters into which Aenomene (the name is somewhat strange) thus pledges herself to enter is altogether lifelike, sketched with a kindly humour devoid of snobbishness. The ultimate breaking-off of the engagement gives occasion for an effective situation, apt for the stage, which Mr. Newte has handled with admirable skill. The characterization throughout is clear and effective.

BOOKS ON ITALY.

Italy the Magic Land, by Lilian Whiting (Cassell & Co.), is an English edition of a book published in America about three years ago. It is the kind of travel-book which Italy seems peculiarly liable to call forth. The author has a true feeling for the beauty of the country, as is shown by her rather highly-coloured descriptions. But the only part of her book that can be considered in any way new is the first chapter on 'Modern Art in Rome,' of which she gives a short sketch, with reference largely to the many foreigners who have studied there and to living American artists such as Mr. Vedder, whose book we notice elsewhere to-day, and her friend Mr. Franklin Simmons, intermingled with interesting if generally second-hand gossip.

The rest of the volume is mostly in the form of detached notes which suggest a diary, for they do not seem to be put together on any particular plan. We go from Cardinal Merry del Val, his personality, golf, and prospects of the Papacy, to the Arcadian Academy; then to the Lateran, and on to Queen Margherita, for no apparent reason. Some places of interest are described in detail, others receive the barest mention. Indeed, as far as mere sight-seeing goes, the author seems to have hardly made the most of her time and opportunities. Yet she has little else to describe. The chapter on 'Social Life in the Eternal City' consists almost entirely of accounts of excursions to the usual places that are visited. She informs us that between the Blacks and the Whites there is a great gulf fixed, though we had always understood that, with the exception of a few people in official positions and one or two old "black" families, the heads of which belong to the former generation, no such distinction is now usual in Rome. Time and the removal of the "non expedit" are doing their work. Cardinal Merry del Val is credited with a desire to restore the temporal power, which is, we believe, generally considered to have disappeared from practical politics; but Pius X., we are told, "would not be disinclined to the uniting of Church and State as in England." Yet even the Italian Government admits that the Pope is entitled to the rights of a sovereign. The strictures on the railways must be greatly modified, for State control has already worked wonders, and the improvement in the system during the last three years is most marked, though the robbing of foreign luggage is unfortunately almost as prevalent as before. Miss Whiting attaches due importance to the great increase of Socialism in the peninsula. On leaving Rome she visited Naples and the South, and she gives a long account of Vittoria Colonna and her friendship with Michelangelo in connexion with Ischia. Then she took ship for Genoa, and paid visits to Assisi, and afterwards Venice.

There are a number of slips, such as "Monumento nazionali," "Grotto Ferrata," and "Terre di L'avorio"; while Lord Madox Brown makes an interesting addition to the peerage. Guido's famous picture in the Barberini gallery is still said to be of Beatrice Cenci, though it is known that he did not come to Rome till after her death. We also note some strange hybrid expressions such as "San Silvestre" and "Accademia des Arcades."

Florence Past and Present, by the Rev. J. Wood Brown (Rivingtons), is concerned with the survival of primitive and pagan customs in the life and worship of modern Florence. The later chapters strike us as the most interesting. In discussing amulets our author shows that the bells, the flag, the little mirror, the eye, and all the other ornaments on harness in Italy, are really charms against the Evil Eye. He acknowledges his debt to some unpublished MSS. of the late C. G. Leland, now in his possession. Leland's profound knowledge of Florentine folk-lore makes us hope that Mr. Brown will some day see his way to preparing these for publication. A Tuscan wise woman told Leland to plait or twist everything and to sew so that the threads crossed, as then the witches, being unable to count, would be powerless.

Our author devotes some interesting chapters to the origin of the great festivals. The log at Christmas and the noise at the feast of the Befana—the witch who brings

toys to good and rods to bad children as she walks along the housetops, and whose feast was connected with Epiphany—represent the farmer's dread of the dead season, and desire to rouse the sun to life again. So the Easter car and the travelling fire are connected with the New Year, which began on March 25th at Florence. Mr. Brown considers "that Florence is called after the goddess Flora, whose earlier Etruscan name seems to have been Arna," and who may be identified with Cybele, the mother of the spring corn. He also provides interesting accounts of the feast of the Grillo and the Midsummer celebrations centring round St. John, the patron saint of Florence, and connects the Virgin's birthday in September with Dionysus and Demeter.

Some of his conclusions strike us as rather far-fetched. Florence, he holds, was founded by hunters, Rome by shepherds, and the desire for independence among the former made them build groups of towers instead of palaces, like the latter. Are we, then, to hold that dwellers in flats are less independent than those in houses? He also appears to believe that hunters have a specially good ear for languages. If so, this would surely be displayed in pronunciation; yet no one has ever regarded the Tuscan dialect as the ideal in this respect. The proverb runs "Lingua toscana in bocca romana."

Excellence of method has made Hare's many guide-books so deservedly popular that a reissue of his *Cities of Southern Italy*, edited by Mr. St. Clair Baddeley (Heinemann), will be widely welcomed. Most tourists in Italy get as far as Naples, but, if they venture further, they generally take the boat to Palermo. Sicily certainly has far more to offer to the average sightseer than most of the districts described in the book before us, though it includes Naples and its environs. Apulia and Calabria have none of the beauty of the Conca d'Oro or the Sorrento peninsula, but we should have thought that the very fact of their being so little visited would have attracted the jaded palate of the much-travelled. Hotel accommodation is primitive and the risk of typhoid and malaria considerable; but here at least we can find an almost uncivilized population, so poor that a man with only five francs upon him thinks it wise to take a gun if he is going a couple of miles. Carts are unknown in many districts, for the railway has preceded the road, and in parts of Cosenza there are still nothing but mule-tracks. The present writer found *vettura*, which elsewhere means a conveyance, regularly applied to a mule there.

Our author had not the sympathy with the inhabitants that comes of familiar intercourse, or the long and intimate knowledge of the district necessary to make this book as good as his 'Walks in Rome,' for instance, and there is room for still further revision of its practical side. The tramway from Castellamare to Sorrento is not even mentioned, though its construction has considerably modified the prices of carriages. To describe Vico as a logician shows a strange ignorance of the achievements of that great man.

CLASSICAL BOOKS.

The Lay of Dolon (the Tenth Book of Homer's Iliad). By Alexander Shewan. (Macmillan & Co.)—One can hardly say that this is an attractive book, but it is a necessary book. The lay of Dolon has been

assailed on so many sides that it is necessary to give it separate treatment; but the arguments are so minute, and we may add, so capricious, that the volume is difficult to read. Unfortunately, Mr. Shewan has made it more difficult by filling his text with his references. The eye has continually to skip a line, or half a line, or a couple of words, and to run on for the sense. Mr. Shewan's style is also jerky and often obscure, which all adds to the reader's trouble.

But when we do settle down to read, what an amusing banquet is put before us! So many and so varicous have been the critics that we find the same lines praised as good and condemned as bad; some critics decrying the book as late, others appealing to it as "Homeric"—sometimes the same critic doing both; this ejecting what that admits: a perfect hotchpotch of criticisms, which have only to be put together to show that they are really worthless. No doubt each critic, himself his own standard (for is not *ἀνθρώπος μέτρον*?), felt that he was proving his case to conviction, yet when a number are put together, their work is seen to be chiefly caprice. Amongst them all it is interesting to note how Col. Mure stands out for sterling good sense. The world seems to be waking up at last to the value of Mure.

From the literary standpoint no one who has read the 'Iliad' through as a story can fail to see that the Doloneia is admirably suited for its place. Like the fifth book of Virgil, it relieves the intensity of the rest by a lighter episode; not indeed broad comedy, or parody, as some have maintained, but an episode, itself trifling, yet important in its effects. "The weakest motive is legitimate if it helps the action for the time being"; and this, coming at a time of deep despondency, gives a gleam of hope and a small success when these are most wanted. The story is well told, the characters are consistent. We fear, however, that few people do read the 'Iliad' through as a whole. Higher critics especially are just picking it to pieces, and every word in it: they are the last men in the world to read a poem for its literary value.

But Mr. Shewan is ready for them. He takes each department of criticism and deals with it alone. Thus he takes language, article, digamma, parallel passages, and shows in each case that the objections are flimsy, or nothing at all. He adds one or two more general essays on the relation of 'Iliad' to 'Odyssey,' which also have a bearing on these points. But he is not content with this: he tackles the *sanctum sanctorum*, Book I., and, reasoning on the same lines as the critics, proves that to be late. The fact is that, since Miss Stawell's book came out, all the old arguments on language have become futile, but not every one recognizes this yet. Some new criterion must be found if language is to determine the date of the parts of Homer. Even the digamma has failed, even the article. By the way, how is it no one seems to have examined the use of the article in Greek drama? Argument on the lines of the Homeric critics could prove that Sophocles is composite. To return to the first book: the four tests supposed to be crucial—digamma, *ἐς*, *ἀν*, iteratives—all fail. One is even more put out to find how shamelessly one critic copies another; so that one after another argues on statistics compiled by Monro, and wrong (p. 110).

Mr. Shewan's argument is convincing when it is destructive: we are not always so well satisfied with it when it attempts to construct. That on p. 100, which

argues for a scansion δ' φοῖκαδε, pronounced *dwoikade*, on the analogy of Latin *ne* elided before a consonant, fails, because Latin is a stress-language, and its metrical rules are different. We do not like Mr. Shewan's own attempts at emendation (as on p. 230).

We may sum up by saying that this is a convincing defence of perhaps the most assailed part of Homer. If this is proved not to be late, the cause of the rest is helped. It is clear that the reaction against Wolf is fast becoming stronger, and the believers in one Homer may take heart. The learned opponents of unity are apt to be mutually destructive.

Syntax of Classical Greek from Homer to Demosthenes.—Part II. *The Syntax of the Simple Sentence continued, embracing the Doctrine of the Article.* By Basil Lanneau Gildersleeve. (New York, American Book Company.)—This book represents a second fragment of a larger scheme of a Greek series which was apparently too comprehensive to be carried through, and so had to be abandoned. The partnership between Prof. Gildersleeve and Prof. Charles W. E. Miller has occasioned so much delay that it has had to be dissolved as from the end of this part. An outline of what remains to be done with the original manuscript is in progress, but Prof. Gildersleeve is beginning sadly to realize "*ars longa, vita brevis.*" He writes in his Preface: "Though it is high time that I cut down long hope to match the brief space of human life, I do not hesitate to commit myself to a plan that involves little more than the shaping of material already in hand."

Readers of the first part will know how exceptionally thorough is the method of treatment, with its wealth of illustration of each minute syntactical point from many authors from Demosthenes back to Homer. The present part continues the treatment of the simple sentence, and advances through the various concords, until at § 514 it takes up the thorough treatment of the article—the most thorough we have yet seen—which has been elaborated fully and accurately by Prof. Miller. The subject occupies pp. 215 to 332. The general remarks on the article on p. 215 give a foretaste of the thoroughness and originality of the whole section. We have no space here for quotation, but may send Greek grammarians with confidence to these pages.

Caesar's Gallic War. Translated by the Rev. F. P. Long. (Oxford, Clarendon Press.)—The general character of this translation reminds us of Crawley's rendering of Thucydides. Certain broad characteristics are common to both. Both exhibit virile fluency, and a formative sense of English historical style which prevents the translator, when once he has apprehended the full sense of his author, from running into Latin moulds. Mr. Long's diction is often imaginative and bold, and on the free side, so that squeamish scholars might possibly turn from it. Its demerit, naturally, is a tendency to verbosity, and herein a contrast is suggested with Dr. Rice Holmes's translation. Much as we like the latter, however, we confess to a slight general preference for the lilt of the version before us, though it does not suggest Caesar's simplicity, terseness, severity, or restraint as does the other. We append a passage taken at random from Book V., chap. 17:—

"On the next day the enemy kept the hills, merely showing themselves in small groups at a long distance from camp, and making demonstrations against the cavalry, though with far less

determination than the day before. But towards noon, on a force consisting of three legions and all the mounted troops leaving camp in search of fodder, under the general C. Trebonius, they suddenly swept down from every side upon the foragers, and even ventured up to the standards, prepared to cross swords with the legions. The latter delivered a spirited charge, before which they broke and fled, hotly pursued by the infantry."

OUR LIBRARY TABLE.

THE title of *The House of Hohenzollern: Two Centuries of Berlin Court Life*, by E. A. Brayley Hodgetts (Methuen), explains with accuracy the contents of the book. Its author is not much concerned with the campaigns and constitutions which have built up the German Empire under the hegemony of Prussia. Such matters he deals with briefly and sometimes allusively. But we are told a good deal about coronations and other ceremonies; and a long procession of kings, queens, ministers, functionaries, and favourites passes before us. Anecdotes not always of a pleasant character abound. The volume should have its vogue. Mr. Brayley Hodgetts displays genuine enthusiasm for noble figures like Queen Louise and the Emperor William I.; and his portraits of Grumbkow and the "Old Dessauer," already familiar to us through Carlyle, are commendable. He deals, unfortunately, in a rather uncritical spirit with some of the numerous authorities that he has consulted, and the result is a blurred impression here and there, especially where complex characters like Frederick William II. are concerned. Mr. Hodgetts's style, though animated, might be more correct. The statement that Frederick the Great was constantly "pulling the leg" of Catt is an unnecessary lapse into slang; and an "infant spokesman" is a contradiction in terms. The German Emperor's "jolly" sons are "devoid of side." Clément, again, in addition to being "an adroit vulgar swindler," must have been a singularly prescient prophet if he could confess that "all his wild stories were as devoid of foundation as the latest mare's-nest of the yellowest of modern yellow newspapers" (p. 133). These are, however, but minor blemishes, and on the whole Mr. Hodgetts may be congratulated on having produced a spirited, if slightly incoherent study of a great dynasty. His Index is not good.

An Adventure (Macmillan), to the Preface of which are appended two pseudonyms, "Elizabeth Morison" and "Frances Lamont," is hardly convincing in its present form. Before stating some of our objections, we will give a short outline of it.

Nearly ten years ago the two pseudonymous ladies, it is related, went from Paris to Versailles. They visited the Petit Trianon, where "Miss Morison" saw "a woman who was shaking a white cloth out of the window of a building," and was surprised that "Miss Lamont" did not ask her the way. That lady had not perceived the cloth-shaker, her attention being occupied by a plough of antique shape which had escaped the notice of her companion. They, however, both saw two "dignified, thoughtful-looking officials in long greyish-green coats with small three-cornered hats," who directed them, in a "casual and mechanical manner," to go straight on. A "sudden gleom, which became quite overpowering," fell on the spirits of the ladies, which was not dispersed by their respective visions which followed. At the door of a detached cottage was a

woman passing a jug to a girl wearing a close white cap, from which "her light-brown hair escaped." That tableau was visible only to "Miss Lamont"; but both ladies beheld, sitting by a kiosk, a cloaked and slouch-hatted man of evil and repulsive countenance marked with smallpox. That spectacle "was the culmination of my peculiar sensations," writes "Miss Morison," "and I felt a moment of genuine alarm"; while "the eerie feeling" of her companion likewise "culminated in a definite impression of something uncanny and fear-inspiring."

The "culminating" emotions of the pair (they wrote independent accounts of their remarkable day's outing) were relieved by the precipitate arrival of another cloaked gentleman, "who had apparently just come either over or through the rock (or whatever it was) that shut out the view." He was "handsome," "young-looking, with a florid complexion," "from heat, not sunburning," and told them not to pass that way. Near the house, "on the rough grass which grew quite up to the terrace, a lady was sitting, holding out a paper." Her face, though not young nor attractive, was "rather pretty," and, unlike the warmly cloaked gentlemen, she was seasonably attired in a "light summer dress." "I thought she was a tourist, but that her dress was old-fashioned," writes "Miss Morison," whose turn it was to perceive an apparition alone. Both, however, were permitted to see coming out of a door a youth, who to one "had the jaunty manner of a footman," and, according to the other, "with the peculiar smile of suppressed mockery, offered to show us the way." Then they got into the Petit Trianon, "and looked round the room in the wake of a French wedding party," after which they "drove back to the Hôtel des Réservoirs, where we had tea, but we were neither of us inclined to talk."

On January 2nd, 1902, "Miss Lamont" returned to the Petit Trianon, when "the old feeling returned in full force." She saw "a cart being filled with sticks by two labourers," who "were tunics and capes with pointed hoods of bright colours"; likewise a "man cloaked," who seemed to "slip swiftly through the line of trees." She also heard the rustling of silk dresses, women's voices saying "Monsieur et Madame," and "faint music as of a band"; but a gardener only was visible with "the air of an Englishman" and "a grizzled beard," who showed her the way.

On July 14th, 1904, the two ladies went back again and found everything was changed: buildings, woods, kiosk, had disappeared, and ordinary people promenaded in a "commonplace unhistorical atmosphere." Both before and after the "complete disillusionment" of that day, they undertook a course of research, to the end that they might come to a comprehension of their experience. They bought the best books about Versailles, such as M. de Nohac's '*La Reine Marie Antoinette*'; they studied contemporary documents and engravings among the Archives Nationales. They thus concluded that they had seen the Petit Trianon as it was on the eve of the Revolution, peopled by those who frequented it then. They recognized the plough they had observed as being of that period. They discovered records of the Kiosk, the out-buildings, the woods, and other objects which were no longer there on their last visit. They found that the music heard by one of them resembled passages of Grétry, Pergolesi, and other eighteenth-century composers. They identified the man marked with smallpox as the Comte de Vaudreuil, a courtier of 1783,

and the lady holding the paper as the Queen; and they ascertained that the ancient costumes of other apparitions were royal liveries of that time. They came to the conclusion that, as their first vision took place on the anniversary of the sack of the Tuileries on August 10th, 1792, it was a replica vouchsafed to them of a vision Marie Antoinette had, on that disastrous day, of the happy time she had spent at the Petit Trianon.

Now, if this adventure was genuine, why should the heroines of it disguise their names? It is nothing to be ashamed of, if veracious. Indeed, if the visions narrated were really seen by two English women, willing to publish their names as the only possible authentication, their narrative would become a highly interesting psychological document, well worth inquiring into. Such "retro-cognitive" visions are recognized by F. W. H. Myers.

But if this account is merely a pseudonymous work of imagination, it loses its interest. Why, too, should nearly ten years have been allowed to elapse from the date of the first vision to its revelation to the public? There is a good deal of erudition with evidence of laborious research among the *pièces justificatives* annexed; but, even though the authors are, as they say, "very busy people," ten months should have sufficed for all the documentation produced.

If the authors had spent only that amount of time in mastering the essential outlines of the French Revolution, simultaneously with their study of archives and memoirs, they might have furnished their narrative with an air of more plausible reality. But their last chapter, in which they essay an "historical clue," is unsatisfactory. Their alleged theory is that on a 10th of August they were miraculously inspired with the spirit of the unhappy Queen, awaiting the issue of that terrible day on which the monarchy fell. They saw with her eyes, and were filled with her thoughts. Marie Antoinette has often been accused of misunderstanding the situation in France; but it has been left for these English ladies to reveal that she was so ignorant of what had taken place that she believed that in 1792 she was the prisoner of the National Assembly of 1789. They say:—

"On this day Louis XVI. virtually relinquished all independence.....into the doubtful care of the Legislative Assembly. That assembly grew out of the States General which had been convened by the King, May 5th, 1789."

The poor Queen may have forgotten amid the tumult of the day that the King convened the States General on December 27th, 1788. "May 5th, 1789" is a minor error. But we do not believe, even on the assurance of the accredited medium of Marie Antoinette, that she imagined that the Legislative Assembly "grew out of the States General." It not only did nothing of the sort, but all the members of the Constituent Assembly, which did "grow out of the States General" at the famous *séance de nuit* on June 17th, 1789, were disqualified from sitting in the Legislative Assembly, which first met on October 1st, 1791. The Queen had reason for recollecting how the King was present on September 30th at the last sitting of the Constituent. What should we say of an inspired tourist to Carisbrooke who, filled with the spirit of Charles I., should inform us that the Short Parliament was sitting in 1648? It was also revealed to the authors that the King and Queen got no sleep on the night of the 10th of August, being "within sound....of the distant hum of the all-powerful Assembly about to decree their final destiny."

As to that we have to say that the Legislative Assembly, never powerful, reached on the 10th of August the extreme of its feebleness, and the only final destiny it was about to decree was its own, when it decreed that night the election of a National Convention. Nearly 400 members of this "all-powerful Assembly" were absent on August 10th, constrained by the armed force of the Jacobins; and all that the "Rump" decreed was not even the dethronement of the King, but only his temporary suspension.

Among the *pièces justificatives* we have noted several points which need elucidation; but space permits us to call attention only to one. "Miss Lamont" on the occasion of her second vision of the 2nd of January, 1902, saw two eighteenth-century labourers "loading a cart of sticks." She then discovered that in January, 1789, two men were hired at Trianon "pour ramasser les loques des chenilles et les brûler." We are sure she does not think that "loques des chenilles" is the French for "sticks." They are the caterpillars' nests which are such a nuisance to French arboriculture that experts, even in humble domains, have always been employed to remove them. Men so specially hired would no more be employed in "loading a cart with sticks" than would another rural specialist, the *taupier* or mole-catcher. This example does not prove that the vision was not seen; but it shows that some of the proofs of the visionaries were rather far-fetched.

Gilbert Crispin, Abbot of Westminster: a Study of the Abbey under Norman Rule. By J. Armitage Robinson. (Cambridge University Press.) Dr. Robinson has done a good work in producing this account of Gilbert Crispin, the earliest Abbot of Westminster of whom there is any considerable knowledge. In the Dean's able hands this volume forms a highly interesting study of the Abbey under Norman rule. Although Gilbert's time-worn effigy has been before the eyes of every generation which has trod the cloisters for the past eight centuries, no one has hitherto cared to bring together the scattered details of his life and times. His biography by Herluin, first Abbot of Bec, has never before been edited intact. Another valuable part of this work is the selection from early charters of Westminster and of St. John's Abbey, Colchester, most of which are here printed for the first time. Particular attention is paid to Abbot Gilbert's literary remains; he was held in much esteem as a theologian. But perhaps the most interesting sections of this book are those which deal with Gilbert's home at Bec, where he lived as a monk and scholar for twenty-five quiet years, and with the details of his administration as Abbot of Westminster from 1085 to 1117.

Dr. Robinson has evidently found it a pleasant task to revive the memory of one whom he has good ground for describing as a "blameless man":—

"As fragment after fragment of his story has revealed itself, his character has always remained without a stain. Other evidence may be found which has escaped my search; but there are few men, I think, of whom we may more safely say,

Whatever record leap to life
He never shall be shamed."

Gilbert Crispin was not only a true monk of the highest character and a distinguished scholar, but also a man of noble descent. William Crispin, son of the first Gilbert Crispin, achieved the highest fame under Duke William, and ended his life as a monk

at Bec. He was the father of Abbot Gilbert, whose mother, Lady Eva de Montfort, was of equally distinguished birth. Anselm records the interesting fact that the first Gilbert was called Crispin from the fashion of his hair, which stood on end, a feature he transmitted to his descendants. The Archbishop adds that they were distinguished from other Norman families both by this peculiarity and by the surname to which it gave rise. The Crispini, he tells us, were as famous among the Normans as were the Fabii and Manlii among the Romans.

Sinai in Spring; or, The Best Desert in the World. By M. J. Rendall. (Dent & Sons.)—Many tourists have indited ponderous tomes pretending expert knowledge upon the strength of journeys no more interesting than that described by Mr. Rendall in this little book. Like the Muslim doctor who brought all his stores of learning to bear upon the sex of an ant mentioned once in the Koran, such writers use their travels as a pretext to air their views upon the world in general. It is otherwise with Mr. Rendall. He keeps strictly to his text, the actual journey. His small volume is a model of what such books should be—a charming and poetic souvenir. He writes with a natural restraint and a sure felicity in the choice of words which recall French work in the same field; and his narrative is neatly rounded, a complete impression. The granite crags of Sinai, the hues, the radiant air, are evoked without a hint of effort on the author's part.

The goal of Mr. Rendall's pilgrimage was the convent of St. Katharine, where he spent some pleasant days. He started, not from Suez, as do the majority of travellers, but from the quarantine station of Tor, further down the coast. With regard to the latter place he has made a strange mistake, the only serious error which we have noticed. He writes:—

"Tor herself once gave the name to the whole peninsula, which was called the Jebel et Tor (the hill or 'desert' of Tor); the tribe of the Towara Bedouins are simply 'the men of Tor,' although the actual inhabitants of the tiny village are not Bedouins at all."

This is topsy-turvy reason. Tor (properly Tûr) is a dignified term for a mountain, applied to mountains of some sanctity. It is given always to Mount Sinai (Tûr Sîna) and the Mount of Olives. Mount Sinai was Et Tûr *par excellence*, and the name extended to the whole peninsula, of which an inhabitant was called a Tûri (plural Towârah). The modern village took its name from the country, not the country from the village.

As an example of the author's pleasant manner we quote the following lines, which occur in a description of a night spent in Wady Sigilliyeh:—

"There was only one serpent in our paradise; namely, the mosquito, of that species which is called with gentle irony *anopheles*, the unprofitable insect."

"The cool and balmy night was too beautiful to waste in sleep. It was refreshing to paddle barefoot in the big pools, close to which we lay; to watch the reflected stars, which seemed to have tumbled into the water, where they shone brighter than ever; to take moon-pictures of the rocks and their images, and then to let one's fancy free. Those granite rocks, whose every line was grotesque, were populous with owls and griffins and chimæras! The gargoyles of the Louvre were grinning silently at us, and the monstrous men of Lionardo; while the whole valley teemed with leviathans and antediluvian cattle."

"So the magic hours passed with never a sound, except when an *anopheles* blew his tiny horn or a cane snapped suddenly in the brake, at the footfall of some unseen beast."

We notice a few mistakes in Arabic words or their rendering, e.g., "safragi (cook)" (the word means "waiter"), "wabba" for *wabr*, and so on; but, as Mr. Rendall avows ignorance, it is a wonder such mistakes are not more numerous. It is a modest little work which should delight the expert reader, and is illustrated with a number of capital photographs taken by the author.

The Belmont Book. By Vados. With an Introduction by Arnold Bennett. (Smith, Elder & Co.)—Mr. Bennett's Introduction speaks very highly of this book and its author, but not a whit too highly. Vados has an intimate knowledge of Norman peasants, male and female, of their thoughts and modes of speech, of their customs and daily life, such as has been attained by few foreigners. 'The Belmont Book' consists of two dozen sketches of Norman country life as seen from a cottage near a small town. The author ranges at will through the most diverse topics: she has a taste for the *macabre* without insisting on it too vividly; she has a keen eye for the picturesque, an alert intelligence for the interesting even in the most unlikely objects, and a forbearance with the uninteresting which is sometimes amply rewarded. Among the tales which show her peculiar gifts, 'La Masure Dame Agnès' stands out prominently in one direction, and 'Autour d'un Mariage' in another. The first is a skilful piece of horror, written from within the peasant's mind; the second is pure farce. 'The Emerald Necklace' is another realistic episode, and Miss Leadbitter, who brings Dalston into high tragedy, is well observed and described. 'Saint Hubert' will introduce the English reader into a new world of sport with a vocabulary of its own. He would find it all, no doubt, in Larousse, but the use of this excellent dictionary is not common on this side of the Channel, and Vados puts her borrowings in a very pleasing setting.

We should have had much more to say in praise of this charming book if Mr. Arnold Bennett had not forestalled us in his Introduction; but good wine needs no bush, and we need only assure the reader that there is not a dull or carelessly written page, and that we know no more truthful or loving description of the Norman peasant.

Problems of Local Government, by Mr. G. Montagu Harris, Secretary to the County Councils Association for England and Wales, is published by Messrs. P. S. King & Son. It is divided into two parts. The first of these gives a general idea of the information submitted to the first International Congress on "The Administrative Sciences," which was held at Brussels in July, 1910, and intended to be the precursor of periodical Congresses of a similar kind. The second part consists of papers contributed to the Congress concerning the systems of local government prevailing in England and Scotland, together with an account by Sir Thomas Elliott of the organization of the Board of Agriculture and Fisheries.

That there are problems of local government awaiting solution and that new ones continually appear is undoubted, for, as M. Cooreman stated in his presidential address at Brussels, "in the national life of prosperous peoples there are continually arising new requirements, moral, material, intellectual and artistic, economic, social, and financial." Formerly, important Acts affecting the wellbeing of local communities, such as Sir Charles Dilke's Housing Act, the Local Government Acts of 1888 and 1894,

the Education Act, &c., would be followed a few years later by Acts providing amendments which experience had shown to be necessary for their more effective working; but now the congestion of business in Parliament makes it almost hopeless to expect the promotion of legislation for removing difficulties and correcting anomalies, until the general public cease to be content to "muddle along somehow" and clamour for some practical dealing with problems in many respects urgent. Hence the publication of this book is timely.

The glimpses (for space precludes their being much more) which the first part of this book affords of local government on the Continent suffice to show that the problems are virtually the same there as here, the principal matters in regard to which reform is needed being administrative areas, constitution, powers, and duties of local bodies, finance, audit, training of officials, the protection of the private individual, and the relations between local authorities and the Central Government. They also exhibit a general dissatisfaction abroad with over-much meddling by the State in local affairs, and this in particular seems to have impressed the author as a warning needed in this country, where he fears that we are drifting towards a system of complete subjection of the local authorities to the central permanent Departments. Even Mr. Henry Hobhouse in his paper on State Bureaucracy expresses the view that the bureaucratic instincts not only of Government Departments, but also of members of Parliament, have tended of recent years towards a considerable reaction against the progress of free local government in this country.

The day has happily gone by when Congresses and Conferences were merely opportunities for "cranks" to air ill-digested theories, and the serious and practical character of the exchange of ideas and experience at the Brussels Congress is apparent. Mr. Harris's digest of views expressed at that Congress will be useful to all who are working for reforms in English local government, and the papers printed *in extenso* in the second part of the book are, with one or two exceptions, clear and accurate expositions by competent writers of the problems with which they are concerned. Sir Thomas Elliott's subject is outside the scope of the title of the book, but any one reading his paper will wish for similar authoritative accounts of the history and inner working of other departments of the State.

THE growing "Dickens Centenary Edition" (Chapman & Hall) has been further augmented by the appearance of *David Copperfield* (2 vols.) and *The Uncommercial Traveller*. Just as the former is among the most widely read of Dickens's books, so the latter is probably to this day unknown, except by name, to many who regard themselves as Dickensians. For repairing so disloyal an omission the present issue offers an unusual opportunity, for though, as we have more than once pointed out, most moderate in price, the volumes are produced in excellent style.

GEORGE DARLEY'S LETTERS.

IN his comments upon the interesting letters of George Darley in your issue of the 22nd ult., which we owe to the unceasing literary assiduity of Mr. Bertram Dobell, he hazards the guess that Charles Rann Kennedy is referred to in the first. With all due respect to Mr. Dobell, may I suggest

that, in my humble opinion, the evidence I submit is more in favour of the theory that Darley was referring to William Kennedy (1799-1871)?

1. They were both born near Dublin, were nearly of an age, and may have been acquainted in youth.

2. Darley writes May 22nd, 1831, "Is it too late to ask for our friend Kennedy's periodical?" In the previous month, April, 1831, William Kennedy started a monthly periodical entitled *The Englishman's Magazine*.

3. Under same date, "I see a volume of poems advertised with his name." In 1830 Kennedy's second volume of verse, 'The Arrow and the Rose,' made its appearance.

4. In 1831 Charles Rann Kennedy was Senior Classic at Cambridge, and as yet unknown in the literary world.

Now I venture to submit that this is fairly strong evidence that Wm. Kennedy was the friend referred to. In addition, I may add that Kennedy was a colleague of William Motherwell, the Scottish poet, before coming to London, and what is more natural than that he may have been introduced by him to his brother Scot "honest Allan"?

EDITOR 'IRISH BOOK LOVER.'

'THE KING OVER THE WATER.'

I AM not surprised that Mr. Justin Huntly McCarthy has selected for a novel (apparently concerned with Charles Wogan and the Clementina Sobieska of Mr. A. E. W. Mason's romance 'Clementina') the title of 'The King over the Water'. This is, as you observe, the title of Miss Shield's biography of James VIII. and III., a work in which I took a humble part.

But Mr. McCarthy doubtless worked on "The Stuart Papers," either in manuscript or in the edition of the Historical Manuscripts Commission, with the narratives of Sir Charles Wogan and his companions. The historical novelist, going to documentary sources for his materials, is not obliged to be aware of the existence of mere modern works in biography. But I do not advise the biographer of an unfortunate Lady Audley of the early seventeenth century to call his book 'Lady Audley's Secret.' The historian ought to know the names of great novels, but the novelist need not know the names of merely historical works; *autant en emporte le vent*. The student who asks for Mr. McCarthy's novel has all my sympathy if he be fobbed off with our purely historical work. It is not our fault!

A. LANG.

A BOOKWORM'S PERPLEXITY.

University Library, Cambridge, May 1, 1911.

THE two letters in last Saturday's *Athenæum* do not contribute much to the solution of Dr. Jessopp's perplexity: but they compel me to reply. I readily acquit Sir George Birdwood of evil intention. But the suggestion that "Dr. Jessopp's little book in all probability found its way into the market through having been deliberately sold, as so much rubbish and lumber," is one that ought not to have been made unless there was some evidence to support it. On the other hand, the writer who goes out of his way to sign himself "Cantab" evidently means to be nasty. He will therefore no doubt be disappointed to learn that the book did not leave the Library

by sale or exchange; and further, that no book, not being a duplicate, ever did leave the Library by sale or exchange, except perhaps in the disastrous year 1547.

I ought to add that Dr. Jessopp never seriously hesitated about returning the book to its place in the University Library; and that I had great pleasure in acknowledging it as an exceptionally welcome gift.

FRANCIS JENKINSON.

'THE SERPENT OF DIVISION.'

MAY I venture to reply to certain criticisms of my edition of this work made in your issue of April 8th?

1. Your reviewer remarks on the absence of the place-name Assoine from the glossary, and refers the expression "assoine lyne" to the "limes ab Ausoniis" of Lucan. He fails to state that I give the passage from Lucan in which the Latin original occurs, complete, in my study of sources. He fails to note, further, that the line in Lydgate reads "bi þe parties of assoine lyne riȝt tyl he aproched" [Rubicon]. The word "lyne" obviously does not translate "limes," but is a part of the adverbial expression "lyne riȝt," which is very common in Lydgate.

2. Your reviewer is surprised by my "approximation of the influence of a Lydgate tract to that of a succession of leading articles in some modern organ of opinion." His surprise is due entirely to ignorance of Lydgate's other work. In 1426 the Earl of Warwick commissioned him to prepare a 'Pedigree of Henry VI.' in English, "Troubled hertis to setten in quiete," as to Henry's rightful claim to France. If Lydgate's tracts had no influence, why should a great war-captain employ them? Of course, your reviewer's phrases overstate my estimation of this influence.

3. In censuring my opinion that Lydgate wrote 'The Serpent of Division' at the request of Humphrey of Gloucester, in December, 1422, your reviewer equally fails to take all the evidence into account. The earliest MS. says, it will be recalled, that the author is writing at the request of his "most worshipful master and sovereign." The next earliest MS., although omitting the last two words quoted, adds a colophon which clearly gives the date as December, 1422. Internal evidence supports this date. The patron's name is not given in either text; and it resolves into a question of probabilities as to who was likely to be Lydgate's master (and sovereign) in 1422. To this the only answer is Humphrey of Gloucester. In the autumn of the same year, 1422, Lydgate wrote a ballade on the approaching marriage of Humphrey with Jacqueline of Holland. He is here represented as supreme in England, as the

Wal of Bretayne, by manly vyolence
Ageyn hir foomen to stonden at defence.

Lydgate does not mention Humphrey by name in the poem, but only by allusion. Similarly, in 1424 Lydgate wrote a ballade against the Flemings, Humphrey's enemies. No other patronage between these dates is known, than Humphrey's. Shirley calls Lydgate in one manuscript, Ashmole 59, "a chaplain of my Lord of Gloucester," and no evidence has ever been adduced against the statement. Who, then, is likely to have been Lydgate's "master" in 1422, if not Humphrey?

To Lydgate Humphrey was, as I have called him, the real sovereign of the kingdom.

To him the Crown patronage fell, and he was entitled protector and defender of England and the Church. An order for literary services from the chief counsellor of the infant king was equivalent to an order from the sovereign; and Lydgate's phrase is perfectly intelligible with this rendering. The quarrels between the Council and Humphrey may have been the very things which set Humphrey's mind running on the danger of civil dissension. To him, of course, civil dissension meant thwarting his will. At all events, as defender of the kingdom it was his place to discourage civil strife, and in continuing his royal brother's patronage to the poet with a commission for a political tract on the subject, he was doing the natural thing.

H. N. MACCRACKEN.

FREEHOLD LAND TENURE.

It is commonly supposed that the old feudal rights of overlordship of freehold land have been extinguished; that now there is no feudal lord intermediate between any freeholder and the lord paramount the Crown; and that therefore the land which the freeholder held must of necessity fall in to the Crown, and to no one else, if it escheats by reason of his dying intestate and without heirs. Such belief is incorrect. Though other incidents of feudal tenure have been abolished by Acts of Parliament, escheats have not been abolished; the rights of overlordship of freehold land have not been extinguished, so far as escheats are concerned; we still hold our freehold land from a feudal overlord who is not of necessity the Crown, and to whom the escheat of it would fall in if only he could be found, and if he could prove that he was the overlord of it—just as in the case of copyhold land the escheat falls in to the lord of the manor, who is the feudal overlord of it. There must still be many instances in which, if the facts could be ascertained, it would be found that freehold land is held not directly from the Crown, but from an intermediate feudal overlord. Such overlord is in existence somewhere, but unknown to be such, and ignorant of it himself.

But if any one believed he was the overlord of a piece of freehold land which escheated, he would have difficulties which are practically insuperable in the way of proving it. In the case of copyhold land the constant and continuous recurrence since feudal times of the incidents of tenure maintains the evidence that it is held from the lord of the manor. With freehold land there is no such continued chain of evidence; and so, even in a case in which the lord of a manor is really overlord of freehold land which escheats within the circuit of his manor, he cannot prove it—the links connecting his claim to the escheat have been lost.

But probably in most cases the lord of a manor to-day is not the overlord of freehold land escheating within the circuit of his manor. For if the land was granted in the early centuries by the then lord to a feoffee who sub-enfeoffed another holder before the enactment of the statute known as Quia Emptores on November 20th, 1290, the overlordship of that land would descend not to the lord of the manor, but to the heir of the said feoffee, he being in that case the immediate overlord of the freeholder in possession. And if there had been further sub-sales, the last seller or feoffor before November 20th, 1290, and his heirs, would be the overlords to whom the escheat was

due. Only on failure of heirs of intermediate overlords would the escheat go to the lord of the manor.

By the statute Quia Emptores freehold land was put on the same footing with copyhold in the matter of escheats; that is to say, when thereafter sold by the freeholder, and in all further sub-sales, each last buyer would hold it from the overlord existing on November 20th, 1290, or from his heirs, not, as previously, from the last seller. But, as explained, evidence of the descent of the overlordship is maintained in the one case, and not in the other. He who seeks to-day to prove his overlordship of freehold land must not only show that the particular piece of land in question was in the occupation of a freeholder after November 20th, 1290, to whom or to whose progenitors the grant of it by the then overlord or by his predecessors had been made before that date, but must also show from then, by continuous chain of evidence, the descent to himself of the title, passing perhaps sometimes through the female line.

It is doubtful whether in any case that may now arise the proofs which are necessary could be found. And so, although escheats of freehold land have not been killed, they may probably be said to have died a natural death; the overlords entitled to such escheats are still among us, but whether they are now well-to-do members of society or parading the streets as sandwich-board men, we do not know them, and they do not know themselves as feudal overlords.

I have raised this question in a note (p. 58) in my recently published 'Historical Antiquities of Ackworth.'

W. A. GREEN.

THE PHILLIPPS SALE.

MESSRS. SOTHEY were engaged from Monday to Friday in last week in selling a further portion of the late Sir Thomas Phillipps's collection of manuscripts and autograph letters. The following important lots were included:—

Ambrosius, van der Junffernschaft, MS. by Heinrich Dissen, 15th century, 42l. Various MSS. relating to English affairs, 14th–15th centuries, 25l. 10s. Aske, a collection of pedigrees, &c., 1530, 30l. Astronomica, MS., 100 pp., 15th century, 32l. 10s. Bedfordshire, an extensive collection of drawings by T. Fisher and others, and engravings relating to the county, 5 vols., 36l. Michael Behaim's Gedicht, 296 pp., 15th century, 65l. St. Benedict, Regula, 14th or 15th century, 46l. 10s. Bible Commentary, German, 11th century, 56l. Breviarium, 590 pp., 13th century, 32l. 10s. Byron, A.L.S., 3 pp., 1822, 25l. Sir Julius Cæsar, State Papers, letters, &c., early 17th century, 38l. Cassiodorus, Formularum Liber, and Liber de Anima, 360 pp., 12th century, 32l. Charles II., Book of Ordinances of his Household, 26l. Chronicles, various, including two accounts of the life of St. Thomas of Canterbury, 288 pp., 12th century, 50l. Chroniques de St. Denis, 616 pp., 13th century, 72l. Cicero, various works, 14th–15th centuries, 37l. Dudo, De Gestis Ducum Normannia, 11th century, 60l. Sir William Dugdale, original collections, 2 vols., 18th century, 122l. Edward I. Year Book, 1286, 52l. Edward I. original Wardrobe Book, 1298, 54l. Edward II., Statutes, 14th century, 32l. Edward IV., Treaty between England and Flanders, 1467, 38l. Edward VI., Expenses of the Privy Council, 32l. Eusebius, Histories, &c., 12th century, 25l. Ford Monastery, Cartulary, 574 pp. 15th century, 235l. 327 leaves from various MSS., 11th–15th centuries, 38l. Geography by F. Bartholomæo, 15th century, 65l. Glastonbury, Cartularium, 1515–17, 150l. St. Gregory, Dialogues, 396 pp., 10th century, 48l. Guido de Columna, History of Troy, and History of Alexander the Great, 308 pp., 15th century, 55l. Guise family, a collection of State papers and letters addressed to them, 1557–8, 75l. Heilige Legenden, 526 pp., 15th century, 26l. 10s. Henry V., Treaty with Charles VI., 1416, 36l.; ratification of the same treaty, 1418, 29l. St.

Hildegard, *Vitarum Meritorum Libri VI.*, 232 pp., 12th century, 41l. Correspondence of Sir John Chardin and other members of his family relating to India, 14 vols., 1684-1718, 40l. Jacoponi da Todi, *Poesic*, 318 pp., 15th century, 39l. John II. of France, an account of the subsidies levied for his ransom, 1364-5, 43l. 10s. Cartulary of the Manor and Town of Pluckley, 28l. 10s. Königshofen, *Chronik*, 342 pp., 15th century, 25l. 10s. Marcus von Lindau, *Auszug der Kunder Israel*, 244 pp., 15th century, 46l. Lucretius, *De Rerum Natura*, 15th century, 40l. The Falle of Princes, by John Bochas, translated by John Lydgate, 562 pp., 15th century, 29l. 10s. William of Malmesbury, *De Gestis Regum Anglorum*, and *Historia Novella*, 399 pp., 14th century, 88l. Sir Peter Manwood, original collections, 582 pp., 1605, 35l. 10s. Chronicle of the Abbey of Marienmünster, 1503-49, 31l. Queen Mary I. and King Philip, *Wardrobe Book*, 168 pp., 120l. Sir Thomas Mayerne, *Entry Book of Cases*, 403 pp., 1607-49, 45l. Chronicle of the Monastery of Melsa, 14th-15th centuries, 118l. Messiasbuch, in old German, 208 pp., 15th century, 38l. 10s. *Regulæ Solitiorum*, 140 pp., 9th century, 86l. Correspondence of Capt. James Walter relating to the Navy, 6 vols., 1677-1749, 30l. St. Neot, *Life, &c.*, 11th century, 71l. Normandy, *Laws and Customs*, 13th century, 60l. Bishop John of Olmütz, translations from Eusebius and Augustine into German, 144 pp., 15th century, 39l. Ovid, *MSS.* of various works in Latin, 15th century, 31l. St. Pancratius, *Officium et Passio*, 10th century, 71l. Bishop Pecock, *Ye Book y callid Ye Reule of Crysten Religioun*, 384 pp., 15th century, 151l. Persius and Juvenal, *Satires*, 15th century, 42l. Sir William Petty, original entry book of letters, 8 vols. in 2, 1666-83, 51l. Poems written in the time of Charles I., 25l. 10s. Nicolas Oldisworth, *Poems*, 1644, 38l. Leger Book of the Fraternity of St. Wolfgang, Ratisbon, beginning in the 14th century, 51l. Richard I., *Itinerary*, 13th century, 75l. Johannes Roth, *Gedicht von der Keuscheit*, 182 pp., 18th century, 53l. Siefried's *Alexandreis*, 376 pp., 16th century, 56l. A collection of 1629 drawings and engravings relating to Surrey, 9 vols., 80l. *Æneas Sylvius*, *Euryalus and Lucretia*, in German, 15th century, 44l. Terentii *Comædiæ*, 14th century, 40l. Tucher's and Rietter's *Journeys to the Holy Land*, 196 pp., 15th century, 63l. Theological Tracts in prose, 262 pp., 15th century, 40l. Acts relating to the monastery of St. Maximin in Treves, 15th-16th centuries, 44l. *Lives of the Saints*, 282 pp., 15th century, 46l. About 80 sketches of scenery in Wales and Devonshire, 1818, 35l. 10s. Cartulary of the Abbey of Warden, 218 pp., 13th century, 172l. *Wigmore Chronicle*, 1066-1306, and *Chronicle of England to 1437*, 61l. Names of the Mayors and Sheriffs of York from Richard I. to 1609, 46l. Yorkshire, two rolls of taxation, 14th century, 38l. Cartulary of the Monastery of St. Mary's, York, 2 vols., 505l. The total of the sale was 8,795 17s. 6d.

THE following prices were realized in Messrs. Hodgson's sale of the 26th and 27th of April: Two specimens of fore-edge paintings, *The Poems of Gray*, 1801, and *Bidcombe Hill*, 1808, 25l. Original drawing of a plan of part of the Provinces of Lower Canada and New Brunswick, 1817, 15l. 10s. Herriek's *Hesperides*, first edition, 1648, 33l. Adam's *Works in Architecture*, with 105 plates, 1773-1822, 50l. Illuminated genealogical manuscript of the Weston Family, 1632, 21l. Johnson's receipt for 100l. for his tragedy of 'Irene,' &c., 1776, 17l. 10s.

With introduction by the Bishop of Salisbury.

Documents illustrative of the Continental Reformation, 12/6 net.

Edited by the Rev. B. J. Kidd.

Form and Order of the Service that is to be Performed, and of the Ceremonies that are to be Observed, in the Coronation of their Majesties King George V. and Queen Mary in the Abbey Church of St. Peter, Westminster.

Various editions and prices.

Forms of Prayer with Thanksgiving to Almighty God, commended by the Archbishops of Canterbury and York for General Use at the Coronation of their Majesties King George V. and Queen Mary.

Various sizes and prices.

Harris (J. Rendel), *The Odes and Psalms of Solomon*, published from the Syriac Version, 12/ net.

Second edition, revised and enlarged, with a facsimile. For notice see *Athen.*, Jan. 15, 1910, p. 62.

Journal of Theological Studies, April, 3/0 net.

Robertson (John M.), *Pagan Christs: Studies in Comparative Hierology*, 5/ net.

Second edition, revised and expanded.

Thompson (Rev. J. M.), *Miracles in the New Testament*, 3/6 net.

Law.

Haycraft (Thos. W.), *A Handy Book on the Bills of Sale Acts, 1878 to 1891*, 2/6 net.

Revised edition.

Six Roman Laws, 6/ net.

Translated, with introduction and notes, by E. G. Hardy.

Fine Art and Archæology.

Bone (Muirhead), *Glasgow: Fifty Drawings*.

With notes on Glasgow by A. H. Charteris.

Crowe (J. A.) and Cavalcaselle (G. B.), *A History of Painting in Italy, Umbria, Florence, and Siena from the Second to the Sixteenth Century: Vol. IV. Florentine Masters of the Fifteenth Century*, 21/ net.

Edited by Langton Douglas and G. de Nicola, with many illustrations. For notice of Vol. III. see *Athen.*, Feb. 27, 1909, p. 262, and March 6, p. 294.

Cruikshank (J. W. and A. M.), *Christian Rome*, 3/6 net.

Revised edition, with 32 reproductions from photographs. One of Grant Allen's *Historical Guides*.

International Fine Arts Exhibition, Rome, 1911: British Section, Catalogue.

Issued by the Royal Commission.

National Art-Collections Fund, *Seventh Annual Report*, 1910.

Perkins (Rev. Jocelyn), *The Coronation Book; or, The Hallowing of the Sovereigns of England*, 7/6 net.

Illustrated by Mrs. Temple Perkins, together with reproductions of ancient prints. Second edition.

Royal Academy, 1911, 1/

Selincourt (Basil de), *Giotto*.

Besides treating of Giotto as a painter, the book contains an interesting chapter on 'Giotto as Sculptor and Architect.' The volume has 44 illustrations.

Poetry and Drama.

Ainslie (Douglas), *Mirage*.

A collection of poems, a few of which have appeared in magazines and papers.

Chanson de Roland, 1/ net.

The first volume of a series called *Tous les Chefs-d'Œuvre de la Littérature Française*.

Edwards (Blanche), *The Dream-Merchant*, and other Poems, 1/ net.

Part of the Vigo Cabinet Series.

Hewlett (Maurice), *The Agonists*, a Trilogy of God and Man: *Minos, King of Crete; Ariadne in Naxos; and The Death of Hippolytus*, 4/6 net.

McClymont (James Roxburgh), *Characters in Outline*, and other Poems, 3/6 net.

Pottle (Emery), *Poems*, 5/ net.

A volume of poems by an American author known chiefly for his short stories of modern life.

Saunders (James), *A Marriage Hymnal*, 3/6 net.

Hymns for use at marriage services.

Saunders (J. E.), *Niagara*, a Poem, 6d. net.

New edition.

Stephenson (Rev. H. S.), *Three Hymns for the Coronation of their Majesties King George V. and Queen Mary*, 1d.

Music.

Hervey (Arthur), *Franz Liszt and his Music*, 4/6 net.

With a portrait. The author hopes to interest Englishmen in Liszt, around whom a literature has developed in Germany.

Bibliography.

Bilderbeck (J. B.), *Early Printed Books in the Library of St. Catharine's College, Cambridge*, 2/ net.

Library of Congress: Classification: Class S. Agriculture—Plant and Animal Industry, 15 cents.

Political Economy.

Holcombe (A. N.), *Public Ownership of Telephones on the Continent of Europe*, 8/6 net.

Vol. VI. of *Harvard Economic Studies*.

History and Biography.

Abbott (Wilbur Cortez), *Col. Thomas Blood, Crown-Stealer, 1618-80*, 4/ net.

The author is a Professor of History in Yale University.

American Historical Review, April, \$1

Atthill (the late Lombe), *Recollections of an Irish Doctor*, 2/6 net.

Begins with an insight into the rural conditions of Ireland in the reigns of George III. and IV.

Bindley (T. Herbert), *Annals of Codrington College, Barbados, 1710-1910*, 1/ net.

A sketch of the history of the College by a late Principal, including many illustrations.

Biographia Epistolaris: being the Biographical Supplement of Coleridge's Biographia Literaria, 2 vols., 3/6 each.

With additional letters, &c. Edited by A. Turnbull for Bohn's Standard Library.

Calendar of State Papers, Domestic Series, March 1st, 1677, to February 28th, 1678, preserved in the Public Record Office.

Edited by F. H. Blackburne Daniell.

Elliott-Drake (Lady), *The Family and Heirs of Sir Francis Drake*, 2 vols., 31/6 net.

With portraits and illustrations.

Gardner (Monica M.), *Adam Mickiewicz, the National Poet of Poland*, 10/6 net.

Knox (Robert), *An Historical Relation of Ceylon*, together with somewhat concerning several Remarkable Passages of my Life that hath hapned since my Deliverance out of my Captivity, 12/6 net.

Part of this volume is printed for the first time from a manuscript in the Bodleian Library. The remainder is a reprint of Knox's well-known and scarce work on Ceylon, first published in 1681.

Lincoln (Abraham) and the London 'Punch,' \$1 net.

A collection of cartoons, comments, and poems published in *Punch* during the American Civil War, edited by William S. Walsh.

Melville (Lewis), *Some Eccentrics and a Woman*, 10/6 net.

Eight papers, most of which have already appeared in English and American journals. The "Eccentrics" include Charles James Fox, Peter Pindar, Beckford of Fonthill, and others. The book has 9 illustrations.

Mullinger (James Bass), *The University of Cambridge: Vol. III. From the Election of Buckingham to the Chancellorship in 1626 to the Decline of the Platonist Movement*, 20/

Newbigging (Thomas), *A Nook in Galloway*, 2/ net.

With illustrations of this haunt of the author's boyhood.

Reeks (Margaret), *The Mother of Goethe, "Frau Aja"*, 10/6 net.

With a photogravure frontispiece and 17 other illustrations.

Tilby (A. Wyatt), *British India, 1600-1828*, 4/6 net.

Revised edition, forming Vol. II. of the *English People Overseas*.

Turpin (Edna Henry Lee), *A Short History of the American People*, 4/ net.

With an introduction by S. C. Mitchell, maps, and illustrations.

Geography and Travel.

Fraser (John Foster), *Canada as It Is*, 6/

New edition, with an introduction by Lord Strathcona, 4 plates in colour, and over 50 black-and-white illustrations.

Gostling (Frances M.), *Auvergne and its People*, 10/6 net.

With 8 illustrations in colour by Léopold Lelée, 32 other illustrations, and a map.

Marshall (Archibald), *Sunny Australia: Impressions of the Country and People*, 6/

With an introduction by Sir George Reid, and many illustrations.

Robertson (Eric), *Wordsworthshire: an Introduction to a Poet's Country*, 7/6 net.

Illustrated with 47 drawings by Arthur Tucker.

Talbot (F. A.), *The New Garden of Canada*: by Pack-Horse and Canoe through Undeveloped New British Columbia, 7/6 net.

With 48 full-page plates and a map of the author's route. The scenic interest of the country is emphasized, as well as the economic.

Sports and Pastimes.

Grahame-White (Claude) and Harper (Harry), *The Aeroplane, Past, Present, and Future*, 15/ net.

With 93 illustrations. Such able exponents of the subject as M. Bleriot, Mr. Henry Farman, and M. Paulhan have contributed chapters to this book.

Record of Sports.

The records up to the end of 1910 are contained in this little handbook, issued by the Royal Insurance Company.

Russell (Harold), *Chalkstream and Moorland: Thoughts on Trout-Fishing*, 5/ net.

Education.

Darroch (Alexander), *The Place of Psychology in the Training of the Teacher*, 2/ net.

Kerschensteiner (Dr. Georg), *Education for Citizenship*.

Translated by A. J. Pressland from the fourth enlarged edition for the Commercial Club of Chicago.

Kerschensteiner (Dr. Georg), *Three Lectures on Vocational Training*.

Delivered in America under the auspices of the National Society for the Promotion of Industrial Education.

Sociology.

Sociological Review, April, 2/6 net.

Philology.

Armitage (Lionel), *An Introduction to the Study of Old High German*, 8/6 net.

Cicero, *Orationes: Cum Senatui Gratias Egit, &c.*, edited by W. Peterson, 2/6; and *Pro Tullio, &c.*, edited by A. C. Clark, 2/.

Parts of the *Scriptorum Classicorum Bibliotheca Oxoniensis*.

Euripides, *Phœnissæ*, 8/6 net.

Edited, with introduction and commentary, by John U. Powell.

Gerschel (J.), *Vocabulaire Forestier: Français-Allemand-Anglais*, cinquième édition, considérablement augmentée, 5/ net.

Revised by W. R. Fisher.

Journal of English and Germanic Philology, April, \$1.

Mendell (Clarence W.), *Sentence Connection in Tacitus*, 6/ net.

A thesis presented to the Faculty of the Graduate School of Yale University for the degree of Doctor of Philosophy.

Rippmann (Prof. Walter), *Simplified Spelling*.

Reprinted from *The School World*, and issued by the Simplified Spelling Society.

Wyld (Henry Cecil) and Hirst (T. Oakes), *The Place-Names of Lancashire: their Origin and History*, 26/ net.

School-Books.

Davison (Charles), *Exercises from 'Algebra for Secondary Schools'*, 3/.

Geography Notes: Part I. The British Isles; Part IV. America (Non-British), both by J. C. Chute, 8d. each.

A four-page abstract of each part is also issued for pupils, price 2d. each.

Heitland (W. E.), *A Short History of the Roman Republic*, 6/.

Although founded upon the author's larger volume, this history has been entirely rewritten for junior students.

Scherer (E.), *Études Françaises et Anglaises*, 2/6 net.

Edited by Francis Storer for the Oxford Higher French Series.

Shelly (C. E.) and Stenhouse (E.), *Life and Health, with Chapters on First Aid and Home Nursing*, 1/8.

Forms Health Reader III.

White (J. A.), *How to Use Contour Handmaps for Class Teaching*, 6d.

Suggestions for practical exercises, with coloured facsimile.

Science.

Alexander (F. Matthias), *Man's Supreme Inheritance*, 5/ net.

The author puts forward a theory of the present and future trend of man's evolution, and endeavours to show that the great phase in man's advancement is that in which he passes from sub-conscious to conscious control of his own mind and body. New edition, with Addenda.

Austen (Ernest Edward), *A Handbook of the Tsetse Flies (Genus Glossina)*, 5/6.

With 10 coloured plates and illustrations in the text by A. J. Engel Terzi.

Barrett-Hamilton (Gerald E. H.), *A History of British Mammals, Part VI.*, 2/6 net.

Catheart (William Ledyard) and Chaffee (J. Irvin), *The Elements of Graphic Statics and of General Graphic Methods*, 12/ net.

With 159 illustrations. An extension of a course of lectures prepared originally by the authors for students of marine and mechanical engineering and naval architecture in their classes at Columbia University.

Ceylon Marine Biological Reports: Part III., by T. Southwell and J. C. Kerkham; Parts IV. and V. by T. Southwell, May, 1910; and Part V. March, 1911.

Dugger (John Frederick), *Southern Field Crops (exclusive of Forage Plants)*, 7/6 net.

By an Alabama Professor. The volume contains 222 illustrations.

Ely (Helena Rutherford), *The Practical Flower Garden*, 8/6 net.

With illustrations from photographs taken in the author's American garden.

History of Science Series: History of Biology, by L. C. Miall, and *History of Geology*, by Horace B. Woodward, 1/ net each.

Leduc (Dr. Stéphane), *The Mechanism of Life*, 6/ net.

Translated by W. Deane Butcher, with many illustrations.

Meat and Food Inspectors' Examinations: Model Answers to Questions set by the Royal Sanitary Institute and other examining Bodies, 3/6.

Compiled by G. T. Billing and A. H. Walker. *Plutarch on the Face which appears on the Orb of the Moon*, 2/6.

Translation and notes, with appendix, by A. O. Prickard.

Schuster (Arthur), *The Progress of Physics during 33 years (1875-1908)*, 3/6 net.

Four lectures delivered before the University of Calcutta during March, 1908.

Walker (Gilbert T.), *Outlines of the Theory of Electromagnetism*, 3/ net.

Another series of lectures delivered before the University of Calcutta.

Fiction.

Adams (Andy), *Wells Brothers, the Young Cattle Kings*, 6/.

The story of two young Americans who go through many exciting experiences while cattle-raising in the Far West, and eventually become "Cattle Kings."

Armstrong (Donald Pringle), *The Marriage of Quixote*, 6/.

A novel by a new Scotch author who has a neat and rather elaborate style.

Balzac's *Le Père Goriot*, 1/ net.

The second volume of the series *Tous les Chefs-d'Œuvre de la Littérature Française*.

Belloe (Hilaire), *The Girondin*, 2/ net.

An historical romance.

Bradstock (William Burton), *Not at Gribbin's: a Chronicle in Talk and Letters*.

A tale told in a series of dialogues of a man who wishes to practise the Christ-like life to-day.

Colmore (G.), *Suffragette Sally*, 6/.

A story of the present movement in favour of votes for women.

Deakin (Ralph), *The Broken Butterfly*, 6/.

An Austrian romance.

Fitzgerald (John Godwin), *Ruth Werdress, Father O'Haran, and some New Christians*, 6/.

An Anglo-Irish tale.

Howard (Keble), *The Happy Vanners*, 6/.

An account of a caravan holiday, illustrated by L. Raven Hill.

Kraszewski (Joseph), *Count Brühl, a Romance of History*, 1/6 net.

Translated by the Count de Soissons as part of the Lotus Library.

Laws of Lello, 2/ net.

Lello is a lonely and ideal colony which makes its own laws, and keeps idlers apart.

Le Queux (William), *Revelations of the Secret Service: being the Autobiography of Hugh Morrice, Chief Travelling Agent of the Confidential Department of His Britannic Majesty's Government*, 6/.

Masefield (John), *Multitude and Solitude*, 7d. net.

New edition.

Morgan-de-Groot (Dr. J.), *The Hand of Venus*, 6/.

Tells how a statue of Venus, fashioned by the hand of a great Greek sculptor, came to play an important part in the life of a modern English artist. The image is discovered in a field in the outskirts of Rome, where the scene of the novel is partly laid.

Page (Gertrude), *Winding Paths*, 6/.

Most of the scenes are laid in London, and the chief women characters are an actress, a journalist, and a Civil Service clerk.

Philips (F. C.), *That Wicked Miss Keane*, 2/ net.

A tale of unrequited love, ending with the suicide of the lover.

Smith, Elder & Co.'s *Shilling Net Series: Haggard's Jess, and Merriman's The Sowers*.

Syrett (Netta), *Dreder's Daughter*, 6/.

A young man, educated upon a system, marries a girl full of nervous energy. The story shows how she faced the difficulties which love and rebellion brought into her life; it provides also a satire on certain modern theories of wifehood, motherhood, and model villages.

Thurston (E. Temple), *The Garden of Resurrection*, 6/.

The love story of an ugly man.

Wemyss (Mrs. George), *People of Popham*, 6/.

A lively book by the author of 'The Professional Aunt.'

Weyman (Stanley J.), *Under the Red Robe*.

One of Methuen's Shilling Net Books.

Whitelaw (David), *The Man with the Red Beard*, 6/.

A story of Moscow and London.

Wynne (May), *Honour's Fetters*, 6/.

An historical novel of the times of Louis XV.

General Literature.

Bailey (L. H.), *The Country-Life Movement in the United States*, 5/6 net.

Forms part of the Rural Outlook Set, and deals with American conditions.

Cambridge Union Society, *Debates*, April, 1910—March, 1911, 1/6 net.

Edited by G. E. Jackson and P. Vos, with an introduction by Oscar Browning. Reprinted from *The Gownsmen*.

Cotbank and its Folk, 1/6 net.

Illustrated by H. C. Preston MacGoun.

Crockford's *Clerical Directory*, 1911, 20/.

Debrett's *Coronation Guide*, 1/ net.

With many illustrations.

Eastman (Charles Alexander), *The Soul of the Indian: an Interpretation*, 4/6 net.

The author writes of the American Indian as he was before he came in contact with the white man.

Egerton (Hugh Edward), *Federations and Unions within the British Empire*, 8/6 net.

Henry (S.), *Prophecies and Spirit-Rappings*, 1/.

Holmes (Thomas), *Pictures and Problems from London Police Courts*.

New edition in Nelson's Shilling Library.

Jackson (Holbrook), *Romance and Reality: Essays and Studies*, 3/6 net.

Landa (M. J.), *The Alien Problem and its Remedy*, 5/ net.

Merrill (Elizabeth), *The Dialogue in English Literature*, \$1.

A thesis presented to the Faculty of the Graduate School of Yale University in candidacy for the degree of Doctor of Philosophy.

Mitchell (C. Ainsworth), *Science and the Criminal*, 6/ net.

The author has endeavoured to give some account of the ways in which scientific discovery has been utilized to detect the criminal.

Mulhall (Marion McMurrugh), *Beginnings, or Glimpses of Vanished Civilizations*, 2/6 net.

The author has endeavoured to retell the discoveries of learned men in language intelligible to boys and girls.

Nevinson (Henry W.), *Peace and War in the Balance*, 6d. net.

One of the Conway Memorial Lectures delivered at South Place Institute on Dr. Conway's birthday, March 17.

Royal Commission upon the Duties of the Metropolitan Police: *Suppressed Evidence*, 2/.

Select Orations, 1/ net.

Edited, with introduction, by Archibald McClelland Hall. Part of Macmillan's Pocket Series of English Classics. Includes such dissimilar speeches as St. Paul's oration from Mars Hill, Mark Antony's oration on the death of Julius Caesar, and Mr. Roosevelt's speech concerning American motherhood.

Sportophyte, Vol. II., April, 1/.

See p. 513.

Pamphlets.

Echeverria (Don Vicente), *Lecture on Pan-Americanism*.

Delivered at the Polyglot Club, London, on March 17, 1910.

Echeverria (Don Vicente), *Lecture on the Political Organization of Chile*.

Delivered at the London School of Economics on January 16.

Harrison (Jane Ellen), *Heresy and Humanity*, 3d.

An address delivered before the "Heretics" Society in Cambridge, on December 7, 1909.

Knott (John), *Christian Science*.

Reprinted from *The St. Paul Medical Journal*.

FOREIGN.

Fine Art.

Doubletten des Kaiserlichen Münzcabinets der Eremitage in St. Petersburg: Münzen und Medaillen verschiedener Länder.

Catalogue, with 14 plates, of a sale to begin at Frankfort on May 29.

Haberlandt (M.), Oesterreichische Volkskunst, 2 parts, 105m.

Based on the collections in the Volkskunde Museum in Vienna.

Poetry and Drama.

Charlot (M.), Théâtre choisi de Scribe, 3fr. 50.

In the Collection Pallas.

Filon (A.), Shakespeare Amoureux: Scènes en vers, 3fr. 50.

Philosophy.

Boutroux (É.), William James, 3fr.

Ruyssen (T.), Schopenhauer, 5fr.

In the series Les Grands Philosophes.

History and Biography.

Hanotaux (G.), Jeanne d'Arc, 7fr. 50.

* * * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

MESSRS. MACMILLAN announce the early publication of 'The Letters of Peter Lombard (Canon Benham),' whose antiquarian gossip was widely appreciated. The volume will contain a portrait.

THE same firm also have nearly ready 'Problems of Life,' by Canon C. A. Houghton; and 'Aspects of the Holy Communion,' by the Rev. J. T. Levens, who hopes that the volume may have some influence in harmonizing views commonly regarded as discordant.

MR. ELKIN MATHEWS will shortly publish a new volume entitled 'Coronation Poem and Love Songs,' by Mr. K. H. D. Cecil, author of the 'Tragedy of Nero.'

THE CAMBRIDGE UNIVERSITY PRESS has undertaken the publication of 'The Diwân of Dhu'r-Rummah.' The work will include the Arabic text and Arabic commentary, edited from MSS. in the India Office, the British Museum, and elsewhere, with critical and other notes, glossary, and indexes by Mr. C. H. H. Macartney.

THE summer meeting of the English Association will be held at University College, Gower Street, on Friday evening, the 26th inst. Mr. F. S. Boas will deliver a lecture on 'Richardson's Novels and their Influence,' the President, Dr. A. C. Bradley, being in the chair. The lecture will be followed by an informal reception.

SOME books of exceptional interest which belonged to Sir Charles Dilke are to be sold at Messrs. Christie's next Tuesday. We notice in the catalogue Blake's 'Songs of Innocence,' original edition, designed, printed, and coloured by the author, purple morocco, 1789, a very fine copy; Keats, 'Lamia, Isabella, The Eve of St. Agnes, and other Poems,' 1820; 'Poems,' 1817; 'Endymion,' 1818; and another

copy of the same, which belonged to the poet and has his shorter poems in his own hand. All these are first editions, and there is also a copy of Milton's 'Poetical Works,' 1811, with many lines scored and numerous MS. notes in the handwriting of Keats, and a few by the Dilke who was the poet's friend. Sir Charles, in a note, suggests that the two worked through the book together.

THE Huth collection of autograph letters, of which Messrs. Sotheby announce the sale for June 12th-13th, is not extensive as such collections go—there are only 246 lots in all—but should attract attention. One of the most precious of the literary documents is Fielding's autograph receipt for 600*l.* paid to him by Andrew Millar, 11 June, 1748. The Burns autograph MS. of 'The Jolly Beggars' is a fine manuscript in perfect condition, and was acquired by Mr. Huth at a small price in 1861. The autograph MS. of Lamb's essay 'Grace before Meat' is another item of the highest literary interest. Nearly all the more important lots are illustrated by facsimiles in the sale catalogue.

THE new issue (No. 59) of the "Bibliographical Contributions of Harvard University Library" consists of a 'Herbert Bibliography' by Mr. George Herbert Palmer, the result of many years of study, and it is to be hoped that copies may be obtainable in England. Over 140 titles are registered. It is not confined to the works of George Herbert, but deals with all the seven brothers who wrote.

THE JOHNSON CLUB are to include a visit to the Church of St. Clement Danes in their itinerary this week. Only the tallest members of the party can, however, by gaping over a wooden fence, hope to see some portions of the legs of Johnson's statue at the back of the church. It is shrouded in the wood-work of Coronation seats. It seems to us that this profitable enterprise might have taken shape at a later date.

THE speakers at the Royal Literary Fund Dinner, at which Mr. Birrell will preside on Thursday, the 18th inst., will be Lord O'Brien, Sir Arthur Quiller-Couch, and Mr. Owen Seaman.

MR. A. M. WILLIAMS writes:—

"May I say that the reviewer of Mr. Fraser's interesting book on Aberdeen street-names has done some injustice to my old friend John Bulloch, father of John Malcolm Bulloch? In 1884 my worthy antiquarian friend published 'Aberdeen Three Hundred Years Ago,' and in it he wrote:—'The west side of the Broadgate was called the Ghaist Raw or Gastraw. The name has given some trouble to the philologist. Its overlooking St. Nicholas' churchyard has suggested the explanation of the name "Ghaist" or "Ghost." In charters of the 16th and 17th centuries it is termed *vicus lemurum*. Others derive it from the circumstance that it was here that hostleries or houses of entertainment existed—that it was the *Guest Raw*.'

"It will be seen that Mr. Bulloch was quite aware of the derivation given by Mr. Fraser."

'PRINTERS' PIE, 1911,' edited by Mr. W. Hugh Spottiswoode, will be published by "The Sphere and Tatler, Limited," next Monday, and is already in great demand.

THE first volume of 'The Letters of Richard Henry Lee, 1762-78,' collected and edited by Dr. J. C. Ballagh, will be published immediately by Messrs. Macmillan.

MR. ENEAS MACKAY of Stirling has in the press an enlarged edition of Macbain's 'Etymological Dictionary of the Gaelic Language,' with all the author's corrections and additions. The original edition appeared twelve years ago, and is now out of print and much sought after.

THE Fifteenth International Congress of the Press began last Wednesday at Rome, and on Thursday was inaugurated by the King and Queen of Italy.

MESSRS. WITHERBY & Co. will shortly publish an illustrated travel book entitled 'Through South-Westland,' by Miss A. M. Moreland. It records a ride through a district in New Zealand largely unknown to the outside world.

AT the thirteenth annual meeting of the Irish Texts Society on April 27th it was reported that thirty-three members had joined the Society during the year. The first of the three volumes of the Rev. John MacErlean's edition of the poems of David O'Bruadair appeared at the beginning of the year, and the second is well advanced. Mr. Thomas O'Rahilly has also made considerable progress with his edition of the Irish translations of the Spanish stories of Juan Pérez de Montalbán. The Council, which is in arrears in the publication of promised volumes, has received an unusual number of offers of new work.

IN their series of "Tous Les Chefs-d'œuvre de la Littérature Française" Messrs. Dent are publishing Amyot, 'Deux Vies parallèles,' Voltaire 'Philosophie,' and Rabelais, 'Œuvres,' Vol. I.

THE quarters occupied by the Biblioteca Nazionale at Florence under the Gallery of the Uffizi have long ceased to be adequate, and it has been decided to remove the library to the large space which extends from the Corso dei Tintori to the south side of the church of Santa Croce. The King of Italy will, on Monday next, lay the foundation stone of the projected building.

THE death at the age of 71 is reported from Munich of Dr. Andreas Schmid, late Professor of Pastoral Theology at the University of that town, and author of 'Geschichte des Georgianums in München,' 'Der Kirchengesang nach den Liturgikern,' and other works.

WE have noted one Parliamentary Paper under our Science heading. The only other of general interest this week is the Statistical Report of the University of Edinburgh (post free 3*d.*).

SCIENCE

GEOMETRY AND TRIGONOMETRY.

A New Trigonometry for Schools and Colleges. By the Rev. J. B. Lock and J. M. Child. (Macmillan & Co.)—The authors of this book have attempted the impossible by trying to combine in a single volume a textbook for schools and a textbook for colleges. They begin with a chapter which is remarkably good, containing problems on heights and distances to be solved graphically, which are illustrated by useful sketches; but the next chapter introduces almost simultaneously not only the six trigonometrical ratios, but also the inverse notation, and the first set of examples contains comparatively difficult algebraical identities. The authors advocate the use of five-figure tables throughout, and lay great stress on the theory of interpolation. This course is probably justified when young surveyors are being trained at a technical college, but schoolboys should not, in our opinion, be given the additional labour which is likely to divert their attention from the essential work of gaining facility in the use of formulæ. It is certain that, when differences have to be worked out, it is difficult to make calculations at the same time neat and logical.

In the Preface great stress is laid on the advantage of a general proof of the addition theorems, suitable for angles of any magnitude. The only criticism to which the proof seems to be open is that there is no discussion of the projection of a segment which is reckoned negative before projection. Experience shows, however, that such proofs by projection do not appeal to the majority of beginners, and the authors wisely include the old-fashioned proof as well, although they postpone it to a later chapter.

The proof of the expansion of a cosine in terms of powers of the circular measure of the angle is apparently invalid. A number m is fixed by the condition that it determines the numerically greatest term in an expansion; at the end of the proof we find the sentence: "Now make m infinite, then the finite series becomes infinite, and the last term vanishes." Apart from the fact that m is by definition finite, we do not like the looseness of this way of talking about limits. Is it right to say that the last term vanishes? We cannot help thinking that the use of the arrow notation " $m \rightarrow \infty$ " for " m tends to infinity" would have been of great service to the readers of this part of the book. Another paragraph that calls for criticism is the one in which the real factors of x^2-1 are found. Although the paragraph occurs before the introduction of imaginaries, the method adopted is to make x the root of a quadratic equation which happens to imply that x is complex. It would have been much simpler to take the complex value explicitly.

There are valuable descriptions of surveying instruments with unusually clear diagrams, and the chapters on triangles and quadrilaterals are full, including a great deal of modern geometry which is not readily accessible elsewhere, so that teachers will do well to get the book for their own use and perhaps for a few selected pupils.

Solid Geometry. By C. Godfrey and A. W. Siddons. (Cambridge University Press.)—That a certain amount of solid geometry should be included in every school course is probably admitted by all teachers. As a matter of fact, many of the little problems which are discussed in a course of plane geometry assume the existence of vertical and horizontal lines—ideas which belong essentially to space of three dimensions. There are not many books, however, which give a systematic, but elementary discussion of solid geometry. The little book which Messrs. Godfrey and Siddons have prepared fills the gap in a satisfactory way. They are content with half a dozen formal propositions, and are able accordingly to find room for clear accounts of orthogonal projection and perspective as well as the substance of Euclid's eleventh book. The diagrams are worthy of special commendation.

The most noteworthy feature of *A First Book of Geometry*, by J. V. H. Coates (Macmillan & Co.), is the successful co-ordination of work in the field and the classroom. The field work is done with the beautifully simple and cheap apparatus which Mr. Coates showed in his recent lecture before the London Branch of the Mathematical Association. The classroom course is also well arranged. In the text the congruence theorems are proved by demonstrations with hinged rods, but the orthodox proofs are included in the final chapter, which contains a course for revision on formal lines.

OUR LIBRARY TABLE.

The History of Medicine, Philosophical and Critical, from its Origin to the Twentieth Century. By David Allyn Gorton. 2 vols. (Putnam's Sons.)—A study of the history of medicine rather tends to confirm the truth of the saying, "There are no bounds to the folly and stupidity of mankind." With bright exceptions here and there—from Hippocrates onwards—of individuals who pursued their noble calling by the light of observation, induction, and reason, and thus advanced its aims, the history of the science and art of medicine is too frequently a history of credulity and empiricism, or even of quackery and imposture. Increase of knowledge and the growth of science might have been expected to weed out such faults; but, whenever mankind is confronted with the unknown and the incomprehensible—and this, unfortunately, is still the case in the practice of medicine—there seems to be a tendency, deeply ingrained in human nature, to use faith as a substitute for knowledge, or, in fact, to consider them as identical. Credulity amongst the suffering has been as rampant during recent years as in earlier ages; and for them there is excuse; but that it has found its appropriate ministers is witnessed to by the success of such systems of treatment as homœopathy with its infinitesimal doses, hydropathy for all ills, and Perkinism.

Aristotle said, "The philosopher should end by studying medicine, the physician begin with philosophy," and Celsus was of opinion that "no man is qualified to treat a disease of the nature of which he is ignorant." There is a force existing in each individual, the *vis medicatrix nature*, which, as Hippocrates taught, is the curative principle in life; it is the physician's best ally, not an enemy to be removed or weakened by purging or depletion. Systems and methods

of treatment have been, as Dr. Gorton says, the bane of medicine. In the majority of instances nature will do more than a whole pharmacopœia of drugs. Indeed, the brightest spot in the recent history of medicine is the gradual recognition of the fact that drugs are not essential to the cure of every illness. The fall in the death-rate and the lessening of infantile mortality which have been brought about by the teaching of the rules of personal hygiene and by legislation concerning public health are slowly though surely bringing home to the minds of the profession and the community that the most important part of the science and art of medicine is the prevention rather than the cure of disease.

It would be an advantage to the modern student if, at the close of his medical education, a course of lectures on the history of medicine were compulsory. He would then see in its proper perspective the knowledge he had acquired, and would learn to distinguish between what Prof. Virchow called objective knowledge founded upon scientific data, which is trustworthy, and that subjective mode of thought, a great part of which is empirical and a legacy from tradition. The history of the healing art has attractions to all students of humanity, and interest in its evolution has of late been reawakened. Besides Dr. Payne's lectures on Anglo-Saxon medicine and Dr. Moore's history of medicine in the British Isles, we have had more recently Dr. Moon's scholarly little book upon the 'Relation of Medicine to Philosophy'; and at the present time the Oxford University Press is issuing a translation of Prof. Neuburger's exhaustive history of medicine. Dr. Gorton's volumes are less ambitious than the last-mentioned work, but they contain a mine of information in an eminently readable form.

After a philosophical prologue, with some of the conclusions of which we cannot agree—since by them the author appears to be an adherent of Von Hartmann's "philosophy of the unconscious"—Dr. Gorton opens his subject with the mythical period. In the first volume he gives a survey of the progress of medicine through Greek and Roman times, the mediæval period, and the period of the Renaissance up to the close of the eighteenth century. The second volume is devoted to the nineteenth century and that great extension of medical knowledge which has been the result of the advance of the collateral sciences. This period he divides into decades, and treats more fully.

A comparison of the position of medicine at the end of the eighteenth and of the nineteenth centuries discloses remarkable progress. Dr. Gorton says:—

"At the beginning of the nineteenth century medicine was in a state of impassivity. It was really worse than that. It had made no substantial progress in a quarter of a century; and when a system or science ceases to progress it retrogrades."

At its close, however, the historian can chronicle a real advance founded upon accurate data and experiment. This progress has been mainly due to an increased knowledge of the ætiology of disease. To Pasteur, above all, belongs the distinction of having unravelled and established upon a scientific basis the germ-theory of infectious disorders; and his example has been followed by many successful workers in the same field. Lord Lister has revolutionized the art of surgery by applying these principles, in the form of antiseptic or aseptic precautions, to operations upon the human body. But the brilliant results of Lord Lister and the extension of operative surgery which he has brought about would

not have been possible without another discovery of the nineteenth century, that of anæsthetics. We owe the knowledge of the anæsthetic properties of nitrous oxide gas and of ether to two of Dr. Gorton's fellow-countrymen, Drs. Wells and Morton, and that of chloroform to Sir James Simpson. Many other aids to diagnosis have been acquired, such as the use of the clinical thermometer, and of X-ray photographs for the detection of foreign bodies or injuries to bones. It should be noted, also, that the employment of trained women as nurses—invaluable both to the sick and the physician, and always to be associated in England with the name of Florence Nightingale—dates only from the latter half of the nineteenth century.

The production of a work of this character requires so much erudition and painstaking research on the part of the author that slips are almost unavoidable. Some of those we find here are due to careless proof-reading, e.g. the description of the Homeric metre as "hexagonal" verse, and the expression "an exanthemata." In some cases the author's geography appears to be at fault: Crotona, though a Greek colony, was not in Greece, nor is Mecca in Europe, or Bokhara in Arabia. Roger Bacon was born at Ilchester, Somerset; he was not, therefore, "a product of the bogs and moors of Scotland." Other mistakes are more technical: the "circle of Willis" is not a convolution of the brain, but an anastomosis of the cerebral arteries. It is not correct to ascribe the discovery of the antitoxin treatment for diphtheria to Prof. Loeffler; antitoxin was first obtained by Behring in 1890. A few slips of this character may be pardoned. A more serious fault in our view is the flippant manner in which Dr. Gorton constantly refers to sacred subjects: we do not expect a man of his education and culture to speak of the author of the third Gospel as "Dr. Luke." Notwithstanding these blemishes, Dr. Gorton's volumes contain much valuable information, are written with considerable critical acumen, and enriched with portraits of many professional celebrities.

Atlas of Zoogeography: a Series of Maps illustrating the Distribution of over Seven Hundred Families, Genera, and Species of Existing Animals. Prepared by J. G. Bartholomew, W. E. Clarke, and Percy H. Grimshaw. (Edinburgh Geographical Institute.)—Geographers and zoologists alike will welcome this handsome work, which forms the fifth volume of 'Bartholomew's Physical Atlas,' now in course of publication by the Edinburgh Geographical Institute. In the preparation of the work Mr. Bartholomew has had the able co-operation of two officers of the Natural History Department of the Royal Scottish Museum—Mr. W. Eagle Clarke, the Keeper, and Mr. Percy H. Grimshaw, Assistant Keeper. The zoological studies of the geographer are thus associated with the geographical studies of the zoologist, and their joint compilation is a work of high value, representing no small amount of labour in ransacking the scientific literature of many lands.

Various schemes have been suggested from time to time for parcelling out the surface of the earth into zoological regions as distinct from political divisions. It is with good reason that the first map in this Atlas shows the system used by Dr. A. R. Wallace in his famous work on the distribution of animals, and it may be remarked that this system is not only adopted as a basis in the present work, but was followed also in Berghaus's 'Atlas der Tierver-

breitung.' The six primary regions recognized in this scheme as applicable to animal life in general correspond, though not without certain modifications, with the divisions of the earth suggested more than half a century ago by Dr. P. L. Sclater from his observations on the distribution of birds, and used many years afterwards by him and his son, Mr. W. L. Sclater, in their study of the distribution of mammals.

By means of a system of colouring, clear and delicately executed, the range of animal life over the earth's surface is represented in Bartholomew's Atlas in a series of more than 200 small maps comprised in 34 large plates. The adoption of this method of using a great number of maps, each limited to a few special groups, will be appreciated by those who have had to puzzle over distributional maps which, though on a larger scale, are crowded with a confusing mass of details. With regard to mammals, birds, reptiles, and amphibians the maps show the range of all the families and some of the component genera, whilst in certain cases they descend even to the species. Thus, to mention only some of the species, there are maps representing the range of the gorilla, chimpanzee, and orang-utan; the lion, tiger, jaguar, and puma. It may be noted, as an indication of the recent character of the work, that the localities in which the okapi is known are marked on one of the maps. In the case of fishes most of the families are dealt with; and among invertebrata the molluscs and insects are satisfactorily represented.

In the text which precedes the collection of maps there is a concise record of the various groups of the animal kingdom to which the maps relate, noting their range not only in space, but also in time. The text likewise discusses the general principles of distribution, dealing briefly with the natural processes by which the dispersal of animal forms is effected and the conditions controlling their geographical range. Emphasis is here properly laid on the value of palæontology in throwing light on many of the peculiarities of distribution. Moreover, a slight sketch of the history of zoogeography is given, including reference to the works of Mr. R. Lydekker, Mr. J. E. Beddard, and other writers.

The student who desires to pursue the subject of animal distribution will be grateful for the valuable Bibliography which accompanies the text. Here is a list of selected works numbering about a thousand titles, arranged primarily under the various geographical regions, and subordinately under zoological groups. Finally, a clear and copious Index adds considerably to the usefulness of this beautiful Atlas as a work of reference.

New Ideas on Inorganic Chemistry. By Dr. A. Werner. Translated from the second German Edition by Edgar Percy Hedley, Ph.D. (Longmans & Co.)—This is a translation of the 'Neuere Anschauungen auf dem Gebiete der anorganischen Chemie' of the Professor of Chemistry in the University of Zurich, by a Lecturer on Chemistry in the University of Birmingham. It will be useful in bringing Prof. Werner's work closer to English-speaking chemists, who will welcome an authoritative statement of his co-ordination theory. The book deals principally with the conceptions of valency which have from time to time been brought forward, and discusses the problem in such a way as to bring out not only the differences, but also the relationships, between various conceptions of valency, and between principal

and auxiliary valencies. The volume is, in fact, very suggestive for research in inorganic chemistry, and in that way will no doubt do good. References to original papers are numerous; but an index would be useful. We note that the author is convinced that lithium salts are produced by the action of radium emanation on solutions of copper salts.

The translation is well and accurately done, but misprints like "Rhubidium" (p. 7) and "Paladium" (p. 55) might have been corrected.

VOL. II. is out of *The Sportophyte: a British Journal of Botanical Humour*, founded and edited by Marie C. Stopes, Palæophytologist (Botanical Department, University College, London). The little periodical of twenty-four pages, though "a butterfly, a luxury, a phantasy," has beaten the record of many serious publications by becoming self-supporting in its first year, and has, we learn, been the subject of a lecture in New Zealand.

Though many of its jests are of a technical character, and some of the contributors have a deeper sense of botany than of metre, there is genuine amusement for those who, like our spring poets, are largely indifferent to science. Thus we hear on p. 3 of a lecturer to the Linnean Society who said: "The Dawn of Ecology was when Hooker threw his own orchids in Darwin's teeth"; and on p. 4 of a farmer who, on being told that the Experimental Stations for plant-breeding were primarily engaged in seeking for new plants for his benefit, remarked: "Well, what I want is for them to breed flat peas which won't fall off the knife as I eat 'em."

To italicize jokes, as is done on the same page, is surely an Early Victorian habit. The phrase in question reminds us of the description of an historian (was it Thorold Rogers?) as one who, better than any one else, has reproduced for us the savage habits of our ancestors.

SOCIETIES.

SOCIETY OF ANTIQUARIES.—April 27.—*Annual Meeting.*—The elections of officers and Council for the ensuing year resulted as follows: *President*, C. H. Read; *Treasurer*, P. Norman; *Director*, Sir E. W. Brabrook; *Secretary*, C. R. Peers; *Members of Council*, Lord Balcarras, J. Bilson, C. A. Bradford, P. W. P. Carlyon-Britton, A. H. Cocks, Viscount Dillon, A. J. Evans, Sir G. J. Frampton, Major W. J. Freer, Prof. F. J. Haverfield, Lieut.-Col. W. Hawley, W. R. Lethaby, Sir H. C. Maxwell Lyte, W. Minet, E. S. Prior, W. H. A. Vallance, and L. Weaver.

ZOOLOGICAL.—April 25.—Dr. S. F. Harmer, V.P., in the chair.—The Secretary read a report on the additions to the menagerie during March, 1911.

Mr. D. Seth-Smith, the Society's Curator of Birds, exhibited: (1) A nest of the grey struthidea or apostle bird (*Struthidea cinerea*), composed entirely of mud, and built on a branch in the Western Aviary. (2) Lantern-slides from photographs of the king penguin (*Aptenodytes pennanti*) and black-footed penguins (*Spheniscus demersus*) showing the method of moulting. (3) Lantern-slides from photographs of a number of wild Swainson's lorikeets (*Trichoglossus novaehollandiae*), sent by Mrs. Innes of Mackay, North Queensland. These birds came in large numbers to feed daily at a table, on syrup provided, settling without fear upon the head, shoulders, and arms of the lady who fed them.—Mr. C. Tate Regan exhibited a series of lantern-slides of scales of the salmon (*Salmo salar*), and showed how the life-history of the fish could be read from its scales.—Dr. W. Nicoll exhibited some preparations from a hare which showed a unique pathological condition.—Dr. Cuthbert Christy exhibited part of a collection of skins of mammals and reptiles obtained by him in Uganda, which included those of the antelope, leopard, civet, hyrax, &c.

Dr. W. Nicoll read a paper on 'Three New

Trematodes from Reptiles,' from material received from the Society's Prosectorium.—Dr. R. T. Leiper read a paper on 'Some Parasitic Nematodes from Tropical Africa,' and gave a brief description of a number of new genera.—Mr. Oldfield Thomas read a paper (the fourteenth of the series) on 'Mammals collected in Southern Shen-si, Central China, by Mr. Malcolm Anderson, for the Duke of Bedford's Exploration of Eastern Asia.' The collection contained 160 specimens, referable to 30 species.

PHILOLOGICAL.—April 7.—Mr. John Hodgkin read a paper on a curious collection of terms proper to the arts of cooking and carving. These were printed by Caxton about 1478, and by Wynkyn de Worde in 1508 and 1563. But Mr. Hodgkin laid before the Society transcripts of three MS. versions of an earlier date. These are Egerton MS. 1995 (British Museum), Packington MS. 10 (Lord Harlech), and Ashmole MS. 189 (Bodleian). They give the terms as statements of the manner in which various foods should be treated: "a Dere is Brokynne," "Brawne is leyschyde," &c., whereas Wynkyn de Worde uses the mandatory form: "Breke that dere," "Lesche y^e brawne," &c.

The terms seem to be a kind of mnemonic for the "keruer" and the cook, a sort of heraldry of the kitchen. It is quite possible that the original list was a *jeu d'esprit*, a skit upon the heraldry run riot of the period. Many terms are used for the same operation: to "raise," to "rear," and to "lift" all signify cutting from below upward. Thus in the Egerton MS. we have "Gosse ys rerryd," "Swaune ys lyfte," "Capoune ys sawsyde," "Henne ys jspoylyde" (spoiled) "Mallerde ysvnbrassyde" (unbraced), "Hayrynn ys dysmembraide," "Crane ys Dysplayde," "Pecocke ys dysfyguryde," "flesonde ys jhay lyde" (winged), "Rayle ys Brestyde," &c.

"A dere ys Brokynne" was the proper term for cutting up the hart when killed, that for the wild boar being "undone," although "undone" was sometimes used for the flaying of the deer preparatory to "breaking." See Sir Henry Dryden's edition of 'Twice,' 1908. For the method of breaking see 'Boke of St. Albans,' 1486, J. Turberville's 'Booke of Hunting.'

Many of the terms were merely cookery terms, e.g., "A Pastey ys brouderyde," Eg. 3; "Border that pasty," W.I. 18; "Border a pasty," L.D. 3; and "Sauce that capon....Chekyns shall be sauced with green sauce or vergyns," 'The Boke of Keruyng,' 1513.

"An egge tired," all three; "Tire that egg," R.H. 16. In Scotland to *tir* to the skin is to strip naked; to *tir* a house is to take off the tiles.

"A Papyr ys lowryde," Eg. 17. The *papyr* or *poper* was probably the wild goose, which was to be "lowered," i.e., cut downwards; whereas the domestic goose was to be "reared."

"Disfigure that peacock," R.H. 30. When cooked, the peacock was served up in his skin and his comb was gilded. Cutting up such a fine bird might well be called "disfiguring."

"A Crabbe ys mynde," Eg. 40; "Tayme that crabbe," W. I. 38. The first means that the crab is to be excavated; the second is from the French *entamer*, to cut or open up.

"A Lampray ys cordyde," Eg. 29; "String that Lamprey," R.H. 5. This was to remove the cord or string that runs down the back.

"Barbe that lopster," W.I. 29; "Barb that lobster," R.H. 19. This is a corruption of *barde*. The *barde* was the several portions of a horse's armour. Similarly the "craus" (crayfish) is "vamaylyde," Eg. 41.

A sole was to be "loyned," a haddock "sided," both meaning filleted; a trout "gobbed," or cut into goblets or small pieces, or it might be "colpynded," i.e., scored.

Finally, we are not to say "Put some wood on the fire," but "Tymbre that fyre."

The paper, with the Lists referred to, will be published by the Society.

INSTITUTION OF CIVIL ENGINEERS.—April 25.—*Annual Meeting.*—The result of the ballot for the election of officers was declared as follows: *President*, Dr. W. C. Unwin; *Vice-Presidents*, Mr. R. Elliott-Cooper, Mr. A. G. Lyster, Mr. B. Hall-Blyth, and Mr. J. Strain; *other Members of Council*, Mr. J. A. F. Aspinall, Mr. J. A. Brodie, Mr. W. B. Bryan, Col. R. E. B. Crompton, Mr. W. Davidson, Mr. J. M. Dobson, Mr. H. F. Donaldson, Mr. E. B. Ellington, Mr. M. Fitzmaurice, Mr. J. P. Griffith, Dr. C. A. Harrison, Mr. W. Hunter, Mr. G. R. Jebb, Mr. H. E. Jones, Mr. E. H. Keating, Sir W. T. Lewis, Sir T. Matthews, Mr. W. H. Maw, the Hon. C. A. Parsons, Mr. F. E. Robertson, Mr. A. Ross, Mr. J. W. Shores, the

Hon. F. J. E. Spring, Sir P. Watts, Mr. W. B. Worthington, and Mr. A. F. Yarrow. This Council will take office on the first Tuesday in November.

ROYAL INSTITUTION.—May 1.—*Annual Meeting.*—The Duke of Northumberland, President, in the chair.—The Annual Report of the Committee of Visitors for 1910, testifying to the continued prosperity and efficient management of the Institution, was read and adopted, and the Report on the Davy-Faraday Research Laboratory of the Royal Institution, which accompanied it, was also read.

The following gentlemen were unanimously elected as officers for the ensuing year: *President*, The Duke of Northumberland; *Treasurer*, Sir J. Crichton-Browne; *Secretary*, Sir W. Crookes; *Managers*, J. B. Broun-Morison, Dr. J. M. Bruce, Dr. H. E. Armstrong, Sir H. B. Buckley, Sir J. Wolfe Barry, Earl Cathcart, Dr. D. W. C. Hood, H. F. Makins, Sir F. Laking, A. C. Ionides, R. Mond, Dr. R. Messel, the Hon. C. A. Parsons, Sir J. Stirling, and A. Siemens; *Visitors*, H. Edmunds, Sir F. Fison, W. A. T. Hallowes, Dr. A. C. Hill, J. W. Gordon, H. R. Kempe, Major-General Sir Coleridge Grove, C. E. Groves, A. Kirkman Lloyd, F. K. McClean, Sir C. D. Rose, Major P. A. MacMahon, W. Stone, E. R. Merton, and H. Swinbank.

HISTORICAL.—April 27.—Archdeacon Cunningham, President, in the chair.—A paper was read by Dr. J. H. Wylie on the Agincourt Roll, the copy of which by Sir Harris Nicolas does not seem to represent the actual force engaged in that battle.—Mr. Kingsford, Mr. Hall, Col. Lloyd, Mr. Boyd, and Mr. Merriman (Harvard University) took part in a subsequent discussion.

Mr. J. C. Fox was declared elected a Fellow.

SOCIETY OF ENGINEERS.—May 1.—Mr. H. C. II. Shenton read a paper on 'The Protection of Water Supplies.'

MATHEMATICAL.—April 27.—Dr. H. F. Baker, President, in the chair.—Mr. S. C. Basu was elected a Member.—The following papers were communicated: 'On the Number of Primes of a Given Linear Form,' by Lieut.-Col. A. Cunningham, 'The Properties of Certain Linear Homogeneous Substitutions,' by Mr. H. Hilton, 'A Symmetrical Method of generating Cubic Curves by Apolar Pencils,' by Mr. W. P. Milne, 'On the Proofs of the Properties of Riemann's Surfaces discovered by Lüroth and Clebsch,' by Prof. M. J. M. Hill, 'The Solution of the Homogeneous Linear Difference Equation of the Second Order (Second Paper),' by Mr. G. N. Watson, and 'A Cartesian Theory of Complex Geometrical Elements of Space,' by Mr. G. B. Mathews.

BRITISH NUMISMATIC.—April 26.—Mr. Carlyon-Britton, President, in the chair.—H.E. the Marquis Guglielmo Imperiali, Italian Ambassador, was elected an Honorary Member; and Messrs. H. Gibson, Raymond C. Carlyon-Britton, and Coleman P. Hyman Members.

The President read a further section of his 'Numismatic History of the Reigns of William I. and II.,' in which he treated the counties of Huntingdon, Kent, and Leicester. Coinage at the county town of Huntingdon had begun in, or shortly before, the reign of Eadwig, and although Domesday states that the moneyers then "were not," the mint is represented by every type, save two, of the reigns under discussion. Mr. Carlyon-Britton explained that the statement in Domesday merely referred to the fact that the moneyers no longer accounted directly to the Crown, but probably through the local authority. At Canterbury the same conditions then prevailed, except that of the seven moneyers of the city, two had been assigned to the Archbishop and one to the Abbot of St. Augustine's, and every type of the two kings was in evidence to-day. Dover at this period was not a prolific mint, and its known coins were of only nine types of the thirteen issued by William I. and II. Similarly of Hythe only four of the types were preserved to us. Under the laws of Athelstan Rochester had been granted three moneyers, namely, two for the King and one for the bishop; but nevertheless under the two Williams seven types only were known. Romney and Sandwich were each represented by nine types. The origin of the mint at Leicester had hitherto been credited to Edgar, but Mr. Carlyon-Britton was able to prove its existence in Alfred's time by the evidence of a contemporary round

halfpenny reading *LIOIRA CIVITAS*. Domesday records that the moneyers paid 20*l.* yearly, and seven of the eight types of William I. and the first two of the five types of William II. had descended to us from this mint. As in his previous contributions, Mr. Carlyon-Britton brought entirely new evidence to bear upon his subject by the production of many inedited coins, and the correction of the readings of others which have wrong attributions in the textbooks. The topographical historian will find much that is both important and new in this 'Numismatic History.'

In addition to the largeseries of silver pennies and cut halfpennies exhibited by the President in illustration of his treatise, Col. Morrisson showed examples of most of the mints under discussion. Amongst other exhibitions were a groat of Edward III. weighing 69½ grains, on which the annulets in the reverse legend were omitted and the N's formed of plain upright strokes; a groat of Edward IV. of 45½ grains, mint-mark cinquefoil, on which the usual fleurs over the crown are absent; a forgery of the shilling of Philip and Mary dated 1557, and a groat of Elizabeth, mint-mark lis, reading on the obverse z instead of the usual ET, by Mr. J. B. S. MacIlwaine; an early light groat of Edward IV., weighing 48 grains and reading *DI GRACIA*, by Mr. F. A. Walters; and the Victorian proof crown of 1879, by Mr. Henry Garside.

MEETINGS NEXT WEEK.

- Mon.** Society of Arts, 8.—'Rock Crystal: its Structure and Uses,' Lecture II., Dr. A. E. H. Tutton. (Cantor Lectures.)
— Surveyors' Institution, 8.—'Development of Building Land,' Mr. J. J. Done.
— Colonial Institute, 8.30.—'The Past, Present, and Future of Australia,' Sir George H. Reid.
— Geographical, 8.30.—'Foundation and Development of British Guiana, from Unpublished Documents,' Mr. J. A. J. de Villiers.
- Tues.** Royal Institution, 3.—'The Institute of France,' Mr. J. E. C. Bodley.
— Society of Arts, 4.30.—'Canada and Canadian Banking,' Mr. F. Williams Taylor. (Colonial Section.)
— Anthropological Institute, 8.15.—'Some Saxon Bones from Folkestone,' Mr. F. G. Parsons; 'Further Notes on French Dolmens,' Mr. A. L. Lewis.
— Zoological, 8.30.—'On the Palatability of some British Insects,' Mr. R. I. Pocock; 'Contributions to the Morphology of the Group Neritoidea of Aspidobranch Gastropods: Part II. The Helicinidae,' Prof. G. C. Bourne; 'On the Distribution in the Pacific of the Avian Family Megapodidae,' Mr. J. J. Lister.
- Wen.** Geological, 8.—'The Lower Carboniferous Succession in the North-West of England,' Prof. E. J. Garwood; 'Palaeontological and Lithological Sequence in the Lower Carboniferous of Burrington Combe,' Prof. S. H. Reynolds.
- Thurs.** Society of Arts, 8.—'Beet Sugar Factories,' Mr. Hal Williams.
— Royal Institution, 3.—'The Optical Properties of Metallic Vapours,' Lecture III., Prof. R. W. Wood. (Tyndall Lectures.)
— Royal, 4.30.—'On a Method of Making Visible the Paths of the Ionizing Particles through a Gas,' Mr. O. T. R. Wilson; 'The Vertical Temperature Distribution in the Atmosphere over England, and some Remarks on the General and Local Circulation,' Mr. W. H. Dines; 'On Some Mineral Constituents of a Dusty Atmosphere,' Prof. W. N. Hartley; and other Papers.
- Institution of Electrical Engineers, 8.—'The Driving of Wind-Engines by Induction Motors,' Mr. H. J. S. Heather.
— Society of Antiquaries, 8.30.
- SAT.** Royal Institution, 3.—Walter Pater; or, The Connoisseur and Art, Prof. Selwyn Image.

Science Gossip.

THIS month's list of announcements by Messrs. Macmillan contains a group of works on travel and anthropology of exceptional interest. 'The Kachiris of Manipur,' by the late Rev. Sidney Endle, is a companion volume to Mr. Hodson's recently published book on 'The Nāga Tribes of Manipur,' and will contain coloured and other illustrations; 'Man and Beast in Eastern Ethiopia,' by Mr. J. Bland-Sutton, is finely illustrated by 186 woodcuts; 'The Baganda,' by the Rev. John Roscoe, gives a general survey of the country, life, and customs of these people, with illustrations and plans; and Mr. F. W. F. Fletcher is the author of a work on 'Sport in the Nilgiris,' with numerous illustrations, which may be expected at an early date.

THE Report of the Committee on the Science Museum, &c., has just been published as a Parliamentary Paper (post free 4*d.*).

FOUR Gresham Lectures will be delivered by Prof. F. M. Sandwith at the City of London School from May 16th to 19th inclusive. The first two will be concerned with 'Measles'; the rest with 'Plague,' from the Black Death to modern times.

WE hear from America of the death of the veteran botanical explorer Dr. Edward Palmer, which occurred at Washington after a brief illness at the age of 80. He was born at Hockwold, near Brandon, Norfolk. He settled in America, and was for a long period connected with the National Museum, the Smithsonian Institution, and the Bureau of Ethnology, and did a vast amount of exploring work, besides writing many books on botany. Over 40 years ago he went to Arizona and New Mexico for the U.S. Department of Agriculture, and made an exhaustive report on the agricultural resources of that section of the Continent. He also travelled extensively in Africa, India, and South America.

MR. C. H. G. MARTIN has been appointed Demonstrator of Zoology at the Imperial College, in place of Mr. Darbishire, who, as we have already noted, has gone to Edinburgh. Mr. Martin was for some time Demonstrator of Zoology in the University of Glasgow.

THE observations of the total eclipse of the sun in the Tonga Islands on the 28th ult. seem to have been much interfered with by passing clouds; nevertheless, some photographs of the corona were obtained. The type will probably be found to be similar to that of May 28th, 1900, when the solar spots, as on the present occasion, were nearly at an epoch of minimum. That eclipse was observed by Sir William Christie on the coast of Portugal, by several astronomers in Spain and Algiers, and by Prof. Todd at Tripoli, the easternmost point at which it could be seen. The state of the sky last Friday appears to have been more favourable on the east coast of Australia where the eclipse was only a large partial one.

THE third number of Vol. XL. of the *Memorie di Astrofisica ed Astronomia* of the Società degli Spettroscopisti Italiani has appeared, containing Prof. Riccò's account of the solar spots and faculae observed at Catania during 1910; papers by Herr Brunner of Zurich on proper motions in groups of solar spots, and by Signor Giacomelli on spectroscopic examinations of the solar limb at the Capitol Observatory, Rome; and a continuation of the spectroscopic images of the solar limb observed at Rome and Palermo from May 22nd, 1882, to September 14th, 1883.

FINE ARTS

Lady Charlotte Schreiber's Journals.
Edited by her Son Montague J. Guest,
with Annotations by Egan Mew. 2 vols.
(John Lane.)

THE sub-title of these bulky volumes, viz., 'Confidences of a Collector,' exactly describes their contents; it must be allowed they differ greatly from the ordinary run of "Journals." Doubtless Lady Charlotte Schreiber, as her son, the late Mr. Montague Guest, says in his Introduction, was "in her way.... remarkable"; to which we may add that she gave to bric-à-brac what was meant for mankind.

The only daughter of a Scottish peer of ancient lineage—the Earl of Lindsey—she was a born business-woman: she tells us so herself. "It is more congenial to me," she declares, "to calculate the advantage of half per cent commission on a cargo of iron than to go to the finest ball in the world." This from a young lady of twenty-seven! On the death of her first husband, Sir Josiah John Guest, Lady Charlotte for some time took an active part in the management of the Dowlais ironworks. "I am happy," she says in the same entry in her Journal, "to see we are at the head of the iron trade." But her interests were not limited to the smelting of iron: when quite a young woman she translated the 'Mabinogion,' a work which, as Mr. Guest recalls with pardonable filial pride, inspired Tennyson to write the 'Idylls of the King.' Then, beside her mastery of Welsh, Lady Charlotte was proficient in French, German, Italian, and Spanish; and she studied, we are told, Greek, Latin, Hebrew, and Persian.

Here, then, we have the outline of a full, happy, and useful life; and such, unquestionably, was that of the author of these Journals. It is to be observed that she did not become an enthusiast for ceramics until after she was fifty. It is to her second husband, Mr. Charles Schreiber—eldest son of Col. Schreiber, and a Fellow of Trinity College, Cambridge—whom she married some three years after the death of Sir John Guest, that the development of the china-collecting mania can be traced. Then it became her ruling passion; in fact, "la chasse," as she terms it, possessed her entirely thenceforward unto the end of her life, or, at any rate, until blindness darkened her last years.

How ardent a collector she was is shown on every page of the Journals. She possessed extraordinary energy and perseverance; thus, being at Venice in 1869, she writes: "June 7. Up at three o'clock, off to Ferrara at six." A few days later we read: "Up at three, left Venice at six, stopped at Padua four hours"; and so on. In Holland she records visiting a dozen dealers in a day. France, Germany, Italy, Spain, and Turkey were all ransacked; but her favourite hunting-ground appears to have been the Netherlands, where endless bargainings are recorded. Thus, May, 1876: "Up early, out before ten; have visited every curiosity shop in Brussels in eight hours." Again, at Hamburg, in July of the same year: "Spent all the morning in visiting the curiosity shops, some fourteen in number." For a long period neither fatigue nor advancing years seem to have checked her ardour; but the death at Lisbon of Mr. Schreiber, who had shared her tastes and pursuits, was a great blow to her happiness.

The result of this *flair*, enthusiasm, and, it must be added, judgment, is to be seen at the Victoria and Albert Museum, where the Schreiber bequest of some two thousand pieces, well displayed in a room

by itself, makes a brave show. It is a fine collection of early English porcelain, pottery, and enamels, possessing an interest of its own, and not seeking competition with the Oriental porcelain of the Salting Bequest, which is now housed in the same part of the new building at Kensington. The preparation of the Catalogue of this Schreiber Collection cost much labour to the donor of it, also to Sir Augustus Franks and others who helped to make it. Probably Lady Charlotte would have been chagrined to find, as would, we think, the compiler of the book under review, that the Catalogue is "out of print" at the Museum. That this should be the case just when the history of the provenance of the collection appears seems unfortunate, to say the least. It is hard to withhold a sigh of envy as we read the story of the acquisition of these treasures. As Mr. Guest, himself a keen collector, says, they were bought in days the like of which will never return. We who have come into this goodly heritage may be thankful that those who have left it for our enjoyment availed themselves of the opportunities which Mid-Victorian times, and prices, afforded.

The book is mainly composed of details pertaining to the pursuit of china, and is, indeed, swollen thereby to no fewer than a thousand pages. Probably Mr. Guest's affection made him unwilling to use the pruning-knife; but there is scarcely an entry without trivial details: the weather nearly always, the travellers' sensations in crossing the channel, are fully recorded, and even visits to the dentist chronicled. The personal element is very marked; the author seems to have known all the "brocanteurs" on the Continent, and to have had a full acquaintance with their family affairs besides an intimate knowledge of the contents of their shops. She must have appeared to them in the guise of a benefactor and friend. Beyond a few interesting recollections of Disraeli when she was young, references to the many distinguished men and women she must have met are disappointingly meagre. There is, however, a strong under-current of family affection running through these Journals, especially in regard to her third son, "my Monty" as she often calls him. Nothing gave her greater pleasure than his company; and in truth "Monty Guest" was *persona gratissima* wherever he went. No man was better known in London society, especially in Court and dilettante circles. To varied accomplishments he added an excellent judgment in art; his striking figure was familiar at Cowes, where he was librarian of the Royal Yacht Squadron, his history of which appeared not long before his sudden death whilst he was on a visit to Sandringham.

The attractiveness of the book is enhanced by the varied illustrations, of which there are over a hundred, eight of them being in colour. Only about a third of them are taken from the pieces at Kensington; the remainder are from the

collections of Lady Charlotte's daughters, the Countess of Bessborough and Lady Layard, and Lord Wimborne's treasures at Canford, with the result that we make acquaintance with some seventy fresh examples of Lady Charlotte's good fortune and knowledge. The Index is copious and valuable, and the book is carefully edited, though we have noticed a few trifling errors; e.g., "Sauvagest" for Sauvageot, "Aldermastor" for Aldermaston; while for "Lord Oxford," Orford should be read.

In taking leave of the book we may note the light it throws on the manufacture of spurious porcelain and such like. Take the four small figures of 'The Seasons,' in Venetian glass, now belonging to the Countess of Bessborough. These were considered a particularly fortunate find by Lady Charlotte, yet on p. 214 of vol. i. we read:—

"We hope they are authentic; but we have been told since we bought them that such things were formerly manufactured at St. Louis, a small fabrique near Metz."

Or again (and this is still more significant), at St. Amand the factory of M. Bettignie is visited:—

"He took us to see his rooms full of finished pottery and porcelain; the latter consists of white pieces, 'pâte tendre,' copied from the old Sèvres, which he told us was bought by dealers in Paris to be there painted (and marked X), and duly sold as old.... Most of them are exact copies of old Sèvres.... We were especially interested in spying out two hexagonal covers which could only have been made for imitation of Worcester vases; and many oviform vases evidently made to imitate Worcester and Chelsea.... They all went to Paris to be decorated and sold as old.... M. B. told us they got clay from England," &c.

Lady Charlotte naively adds: "It was very satisfactory thus to have traced the origin of the Worcester forgeries." Whether all collectors who may read these "confidences" will share that satisfaction may be doubted.

OUR LIBRARY TABLE.

Sketches of Deal, Walmer, and Sandwich. By the late John Lewis Roget. With an Introduction and Notes by S. R. Roget. (Longmans & Co.)—There is not a little difference in the execution of the fashionable colour-books illustrative of various phases of English scenery. The one before us, supplying sketches of Deal, Walmer, and Sandwich, is about the best and most attractive which we have seen lately. A particular interest is attached to this volume with its thirty-two coloured plates and eight black-and-white illustrations, for it serves as a memorial to the late Mr. J. L. Roget, "an artist whose modesty stood in the way of his ability as a draughtsman and water-colour painter being known as widely in his lifetime as was his literary work in connection with art." He was well known as an art critic of *The Daily News* and *The Observer*, and he also contributed to *The Spectator*. The perfect perspective and

pure colour of this selection from sketches merit admiration, though occasionally there is a hardness of outline. One of the best things is a picture of the Stour near Stonar Beach, which was painted in 1879. Mr. Roget was also exceptionally successful with buildings, as is apparent in several pictures of old houses at Deal and Sandwich.

Mr. S. R. Roget supplies a biographical sketch which gives some interesting information concerning the literary and artistic work of the artist. His text dealing with the condition of things twenty or thirty years ago at the three old seaports with which the illustrations are concerned is attractive. The Deal of the past was very different from the town of recent years. The beach at the south end, now occupied by the parade, used to be devoted to a row of old Deal luggers, with their picturesque capstans and gear. The true Deal lugger, of which Mr. S. R. Roget supplies many valuable particulars, is now, alas! extinct in Deal itself; but a few specimens are still preserved at Walmer. Every lover of this part of the Kent coast should secure this attractive book, not only for the sake of its artistic merits, but also on account of its portrayal of various details of seafaring life which have now vanished.

The Lives of British Sculptors and those who have worked in England from the Earliest Days to Sir Francis Chantrey. By E. Beresford Chancellor. (Chapman & Hall.)—Whether the popular opinion that sculpture does not flourish in these islands be well founded or otherwise, there has been but little written about it. Cunningham devoted a volume to the subject, but that was a century ago; Walpole in his 'Anecdotes' spares a few pages at the most to "statuaries," as he calls them; more recent writers have given some attention to Chantrey; but on the whole the topic has been neglected. Mr. Beresford Chancellor's book of some 300 pages, which has a score of rather poor illustrations, aims at giving a concise account of the lives and works of British sculptors and of those foreigners who are chiefly identified with this country.

In the small space at our command it is impossible to follow the author in any detail. The number of foreigners on the list of those dealt with is noteworthy. They begin with "Peter the Roman," brought back by the Abbot of Westminster from Rome, whither he had been to be consecrated by Urban IV. The work for which Peter was wanted was the shrine of Edward the Confessor, and his memory is still preserved on the tomb in these words:—

"Hoc opus est factum quod Petrus duxit in actum Romanus civis."

Vertue thought the Eleanor crosses were Peter's work, but of that there seems to be no proof.

The best known of these early men is Torrigiano, who is justly treated in this book, as are Nicholas Stone and his sons. Stone was the son of a Devonshire quarryman, and made the gate of St. Mary's at Oxford with its twisted columns. It was Le Sœur who set up the familiar equestrian figure of Charles I. at Charing Cross "hard by his own Whitehall."

All admire the exquisite wood-carving by Grinling Gibbons in the choir of St. Paul's, but perhaps all do not realize that he was a sculptor as well. Interesting matter may be gleaned about him and others in this volume. Nollekens is perhaps the most familiar figure of them all, thanks to J. T.

Smith's amusing, but ill-natured book. The snuffy old man therein ridiculed left 200,000*l.*, and the disappointed Smith got only 100*l.* for his trouble as executor. Flaxman is judged in the book before us by the opinion of Lawrence, who says that his illustrations of Homer have given him a more truly European reputation than any other English sculptor has achieved.

Chantrey, who died in 1842, is the last artist dealt with. It is thus apparent that all the men who worked in the second half of the nineteenth century are excluded. But the volume as it stands contains much information concerning the personal characteristics of the men and the whereabouts of their work; and, as it has a good Index, should be a useful book on the subject.

THE ROYAL ACADEMY.

(Second Notice.)

In their attempt to popularize art modern critics have made so full a use of the attractive power of romantic biography that we can almost foretell the "star" painter of any particular year before seeing his work. The history of a generation or so back serves as a kind of chassis on which current facts are draped with more or less taste, and the judgments resulting would seem plausible enough if only we did not commit the mistake of looking at the pictures. The broad lines of the artistic developments of to-day are usually presented to the readers of newspapers after a predetermined system. "Les Jeunes" have always the leading part; they are the painters who "dare to see nature for themselves" as against the "conventional" Academicians, whose stereotyped use of a traditional means of expression has obscured for them to the truth of the newer painting. The man who is most snubbed by the Royal Academy is, if he can obtain a certain celebrity elsewhere, the man of most talent. A breaker of academic rules, the more he is neglected by Burlington House, the more sympathy he wins from the reader; yet to be a perfectly satisfactory protagonist he must ultimately, after exclusion for a term of years, make a triumphant re-entry, when his genius at last unfolds itself fully and irresistibly.

Failing Mr. Charles Shannon, Mr. Lavery was bound to take the lead this year with his large picture *The Amazon* (85), acclaimed as his culminating achievement—a triumph of light and air on the one hand, or alternatively an example of bold monumental design which confounds the merely illustrative achievements of academic painting. To the mere amateur of painting it is neither the one nor the other, though it offers to the general view a plausible appearance of either.

We, however, fully acquit Mr. Lavery of consciously playing to the gallery. Even at the outset of his career he was more remarkable for general technical cleverness than for definite direction. A copious painter, quick to acquire facility in any genre, he came to the front by pressing the attack at all points at once—by great apparent versatility. He stood, moreover, for two qualities at the time welcome enough. He could maintain the true relative inclination of the planes of a group to an extent that made his work look broad and dignified compared with, say, Pettie on the one hand, or Mr. Stanhope Forbes on the other. Further, in an occasional portrait or landscape he showed something of the dis-

cretion of Whistler in the matter of modelling, limiting, in order to enhance the massiveness of his design, the treatment of recession in his pictures. The best idea of his work in the latter phase is perhaps to be got from a picture not painted by himself at all, but by the late Robert Brough in a moment of emulation—the 'Fantaisie en Folie' at the Tate Gallery. Mr. Lavery's power of thus making two or three main movements serve as an abstract of the infinite modelling of space was never very certain. Such decorative formalism has its logic. The use of illumination for purposes of realistic modelling has its logic also, of another kind, and Mr. Lavery has always been inclined to compromise between them. He has rarely mixed two kinds of vision so completely as in the present picture, which apparently started out to be a severely designed scheme strictly related to the four sides of its frame. The straight line of the lance is almost all that is left of that intention, the integrity of the contours of the horse vanishing before the temptation to over-analyze the reflected lights on white, while an irrelevant impulse has induced a copious representation of the element of recession in the landscape, which reduces the impressiveness of the silhouette.

This looseness of artistic form, which has always been a weakness with Mr. Lavery, is apt to beset most contemporary painters and most contemporary schools, when once the stimulus of opposition is removed, and it is generally at this moment of relative commonness that the Academy sincerely welcomes the former rebels. For the Academy of to-day is not in the least academic, nor is its art conventional. Nor are such of the younger painters as are of any interest breakers so much as makers of conventions, which, to their credit, they are coming to recognize as the essential conditions of fine art just as metre is of poetry. The history of recent painting is that of a few individuals or groups setting more or less arbitrary limits to their means of expression; and such progress in artistic culture as has been made among the public has consisted in the increasing apprehension of painting as language in which many idioms are possible, and in the readiness of the public to understand the idiom of each painter and prize it for its purity. So long as an artist exercises such fastidiousness, however, with the inevitable limitations which accompany it, he is not likely to please the ruling body at the Academy. But as almost all painters and schools, after attaining a reasonable mastery of their own styles, themselves feel their limitations, and, somewhat hastily assuming exhaustion, begin to paint at large in undistinguished fashion, there arises an opportunity for the Academy to include one more erstwhile rebel—no longer so repugnant as of yore to a miscellaneous taste, but certainly no longer so distinguished.

The present exhibition is an eloquent record of individuals and movements recognized when they were ceasing to be recognizable, and while we are sadly conscious that purity of style and singleness of purpose are transient qualities in all but the rarest natures, so that the artists we praise to-day are probably not intrinsically finer painters than those whom the Academy honours, we nevertheless persist in believing that the judgments recorded by the Hanging Committee upon the works submitted to them are amazingly odd. We are by no means sure, for example, that ten years hence Mr. G. W. Lambert will be a better painter than Mr. Lavery is to-day, but we are convinced that his preposterously skied picture *The Mask* (736) is one of the most distinguished

canvases in the show, and infinitely superior to the much-lauded work by the new Associate. Even in electing their honorary Foreign Academicians recognition lags so far behind achievement that we have Dagnan-Bouveret's lamentable *Ophelia* (194) to represent French art with something almost as formless and sentimental as the canvases (437, 446) in which Mr. George Henry displays the Glasgow School in its decline. Mrs. Laura Knight (*Daughters of the Sun*, 329) and Mr. Arnesby Brown (*The Drove*, 304) are instances not so much of the selection of artists past their best period as of the honouring of belated and comparatively uninspired imitators in a school whose more vital exponents suffered lifelong neglect at the hands of the Academy. We incline to think, indeed, when we look on the portrait by Mr. Bacon of *The Earl of Lonsdale* (134) that the Associateship bestowed here for qualities genuinely understood by Academicians is a worthier subject for congratulation than their frequent endorsement of modern movements when backed by public approval and bereft of their first vitality. The Academy that usually skied Buxton Knight in his prime welcomes with both hands his mild disciple Mr. Lamorna Birch (90 and 152), just as Mr. Arnesby Brown occupies to-day the line space due of old to the late James Charles. Burlington House is full of the like revengeful ghosts—Mr. Hornel clearing off his own old scores, Mr. Lavery stirring disquieting legends of Whistler's relations with the arbiters of his day; while who knows for what unrecorded acts of rejection the Hanging Committee are doing penance by hanging so well Mr. Val Havers's two "Living-room Pictures" (701, 708)? As to these, however, it would hardly be fair to be severe, so evidently are they the first steps towards distinction of a painter trained in an unfortunate *milieu*, and so pleasant in any case is a passage of reasonably flat colour in the Royal Academy. The flat tones are somewhat mechanical, adopted apparently in imitative enthusiasm for some other painting conceived in conventional fashion rather than the result of a real power of abstraction such as would imply the simplification of silhouette as well as modelling. We have an uneasy suspicion that some "artistic photographer" will be doing this sort of thing before long.

NATIONAL GALLERY: ANNUAL REPORT.

THE NATIONAL GALLERY ANNUAL REPORT, which has lately been issued, is, owing to the numerous pictures of the Salting Bequest, on a larger scale than usual. It contains details in regard to such widely different matters as the retirement of an attendant after upwards of thirty-two years' service, the daily average attendance on free days of 3,047 persons, the making of 739 oil-colour copies of pictures, and the transference from Millbank to Trafalgar Square of eleven modern Continental pictures, as well as information in regard to the numerous bequests, presentations, and loans, the majority of which have been pointed out in these columns from time to time. However, the 'Family Group' ascribed to Vermeer, which was purchased in Paris some months ago for 1,000*l.*, has not yet been exhibited.

It is stated that "nineteen characteristic examples of Turner's art" as a painter in oils have been retained at Trafalgar Square,

"to represent the painter in the history of European Art, including the two pictures which, in accordance with a special clause in Turner's will, are placed in juxtaposition to two pictures by Claude Lorrain." But the term "in juxtaposition" is not that used in the great painter's will.

The facts given in regard to certain pictures will not satisfy modern critics in every instance, nor are the dates always exact. Thus the 'Portrait of the Young Florentine,' which is officially catalogued as being by Domenico del Ghirlandaio, and held to have come from the Barbarini (*sic*) Collection, is now ascribed to Francesco Granacci, while Tiepolo appears to have lived to be 177 years of age.

The Report seems to have been compiled long before the end of the year, as it states that the much-discussed eightieth edition of the Catalogue of Pictures of the Foreign Schools "is still on sale," although "only a few copies remain," while also the seventy-seventh edition of the British Schools Catalogue "is still on sale." It is, however, indisputable that difficulties were experienced by visitors in obtaining copies of these catalogues before the end of the year.

SALE.

MESSRS. CHRISTIE held on Saturday last a sale of important modern pictures and drawings of the British and Continental Schools.

The following were from the collection of Mr. John G. Ure of Glasgow. Drawings: J. Bosboom, Interior of the New Church, Amsterdam, 199*l.*; The Village on the Sandhills, 115*l.*; The Interior of a Church, with a figure, 131*l.*; J. Maris, The Haycart, a river scene, with a barge and haycart, 420*l.*; The Windmill, 199*l.*; A Landscape, a view from high ground, overlooking a stream; windmills in the distance, 231*l.*; Matthew Maris, The Wood (charcoal), 168*l.* Pictures: Eugène Carrière, Les Devideuses, a young woman seated on a sofa, winding some wool from a skein, which her daughter is holding, 714*l.*; Corot, Le Marais, a dark clump of trees on the left, beneath which are two figures; a pool on the right, and a tower in the distance, 1,027*l.*; H. Fantin Latour, Pink and White Roses in a Glass Vase, 567*l.*; Matthew Maris, A Young Child, in a white frock, 546*l.*; Monticelli, Fête Champêtre dans un Parc, 525*l.*; Whistler, A Coast Scene, with shipping out at sea, and boats drawn up on the shore, 231*l.*; Allan Ramsay, Lady Augusta, in pink and white dress, holding a green parasol, 514*l.*; Mrs. Fergusson, in blue dress with muslin scarf, pearl ornaments, in an oval, 252*l.*

The remainder were from various properties. Drawings: A. Mauve, The Timber-Waggon, 126*l.*; Entering the Fold, 105*l.*; T. M. Richardson, Heidelberg, 105*l.*; Turner, Exeter, the town, with the Cathedral, standing on the far side of the river, 525*l.* Pictures: J. Israels, On the Dunes, a fisher-girl, in pink blouse, dark skirt, and white cap, seated on a grassy bank, looking out to sea, 714*l.*; Drawing the Net, three fishermen in a small boat, moonlight, 451*l.*; E. van Marcke, Plateau de Belle Croix, Forêt de Fontainebleau, 525*l.*; C. van Haanen, Afternoon Coffee, 252*l.*; C. F. Daubigny, a river scene, 661*l.*; Lady Butler, "Floreat Etona!" the attack on Laing's Neck, 336*l.*; B. W. Leader, The Wooded Banks of the Thames at Shillingford, 262*l.*; F. Dicksee, The Magic Crystal, 546*l.*; The Redemption of Tannhäuser, 472*l.*; The Symbol, 598*l.*; D. Cox, Peace and War, peasants in a harvest field in the foreground; an army on the march towards Lancaster in the distance, 997*l.*; Sir L. Alma Tadema, The Roman Flower-Market, 493*l.*; Peter Graham, The Head of the Glen, 588*l.*; On the Dunes, 493*l.*; Sir E. Landseer, The Twins, 735*l.*; Lassie herding Sheep, 315*l.*; B. W. Leader, Evening Glow, 411*l.*; A Hazy Morning on the Banks of Derwentwater, 199*l.*; By Mead and Stream, 508*l.*; Erskine Nicol, Among the Old Masters, 304*l.*; J. F. Lewis, "And the Prayer of Faith shall save the Sick," 304*l.*; Sir W. Q. Orchardson, The Fisherman's Home, 231*l.*; J. W. Godward, Yes or No? 315*l.*; W. McTaggart, Children at the Seaside, 315*l.*

Fine Art Gossip.

THE second annual exhibition of the Palette Club is now open in Dublin. Amongst the work shown is an interesting group of Dublin sketches by Miss Josephine Carson. The other exhibitors include Mr. A. Colles, Mr. Poole Addey, Mrs McCormick, and Miss Pugh.

THE first annual meeting of the Arts and Crafts Society of Ireland was held last week in Dublin, under the presidency of the Earl of Mayo, the founder of the Society. The Society has during the past year been formed into a guild of art workers, and is making a successful effort to raise the standard of handicraft in the four provinces of Ireland.

THE NORTH BRITISH ACADEMY OF ARTS (Newcastle-on-Tyne) has been invited by the Corporation of York to hold the fourth exhibition of its members' works at the Corporation Art Galleries in that city. The exhibition will open on July 3rd, and close on August 12th.

AMONG the drawings of Old Masters lent by the King to the Fitzwilliam Museum at Cambridge this term are the portraits by Holbein of Sir John Godslove and Dean Colet. The Duke of Devonshire lends a group of seven exquisite designs by the same artist, as well as drawings by Albert Dürer, Correggio, and Watteau.

MR. W. J. WILLIAMS writes from The Bungalow, Addlestone, Surrey :—

"In connexion with the exhibition now being held at Rome there is another exhibition at Florence of portraits by Italian artists. The portraits include those of Robert and Mrs. Browning by Gordigiani, lent by Mr. Barrett Browning. This reminds me that a coloured crayon portrait of Mrs. Browning appeared in a London saleroom in 1908, but I have been unable to trace it. If any of your readers could give me information regarding it, I should be greatly indebted."

It was announced by M. Bounat at the last meeting of the Académie des Beaux-Arts that the Société des Amis du Louvre had purchased from the well-known collector M. Fenailles the important work of Ingres, 'Le Bain Turc,' for the national museum.

M. W. B. writes :—

"The doubt which Mr. C. H. Lee entertains as to the 'Portrait of Mrs. Harry Linton,' now being shown in the Exhibition of British Pastels in Paris, admits of a very simple solution. It is catalogued under the name of Gainsborough Dupont, the nephew of the great English painter, and that fact was inadvertently omitted by me in the note on the exhibition that I wrote under difficulties when travelling by night. It seems almost needless to point out that there was no relationship between John Downman and the Gainsborough family."

NEXT Monday Messrs. Christie will sell miniatures, &c., which belonged to Sir Charles Dilke. Among the choice items are miniatures of Miss Temple, after Cooper, from the Strawberry Hill collection; 'A Lady,' by C. H. (possibly C. Henard); Madame Geoffrin, from Lady Morgan's collection; and Henry VII. (so called at the Tudor Exhibition); a fine small portrait in oils of the poet Oldham, from the Strawberry Hill collection, and from the same source a marble relief of St. John the Baptist, attributed to Donatello, and regarded as his work by Lord Balcarras. This last has attracted much attention on the occasions when it has been shown.

ACCORDING to the *Journal des Savants* for March, the French Society for the Reproduction of MSS. has decided to issue, as its first publication, the reproduction of a Bible—the finest existing work of French

miniature art of the thirteenth century—containing five thousand painted medallions. One volume of this precious MS. is in the Bibliothèque Nationale; the remaining two are in England (Bodleian and British Museum). The whole work will occupy four volumes of the Society's publications.

THE PRUSSIAN HISTORICAL INSTITUTE IN ROME has also inaugurated the series of reproductions which it is publishing with a Bible—the so-called "Manfred Bible," a codex in the Vatican. This volume is edited by Count zu Erbach-Fürstenau, an authority on early illuminated MSS.

PROF. HUELSEN has recently brought out an interesting pamphlet on the Thermæ of Agrippa. In treating of this vast building, one of the earliest and worst preserved of the Roman Thermæ, the author has consulted the plans of Baldassare Peruzzi and Palladio, and many other drawings and records, which have enabled him to give a detailed architectural history of the structure.

ONE of the most distinguished historians of Polish art, Prof. Sokolowski, has recently died at Cracow at the age of 72. His researches into the history of Art in Poland are of great importance, and among many notable contributions to the subject are his studies on the German artists who worked at Cracow, especially Hans von Kulmbach, Veit Stosz and his son, and Hans Dürer.

THE death by his own hand, at the age of 53, in consequence of a charge of plagiarism, is reported from St. Petersburg of Konstantin Yakovlevich Krishizki, a prominent Russian landscape painter. In a letter written shortly before the deed he stated that the charge was unfounded, but that his health would not allow him to take up the matter. He was a member of the St. Petersburg Academy.

A LONDON SECESSION has been formed among photographers who are not satisfied with the quality of the work recently shown by the society called the Linked Ring. The first exhibition of the new body takes place next week at the Newman Gallery.

EXHIBITIONS.

SAT. (May 6).—Signor E. Cadarin's Ivory Bas-reliefs, Messrs. Graves's Gallery.
— Mr. Walter Greaves's Early Works, Goupil Gallery.
— Mr. W. Kuhnert's Pictures of Big Game in Africa and India, Fine-Art Society's Gallery.
— Pictures by W. Maris, J. Bosboom, and others of the Modern Dutch School, French Gallery.
MON. Royal Photographic Society's Fifty-Sixth Annual Exhibition, Press View, Prince's Skating Club.
TUES. London Secession Photographic Exhibition, Private View, Newman Gallery.
THURS. Society of Graver-Printers in Colour, Messrs. Goupil's Gallery.

MUSIC

THE WEEK.

THE SHEFFIELD FESTIVAL.

THE morning of last Thursday week was devoted to Bach's Mass in B minor, and the following morning to the 'Matthew' Passion—in fact, the two most important performances of the Festival. Such prominence given to Bach deserves note, for although his music is far more appreciated than it was twenty or thirty years ago, it has, even now, no special attraction for the general public, for whom it is too great, too severe. Sir Henry J. Wood,

the Festival conductor, in selecting them was, therefore, influenced by artistic considerations only.

We can recall many fine performances of the Mass, but the one in question was particularly remarkable for the attention paid to details, or, rather, the attention which had been paid to them at rehearsals. Poor would be the effect of a performance of Wagner's 'Tristan,' of which the varying moods were fairly set forth, but in which players and singers were left more or less to themselves. Wagner conductors know that it is only by looking after small things that great results are obtained. Bach's music wants just the same care taken over it—even more, since form and phraseology belong to a far past. Sir Henry, aiming at perfection of the letter, was able all the more fully to reveal the spiritual side of the music.

In the opening numbers the choir was somewhat flat, but that defect soon passed away. The "Crucifixus" was not altogether satisfactory as regards gradations of tone. And then the "Cum Sancto Spiritu" and the "Et resurrexit," though magnificently sung, were taken at a rate which robbed them of much of their nobility. We are inclined to think that the choir in their enthusiasm and excitement got beyond control. The rendering of the Sanctus, one of Bach's grandest inspirations, was superb. Madame Agnes Nicholls, Miss Ellen Beck, and Messrs. Alfred Heather, Thorpe Bates, and Robert Radford, the soloists, were all good, but the last two deserve most praise. In the "Quoniam" a *corno da caccia* was used for the obbligato. It was specially constructed for Sir Henry Wood from an instrument of Bach's time. The tone is brighter than that of the horn usually employed.

Of the 'Matthew' Passion we must speak briefly. The *continuo* can be realized on the harpsichord, pianoforte, or organ. Sir Henry decided in favour of the last instrument, and wrote out an entirely new part for it. The cold tone of the pianoforte is unsatisfactory; but why should not a harpsichord be used to fill up the accompaniments of the solos?

The words of Jesus were reverently declaimed by Mr. Frederick Ranalow, while Mr. Gervase Elwes rendered justice to those of the Evangelist. Miss Eva Rich, Madame Edna Thornton, and Messrs. William Burrows and Robert Radford were the principal soloists. The performance was solemn and impressive. Mr. J. W. Phillips was effective at the organ.

Of other works given during the last two days, it must suffice to mention a fine performance of Brahms's 'Song of Destiny' and an excellent one of the first part of Mr. Granville Bantock's 'Omar Khayyám,' with Madame Edna Thornton, Mr. Gervase Elwes, and Mr. Frederick Austin as soloists.

Signal service was rendered by the Queen's Hall Orchestra during the week. The splendid Sheffield choir will be heard at the forthcoming London Musical Festival.

Musical Gossip.

AN excellent performance was given of Verdi's 'Un Ballo in Maschera' at Covent Garden last Thursday week. This opera soon after its production at Paris in 1855 became a favourite in London, but after a time it was set aside. Since its revival a few seasons ago it has again enjoyed favour. The cast included Signor Bassi and Signor Sammarco, who impersonated Riccardo and Renato successfully. Mlle. Wittkowska was excellent as Ulrica, while Mlle. Wilna, who sang the Page's song, has a clear, bright voice.

'LOUISE' on Tuesday evening attracted a large audience, and with Madame Edvina, M. Dalmorès, Madame Bérat, and Signor Marcoux impersonating Louise, Julien, and the Mother and Father respectively, the clever work again made a strong impression. Charpentier seems to have carried out Wagner's theories with respect to music drama more fully than the reformer himself. With one or two small exceptions, the music of 'Louise' would have little or no meaning on the concert platform, whereas most of Wagner's music, though it does not, under concert conditions, display its full power, is in itself highly interesting.

At his violin recital at the Æolian Hall last Saturday Mr. Albert Spalding played the Sonata in A minor for violin alone, Op. 91, No. 1, by Max Reger, of whose skill and earnestness there is no question. In this particular work the influence of Bach is, however, unduly strong. The influence of important immediate predecessors or contemporaries is naturally felt by all composers, but why challenge direct comparison with the greatest composer of the first half of the eighteenth century? Apart from this the music is ably written, the Andante being smooth and expressive. Mr. Spalding gave a sound and effective rendering of the work, also of Handel's Sonata in A.

MISS MAY MUKLE gave an orchestral concert on Tuesday evening at Queen's Hall. Her tone is pure, her technique excellent, while in her rendering of D'Albert's 'Cello Concerto in c, although she gave proof of thorough command of the finger-board, there was no empty display. She seemed solely occupied in interpreting the music, which, if not strongly characteristic, is attractive. The lady was also heard in some 'Capricious Variations,' for 'cello and orchestra, on 'Salley in our Alley' by Mr. Dunhill, in which the quaint charm of the melody was scarcely enhanced by the cleverly written variations. The performance, however, was very good.

WITH the exception of 'Ah fors è lui' from 'Traviata,' which was sung with skill and effect by the new-comer, Mlle Wilna, the whole of the programme of Mr. Landon Ronald's sixth concert at Queen's Hall on Tuesday afternoon was devoted to the works of native composers, although none was a novelty. The intention was undoubtedly good, but, except Mr. Balfour Gardiner's bright 'Overture to a Comedy' and Mr. Gustav von Holst's interesting 'Somerset Rhapsody,' there was nothing of special interest. Mr. Henry Gibson's Symphonic Rhapsody lacked point and inspiration; while Mr. William Wallace's Symphonic Poem 'The Passing of Beatrice,' composed eighteen years ago, will not stand comparison with his recent 'Villon.' Mr. York Bowen's Piano-forte Concerto in E flat, the solo part of which was exceedingly well rendered by Miss Irene Scharrer, is of unequal merit. Mr. Balfour Gardiner and Mr. Henry Gibson conducted their own works.

MADAME MELBA will appear at Covent Garden next Wednesday in Puccini's 'Bohème.'

MADAME TETRAZZINI, who is rarely seen on the concert platform, has promised to sing at Stafford House next Tuesday for the Prince Francis of Teck Memorial Fund of the Middlesex Hospital.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	National Sunday League Concert, 3.30, Queen's Hall; 7, Palladium.
MON.-SAT.	Royal Opera, Covent Garden.
MON.	Mr. Edouard Deru's Violin Recital, 3, Æolian Hall.
—	Mr. Albert Spalding's Violin Recital, 3, Bechstein Hall.
—	Dr. Serge Barjansky's Orchestral Concert, 3.15, Queen's Hall.
—	Mr. Alan MacWhirter and Miss Muriel Scott's Recital, 3.15, Steinway Hall.
—	Miss Fanny Davies and Pablo Casals's Bach—Brahms Concert, 8.15, Æolian Hall.
—	Miss Adelina Leon and Mr. Charles Victor's 'Cello and Vocal Recital, 8.30, Bechstein Hall.
TUES.	Miss Evangeline Florence's Vocal Recital, 3.15, Bechstein Hall.
—	Miss Tora Hwass's Pianoforte Recital, 3.15, Æolian Hall.
—	Emil Sauer's Pianoforte Recital, 3.15, Queen's Hall.
—	Madame Pova Erisch's Vocal Recital, 8.15, Bechstein Hall.
—	Miss Rita Neve's Pianoforte Recital, 8.15, Æolian Hall.
WED.	Mr. Jules Wertheim's Orchestral Concert, 8.15, Queen's Hall.
—	Mr. Claude Biggs's Pianoforte Recital, 3, Steinway Hall.
—	Messrs. Ysaÿe and Pugno's Violin and Pianoforte Recital, 3, Queen's Hall.
—	Mr. Ernest Groom's Vocal Recital, 3.15, Æolian Hall.
—	Mr. and Mrs. Ingo Simon's Vocal Recital, 3.15, Bechstein Hall.
—	Smallwood Metcalfe Choir, 8.15, Queen's Hall.
—	Mr. Norman Wilks's Pianoforte Recital, 8.15, Æolian Hall.
—	Société des Concerts Français, 8.30, Bechstein Hall.
THURS.	Miss Nesta de Robeck and Madame Harriet Solly's Chamber Concert, 3.15, Æolian Hall.
—	Señor Arrigo Serato's Violin Recital, 3.15, Bechstein Hall.
—	Signor Livio Boni's Cello Recital, 8.15, Bechstein Hall.
—	Miles von Arany's Chamber Concert, 8.30, Æolian Hall.
FRI.	Madame Jeanne Jomelli's Vocal Recital, 3.15, Bechstein Hall.
—	Mr. Lorne Wallat's Vocal Recital, 3.15, Æolian Hall.
—	Festival of Empire, Opening Concert, 3.30, Crystal Palace.
—	Dr. Dezo Szanto's Pianoforte Recital, 8.15, Bechstein Hall.
—	Miss Susan Metcalfe's Song Recital, 8.30, Æolian Hall.
SAT.	Mr. Paul Goldschmidt's Pianoforte Recital, 3, Bechstein Hall.
—	Miss Joan Manners's Vocal Recital, 3, Æolian Hall.

DRAMA

THE WEEK.

ROYALTY.—*The Master of Mrs. Chilvers: a Comedy in Four Acts.* By J. K. Jerome.

MR. JEROME has done one good thing at least in this play which provides Messrs. Vedrenne and Dennis Eadie with the opening production of their joint management—he has broached a live topic on our stage. If the function of the theatre is to mirror the features of our time, then certainly the women's franchise movement was ripe for dramatic treatment. Nor is there any lack of fairness in Mr. Jerome's presentation of the issue; all the stock arguments of Suffragism and anti-Suffragism are repeated—alas! with only too lifelike a fidelity; and it is only in the solution which he offers of the problem of his drama that we see the author definitely taking his side. Impartiality, too, is combined with a breezy humour, largely turning on the self-assertiveness of the male against feminine domination. His Cockney billposter alternating cajolery and rough masterfulness in his courtship of a girl who has at her tongue's end all the phrases of rebellious sex, provides not only excellent fun, but also a comment on the whole movement. The keen sense of character which both Mr. Edmund Gwenn and Miss Esme Beringer exhibit is matched by Mr. Jerome's comic inventiveness and understanding of types of low life.

But in order to make his battle between the sexes as piquant as possible, the dramatist has made his protagonists husband and

wife, and has supposed them to be contesting a constituency as rival candidates. With that idea he plunges into an atmosphere of fantasy. He has to conceive of a decision of the House of Lords permitting a woman to stand for Parliament—and the public is never tolerant of imaginary politics on the stage. Then, too, so as to arrange his situation completely, Mr. Jerome is forced to make a larger demand on our credulity. Mr. Chilvers has had to vacate his seat on becoming a minister; his wife has been chosen by the Women's League to appear as their candidate at the first by-election that occurs; the League and he, though he is generally sympathetic towards their cause, quarrel on a point they deem all-important—all these hypotheses we may grant. But when Mrs. Chilvers—who is represented as no less attached to her husband than he to her, is pictured as opposing him in his own constituency—opposing him, too, at a critical moment of his career, and not recognizing that she is wounding him in a vital point—then indeed, we find illusion difficult to preserve. For she is not only attacking his dignity, she is also attempting to cut short his political existence. She is ceasing to be his wife—as helpmeet, she is striking at all his prospects. The logical outcome of her action would in our own world be separation. Mr. Jerome, of course, does not push matters this length. He falls back on a conventional happy ending. Mrs. Chilvers, after defeating her husband at the poll, returns home to tell him she is about to become a mother, and on the reconciliation which is brought about by that reason for her resignation—beautifully dealt with by Miss Lena Ashwell—the curtain is dropped. Doubtless, even in thus cutting the knot he contrives to hint at one of woman's disabilities for public service, but none the less he sacrifices the logic of his theme to popular sentiment.

More than once, also, Mr. Jerome adopts a rather heavy-handed treatment. His M.P.'s dispute with the Women's League turns on the proposed legitimization of children born illegitimate, and there is talk on this subject which is likely by its bluntness to offend fastidious ears. So, again, his Suffragists now and then deal in rather too vehement a rhetoric, which needs the full force of his comic interludes to lighten it.

The acting is very good. Mr. Eadie has little to do as M.P. except to preserve ease of manner under difficulties, and exhibit symptoms of distress, and Miss Ashwell has had much more effective parts than that of Mrs. Chilvers, but there are numerous minor contributions to the ensemble which reveal what can be done with small material. Miss Sydney Fairbrother has a delicious scene as a household drudge, and Mr. Sherbrooke's election agent seems to exhale excitement at every appearance. Nicely differentiated portraits of Suffragists are supplied by Miss Mary Rorke, Miss Auriol Lee, and Miss Sarah Brooke. There is no better all-round playing in London than that to be seen just now at the Royalty.

COMEDY.—*Playing with Fire: a Comedy in Three Acts.* Adapted from the German of Franz Molnar.

DRAMATISTS from Scribe onwards have been fond of asserting that there are only so many, or rather so few, plots, all told, and every now and then a survey of the stage seems to bear out their contention. Who, for instance, has not seen on the stage a husband testing his wife's fidelity by making love to her in masquerade? The idea must be as old as comedy itself; yet here it is once more turned to account by Franz Molnar, one of the newest of Continental dramatists. Herr Molnar was responsible for that crude version of the Faust legend staged in London under the title of 'The Devil.' He likes the effects of the theatre, and he has got a thoroughly theatrical scheme for his later and better play. But we do not say that theatrical schemes are unsatisfactory if they are so worked as to produce illusion and convey a suggestion of novelty. Herr Molnar makes illusion easier by suffering his hero and heroine to be an actor and an actress, artists who live in an atmosphere of pretence, and might naturally be expected to resort in real life to the game of make-believe. He has also, if report speaks rightly, succeeded by the brilliance of his wit and the daring of his details in lending freshness to an oft-told tale. That may well be so, in the original, but is not too apparent in the English adaptation, which is tedious in the first two acts, and only redeemed by the surprises of the last and the piquancy of the leading actress.

Neither Mr. Robert Loraine nor Miss Alexandra Carlisle can make much of the earlier scenes. The artificiality of the mock love-making is too obvious. The man, for all his military make-up and his false nose, is just an actor dressed up in the uniform of a Russian prince. We know he must succeed, and we yawn while Gertrude falls into the arms of her supposed lover. But there is a change with the opening of the last act. Here we find ingenuity, the fencing of sex, and the true spirit of comedy. The husband is back after a pretended absence, and starts immediately a tirade of anger over his wife's duplicity. But Gertrude, whose capacity for lying makes us suspect her of other moral lapses, is a match for him in effrontery, and even forces the poor wretch into a denial of the very existence of that prince who was himself. Now, however, comes his turn, and out of his luggage he produces the uniform in which he has made his conquest. Does she succumb? Only for a moment, and then she rallies as the sudden inspiration comes to her, "Why, I knew it was you all along." Mr. Loraine shows here all his customary vivacity and lightness of touch; but Miss Carlisle has the best chances, and her use of all the weapons at a woman's control—tears in the voice, gentle reproach, dignity of pose, ringing laughter—gives welcome proof of her virtuosity. For that one act the Comedy is well worth a visit.

Dramatic Gossip.

MR. F. C. WHITNEY will begin his Shaw season at the Criterion Theatre on the 15th inst. with a revival of 'Arms and the Man.'

At the Coronet Theatre on the 29th inst. a version by Mr. Metcalfe Wood of 'Dombey and Son' will be played. Miss Alice Crawford is to take the part of Edith Dombey, and Mr. William Haviland that of Mr. Dombey.

THE performances at the Stratford Commemoration this year were more varied than usual. Many of the representative actors of London companies came down to collaborate with Mr. Benson's company; and the National Theatre Society from Dublin produced six short plays by Lady Gregory, Mr. Yeats, and Mr. Synge. These were interesting, and well performed.

OTHER authors were represented by 'The Piper' and 'The Critic,' the latter finely produced. Miss Elinor Aitken's Mrs. Dangle and Mr. H. O. Nicholson's Puff were excellent.

THERE have been more changes in the programme than usual, both in players and plays. The "Chester Mystery Plays" were dropped altogether, and replaced by a repetition of 'The Critic.' The houses have been occasionally good, but more frequently rather thin.

BESIDES the plays proper there have been sports, processions, the crowning of the May Queen, and a ball on April 27. Before the ball Miss Ellen Terry gave a lecture in the Theatre on 'Shakespeare's Heroines,' illustrating dramatically some of her special favourites. Mrs. Leo Grindon also gave a lecture on 'Othello,' and Mr. Stanley Cooper one on 'Marlowe.'

MR. JERROLD ROBERTSHAW has secured the rights of a one-act play called 'The Waiter,' by Mr. Vincent O'Sullivan, author of 'Human Affairs,' &c., and expects to produce it in London about the end of June.

MESSRS. BELL'S BOOKS.

ENGLISH PASTELS

(1750-1830).

By R. R. M. SÉE.

A critical and biographical study of upwards of one hundred artists who painted in coloured chalks during the second half of the eighteenth and the beginning of the nineteenth centuries.

LIMITED EDITION OF 750 COPIES.

One large 4to volume bound in white forel. Containing 20 Full-Page Plates in Colour and 40 in Black and White.

Write for a Prospectus and Specimen Plate.

WORKS BY

DR. J. HOLLAND ROSE.

JUST PUBLISHED.

Illustrated. Medium 8vo, xii-632 pages. 16s. net.

WILLIAM PITT AND NATIONAL REVIVAL.

FIFTH EDITION, with many Maps and Plans and numerous Illustrations. In 2 vols. large post 8vo, 18s. net. Also a CHEAPER EDITION without the Illustrations. 2 vols. 10s. net.

THE LIFE OF NAPOLEON I.

Including New Materials from the British Official Records.

SECOND EDITION, Revised. Post 8vo, 5s. net.

NAPOLEONIC STUDIES.

In 5 vols. 4to, 21s. net each; or in half morocco, 31s. 6d. net each.

BRYAN'S DICTIONARY OF PAINTERS AND ENGRAVERS

A New Edition, Revised and Enlarged under the Supervision of
GEORGE C. WILLIAMSON, Litt.D.,
Assisted by a large Staff of Specialists.

With 500 Illustrations, including 40 Photogravure Plates.

"The text bears evidence of careful revision on every page... Certainly no one interested in the Fine Arts can afford to be without this comprehensive and indispensable dictionary."—*Pall Mall Gazette*.

Write for Prospectus and Specimen Plate.

THE ONLY COMPLETE PEPYS.

THE DIARY OF SAMUEL PEPYS, M.A. F.R.S.

Transcribed from the Shorthand MS. in the Pepysian Library, Magdalene College, Cambridge,
By the Rev. MYNORS BRIGHT, M.A.

Edited, with Additions, by
HENRY B. WHEATLEY, F.S.A.
In 8 vols. post 8vo, 5s. net each.

** This reprint contains the whole of the text of the Diary, and the Notes and Index, as given in the ten-volume edition, the volume entitled 'Pepysiana' only being omitted.

The original ten-volume Library Edition is still to be had. Demy 8vo, with numerous Portraits and other Illustrations, 10s. 6d. net each. (Vols. I.-VIII., the Diary; Vol. IX., Index; Vol. X., Pepysiana.)

TO BE COMPLETED IN SIX VOLS.

Vol. I. Ready. Vol. II. In the Press.
Demy 8vo, 10s. 6d. net each.

LITERATURE

The Life of George Joachim Goschen, First Viscount Goschen, 1831-1907. By the Hon. Arthur D. Elliot. 2 vols. (Longmans & Co.)

FIFTY years or so ago this book would inevitably have been entitled 'The Life and Times' and so forth. Even to-day the fuller definition might have been made with advantage, because in chapter after chapter, notably when Mr. Arthur Elliot handles the first Home Rule Bill and the formation of the Unionist party, general history submerges biography. Mr. Elliot writes well, and has a knowledge at first hand of the events which he relates. But for whole pages together he seems, like Randolph Churchill on a famous occasion, to have "forgotten Goschen." The result is that the character of the man fails to stand out from the politics through which he moved, and that a good deal of these volumes is rather in the nature of a Liberal Unionist apology than a study of a much-respected statesman.

We need say but little about Goschen's ancestry, since his 'Life' of his grandfather told us all there is to know; enough that they were Lutherans of Saxony. His father, who retained the modified *o*, founded the well-known firm of Fröhling & Göschen, and, after giving the boy three years' schooling in Germany, determined to make an Englishman of him by sending him to Rugby. "You will go very far," wrote young George to his mother, "before you will find a

'swot' who is popular." Still, Rugby assimilated Goschen, much to its credit and much to his own. To the end of his life he remained desperately English, and prone to launch forth into eulogies of cricket. Though head of the school at Rugby—"one of the best heads of the school," wrote Tait to his father, "that I have known during my Head-mastership"—Goschen received something like a setback at Oxford, through his deficiency in accurate scholarship. His handwriting was always bad, and grew worse with years. But he gained a first class in the final Schools, and made a figure at the Union.

Such was Goschen's training; and, having entered the firm of Fröhling & Göschen, he was not long in making a name in economics through his treatise 'The Theory of the Foreign Exchanges,' and in politics by getting returned in the Liberal interest for the City of London. He gained the ear of the House, and had a conversation with Palmerston in which the aged obscurantist propounded the characteristic programme, "A little law reform, or bankruptcy reform; but we cannot go on legislating for ever." Goschen's promotion to the Cabinet, as Chancellor of the Duchy of Lancaster, was unusually rapid, and took many by surprise. Mr. Elliot mentions the theory then current that he was chosen as an "advanced" politician to balance the Whiggism of Lord Hartington, who became Secretary for War on the same day. But it is difficult to see how Goschen could ever have been considered "advanced"; and the probability is that Earl Russell promoted him, without consulting any of his colleagues, partly because he had a safe seat, and partly because the City had to be kept in a good humour. Mr. Elliot reminds us from Delane's 'Life' that Bernal Osborne was disgusted.

It is unnecessary to follow Goschen up the official ladder. An administrator of the foremost rank, he did admirable work at the Admiralty in Gladstone's first Ministry. In the Cabinet he made a stand against going to arbitration with the United States unless the "indirect claims" were ruled out. Thus he wrote to the Prime Minister:—

"What, I ask myself, can I rely on, as the policy of the Government in the future in respect of these indirect claims if after the proceedings contemplated on Monday they should again be put forward by the U.S.A. as a matter of contention and dispute. I ask the question fairly of the Government, thinking that if I am to be committed to a step which apparently leaves these claims unsettled I may, without presumption, ask for an explicit statement as to the views of the Cabinet of our duties in regard to them. Lord Granville's answer, I am bound to say, was eminently unsatisfactory, and if that answer were to be the last word on the subject, I do not see how, holding the views I do, I could remain a member of the Cabinet. He would say the question is entirely hypothetical, but to me it has a very practical bearing."

Goschen also helped to precipitate the dissolution of 1874 by insisting on naval estimates which he considered adequate.

Sir George Trevelyan's advocacy of an enlarged franchise created, as we can now perceive, the dividing line in Goschen's career. He opposed it, not because it would endanger the throne, the Constitution, and property, but on account of "political economy and the teaching that made Englishmen self-reliant"—a typical utterance. While Disraeli was in office, he accepted the mission to Egypt, about which Mr. Elliot has disappointingly little to tell us when all the consequences that have followed from it are considered. We get rather too much, however, about the special mission to Turkey, offered him by Gladstone in 1880 after he had declined the Viceroyalty of India and the Constantinople Embassy, which hardly raised important issues. As the most interesting episode in the negotiations, his interview with Bismarck, has been freely drawn upon by the daily press, we will take leave of the period of Goschen's pilgrimages abroad with this interesting account from his wife of Beaconsfield in his decline:—

"He put up his glass and made for our corner. Lady Northcote got up and offered him her chair, but he said, 'No. I won't take that, but if Mrs. Goschen will allow me I will sit on the sofa between you,'—so we had him all to ourselves. I was so sorry I had to leave early, but he said, 'I am going myself in ten minutes. I never was fit for anything in the evening late. I live early, ready for anything in the morning—I am like the birds, alive all day but must rest early—I am dead at half-past ten, and buried by twelve!' He has lost his old spirit and is very aged. He looked brighter after dinner than before, but he is very blind and seemed to me to see nothing with one eye."

Gladstone's capacity for putting a sanguine interpretation on most things comes out strongly in his offer of office to Goschen in 1882, merely because the latter had refrained from speaking during a debate on the county franchise. His mastery of ambiguous language appears in a letter written to Goschen in July, 1885, on the eve of the Home Rule rupture:—

"The coming election offers grave enough matter for consideration, without going far into the future. My indisposition to travel beyond the bounds of need is not due to reserve; but is founded on the fact that my fifty-three years of service, and the (for me) fortunate circumstances of the moment, absolve me from future cares, unless it should chance that with an emergency in near view there should be a likelihood that I could seriously contribute to meeting it with effect. I think as you perhaps do that there is an emergency at hand; and that it is a prime duty of all Liberal statesmen to consider how they can best meet it. My starting point would be what I have now described; it would be affirmative and constructive."

Mr. Elliot then plunges into the Home Rule controversy with much vigour and more prolixity. We fear, too, that, pardonably enough, he over-estimates the importance of his hero. The public gaze,

we are told, was concentrated during the winter of 1885 on Lord Salisbury, Randolph Churchill, Gladstone, Hartington, Goschen, Mr. Chamberlain, and Parnell. If Bright had been substituted for Goschen, the statement would have been more correct. The public was not taking much interest in Goschen, for the simple reason that his conduct was discounted beforehand. He acted as an able, but somewhat emotional, lieutenant to Hartington. Now Hartington was slow, but wise. He would not move before he was ready, or attack before there was anything to attack. Goschen tried to force the pace, notably at the Opera-House meeting, where, in the spirit of Burke, he declared that, if the dagger was brought into use, "we will make our wills and do our duty." His electoral mishaps during this period appear to perplex his biographer. The fact is that Goschen never was a popular candidate. He lacked grace of manner; his speeches were better to read than to hear, and by all accounts he carried his zeal for thrift into his personal expenditure.

After he had found his true home among, though as yet he was not of, the Conservative party, many years of administration—his strongest side as a statesman—remained for Goschen. Mr. Elliot deals adequately with his finance, without, perhaps, being sufficiently alive to his propensity to yield to clamour. The withdrawal of the wheel and van tax and the failure to carry through the "compensation clauses" of the County Councils Bill were incompatible with strength, conscious though Goschen was, no doubt, that he was something of a political hostage. Still, he converted Consols, and sagaciously resisted the pressure brought upon him to come to the rescue of Barings:—

"My night thoughts had entirely convinced me that we could not carry direct aid in Parliament even if we had wished. How defend a supplemental estimate for a loss of half a million! And would not immediate application put the whole fat in the fire? This last argument convinced the Governor of the Bank, but he feared that nothing would avert catastrophe. Smith and I pressed getting all banks, and all interested in Barings being kept on their legs, to act together, but the Governor still did not see his way. However books must be examined first. Fearfully anxious day."

During his second spell at the Admiralty—an office which, we are glad to find, he accepted with alacrity—Goschen displayed all his old thoroughness and capacity for hitting it off with professional opinion. Mr. Elliot does not feel himself at liberty to tell the story in detail, but we get significant hints of naval preparations, and differences of opinion with Salisbury, who wished to use ships diplomatically, whereas the First Lord wanted them to be kept at hand should war arise. He wrote to the Prime Minister:—

"When you ask me to send a battleship to Zanzibar, I feel much as I believe you would feel if being Foreign Minister you were desired by the Prime Minister to send one

of your great Ambassadors with all the paraphernalia of a great European Embassy to the Court of some petty African potentate in order to impress him."

But the "new diplomacy" was none to Goschen's taste, and, though failing health was undoubtedly the main cause of his resignation in 1900, it may be that he was not altogether pleased with the trend of Unionist legislation. It remained for Oxford to do honour to one of the worthiest of her sons by making him Chancellor, and for fiscal theories to arise and agitate the last few years of his life. We cannot help feeling that, as one of the victims of Tariff Reform, Mr. Elliot deals with the movement more incisively than impartially.

A New English Dictionary on Historical Principles.—Scouring—Sedum. (Vol. VIII.) By Henry Bradley. (Oxford, Clarendon Press.)

MORE than a quarter of this instalment of the great work is taken up by words beginning with the harsh consonantal group "scr-," of which many may be "phonetically symbolic" or formed by a change of initial "cr-" to "scr-," "due to a feeling of phonetic expressiveness," to quote Dr. Bradley. Certainly "scream" and "srike" sound each like an absolute intensification of "shriek"; and "scriggle" suggests the *ne plus ultra* of "wriggling." Evelyn's 'Memoirs' justify the inclusion of the dialectic "scraze," "Apparently a blending of *scratch* and *graze*, vbs.," one of many words not registered in previous dictionaries of the English language. Dr. Bradley calls "screech" an "echoic modification of *scritch*, v.," which is "onomatopœic." A large proportion of these forms is adopted from Scandinavian, generally by Northern dialects, or indirectly from Old Teutonic through Old French, for instance, "screw" and "scroll." Under "screw," vb., by the way, we find "*to screw one's neck*: to kill by wringing the neck," while one of the quotations for "scrag," vb., defines it in relation to football as "to screw an opponent's neck under the arm in order to induce him to drop the ball," which sounds brutal enough without the fatal result implied under "screw"; but Dr. Bradley's quotation makes it sufficiently clear that the neck-wringing is practised on birds and small animals, and not as a blend of manslaughter and suicide in the game of football.

We think the separation of "scruple" = a small weight, &c., from "scruple" (of conscience) = hesitation, right, as the earlier (14th cent.) "scriple" and the Latin *scripulum*, *scriptulum*, may have been originally distinct from the Latin "*scrupulus*....diminutive of *scrupus*, rough or hard pebble, used figuratively by Cicero for a cause of uneasiness or anxiety." Freshly registered derivatives are "scrupular" = "amounting to a

scruple in weight....1771, Raper in *Phil. Trans.* LXI. 492," while the moral term "scrupleless" is cited from 'Peveril of the Peak,' and "scrupulous" from a letter by Miss Edgeworth. Under "scrupulosity" the sense "minute determination" is given in the phrase "1633....The s. of time." The fullness and judicious arrangement of the two important articles on "seat," sb. and vb., can hardly fail to attract attention. The varieties of meaning distinguished and illustrated by copious quotations are in number about double those found in the fullest treatment given in previous dictionaries, and the difference in order could hardly be greater. The common meaning "something to sit upon" comes seventh, while the first and earliest senses, from about 1200 to about 1420, are the "action of sitting. Also an assembly at a banquet." The second section deals with "Manner of sitting (on horseback)....1577." Here might have been added "Manner of sitting on a coach in motion," found in 'Martin Chuzzlewit,' chap. xxxvi., "among the rattling pavements, where a jaunty-seat upon a coach is not so easy to preserve." The phrase "jaunty seat" was not given under "jaunty." The next sense to the first in order of date comes sixth, from about 1205, "The place on which a person is sitting or is accustomed to sit," the nature of the sitting accommodation not being specified. Without including sections devoted to phrases and compounds, we count more than forty separately illustrated sections in the article. The verb "seat" seems to be found in Elizabethan literature at earliest, its uses being distributed over two dozen sections.

It is curious that Kingsley's "scryming" and foining," 'Westward Ho,' chap. iii., quoted under "scryme" by Cassell's 'Encycl. Dict.,' is ignored, though Shakespeare's "scrimure" is quoted under "scrimmer." The same may be said of "secondine" = afterbirth ('Stanford Dictionary'), used by Holland and Sir T. Browne, while the French "secousse" is given with one instance, dated 1887. The latest quotation for "scroll" = "A strip or ribbon-shaped slip of paper with a legend inscribed; a graphic or plastic representation of this," is dated 1751, so that 'Little Dorrit' (1857), chap. xxv., might be quoted for "this scroll," which Rugg "wrote up in the fan-light."

It is interesting to read that "sculls" for boats were used in the middle of the fourteenth century, their users being called "scullars," "scullers," in the sixteenth century, and "sculls," as also were the boats in the seventeenth. The combinations and compounds of "sea" occupy more than seventeen pages, an achievement equalled by few, if any, words. The number of words not registered hitherto seems to be larger than usual, and many of them are valuable additions to our vocabulary. It would be well if for every useful addition three or four superfluous words, which only cumber the memory, could be annihilated. The

cement "seccotine" is immortalized as a noun and a verb. These remarks are intended not to indicate the merits of the section before us, but to incite our readers to find them out for themselves.

A portion of T, by Sir James Murray, is announced for July 1st.

D'Eon de Beaumont: his Life and Times. Compiled, chiefly from Unpublished Papers and Letters, by Octave Homberg and Fernand Jouselin, and now translated into English by Alfred Rieu. (Martin Secker.)

"IN 1756 I contributed largely to the reunion of France and Russia. In 1762 and 1763 I laboured night and day to establish peace between France and England. I was in direct and secret correspondence with Louis XV. from 1756 to the year of his death."

The foregoing extract from an appeal to Talleyrand as Foreign Minister scarcely exaggerates D'Eon's achievements; yet he is chiefly remembered to-day from the ambiguity which so long hung over the question of his sex. That matter was settled after his death in London, though the feminine tradition still lingered some years; but the present work, based largely upon the man-woman's unpublished papers, throws further light upon a strange career as well as upon this curious aspect of it. As so much of D'Eon's life was passed in England, a translation of MM. Homberg and Jouselin's book is fully warranted, though rather late in appearing.

Whatever was stated later, D'Eon's baptismal certificate qualifies him as a son. He was born at Tonnerre in Burgundy, of a family belonging to the *petite noblesse* of the province. He distinguished himself at the Collège Mazarin, took the degrees of Doctor of Civil and Canon Law, was called to the bar, and soon became known as an author, a wit, and an expert fencer. The Prince de Conti recommended him to the King, and launched him upon a diplomatic career by selecting him to accompany the Chevalier Douglas on a secret mission to Russia in the autumn of 1755. This first attempt of Louis XV.'s secret diplomacy met with a check, and Douglas was compelled by Bestuchef and the English party at St. Petersburg to beat a hasty retreat, though in a few months the emissary returned as Minister Plenipotentiary, with D'Eon as Secretary of Embassy.

The authors are inclined to follow the Duc de Broglie and M. Vandal in dismissing as "wildly improbable" the tradition which attributed this success to the young Burgundian, who was said to have remained in Russia and gained access to the Tsarina Elizabeth in female disguise through the Vice-Chancellor Woronzow; and it even seems likely that D'Eon did not accompany the first mission at all. Nevertheless it is certain that D'Eon was largely instrumental in the success of

the second mission, which resulted in the re-establishment of full diplomatic relations between France and Russia, and ultimately in the disgrace of Bestuchef, the pro-English Chancellor. The little secretary did good service to the incoming French Ambassador by giving him much information about Russian politics; and on his arrival at Paris with the news of the battle of Prague, and a broken leg incurred in his haste, he was rewarded not only with money and a gold snuff-box, but also with a commission as lieutenant of dragoons.

D'Eon, after an interval for recuperation, was sent back to St. Petersburg, and it was he who was chiefly instrumental in bringing about Bestuchef's dismissal and his replacement by Woronzow. There arose some question of attaching him to the Russian service; but his military ambitions led him to decline the suggestion, and after some further intrigues, in which he acted more in the interest of Louis XV.'s secret than of his official diplomacy, he obtained leave to return to France. As the bearer of the ratification of the new Russian treaty of 1758 and a Northern maritime convention directed against Prussia and England, he was well received at Versailles, and awarded a pension from the privy purse as well as the captaincy of dragoons which he had applied for.

D'Eon was equally successful in the next phase of his career, his brief period of service with the Army of the Upper Rhine as aide-de-camp to the Comte de Broglie. A certificate, attested by the Marshal Duc de Broglie as well as by the Count, records the young dragoon's exploits, not mentioning, however, the discomfiture of "the Scottish Highlanders" at Einbeck, referred to in the author's text. At Ultrop D'Eon received two wounds; and it is clear that he was no carpet soldier. But he seems to have been more valued as a diplomatist than an officer; he was ordered back to Paris after a few months' campaigning, and quitted active service at the Peace of 1762-3.

D'Eon was next dispatched to London to assist the Duc de Nivernais in negotiating peace with England. The Secretary to the French Embassy boasted that in the course of the negotiations he had enabled his chief to take copies of important papers by the help of some of his own good wine from Tonnerre, of which he induced Wood, the Under-Secretary, to partake freely. He had pleased Nivernais to such an extent as to induce him to procure for him, despite official objection, the unprecedented honour of bearing the British ratification of the treaty to Versailles, thus winning for himself the cross of St. Louis. Moreover, the Ambassador was induced to recommend his Secretary of Embassy as Minister Plenipotentiary until the arrival of his successor, the Comte de Guerchy, as Ambassador.

This was the crisis of D'Eon's fortunes. He returned to London in 1763 not only

with this official position, but also charged with the direction of a secret survey of England. His instructions were to be from the King through his private agents, the Comte de Broglie and M. Tercier, and D'Eon was to make no communications relating to the affair "to any living person, not even to my ministers wheresoever they may be." Though little or nothing came of this scheme, it occasioned much correspondence, and gave D'Eon in his own opinion, and for a time also in that of his patrons, a semi-independent position. That position, however, he so misused as to tire out his secret protectors and ruin his official career. He made extravagant pecuniary demands upon the ministers on the score of his position as Minister Plenipotentiary, and more than hinted that his former services had been inadequately rewarded, causing the Duc de Praslin to write and remind him of his rapid rise, and to add: "If you are not yet satisfied, I shall be obliged to discontinue employing you, for fear of being unable to recompense your services adequately."

From the first D'Eon was on bad terms with the new Ambassador, De Guerchy, some of whose stipend he had anticipated, and whose remonstrances he answered in a letter containing an impertinent comparison between their relative diplomatic qualifications, which was none the less improper from the fact that it was true in substance. When De Guerchy replied by obtaining the recall of his impudent subordinate, the latter refused to leave without letters of revocation from the King, and remained in England to carry on a long and unseemly controversy with the Ambassador. D'Eon accused De Guerchy of attempting to poison him, and ostentatiously surrounded the house in which he lived with a guard of soldiers.

Even Louis XV. now wished to recall his embarrassing agent, and counter-signed a ministerial order instructing De Guerchy's secretary to take possession of all his papers, keeping them secret till they should be handed over to himself in person. But the English Government found itself unable to issue a warrant for D'Eon's arrest, and the most De Guerchy could obtain was a formal discharge to D'Eon from the Lord Chamberlain from his diplomatic status. Lord Halifax, the Secretary of State, declared that the ex-Plenipotentiary's behaviour was abominable, but his person inviolable. D'Eon formally declined to deliver his papers, and held his ground. But although the King declared he was "presumptuous and a very extraordinary person," he authorized Tercier to continue to supply him with a little money and let him remain where he was. The culprit at the time we find writing to his mother, "Let them do as they please, I will do as I think proper," and assuring her that he had no need of consolation "because I do my duty, and my enemies, who call themselves great men, do not perform theirs"; whilst his "heart," he said, "plays the violin and even the double-bass!"

In his desperation, however, D'Eon proceeded to further outrage by publishing a book containing not only an account of his grievances against De Guerchy, but also extracts from private ministerial correspondence reflecting upon the Ambassador's qualifications. He became almost as popular as Wilkes with the London mob, and he boasted to De Broglie of offers he had received from the English Opposition if he would support their charges of bribery against the negotiators of the late peace. When found guilty of libel for his recent publication, he successfully evaded arrest, and for the first time (unless the Russian romance were true) adopted feminine attire. He even retaliated upon De Guerchy by charging him with attempted murder, obtaining a true bill from the Grand Jury, though the proceedings were finally quashed in another Court.

D'Eon had made his enemy's position in England impossible, and he even obtained from Louis XV. a pension; but the King was now only anxious to get back his papers and rid himself of his agent. The latter still refused, however, to hand these over, and continued for some little time to supply De Broglie with political information as "William Wolf." He helped Halifax to rebut the accusations of having been bribed made against various highplaced Englishmen after the Treaty of 1763, though he remained on terms with Wilkes, whom he advised De Broglie to keep as a counterpoise to Paoli. But his pecuniary position was getting perilous; and became worse when Louis XVI. on his accession received the most preposterous demands from his predecessor's agent. Ultimately, however, Beaumarchais was employed to get rid of his tiresome claims by according him an annuity in lieu of his irregularly paid pension as well as a safe-conduct to France, in return for the long-desiderated correspondence and other conditions.

The latter included a proviso that D'Eon should not only refrain from any action hostile to the family of De Guerchy, but should also always wear feminine dress. Already D'Eon himself, apparently for the sake of notoriety, had adopted the pose of being a woman, although he had at first indignantly combated the popular belief, which took the form of bets and insurance policies. Although he protested vainly against the minister's condition, he succeeded in befooling some of the shrewdest of his contemporaries, such as Beaumarchais, and even many of his old military comrades and intimate associates. Voltaire, however, found it difficult to believe that his "very thick and very prickly black beard" belonged to a woman.

D'Eon was a popular personage during his final residence in France. Not only was he fêted by society, but he also corresponded seriously with such men as Buffon and Lalande, fought Beaumarchais with his pen, and even made pious visits to religious houses. But he was unable

to persuade ministers to allow him to join the army in America, and had to undergo a brief imprisonment in order to remind him of his obligation to retain his irksome attire.

In 1785 he had to return to England to redeem his library and papers from a creditor, and found it convenient to remain. At the Revolution he lost his annuity; and poverty now compelled him to earn his living by giving fencing displays. After an accident in one of these at Southampton, he was fain to desist, and passed his last years as a woman in the house of a charitable London lady.

The story of this life of vaulting ambition is sometimes, as told by the authors, a little lacking in precision. A few footnotes would have been useful to enlighten the English reader—for instance, as to the identity of "the Grand Duchess" mentioned in chap. ii., and to explain what is meant by Comte de Choiseul being "raised to the peerage" (p. 63). The uninitiated might also have had help in distinguishing the latter from his cousin and colleague the Duc. "Henry Fielding, Justice of the Peace" (p. 101), who is said to have taken up D'Eon's quarrel, should presumably be Sir John. Dr. Samuel Musgrave, the Greek scholar, who brought the charges of bribery against the negotiators of the Treaty of 1763, was not a member of Parliament, far less a "leader of the Liberal party." The wording of certain passages in the last chapter concerning the Revolution is so loose as to be misleading.

The translation also leaves something to be desired. Mr. Rieu prints "spy of" his own chief, when he means "on"; and on the same page (28) uses "suborned" for *subsidized*. To "access himself" (p. 74) is certainly not good English; and the words "at England's expense" (p. 242) convey just the opposite of the meaning required. The pagination of the book is somewhat peculiar, and there is no index; but the printing and general get-up are above the average.

An Introduction to the Literature of the New Testament. By James Moffatt. (Edinburgh, T. & T. Clark.)

DR. MOFFATT'S book is the latest addition to "The International Theological Library," and is worthy to be placed in that library beside Prof. Driver's 'Introduction to the Literature of the Old Testament.' It is designed not for general readers, but for students, and we are told that they need to be reminded that, if the first commandment of research is "Thou shalt work at the sources," the second is "Thou shalt acquaint thyself with work done before thee and beside thee." Dr. Moffatt has been obedient to these commandments, and not only are exhaustive lists of books furnished, but also there are innumerable statements and criticisms of the positions

of representative writers. There is no other English book on the subject so comprehensive, and the reader, whether critic or student, will be impressed with the author's learning, lucid style, methodical arrangement, and reverent attitude.

It is impossible, on the other hand, that there should be a consensus of agreement with Dr. Moffatt's conclusions. These conclusions are very definite, as, for example, that John the son of Zebedee did not write the Fourth Gospel; and yet, as they are never merely dogmatic assertions or plausible conjectures, they are deserving of consideration. The classification of the books of the New Testament is novel, but is not to be rejected as fanciful. Five groups are recognized: the Correspondence of Paul; the Historical Literature; Homilies and Pastorals; the Apocalypse of John; and the Fourth Gospel and a Johannine tract (1 John). Under Homilies and Pastorals are included 1 Peter, Jude, 2 Peter, Ephesians, Epistles to Timothy and Titus, Hebrews, James, and two letters of John the Presbyter (2 and 3 John). Ephesians, it is to be noted, is not classed with the letters of Paul. It seems probable, Dr. Moffatt says,

"so far as probability can be reached in a matter of this kind, that the epistle, or rather homily in epistolary form, originally had no notice of any Church. It was a catholicised version of Colossians, written in Paul's name to Gentile Christendom; the solitary reference to concrete conditions is adapted from Colossians, in order to lend *vraisemblance* to the writing, and the general traits of the homily rank it among the catholic epistles or pastorals of the early Church."

In reference to the date the contention is that

"the *terminus a quo* is fixed by Colossians, which was certainly, and 1 Peter, which was probably, used by the anonymous *autor ad Ephesios*. Ewald, who regarded Colossians as written by Timotheus under Paul's supervision, held that Ephesians was composed by a Paulinist between A.D. 75 and 80, and if the *terminus ad quem* is extended to c. A.D. 85, this conjecture may serve as a working hypothesis for the general period of the writing."

After a short but careful examination of the evidence in favour of Prisca and Aquila as the authors of Hebrews, Dr. Moffatt concludes that one has "reluctantly to forego the romance which this hypothesis would introduce into the primitive Christian literature." Unlike Prof. Harnack, Drummond, Dr. Stanton, and other writers, Dr. Moffatt does not reject the Papias tradition that John the son of Zebedee was killed by the Jews. He is inclined, on the contrary, to accept it, for reasons put forward by him; and he has to meet, therefore, the difficulties arising out of the other tradition, that John the Apostle lived to extreme old age and was resident in Asia Minor. He emphasizes the fact that Irenæus is the chief witness for that tradition, and that his statements "are confronted by a significant silence on the part of previous writers." It is shown that in the lite-

rature before Irenæus there is no mention of the sojourn of the Apostle in Asia Minor, and it is maintained that the silence of Clemens Romanus, Ignatius, and Hegesippus cannot fairly be called accidental. No argument is accepted which favours the theory that the Apostle was the author of any of the Johannine books. Dr. Moffatt does not admit that there is a good case for those who give up St. John's authorship of the Fourth Gospel and cling to his authorship of Revelation. He points out that, when the vindictive and passionate tone of the Apocalypse is connected with the temper displayed by St. John in the incident recorded by St. Mark and St. Luke, it is assumed that the rebuke of Jesus produced no impression on the disciple, and that forty years later he was unaffected by what his Master had said. While John the Apostle is rejected as an author, John the Presbyter is accepted. The John of Asia Minor towards the close of the first century was, according to Dr. Moffatt,

"John the presbyter, a Jewish Christian disciple, originally a Jerusalemite, who taught and ruled with strictness in the local churches. His authority and influence created a 'Johannine' school or circle. He wrote the Apocalypse, and two notes of his have survived, all written before the year 96 A.D. Later on, the Church looked back to see in him, however, and in his earlier apostolic namesake, not two stars, but one."

The relevant fact is adduced that, when the Canon was being formed, there was a tendency to connect any accepted gospel or epistle with an apostle. Dr. Moffatt offers no theory regarding the authorship of the Fourth Gospel and 1 John, though he does not repudiate the idea that he who wrote the Apocalypse may have written that Gospel. There is, however, no special attention given to the idea, and it seems as if it would not have been mentioned had not Prof. Harnack and other reputable critics supported it.

The excellent work which Dr. Moffatt has done in this book might be further illustrated by his examination of the contents of the Fourth Gospel, indeed, of all the New Testament writings. He shows himself competent to deal with literary as well as historical problems, and students, whether they ultimately agree with him or not, will at least learn what these problems are and what solutions have been offered.

NEW NOVELS.

Mrs. Thompson. By W. B. Maxwell. (Hutchinson & Co.)

MR. MAXWELL'S scrupulous care in getting-up his "cases" is one of his most marked characteristics, and is displayed to a nicety in his latest novel. Mrs. Thompson is the proprietress of an old-fashioned drapery business in an old-fashioned town. She has pulled the business out of the fire, as the phrase runs, after her incompetent husband's death, and by her

personality and power of organization has built it up again into a substantial affair. At this point she falls a victim to a passion of love which has come to her late in life. She is five-and-forty, and has an insipid and stupid daughter, who also falls a victim to the same passion. The story is virtually the story of these two unhappy marriages. It is marked by all the author's delicacy of touch, his sensitive feeling for detail, and his power of evoking emotion. We do not, however, think that the man Marsden, an admirable salesman at "Thompson's," would have degenerated so sharply as is represented. If he had been capable of that, he would have broken out before. He is, indeed, painted too blackly. But the tragedy of Mrs. Thompson's life is sympathetically and interestingly set forth, and Mr. Maxwell is, as always, an effective writer.

John Verney. By Horace Annesley Vachell. (John Murray.)

THE sordidness of political ambition has recently been much exploited. But Mr. Vachell's tale was worth telling, since all his characters possess individuality. We can admire the honesty of John Verney, which leads to a healthy amount of self-criticism, and sympathize with the self-deception of his chief, which leads to his being caught in the toils of the villain, and eventually involving his family also. Even the villainy of the villain is so obviously the outcome of ambition that it cannot be condemned as mere melodrama; and the heroine will probably make a wide appeal to thoughtful readers. Although many of the characters are not novel, being re-introduced from 'The Hill,' we leave them still interested in their future.

A True Woman. By Baroness Orczy. (Hutchinson & Co.)

THE author of 'The Scarlet Pimpernel' has a public of her own, which may possibly find her latest novel exciting. It is a modern story, and turns on a murder and an innocent prisoner. The *dénouement* will not strike the ordinary reader as particularly convincing, though he may be prepared for it. There is little or no attempt at characterization, and the mystery, as we have hinted, is not impenetrable. On the whole, the author seems likely to do better in melodrama of the past, in which she has already scored a success.

Two Girls and a Mannikin. By Wilkinson Sherren. (Stanley Paul & Co.)

THE idea of twins who are virtually identical in appearance while widely dissimilar in temperament, is not novel, but Mr. Sherren handles his subject with skill and originality, although with an impartiality that borders on the unsympathetic. His hero is well described

as a "mannikin" in spite of his generous physical proportions, and it is with this character that the author is least successful. His alternate backslidings and repentances are not convincing, while his share in the final tragedy is almost abhorrent. The twin sisters who contend for his unstable affections are well drawn, the atmosphere of the Methodist household and the character of the grimly fanatical father being equally ably portrayed; but for a farmer's wife to talk of "we intellectuals" seems hardly in keeping. A fine old sea-captain and a buxom serving-woman provide the most entertaining parts of the book.

The Downfall of the Gods. By Sir Hugh Clifford. (John Murray.)

SIR HUGH CLIFFORD maintains here his high position among novelists who take their local colour from Asia. The scene of the present story is laid in Kambodia in the thirteenth century. Perfection of structure is joined to unusual thematic interest; and one of the characters, an architect enthralled by his discovery of "the formula of the arch," is admirably imagined. The story depicts the tyranny of the Brahman priests or demigods, and their overthrow by the Sudras or men of "servile caste," led by a priest's illegitimate son, himself the infatuated tool of a temple-prostitute. The fraud and piety of the Brahman priests, the artistic enthusiasm of the architect, and the scornful rationalism of the prostitute are impressively exhibited. A poetic solemnity broods over the story.

The Bread upon the Waters. By Georgette Agnew. (Heinemann.)

QUENTIN GREGORIE is kind in his youth to an artist's model, and in his middle age she makes an heroic sacrifice for his sake. Kitty O'Kelly the model has by this time been transformed into Iris Hawthorne the actress, and she has bewitched Quentin's son, as before she had attempted to bewitch him. Her sacrifice adds to her piquant personality just that touch of depth which it otherwise lacked, though it does not seem generally satisfactory. Indeed, the impression left with us is that she has been particularly badly treated, which is a tribute to her charm.

Such words as "impersonalness," "unaccustom," and "revivingly" do not please us, but the book, as a whole, is attractively written.

The Green Wave of Destiny. By Philippa Bridges. (Blackwood & Sons.)

THERE is more than a little of poetic feeling and description in this tale of the Far East. The heroine is charming—"beautiful, good, and brave," says Redpath the traveller, whose life she sets

to good purpose through her love. The strange bargain on the Afghan frontier, whereby Redpath induces his hard companion not to leave him in the desert, is the knot at the core of his destiny, and the various influences which make for his release are well devised and described. These and the good use of the local background (in China particularly) make a striking picture. We may add that the book is an admirable impression on excellent material, since such details are often scamped nowadays.

The Splendid Sinner. By Arthur Lambton. (Eveleigh Nash.)

THE heroine's lapse from virtue in a Neapolitan dungeon, though there may be none who would not forgive it, is a squalid rather than a splendid sin, and should not have been thrown into relief on the title-page. For the rest, the story is concerned with the Naples of Lady Hamilton and Acton. There is plenty of incident connected with the political turbulence of the time, and the author appears to take the common Whig view of the doings of the Neapolitan Court. His lazzaroni are lifelike, but we cannot compliment him on his style.

The Under-Man. By Joseph Clayton. (Martin Secker.)

THE reader would probably have thanked the author for a larger display of the note of relief which is contained in the last five lines of this lugubrious tale. In fact, his honesty in recording the history of one of the failures of modern life may militate against the popularity of his book. This would be a matter for regret, because the picture of the hero's lack of "spunk" combined with a faculty for relentless self-depreciation is noteworthy. The book is not well knit, and lacks due revision. The author's curt close presumably betrays his increasing impatience with the hero, an impatience which his readers are likely to share. Socialistic views are expressed, but not with an insistence likely to offend the ordinary reader.

VERSE.

Songs of the Road, by Sir A. Conan Doyle (Smith & Elder), are so varied in theme that the reason for the title selected is not at once apparent. The volume is in three parts. The first contains 'Narrative Verses and Songs'—humorous like 'Bendy's Sermon,' pathetic like 'The Outcasts,' or, as in 'The Wanderer,' striking a pretty and effective vein of sentiment. These move with characteristic vigour and simplicity, and will lend themselves admirably to recitation. Of the second section, headed 'Philosophic Verses,' the most remarkable pieces are those which seek in thoughtful stanzas—embellished but scantily with poetical graces—to comprehend certain of the incomprehensible anomalies incident to

humanity, emphasizing with a cogency dispiriting, but relentlessly rational, the dependence of mind upon matter, of the spiritual upon the physical. With the third portion, 'Miscellaneous Verses,' the author, in 'Night Voices' and again 'By the North Sea,' approaches the domain of the true lyricist as opposed to that of the reciter or pathologist. We quote from the latter poem:

Her cheek was wet with North Sea spray,
We walked where tide and shingle meet;
The long waves rolled from far away
To purr in ripples at our feet.
And as we walked it seemed to me
That three old friends had met that day:
The old, old sky, the old, old sea,
And love, which is as old as they.

Not the least attractive feature of the volume is the modest little 'Foreword' with which it opens.

Pensive melancholy and mellifluous despair are the dominant features in Mr. Maurice Baring's *Collected Poems* (John Lane). Alike in sonnet, lyric, and play, parting and death continually harped on produce a monotone of feeling, the sense of which not music of word nor beauty of imagery can entirely efface. Mr. Baring has undoubtedly poetic power, but he suffers by taking one corner of the world of human experience for his province. In his chosen domain, however, he acquits himself worthily, and his pages abound in haunting phrases and images of subtle fancy. He sings of

the high pinnacles of wind and rain;

of a woman's soul as

a harbour, dark beneath the moon,
And flashing with soft lights of sympathy;

while the sonnet 'Vale,' which we quote, illustrates the sustained, almost cloying sweetness of his verse:—

I am for ever haunted by one dread,
That I may suddenly be swept away,
Nor have the leave to see you, and to say
Good-bye; then this is what I would have said:

I have loved summer and the longest day;
The leaves of June, the slumberous film of heat,
The bees, the swallow, and the waving wheat,
The whistling of the mowers in the hay.

I have loved words which lift the soul with wings,
Words that are windows to eternal things.
I have loved souls that to themselves are true,

Who cannot stoop and know not how to fear,
Yet hold the talisman of pity's tear:
I have loved these because I have loved you.

Two 'Scenes from a Play' on the Black Prince, a five-act play 'Tristram and Iseult,' and 'Proserpine: a Masque,' conclude the volume, and fill the greater part of it; but in his use of the dramatic form Mr. Baring is not noticeably dramatic. In the Masque, on the other hand, with its virtually boundless latitude, he is more at ease, and the shadowy world of the grove of Proserpine and King Pharamond's "sea-girt city" has inspired some of the most melodious examples of a lyrical talent beyond the ordinary.

Mr. E. H. Visiak, whose little volume *Flints and Flashes* appears in the "Satchel Series" (Elkin Mathews), adds to a somewhat conventional independence of thought—freely expressed—distinct poetical promise. His, when it detaches itself from modern political issues, is the mind which sees visions, and though they resemble most visions in being incomplete, there is yet sufficient indication that when, having realized that the visionary element is not the sole constituent of poetry, he has subordinated it in a greater degree to the service of conscious art, he may advance to some purpose. The contents of the present volume (the majority of which are reprinted

from various periodicals) waver between the finished and trivial on the one side, and the unfinished and amorphous, but not trivial, on the other. A certain grimness of imagination—as yet little more than tentative—points to the region of verse where the author should achieve most. We quote the lines called 'The Murderer':—

I've tricked them! At dawn another dies,
Caught in the net of liars' lies.
But the black night is shot with bars;
And, through the murk, two stony stars
Peer forth like gaoler's eyes.

Technically there is little fault to be found, only we would observe that two such Miltonisms as "the sea-lit dim serene" and "the still profound" are infelicitous to the modern ear and eye when they occur within the space of three short lines; and further, that the use of "lift" for "lifted" does not please.

Mr. Webster Ford's *Songs and Sonnets* (Chicago, the Rooks Press) are of more than average merit, though the fact that, contrary to poetic tradition, they exalt fickleness in love, in place of constancy, may possibly militate against them in some circles. The author possesses grace and fluency, a good sense of craftsmanship, and a rhythmical ear, as may be gathered from two creditable 'Odes,' to 'Day' and 'Night' respectively; while the prevailing spirit (sufficiently individual) of his verse is to be discerned in the following, from 'A Study':

Oh, subtle and mystic Egyptians!
Who chiseled the Sphinx in the East,
With head and the breasts of a woman,
And body and claws of a beast.

And gave her a marvellous riddle
That the eyeless should read as he ran
What crawls and runs and is baffled
By woman, the sphinx—but a man?

The concluding sonnet sequence is technically admirable, though, as is often the case with all but the masters of sonnet-making, its purport is not invariably clear.

In the brief 'Forewords' prefixed to the latest additions to the anthological host, *The Songs of Old England* and *Pilgrim Songs on the King's Highway* (Ouseley), Mr. W. James Wintle recapitulates—unnecessarily perhaps—the difficulties which beset the compiler; but, perfection in this kind being by common consent unattainable, little fault can be found with his selections. The precise method of arrangement followed in 'Pilgrim Songs on the King's Highway,' a book of devotional verse, is not, however, clear; while 'The Songs of Old England' comprise a reasonable leaven of favourites of varied periods, together with others less known, marshalled in groups, but with scant regard for chronology—"temp. Henry VIII." appearing cheek by jowl with Samuel Lover. We do not think that Dickens's 'The Ivy Green' is sufficiently representative to have merited admission. The volumes are handsomely produced as regards binding, paper, and printing, but even so they would call for no special comment in an age glutted with anthologies, were it not for the admirable reproductions of masters, modern and old, with which they are lavishly illustrated. We may observe in passing that Mr. Wintle is mistaken in describing "pygsnye" ('Songs of Old England,' p. 2) as "possibly the origin of the modern word pickaninny," the latter, minus its *k*, being traceable to North American Indian sources.

La Lyre d'Amour: an Anthology of French Love Poems from Earliest Times down to 1866. Selected and annotated by Charles B. Lewis. (Chatto & Windus.)—This is a

charming and well-selected anthology of love lyrics, with annotations sufficient to bring the oldest of them within reach of any reader who understands modern French. This is, indeed, not a difficult task, for, as William Morris used to say, an Englishman who knows French has a considerable advantage over a Frenchman nurtured in Racine in reading any mediæval French book. Anthologies of modern French poems are comparatively common, but Mr. Lewis has done good service in making the older poems available to a wider class than professed students. His Introduction is pleasant and well-written, but we think he misunderstands Verlaine—"De la musique avant toute chose." The lyrics he cites up to Ronsard's day were written to be sung, even the barren verbiage of Charles d'Orléans; the poems of the classical and the modern age were written to be declaimed. The distinction is fundamental, and the exaggerations of the Symbolists and other doctrinaires have their logical basis in it. The book is well printed, and has as frontispiece a photogravure of a modern illumination founded on a fifteenth-century original.

OUR LIBRARY TABLE.

THE third and last volume of Sir Herbert Maxwell's *Century of Empire, 1801-1900* (Arnold), brings an agreeable, though somewhat superficial survey to its appropriate end with the death of Queen Victoria. Unlike many books of its kind, this has improved as it has gone on. As a much-respected member of Parliament, Sir Herbert saw a good deal of the inner workings of politics in 1880 and onwards, and his knowledge lends colour to his narrative. The career of Randolph Churchill, in particular, receives sympathetic treatment at his hands; and, if he makes but little attempt to conceal his animosity to Bradlaugh, his standpoint is, at all events, intelligible. In the earlier chapters we get a reasonably impartial survey of the first Administrations of Disraeli and Gladstone. The agricultural depression which ushered in the first Midlothian campaign is also dealt with in a spirit of sobriety, and the account of Gordon's mission could not be bettered as a candid handling of a fiercely controversial question. Sir Herbert admits that Gordon threw his first instructions to the winds, and that before the capture of Berber he might at any time have brought away the garrison of Khartum.

As 'A Century of Empire' draws near present times, Sir Herbert expresses opinions on which *The Athenæum* cannot pretend to offer criticism. We will merely, therefore, take note of his vigorous denunciation of the Unionist Government for failing to reform the House of Lords when reform was possible. The Diamond Jubilee suggests to Sir Herbert a purview of material progress which is, on the whole, well done, though we cannot agree with him that British architecture is dead or dormant. It may lack a distinctive style, but it abounds in strenuous endeavour.

Crooked Answers. By Phyllis Bottome and H. de Lisle Brock. (John Murray.)—The story in this book—a very slight one—is told by fragments in a number of amusing letters, purporting to be written by a group of people brought together by the occasion of a winter trip to St. Moritz. We are reminded incidentally of 'Blanche's Letters' in *Punch*, of 'The Letters of Elizabeth,' and

of Mr. E. V. Lucas's work in the same field; but the authors have a cleverness of their own, and display a knowledge of a certain world which much arrides us. The letters ascribed to Lady Sarah Overton are the best in the book, and the portrait conveyed of that philosophical chaperon is good caricature. The work is frivolous but entertaining, and demands no mental effort from the reader.

IN Mr. W. J. Batchelder's *The Wine-drinker, and other Stories* (Smith & Elder), the "wine-drinker" is no worshipper of Bacchus, but a North Sea herring, an aristocrat of his race, larger than most, and more beautifully marked, but a herring, and as such liable to the onslaughts of greater fish and the hazards of the trawlers' nets. The tale of this particular herring occupies no more than a score of pages out of three hundred. There are fifteen other stories, all of North Sea fisher-folk and their doings ashore and afloat, and all are distinctly worth reading. The author appears to know his subject—the characters and their environment—extremely well, and most of his tales are told in the vernacular, which is effectively used.

The Teacher's Encyclopædia of the Theory, Method, Practice, History, and Development of Education at Home and Abroad. Edited by A. P. Laurie. Vol. I. (Caxton Publishing Company.)—On March 18th we reviewed the first volume of an American 'Cyclopedia of Education' edited by Mr. Paul Monroe. We have now before us an English attempt in the same field, though there are obvious differences between the two publications. Mr. Laurie departs from the custom of arranging subjects in alphabetical order, and aims at selecting subjects of vital interest which are arranged in related groups. He rightly urges in his Preface that there are two movements which necessitate a fresh study of educational problems: the scientific movement and its creation of the new child-psychology, which is beginning to affect modern ideas of method; and the social movement, which emphasizes the conception of society as a social organism, and the responsibility of the State towards the separate units.

It is obvious from the articles in this first volume that many of the problems handled are only in the course of solution, and that to such problems no attempt is made to give a complete answer. We have instead a presentiment of new ideas "in process of formation, before they have crystallized in final form." It may be said that the teacher who consults this volume will find not so much definite results stated as matter which will set him thinking and working out his own attempts at method. All this is so much gain. If astronomy is the most exact of the sciences, it may be claimed that educational psychology is the most uncertain. The first article, by Prof. John Adams, on 'Child-Psychology,' gives colour to this assertion. He fairly admits the uncertainties of the subject, never dogmatizes, and contents himself with such recommendations as "The teacher is likely to favour" this or that view. Errors in present educational practice are abundantly shown up, but conclusive direction as to the right path is not given. Of the four theories of play for children, one is selected as that most favourably received by students of child-life, the theory that it is a preparatory exercise. Nearly all departments of the science are as yet inchoate. Prof. Alfred Binet's metrical scale of intelligence is introduced as a beginning.

The same must be said of collective psychology, that is, the psychology of the class. Still, the outlook is hopeful, as psychology is undoubtedly daily becoming more detailed and matter-of-fact. The same tolerant attitude is displayed by Prof. J. J. Findlay in his article on 'General Method.' He has a sympathetic understanding of the teacher's doubts and difficulties about psychology and its practical use.

An admirable article is contributed by Prof. Michael Sadler on 'Moral Instruction and Training in Schools,' which challenges quotation in many places; we can find space only for the following, which hits the nail well and truly on the head:—

"Some educational administrators would be more in place in the service of a commercial trust. They achieve punctuality, economy, and order at the expense of much more important things. They dislike the independence of subordinates. They are irritated by anomalies in administration. They like to have things cut and dried. They excel in reports. But their rule is really an oppression to many of those who serve under them. They kill off much which ought to be allowed to grow. They seem successful, but they are really failures."

There are six other articles in this volume by Mrs. Bryant, Miss Brenner, and others. The type is bold and legible; and there is a variety of illustrations in colours and black and white. It is a pity that the Greek quotation from Plato's 'Republic' (Book III.) which figures on the title-page as a motto should have been allowed to retain three misprints in its two and a half lines.

Via Rhodesia: a Journey through Southern Africa. By Charlotte Mansfield. (Stanley Paul & Co.)—Miss Mansfield has attained some success as a novelist, and from the report of a lecture delivered by request at Bulawayo, reproduced on pp. 415-19, it appears that we are to regard her as an authority on the art of word-painting. To reinforce her exposition of its theory she instituted a prize competition, the medal awarded to the successful writer bearing the image of Rhodes, who, we learn, was a poet in feeling and action, if not in word. Miss Mansfield's practice is exemplified by passages like the following:—

"And what a gem of earth set in the sea the beautiful little island of Madeira is, with its fairy mountains tipped by fleecy clouds, the perfume of the flowers coming out to the sea to greet you, as though the land were waving a scented handkerchief of welcome, the valleys suggesting that they have dug their way into the hill-sides with flower-sheathed swords, purple shadows hovering near, while high above is a wonderful canopy of blue."

On arrival at Cape Town:—

"It was only four o'clock; some time must yet elapse before the monarch of day would rise from scarlet sheets of light and with sceptre of gold gladden the hours."

The author, it will be seen, delights in colour, and a little later waxes enthusiastic over the flora of the Cape Peninsula, including one plant new, we fancy, to botanists:—

"...the pale plumbago flowers which skirt the roads and fill the gardens with azure poesy. It is said that plumbago was the favourite flower of Cecil Rhodes; at any rate Cape Town keeps ever flourishing—perhaps in memory—these dainty blossoms. And what a contrast to the pale plumbago is the scarlet proboscis [sic], with its haunting notes of floral exclamation, to arrest the attention of the passer-by."

The aim of Miss Mansfield's book is, however, economic rather than literary: its main theme is wholesale emigration to Rhodesia. The slum children of London are to be made happy at Mwenzo, on the Nyasa-Tanganyika Plateau (about 9° S.), where they could be accommodated in the

school so unnecessarily (in the author's opinion) maintained by the L.M.S. for the benefit of native youth. The natives were happy and virtuous till the missionaries forced on them an education which they do not want and which only injures them—yet we are also told (p. 99) that their "desire for education knows no limits." The grains of truth mixed up with the usual denunciation of missionaries (whose attitude towards native institutions has, after all, sometimes been injudicious) lose much of their force because Miss Mansfield singles out for special condemnation men and women whose great offence, in the eyes of orthodoxy, has been their refusal to meddle rashly with the institutions in question. But with their defence, or that of Mr. Tongo Jabavu (see p. 99), we need not concern ourselves here.

For the rest we have some good photographs, and—when the author forgets to be picturesque—some readable descriptions. It is not easy to see why chap. xxx., 'A Burlesque,' should have been included; and we may perhaps venture to suggest that *kanga* (p. 232) means not a lion, but a guinea-fowl; and that the carriers, if they in truth called Miss Mansfield a "Donna Chubwina," showed themselves indifferently acquainted with their own language.

A FORMLESS, slight, and somewhat ambiguous book is *The Diary of a Refugee*, edited by Frances Fearn (New York, Moffat, Yard & Co.). The name of the diarist nowhere appears, unless, indeed, she was the Rcsalie Urquhart who did some simple drawings, memoranda of scenery, here reproduced in sepia. The editor's explanatory reference to her, and mode of dealing with her work, are both a little curious. A general appeal having been made by an Historical Society for the publication of all remaining data regarding the Civil War, she says,

"I remembered a diary kept during the war by a member of my family, who was a woman of rare qualities of brain and heart, with an unusually just mind. I felt that anything written by her would be so liberal and fair that it could not fail but prove interesting reading, for the people both of the North and the South. From what she had told me, and remembering as a child many things myself, I am able to fill in the gaps where necessary."

Only a note from Admiral Dewey, quoted in the Preface, incidentally makes us aware that the "member of my family" was the writer's own mother. She seems to have been an excellent lady, heavily charged with that somewhat tristful and universal benevolence which is one of the variations of Southern sentiment. It is true we come upon her at a tristful time, with three or four sons at the war (one of them a prisoner) and the prospect of having to leave the beloved Louisiana home upon the fall of New Orleans. Before the exodus occurs we have some pleasing glimpses of the custom and spirit of daily life on the estate of a wealthy planter, especially of the affection and loyalty of the slaves towards the "ole massa" or "ole missus." We read of festival occasions, when gifts were distributed on a variety of pretexts, and a young mother would borrow an extra baby, so as to secure an additional reward of merit.

The seeking of asylum in Texas was the beginning of much vicissitude, not without privation for a time, and even adventure. Thus in crossing the plains the party once watched a whole night through in terror—and in such laager as they could make—fearing lest they should be discovered by an Indian encampment on which they had almost stumbled. Next day they found

that the "Indians," who were fugitive rebels like themselves, on the Texas trail, had passed an equally uncomfortable night, with the same fears concerning them. Eventually the family found its way to England, to Paris, and back to the States, with a great romance on the way, if not two, to compensate for losses and bereavements.

What renders the book "ambiguous" is Mrs. Fearn's method of amplifying the original diary. To what extent she has done so we have no means of estimating; but probably to a very considerable extent, to judge from a note of unreality, which frequently throws one out. There are some pretty portraits, especially that of the child—"The Clarice of the fifth generation"—to whom the book is dedicated.

Through the Wildernesses of Brazil by Horse, Canoe, and Float. By William Azel Cook. (Fisher Unwin.)—The missionary, one is glad to think, has his consolations. Apart from what Mr. Cook disparagingly terms "buying merit"—a theological operation discouraged in whatever sect he belongs to—there is plenty of fun and adventure. In fact, the missionary, who generally comes of a social stratum which furnishes more clerks than deposit accounts at banks, would have a small chance of seeing the world but for his professional advantages. As it is, he travels at a marvellously cheap rate; expects and receives hospitable entertainment (and, as Mr. Cook says, is "obligated") where mere laymen might get the cold shoulder; and he carries with him "a specie" (Mr. Cook is fond of this peculiar singular) of provender which ordinary travellers do not "stock," at least in bulk. "It was a long time between meals," he remarks, "for one who had been accustomed to three meals each day at regular hours. I therefore traded Testaments for eggs to families I encountered along the trail, and had them boiled hard to eat cold at noon." "I also exchanged Bibles for *rapadura*—sugar in bricks. I had long understood that God's Word was food, but never before had experience of the fact in just this way." No wonder that there was "a heavy run on Bibles." The poor heathen were led to "the Truth" by "a Gospel hymn on the cornet." The process of conversion by gramophone may be regarded as much less exciting an experience; but as the "joyful tribal songs" of the Karayá Indians are said to suggest "the running and bleating of a deer," both methods must have been wonders.

"Owing to remarkable Providences, independent of any plans of his own, and the converging of chains of events the beginnings of which were as wide apart as the earth, the author, acting as a sort of forerunner, or scout, for the army of Christ, traveled thousands of miles through the boundless wildernesses of South America inhabited by the children of the forest, besides traveling extensively and evangelizing among the more advanced peoples."

Some of these "remarkable Providences" were the escapes of the author from drowning, when he or his companions had displayed conspicuous incompetence in the management of the paddle, although, he protests, "I was always well armed with 'The Sword of the Spirit.'" There was some excuse for the capsizing, however, if the missionary boatful was often like the one that put off from Leopoldina:—

"I saw with dismay, after we had cast off, that the canoe men.....were intoxicated—worse, that there was a demijohn of the brutalizing liquid [*cachaca*] in the second canoe.....The alcoholized men paddled and splashed wildly about, yelling continually in mad glee; while our cargo of dogs, appearing to really understand the seriousness of the situation, howled a dirge."

It was in this riotous voyage on the Araguaya that the author witnessed a remarkable use of tobacco as an aid to landing big fish. Well may he comment, "If tobacco will paralyze a fish, can it fail to injure the human consumer?" Nay, if men can flourish on mutton chops, why not cows? Mr. Cook himself ate water-melon grown in a Karayá cemetery, and notes "that it tasted unpleasantly like [*sic*] a Karayá smells." There is strange eating in Brazil, beyond a doubt. There is also, sometimes, a fast. "Providence orders my fasts," says the author; "I deny myself gladly if there is no food." So simple a rule deserves registration. He is more exigent in the matter of sleep, and prescribes an excellent recipe for the proper construction and occupation of hammocks. Indeed, on the Rio do Somno sleeping seems a form of telluric worship; and hammocks rise to the dignity of an ethnological test in parts of Brazil, where the tribes appear to be divided into those who sleep in hammocks and those who prefer to use them as greatcoats.

We have said perhaps enough to show the character of the book and the manner in which the author uses what he calls his "beloved mother-tongue," a use so modest that he employs the verb "nurse" for "suck," a use for which we do not find authority in his native Webster. We confess, relying upon Richard Burton's experiences, we had thought Brazil a more attractive country than Mr. Cook describes it. But his method would make the Delectable Mountains seem tame. He cannot depict scenery, and there is little life in his descriptions of the people, in spite of many words. The chief value the book may possess consists in its observations of native customs and folk-lore. Naturally, one cannot travel 7,000 miles (in the first journey alone) and "circumscribe a large portion of Brazil"—and the most out-of-the-way parts of the interior, we should add—without learning a good deal about the inhabitants. But Mr. Cook's account is vitiated by an uncertainty as to when he is recording his own observations and when he is abstracting such books as P. Ehrenreich's 'Beitrage [*sic*] zur Völkerkunde Brasiliens,' to which he confesses himself indebted. It is also vitiated by doubts as to the witness's competence. Mr. Cook does not appear to possess any kind of scientific qualifications, and his descriptions are often vague, and unsatisfactory. Further, he displays such vehement prejudice against the Roman Catholic Church that he is ready to believe any fable that tells against it. We are aware that Brazil is not a favourable example of the work of the Propaganda, and we should not go there for the best type of Roman Catholics. Mr. Cook labels them "Christians (?)," and regards everything connected with them with eyes so jaundiced that one is apt to discredit his evidence on other matters as well. To disparage missionary efforts is far from our intention, but we do not think that such work is well represented by the narrow-minded intolerance which this volume displays. The dislike which the ignorant, self-indulgent, old-established priests entertained for the newcomer who "traded in Testaments" and heralded his advent on the cornet is intelligible.

Crockford's Clerical Directory, 1911 (Horace Cox), is now out, and we are very glad to have again this admirable and accurate guide to the clergy and their achievements. The editor has an easier time than his pre-

decessor in the matter of objections, these being less than five concerning returns of the net annual value of a benefice, and he maintains the pleasant tone of earlier prefaces in dealing with a correspondent who "desires to include his tobacco in his outgoings." Important matters discussed are the marriage of divorced persons and the question of degrees which approximate in character to "alleged" honours.

READERS of to-day certainly have abundant advantages of getting good fiction at a very moderate price. Among recent books issued at sevenpence are *The Waters of Jordan* and *Multitude and Solitude* (Nelson), and *Sant' Ilario* and *Joan of Garioch* (Macmillan). A well-printed edition of that admirable romance *The Sowers* can be had for a shilling (Smith & Elder), and the same sum will purchase an edition in French of Balzac's masterly study of parental love, *Le Père Goriot* (Dent), with an interesting Introduction by M. Henri Duvernois.

THE French "Collection Nelson" also deserves wider notice than it has hitherto secured. *Paul et Virginie* and *Mon Oncle Benjamin* are recent additions to this neat and well-printed series, published under the direction of a French teacher at Edinburgh.

Printers' Pie is now out, and full of entertainment both in text and pictures. The present issue is likely to beat all its predecessors in popularity.

THE SCOTTISH EXHIBITION AT GLASGOW.

THE SCOTTISH EXHIBITION at Glasgow, opened by the Duke of Connaught on the 3rd inst. with the primary view of endowing a Chair of Scottish History in Glasgow University, has in its "Palace of History" a truly remarkable collection of portraits, documents, and objects illustrative of the national life. Considered as a museum of Scots history, the display of relics of all kinds, from Stone Age burials down to nineteenth-century snuff-boxes, has a representative fullness which should be equally instructive and popular. No such assemblage of Scots portraits has ever been made before. Prof. Cooper may well plume himself on the canvases, about 350 in number, hung in two large halls, to say nothing of the vast subordinate array of plaques, miniatures, and prints. Notable among the oil paintings are the Blairs College 'Queen Mary' and the portraits of Bishops Elphinstone and Gavin Dunbar. Mr. Walter Blaikie has arranged a magnificent set of Jacobite prints and caricatures, such as plates of the flight of General Cope, the battle of Culloden, and the last episodes of Lord Lovat's career. They impress only one degree less than do the adjacent cases containing the pamphlets and journals of the time.

In the documentary sections the honours fall to Mr. Robert Renwick for the extensive series of burghal muniments arranged by him, and to Dr. Maitland Thomson for a select but noble assortment of charters and records. Almost every important burgh in Scotland has consigned the treasure of its archives to be shown in this national exposition, which fairly bristles with royal charters of foundation or privilege to, e.g., Edinburgh, Glasgow, Stirling, Perth, Dundee, Lanark, Kirkeudbright, and Montrose. Old minute-books and registers abound, and the

patient scrutineer may follow the course of burghal emancipation and advance. Quaint entries are exposed on some pages, as in that of an Alloway baronial court book from Ayr, where in October, 1513, a plaintiff's case against a defendant was for the "wringwys v'holding fra him of his hors y^t he lent him at y^e oist"—an evident memory of the host that was cut to pieces at Flodden, though the case was sustained only for the horse's bridle. One of the oldest books of this class, dating from the mid-fifteenth century, comes from Montrose, and lies open at a place where the law is laid down for "swyne" to be "ryngit."

Charters not burghal include beautiful examples, some of which are among the glories of Scots history. From Lübeck there has been sent the letter from Sir William Wallace in 1297 praying for closer intercourse with the Hanse traders. A fine series of Melrose writs includes that jewel of pathetic record, the death-bed letter of Robert the Bruce in 1329, committing his heart to burial at Melrose, where, as we know, it was duly interred on its return from its romantic crusade in Spain. Opposite, in the same case, is the *magna carta* (its size, in parchment, perhaps illustrates graphically why King John's charter bore that name?) of Inchaffray, facing in another case the great charter by which David I. founded Holyrood. A fine set of Maxwell deeds consists of commissions to the lords of that house of the wardenry of the West March. Beside them is a bond of manrent in 1525 granted to the Warden by the famous Johnnie Armstrong, sealed with his seal, and signed with his hand "at ye penne." Near by is an odd reminiscence of Dryfesands battle, where Lord Maxwell was killed on December 6th, 1593. Two days after, his gear in Edinburgh was arrested for a tailor's account, and a law report of the plea takes notice of the battle. A distinguished exhibit is the Wardlaw MS. Chronicle of the Frasers.

Ecclesiastically the memorials are both rich and numerous. There are the Holyrood 'Ordinale' and the Cambuskenneth Charterulary on the one hand, and there are Kirk Session registers of the sixteenth century on the other, besides a wealth of Covenants, Covenant literature and biography, and an infinity of law papers about Bothwell Brig and the Killing Time. Mr. Eccles, who is responsible for the ecclesiastical relics, has gathered much capital material in MSS., bells, and church vessels. One curious item is a very early service-book rescued from debased use in supplying the parchment for an angler's fly-book! Mr. W. K. Dickson for the Advocates' Library displays several historic codices, one being Wyntoun's 'Chronicle,' and another being John Ramsay's copy of Barbour's 'Bruce' and Blind Harry's 'Wallace.'

The prehistoric section, contributed to by Prof. Bryce, but chiefly arranged by Mr. Lodovic Mann, is an ambitious attempt to exhibit the course of evolution through stone and bronze well into the Iron Age. It includes several burials showing actual remains *in situ* as found. The series of implements has been chosen so as to typify changes; and the entire section, including models of earth dwellings, cairns, and hill camps, is a notable experiment in arrangement and classification.

Under the charge of Mr. J. A. Balfour, a Norse section (dislocated and delayed by the stranding of the ship Scotland in her relie-bearing voyage from Norway) is still incomplete, but includes the Norwegian Admiralty's model of a viking galley.

Scoto-Swedish and Scoto-French sections are mainly heraldic and pictorial. Scottish heraldry, seals, guildries, needlework, economics, and book-plates each have a particular place.

Sport and its trophies, as classified chiefly by Mr. Henderson Bishop, fill much space with interest, and do justice to the antiquities of golf, "kuting-stone," curling, &c., as well as of that engrossing *pila pedalis* which University authority long ago banned as among *illiberales et periculosos ludos*. The "Siller Gun" of Dumfries is a unique link with the ancient "waponschaws."

Naturally the Highland and military reflection of the past is large. Dr. Magnus Maclean has given an impressive rendering not only to the history of the Gael, but also to his literature, by no means forgetting Ossian. Mr. C. J. Whitelaw makes a brave show of Scottish arms, &c., especially swords, claymores, powder-horns, and pistols.

The largest variety in any single section is found in the close-packed cases of what may be called domesticities garnered by Dr. W. Gemmell. His groups of old spectacles, toddy ladles, tirling-pins, cruises, candlesticks, &c., suggest pleasing comparison with old George Ruthven's "gabions," celebrated in verse three centuries ago:—

His cougs, his dishes, and his caps,
A totum and some bairnes taps,

His hats, his hoods, his bells, his bones,
His alley bowles, his curling stones.

They make, like Mr. W. B. Smith and Mr. L. Clapperton's dresserfuls of old silver and pewter, peculiarly circumstantial memories of a time relatively recent yet already inconceivably remote. Glassware is seen in beautiful examples brought together by Mr. Percy Bate and Mr. Rees Price. Mrs. Bate very happily exemplifies early costume by dressed models which daintily wear the rare garments defiant of the moths of ages.

Literature is imperfectly represented, but at least flourishes in a Burns section and a Scott corner. Mr. J. C. Ewing has arranged many Burns MSS. and books, and his section surpasses all predecessors in portraits, including the original Nasmyth. Mr. J. H. Stevenson and Mr. Moir Bryce have done equally apt homage to Scott, whose corner holds, besides abundant manuscripts, the press on which 'Waverley' was printed, and the desk in which the long-lost manuscript was found.

This notice of the work achieved by the archaeological committees, working with a will under the presidency of Prof. Glaister and the secretaryship of Mr. Eyre-Todd, is necessarily perfunctory, but provisionally sketches the contents of what truly forms an unexampled cabinet of Scots history, generously lent for a patriotic occasion from the heirlooms of noble families, the charter chests of corporations, and the *spolia opima* of mighty collectors.

G. N.

A BOOKWORM'S PERPLEXITY.

MAY 6, 1911.

It is refreshing to find from the letter of Mr. Francis Jenkinson in *The Athenæum* of this date that my theory of apparently suspicious bibliaphanisms—which is as charitable as it is well founded—does not apply to the disappearance from the Cambridge University Library of the book Dr. Jessopp has so generously restored to it. Never-

theless the theory remains a sound one; or, at least, a good working hypothesis in the investigation of such questionable evanishments. Take two more proofs in support of it.

Some time in "the sixties" of the last century a Special Committee of the Bombay Branch of the Royal Asiatic Society condemned 500 works in their library as so much rubbish and lumber. I contended, over three weeks, for the retention of every one of these works; and in the end saved 499 of them, the one I could not save being a copy of 'Pandurang Hari,' which was, however, kindly presented to me, and which, on returning to England in 1871, I prevailed on Messrs. H. S. King & Co. to republish, with an Introduction by Sir Bartle Frere; this leading to the republication in 1874 of 'Tales of a Zenana,' with an Introduction by Lord Stanley of Alderley, by the same author, William Browne Hockley.

Again, the India Office, in a similar "spring cleaning" spirit, disposed of a great store of the oldest and most interesting volumes of the India House Library (Leadenhall Street), founded in 1800, on its transfer to Westminster; and again, and most providentially, I was able to recover some of them, stamped with the "arms" of the East India Company, and present them to others likely to make a better use of them than myself.

But for the sucking, to the fullness of satiety, "treasures hid in the sand" I know nothing more perfect than the two following experiences of my own, the first being altogether relevant to the present discussion. A great frequenter in Bombay, between 1857 and 1869-70, of the "godown" of Mr. Bennett, the locally famous auctioneer, I bought there one day, as "a pig in a poke," for one rupee, two packets, made up in strongly roped, and very stout and antiquated brown-paper wrappings, each packet obviously containing a quarto volume—"cat," or veritable "pig." The first was found to be a copy of the 'Catholicon,' a universal dictionary, and one of the first fifty books printed in Europe, perfect in its paper, type, "forwarding," and original pigskin and "boards" binding, and metal clasps; and worth, say, 600*l.* The second was D'Herbelot's 'Bibliothèque Orientale' (1697), in its so-called "Grolier" binding. But the joy of this "pig" was that the volume on opening, as of itself, laid bare a pair of gold-mounted spectacles, and an autograph visiting card of Elijah Impey! Bennett insisted on my standing by my lucky bargain; and in his own "sporting spirit" I, in due time, passed on "the divine gift," as a Hindu would say, to others—no great virtue in one who has the most complete, indeed replete, sense of possession in the property of others.

Another time—*circa* 1898—walking up Wardour Street in a storm of rain and wind, I saw out of the corner of my left eye, in quite a forlorn, rueful window, a small cameo, in a "glazed" little frame, of Warren Hastings; and at once bought it, and gave it to the India Office. With it the dealer had placed in my hands a companion cameo of Tycho Brahe. "O, what a shame," I cried, "to have perpetuated the amputation of his nose in a work of art!" "No, no," replied the dealer, "it is not so, and if you give the frame a shake, you will see the tip of the nose hop up [between the shell and the glass], and I will have it cemented on all right should you purchase

the cameo." There, sure enough, I found the snub of the great astronomer's nose; and could the force of coincidence further go?

GEORGE BIRDWOOD.

I REPUDIATE strongly Mr. Jenkinson's suggestion that I meant to be "nasty." All I desired was to ascertain the truth of the case, which has now appeared, and might have been expected to appear earlier. I knew of no history of the Cambridge University Library which would explain the facts which Mr. Jenkinson now states, and which I am sincerely glad to see recorded.

The sneer at anonymity is by this time, I should have thought, out of date. I have as much right to the title of "Cantab" as Mr. Jenkinson, and perhaps the Editor of *The Athenæum* will permit me to add that, as he is known to come from the same University, he could hardly be expected to allow me to attribute to myself a qualification I did not deserve.

However, my withers are unwrung, and I venture to think that my interposition has not been wholly infructuous.

CANTAB.

MOGHUL VERSE.

STUDENTS of the East Turki language spoken by the Moghul conquerors of India in the sixteenth century will be much interested in some recent discoveries made by Prof. E. Denison Ross, the Records Officer of the Indian Government, whose interest in Turki subjects has not diminished during the sixteen years which have passed since he translated the history of Transoxiana by Mirza Haidar. Mrs. Beveridge's labours upon the original Turki text of Babar's Memoirs gave a fresh stimulus to the study of the language, which will be further encouraged by Prof. Ross's new contributions.

The first of these is the happy discovery, in the library of the Nawab of Rampur, of a unique manuscript of Babar's poems. In his Memoirs under the year 935 A.H. (1538) Babar records how he began to turn into verse the 'Risāla-i-Wāliidiya' of Khwāja 'Abdullah (Ahrār); but hitherto this translation has evaded all search. The Rampur MS. at last presents it, and it appears in the first fourteen plates of Prof. Ross's facsimile reproduction, which, together with a printed text, briefly annotated, he has published in vol. vi. of the *Journal of the Asiatic Society of Bombay*. The MS. is dated 935 in a colophon in Babar's own handwriting, the genuineness of which is attested by an autograph endorsement written by his descendant, another "Great Moghul," Shah Jahan. Besides the 'Risāla,' the text contains many short pieces and fragments of verse, some of which are already familiar by citations in the Memoirs. Some one should translate them; but we are at a loss for a Turki FitzGerald. Incidentally Prof. Ross points out that there can be no doubt, from an examination of rhymes and other evidence, that Babar's name was vocalized Bābur, as it is still universally pronounced by Turki-speaking natives. He makes a slight mistake in attributing the Introduction to the British Museum 'Catalogue of Persian Coins' to Prof. Stanley Lane-Poole: it was written, like the 'Catalogue' itself, by his uncle, Prof. R. Stuart Poole, the Keeper of Coins.

Prof. Ross's second discovery consists in lighting upon two copies of the 'Divan' or poetical works, in both Persian and Turki, of

Bayram Khan, the famous general of the time of Humayun and Akbar. One of these MSS.—written, according to the colophon, for Bayram's son 'Abdur-Rahim in 1014 A.H.—belongs to Mr. Harinath De; the other is a bundle of fragments of an anthology which fortunately contains nearly all the Turki ghazals which occur in the other MS. The importance of a second copy will be realized when it is stated that both copies were made by scribes ignorant of Turki, who consequently distorted the language in such a way that, but for the collation of the two copies, the task of reconstructing the text would have been almost hopeless. In this case a facsimile reproduction by photography would have been perhaps misleading, so Dr. Ross has printed the text, in the *Bibliotheca Indica*, No. 1241, with notes explaining his corrections of the MSS. where there appeared to be room for doubt, and also elucidating Turki words which "the still all too meagre resources of Turki lexicography" leave obscure.

In addition to these signal discoveries of Moghul poems, Dr. Ross purchased for the Gibb Memorial Trustees (of whom he is one), and by their permission has printed (in the *Bibliotheca Indica*, No. 1225), the Turki grammar prefixed to the 'Sanglākh,' a dictionary of that language, written in Persian by Mirza Mehdi Khan of Astarabad, the well-known historian of Nadir Shah. The analytical table of contents which the editor has added will greatly facilitate reference to the somewhat complicated arrangement of this valuable work.

'OUR MUTUAL FRIEND.'

THE remarks in *The Athenæum* of April 29 about the correctness of the title 'Our Mutual Friend' remind me that the first monthly number of that novel contained a fly-note explaining the phrase. Perhaps the text of this note could be recovered. There is something about it in *The Athenæum*, 1864 (January-June, p. 613); but I have not that volume beside me.

J. D. HAMILTON.

* * Our correspondent is quite correct. *The Athenæum* of the date named mentions in 'Our Weekly Gossip' a

"fly-note to the first weekly number of 'Our Mutual Friend'.....Mr. Dickens explains that on arriving at the ninth chapter of his story the public will understand the use of the popular phrase 'Our Mutual Friend' as the title of his new book. This ninth chapter will appear in July, in the third number; but we dare say the reader will guess, that the popular phrase has been chosen by our great novelist as expressive of the humour of one of his characters, just as the phrase 'Something will turn up' might have been used as a title for the famous history of Mr. Micawber."

This view of the phrase was taken by our recent reviewer, but, as objections to it are perpetually being repeated, it seems well to record the facts which put such criticism out of court more than forty years ago.

SALE.

ON Monday, May 1st, and the following day Messrs. Sotheby sold books and manuscripts from various sources, including the following interesting items. A collection of tracts by William Penn, 1668-75, 72*l.* Vallet, Le Jardin du Roy, 1608, 16*l.* 15*s.* Turner, Herbal, 1568, and Coverdale, Homely Physicke Book, 1561, 21*l.* 10*s.* First editions of works by Dickens, all presentation copies from the author to W. H.

Wills: David Copperfield, 1850, 70l.; Bleak House, 1853, 65l.; Little Dorrit, 1857, 85l.; Tale of Two Cities, 1859, 70l.; Our Mutual Friend, 1865, 70l. Hughes, Tom Brown's School-days, 1857, presentation copy from the author, 30l. Bible, 1611, in a contemporary needlework binding, 25l. 10s. W. Blake, Poetical Sketches, 1783, 49l. Chignell (Rev. Arthur Kent), An Outpost in Papua, 10/6 net.

A missionary's description of his daily life and the people among whom it was spent, with a preface by the Archbishop of Brisbane, and 48 illustrations.

Dolomites (The), a Practical Guide, 3/ net.

One of Grieben's Guide-Books.

Durand (Sir H. Mortimer), A Holiday in South Africa.

A series of sketches, republished from *Blackwood's Magazine*, written during or after a visit to South Africa.

Hart (Albert Bushnell), The Obvious Orient, 6/ net.

An account of a tour through Japan, China, the Philippines, and some British Colonies.

Huntington (Ellsworth), Palestine and its Transformation, 8/6 net.

With illustrations.

Larden (Walter), Argentine Plains and Andine Glaciers: Life on an Estancia, and an Expedition into the Andes, 14/ net.

With 91 illustrations and a map.

Power (William), Pavement and Highway: Specimen Days in Strathclyde, 2/6 net.

With 10 illustrations and maps.

Roberts (R. Ellis), A Roman Pilgrimage, 10/6 net.

An account of the three weeks' sojourn of two friends in Rome, their first interest being the religious and ecclesiastical side of the city. The book is written from a liberal Catholic standpoint, and a good part of it is devoted to art. It has 16 illustrations in colour by William Pascoe, and 8 other illustrations.

Travers (Rosalind), Letters from Finland, August, 1908-March, 1909, 7/6 net.

With 34 illustrations and a map.

Wilson (Lady), Letters from India, 7/6 net.

A volume of letters by a lady long resident in India, whose official position gave her many opportunities of observing different conditions of life there.

Sports and Pastimes.

Watson (Alfred E. T.), King Edward VII. as a Sportsman, 21/ net.

With an introduction and a chapter on 'Yachting' by Sir Seymour Fortescue, and contributions by the Marquess of Ripon, Lord Walsingham, Lord Ribblesdale, and others. The book contains a photogravure plate, 10 plates in colour, 12 Rembrandt-gravure plates, and 79 half-tone illustrations.

Education.

Bagley (William Chandler), Craftsmanship in Teaching, 5/ net.

Welton (J.), The Psychology of Education, 7/6 net.

Folk-Lore and Anthropology.

Gypsy Lore Society Journal, March, 5/

Philology.

Mashona Dictionary, with Notes on the Grammar of the Mashona Language, commonly called Chiswina, 1/6

Compiled at St. Augustine's Mission, Penhalonga.

Satire Ménippée, 2/6

Edited by Paul Demey. One of the Dublin University French Texts.

Wright (F. Warren), *Studies in Menander*.

A dissertation presented to the Faculty of Princeton University in candidacy for the degree of Doctor of Philosophy (Department of Classics).

School-Books.

Daudet (Alphonse), *Le Petit Chose* (Histoire d'un Enfant): Part I. *Le Petit Chose en Province*, 2/6

Adapted and edited by S. Tindall for Siepmann's Advanced French Series.

Science.

Beetham (Bentley), *Photography for Bird-Lovers*, a Practical Guide, 5/ net.

With 18 plates.

Durley (R. J.), *Kinematics of Machines*, 17/ net.

Fox (Thomas W.), *The Mechanism of Weaving*, 7/6 net.

New edition, with numerous illustrations.

Harmer (F. W.), *The Glacial Geology of Norfolk and Suffolk*, 1/ net.

With a contour map showing the distribution of the glacial deposits of East Anglia.

Hayata (B.), *The Vegetation of Mount Fuji, Japan*, 6/ net.

With a list of plants found on the mountain, and a botanical map showing their distribution. Illustrated.

Heath (Francis George), *British Ferns: a Pocket "Help" for the Collector*, 2/ net.

With 50 illustrations, comprising all the native species and showing where they are found.

Jepson (Willis Linn), *The Silva of California*.

Forms Vol. II. of *Memoirs of the University of California*, and contains many illustrations.

Modern Treatment, edited by H. A. Hare and H. R. M. Landis, 2 vols., 60/ net.

Smithsonian Miscellaneous Collections: 2005, *Some Results of Recent Anthropological Exploration in Peru*, with 4 plates, by Dr. A. Hrdlicka; 2009, *Cambrian Geology and Paleontology. Part II. No. 2. Middle Cambrian Merostomata*, with 6 plates, by Charles D. Walcott; 2010, *Descriptions of Fifteen New African Birds*, by Edgar A. Mearns.

United States National Museum: 1809, *Mammals collected by Dr. W. L. Abbott on Borneo and some of the small Adjacent Islands*, by Marcus Ward Lyon, Jun.; 1812, *Descriptions of Six New Genera and Thirty-One New Species of Ichneumon Flies*, by H. L. Viereck; 1815, *Descriptions of Tineoid Moths (Microlepidoptera) from South America*, by August Busck; 1816, *An Electric Ray and its Young from the West Coast of Florida*, by B. A. Bean and A. C. Weed; 1822, *Descriptions of Three New Fishes of the Family Chatodontidae from the Philippine Islands*, by Hugh M. Smith and Lewis Radcliffe; 1825, *Remarks on the Long-Tailed Shrews of the Eastern United States, with Description of a New Species*, by N. Hollister; 1832, *Descriptions of One New Genus and Eight New Species of Ichneumon Flies*, by H. L. Viereck.

Vittoz (Roger), *Treatment of Neurasthenia by the Teaching of Brain Control*, 3/6 net.

Juvenile Books.

Hodgson (Geraldine E.), *Across the Forest and Far Away*, 1/6 net.

A little volume of fairy tales, illustrated by Gerald G. Hodgson.

Fiction.

Andom (R.), *In Fear of a Throne*, 6/

The author's well-known quartet are on a cycling tour abroad when they get into a coil of political intrigue, owing to the chance resemblance of the hero to the weak-minded heir to the throne of a petty kingdom. The book contains a preface by R. Hodder, and many illustrations by G. W. Wakefield.

Charlton (Randal), *The Bewildered Bride*, a Matter of Fact, 6/

A love story, though the principal incident is frankly sensational.

Clapperton (Mrs. Frank), *The Other Richard Graham*, 6/

Concerns a murder and the solution of the mystery which surrounds it.

Crawford (Alexander), *Kapak*, 6/

Kapak is a great chief of the Incas who is to liberate his tribe from its bondage to Spain.

Dickens Centenary Edition: *Bleak House*, 2 vols.; and *Edwin Drood*, &c., 3/6 each.

Diver (Maud), *Lilamani: a Study in Possibilities*, 6/

The action of the story takes place in the South of France, on Lake Como, and in Surrey, and the interest centres in a high-caste Hindu girl who has come to Europe with her father to study medicine.

Drury (Major W. P.), *Men-at-Arms, Stories and Sketches: The Shadow on the Quarter-Deck*, 2/ net each.

Cheaper editions.

Forster (E. M.), *The Celestial Omnibus and other Stories*, 3/6 net.

The stories have appeared in various reviews and magazines.

Hamilton (Ivor), *If It Were Come to Pass*, 6/

The story of an atheistic Socialist.

Hornung (E. W.), *Raffles, the Amateur Cracksman*, 2/ net.

Fifth impression.

Irons (Geneviève), *The Mystery of the Priest's Parlour*, 6/

The priest is condemned to penal servitude for a murder concerning which he unsuccessfully pleads his innocence: he cannot expose the real criminal because he has learnt the secret from the man's lips under the seal of the confessional.

Leroux (Gaston), *The Phantom of the Opera*, 6/

A mysterious story woven round the Paris Opera-House.

Translated by Alexander Teixeira de Mattos.

Lewes (Mary L.), *Stranger than Fiction*, 3/6 net.

Tales from the byways of ghosts and folklore, some of which have appeared in *The Occult Review*.

London (Jack), *Burning Daylight*, 6/

A romance of pioneering life in Klondyke.

Long's Sixpenny Net Cloth Novels: *Delilah of the Snows*, by Harold Bindloss; *Father Anthony*, by Robert Buchanan; and *Only Betty*, by Curtis Yorke.

Marchmont (Arthur W.), *Elfa*, 6/

The love-story of a hunter.

Meade (L. T.), *Twenty-Four Hours, a Novel of To-day*, 6/

Deals with the machination of an unscrupulous stockbroker, from which, however, Love manages with difficulty to emerge triumphant.

Mrs. Alfred Trench, 2/6 net.

The story of a marriage which was not a marriage.

Parkinson (John), *Other Laws*, 6/

A tale of the English provinces and the wilds of West Africa.

Reynolds (Mrs. Fred), *The Horseshoe*, 6/

A Cornish love-story.

Ridge (W. Pett), *Table d'Hôte*, 2/ net.

The bill of fare which Mr. Ridge has provided in this volume of sketches is as varied as its title would imply.

Russell (George Hansby), *Ivor*, 6/

A tale of Lundy Island and the West Country.

Saiki (Tadasu), *The World's Peace*, 6/

A tale written with the object of improving the happiness of the world by cultivating better relations among the nations. The story continues until the year 1941.

Scott's *Kenilworth*.

Edited, with introduction, notes, and glossary, by A. D. Innes, with 47 illustrations.

Stacpoole (Henry de Vere), *The Ship of Coral*, 6/

A West Indian romance.

Stockley (Cynthia), *The Claw*, 6/

The story of a society girl of Irish-American birth, who, going to Africa on a casual visit of curiosity, is held there by the force of circumstances, at first humorous, and later somewhat tragic.

Thackeray: *Barry Lyndon* and *Catharine*; and *The Virginians*, 10/6 net each.

Parts of the Harry Furniss Centenary Edition.

Young (F. E. Mills), *Sam's Kid*, 6/

The scene is laid in Africa. Sam's Kid sacrifices her own honour in order to save the man she loves.

General Literature.

Cambridge Manuals of Science and Literature: *The Administration of Justice in Criminal Matters (in England and Wales)*, by G. Glover Alexander; *An Introduction to Experimental Psychology*, by Charles S. Myers; *English Dialects from the Eighth Century to the Present Day*, by the Rev. W. W. Skeat; and *An Historical Account of the Rise and Development of Presbyterianism in Scotland*, by Lord Balfour of Burleigh, 1/ net each.

Cassell's Guide to Employment in the Civil Service, including Clerkships under the London County Council, 1/ net.

Revised and corrected by A. J. Lawford Jones.

Denis-Browne (Rosalind), *A Bird in the Hand*, 2/6

A series of essays on 'The Looker-on,' 'Heroines of Fiction,' 'Geniuses,' 'Reformers,' &c.

Green (F. E.), *A Few Acres and a Cottage*, 3/6 net.

With a chapter on each month, and 22 illustrations. The work of a follower of Tolstoy and Thoreau.

Land Union Journal, No. 1, May, 3d.

A monthly periodical to assist persons called upon to deal with valuations and assessments under the Finance (1909-10) Act, and to consider the principles applied to rating and taxation.

Lectures on Literature, \$2 net.

Lectures by members of the Faculty of Columbia University.

Nitrate Facts and Figures, 1911, 2/6 net.

Compiled by A. F. Brodie James.

Oxford and Cambridge Review, Summer Term, 2/6 net.

Parry (M. S.) and Muraour (E. M.), *The A B C to Rubber-Planting Companies in Malaya, Sumatra, and British North Borneo*, 2/6 net.

Second edition.

Printers' Pie, 1/ net.

Scammell (Arthur), *Cheapside to Arcady*, 5/ net.

Partly reprinted from *Country Life*, Messrs. Cassell's 'Nature Book,' and *The Idler's Magazine*.

Stilwell (Arthur Edward), *Universal Peace: War is Mesmerism*, 4/ net.

Second edition. A book by an American railway magnate advocating arbitration instead of war.

Stock Exchanges Ten-Year Record of Prices and Dividends, 1901 to 1910.

Compiled by F. C. Mathieson & Sons. Fifth year of issue.

Pamphlets.

Fabian Tracts: 154, *The Case for School Clinics*, by L. Haden Guest, 1d.; 155, *The Case against the Referendum*, by Clifford D. Sharp, 1d.;

156, *What an Education Committee Can Do (Elementary Schools)*, by Members of the Education Group, 3d.

Our Educational Policy, by "Spectator Tantum."

Reprinted from *The Englishman*, Calcutta.

Trotter (E. B.), *Should the Central Board of Missions of the Church of England be Financed, and How?* 1d.

A paper read at the annual meeting of the Board at Leeds on February 7.

FOREIGN.

Fine Art.

Chefs-d'œuvre de l'Art Flamand à l'Exposition de la Toison d'Or, 25fr.

Written by a group of specialists, with historical preface by Prof. M. H. Pirenne.

Gardthausen (V.), *Das Buchwesen im Altertum und im byzantinischen Mittelalter*, zweite Auflage, 8m.

Has 38 illustrations, and forms the first volume of a work on Greek palaeography.

Huet (Paul), 1803-69, d'après ses Notes, sa Correspondance, ses Contemporains, 15fr.

With a biographical notice by his son, and a preface by Georges Lafenestre. An exhibition of the artist's work is shortly to be opened at the École des Beaux-Arts.

Salons d'Architecture, 1911, 6fr.

A reproduction of the principal exhibits in architecture in the two Salons.

Drama.

Alvor (P.), *Die Lösung des Shakespeare-Problems*, 3m.

Gundolf (F.), *Shakespeare u. der deutsche Geist*, 7m. 50.

Hedgecock (F. A.), *Un Acteur cosmopolite: David Garrick et ses Amis français*, 5fr.

Rigal (E.), *De Jodelle à Molière: Tragédie, Comédie, Tragi-comédie*, 3fr. 50.

History and Biography.

Hedgecock (F. A.), *Thomas Hardy, Penseur et Artiste: étudié dans les Romans du Wessex*, 10fr.

Revue historique, Mai-Juin, 6fr.

Rolland (R.), *Vie de Tolstoï*, 2fr.

Science.

Burnet (E.), *Microbes et Toxines*, 3fr. 50.

*** All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

MRS. C. W. EARLE, whose "Pot-pourri" books are widely appreciated, has been reading and sorting a mass of old letters, and selecting those that seemed of general interest. With these records Mrs. Earle has linked up some of her own memories from a life full of interests and friendships. The result is embodied in 'Memoirs and Memories,' with four portraits in photogravure, which Messrs. Smith & Elder will publish next Thursday.

A NEW volume of the well-known "Historical Series for Bible Students," 'Biblical Geography and History' by Prof. Charles Foster Kent, will be published immediately by the same firm. The first part of the book gives a picture of the significant physical characteristics of Biblical lands, and especially Palestine. The second part presents the chief characters, movements, and events of Biblical history in their chronological order and geographical setting, and shows the influence of physical environment.

UNDER the title of 'The Records Unrolled' Mr. John Ouseley promises a new book on the most ancient MSS. of the Scriptures. The work is from the pen of the Rev. E. S. Buchanan, who has taken a leading part in editing the Oxford Old Latin Biblical Texts, and claims to have made several important discoveries affecting in some measure the present-day reading of certain passages of the Gospels.

MR. E. T. C. WERNER, H.M. Consul at Foochow, has made considerable progress with a complete illustrated history of Chinese civilization, on which he has been at work for many years. It is largely based on the materials included in his recently published volume on Chinese civilization, which forms Part IX. of Herbert Spencer's 'Descriptive Sociology,' and on further investigations into original Chinese sources.

MR. W. G. BLAIE MURDOCH is publishing with Mr. Moring 'The Renaissance of the Nineties,' which deals chiefly with the men associated with 'The Yellow Book,' but also with the rise of Impressionism in Scotland, especially the group known as the Glasgow School.

MR. HILAIRE BELLOC has prepared for *The Tablet* of next Saturday an exhaustive study of 'The Ferrer Legend.'

It is proposed to publish a short biography of the late J. W. Clark, Registry of the University of Cambridge. The editors would be grateful if those possessing letters from J. W. Clark, which they are willing to lend, would post them to Dr. A. E. Shipley, care of Mr. A. T. Bartholomew, Kellet Lodge, Cambridge.

THE advanced state of 'The Oxford English Dictionary' has made the pub-

lication possible of 'The Concise Oxford Dictionary of Current English,' a volume of 1,056 pages adapted by the authors of 'The King's English.' In this 'Concise Dictionary' they have given a large amount of space to common words and illustrative sentences; while uncommon words have been treated as briefly as possible. Slang has been admitted with freedom.

MRS. MERIEL AIMÉE ROSE, who published anonymously 'Lady Beatrix and the Forbidden Man,' is about to issue through Messrs. Harper a new novel, 'The Pawns of Fate.' It is described as a story of strong contrasts, picturing misery and depravity at Mile End as well as refinement in Mayfair and the Scotch Highlands.

ELEANOR, DUCHESS OF NORTHUMBERLAND, who died at Stanwick Park on the 4th inst. at the great age of 91, has her place in the history of scholarship. It was her husband, Algernon, fourth Duke, who, out of old friendship, induced Edward Lane to go again to Cairo in 1842 and live there seven years, collecting the materials for his Arabic Lexicon, all the expenses of which were paid by the Duke. When the printing began in 1861, the cost must have become very considerable: over 9,000 columns of Arabic and English were eventually to be printed; and, had it not been for the Duchess's fine spirit of loyalty to her husband's wishes, the work might have broken down on Duke Algernon's death in 1865. But she continued to support the work, and bore the cost of the printing until the last line of Lane's MS. was published in 1893.

A SPECIAL meeting of the Topographical Society took place on Saturday last, by the invitation of Mr. Buxton, at the Board of Trade Offices in Whitehall. The Earl of Rosebery, President of the Society, was in the chair, and Mr. Ernest Law gave an address on 'Shakespeare at Whitehall,' which was well received by the audience, though certain statements seemed to require further amplification. Shakespeare, as one of the King's players, was groom of the Chamber, and might at any time be summoned for special service; while as players he and his company were frequently commanded to perform in Whitehall, and we have notes of many of his plays acted there. In a happy little speech Lord Rosebery said that the first king that Scotland gave to England could hardly be called a success, but that he had done at least one good deed in protecting and supporting Shakespeare. Lord Welby followed with a short discourse on 'The Position and History of the Cockpit.' A perambulation through the buildings followed.

A LECTURE will be delivered by Mr. R. A. Peddie in the British Museum Lecture-Room next Saturday afternoon, and will be repeated on the two following Saturdays, on 'How to use the Reading-Room of the British Museum.' Admission to the lecture will be free.

The Scottish National Exhibition, of which we give a survey to-day, includes two volumes of a set of the Waverley Novels in which Sir Walter entered his corrections and emendations until the day of his death, and which contains also the MS. Introductions written for the final collected edition. The volumes are lent by the present proprietors, Messrs. Adam and Charles Black.

ON the 24th inst. Count Lützow will read to the Royal Society of Literature a paper on 'The Apostles of Moravia and Bohemia.'

THE election of Dr. Peter Giles to the Mastership of Emmanuel College, Cambridge, should cause general satisfaction. Dr. Giles's record is one of the most brilliant of modern times, and he has done excellent service to the College for many years.

AN exhibition in commemoration of Théophile Gautier (who was born in 1811) is now open in the *vestibule d'honneur* of the Bibliothèque Nationale, Paris, consisting of original editions of his works, a number of portraits of him at various ages, and caricatures.

THE death in his 65th year is announced from Munich of the historian Prof. Hans Reidelbach. His most important works dealt with the history of Bavaria and the Wittelsbachs. He took a great interest in educational questions, and it was in a large measure due to his unceasing efforts that the teachers of the Realschulen were placed on an equality with those of the Gymnasien.

PROF. MARCKS will read a *Festvortrag* on 'Goethe und Bismarck' at the annual meeting of the Goethe Society on June 3rd. In the afternoon there is to be a costume festival in Bad Becka. There will also be a performance of 'Die natürliche Tochter' in the Hoftheater, the date of which is not yet fixed.

PROF. KONRAD VARRENTAPP, whose death at the age of 66 is reported from Marburg, where he was University Professor, was also an historian of note, and author of a number of important works, among them 'Erzbischof Christian von Mainz,' 'Hermann von Wied,' and 'Einleitung zu Sybels Vorträgen und Abhandlungen.'

WE have to announce the death of one of the leading economists of Denmark, Prof. William Scharling, aged 73, author of numerous economic and financial works, and Finance Minister for a number of years.

AMONG recent Parliamentary Papers of interest we note: University Court Ordinance, Glasgow, No. II. (post free, 1d.); and University Education in London, Second Report (post free 1d.). We have alluded to others under our Science heading.

SCIENCE

The Veddas. By C. G. and Brenda Z. Seligmann. (Cambridge University Press.)

OF making books—books of solid value—there is no end for Dr. Seligmann. Only a few months ago we noticed a substantial work of his on the anthropology of Eastern New Guinea. We are now presented with the no less substantial fruits of an expedition conducted on a different and doubtless far more agreeable plan. The plan in question is that of research in double harness. Just as Mr. and Mrs. Routledge in their recent book on the Akikuyu of East Africa interwove complementary studies with great success, so Dr. and Mrs. Seligmann here raise the principle of interconjugal assistance almost to the dignity of a field-method. Certain special drawbacks are found to attend alike the work of the single-handed observer and that of the composite exploring party. Behold, then, a middle way that promises to include whatever is most profitable in either system!

"First catch your Vedda" is a chastening maxim that must have come home to many who were for making a feast of reason off this most interesting of primitive peoples. It is with Veddas as with eggs. Just as there are undergraduates' eggs, election eggs, and eggs, so there are Village Veddas, Coast Veddas, and Veddas. Whilst adopting this classification, our authors are ready to admit that it "rests on no natural or known physical basis." Village Veddas—or Gan Veddo, as the Sinhalese call them—are organized communities of house-building Veddas, such as have at least existed from the times when Sinhalese kings of old made them grants of land. These keep up few of the old Vedda customs, and are of very mixed blood. The Coast Veddas, again, who live in scattered communities on the east coast, chiefly to the north of Batticaloa, have much Tamil blood in their veins, whilst their religion shows Tamil by the side of certain Vedda affinities.

There remain the real or "wild" Veddas of the jungle. Unfortunately, some of these are degenerates, who make bad worse by deliberately posing as the genuine article. Your amateur anthropologist insists on seeing a true Vedda of the woods. So he repairs to the nearest Rest House on the main road, and obliging villagers bring in the untamed savage, who glowers and grunts—for is it not written in all the books that a Vedda never smiles?—and is rewarded accordingly. Or, better still, the venturesome tourist ascends Danigala rock, and observes the unclothed, ash-smeared aboriginals cowering in an artistically wretched lean-to of branches. When the performance is over, however, and the spoil divided, the professional primitive man returns to his decent settlement to tend his

cattle and raise his bananas. Our authors have apparently searched through Eastern Ceylon with a lantern, but of just and uncontaminated Veddas they have brought to light a mere handful. Four families at Sitala Wanniya who were living the life of their forefathers, with another group of families at Hennebedda whose ways were slightly more sophisticated, were apparently in a class by themselves.

It is possible to argue, indeed, that the more "wild" your Vedda is found to be, the more degenerate he is. Thus Mr. Parker, in his masterly work 'Ancient Ceylon,' after positing the alternative theories, either that the present few hunting Veddas (perhaps a hundred in all) have reverted to the free untrammelled life of the forest from the relatively civilized condition enjoyed by a portion of their race in ancient times, or that they have preserved the original condition of the first comers to Ceylon, verges in the end towards the former supposition. At least two good reasons are urged for this preference: firstly, that the Veddas have no language of their own, but speak a Sinhalese dialect; secondly, that the caves and rock-shelters in which they now dwell indicate by their drip-ledges and other signs of stone working that they were inhabited by Sinhalese about 2,000 years ago. Our authors, on the other hand, are strongly in favour of the second hypothesis. They maintain, seemingly as a general principle, that "a people may adopt a foreign language while retaining its old customs and without greatly altering its old method of life." The point about the caves they meet by supposing the wild Veddas during the occupation of the caves of the Vedirata by Buddhist monks to have found shelter in other parts of the country, or to have quickly dispossessed the isolated ascetics.

So far, it must be confessed, their case is weak. A more convincing argument is drawn from the physical characteristics of the wild folk, who certainly appear to agree most closely in physique with the short, dark, dolichocephalic type of certain jungle ("Dravidian") peoples of the Deccan. Our authors, however, do not go very thoroughly into the somatological details, doubtless because the brothers Sarasin have anticipated them in exploiting this side of the subject. Moreover, on the cultural side, namely, in respect of social organization and of religion, the Vedda of the woods, as contrasted with the Village Vedda, displays certain peculiarities that are as unsuggestive of Sinhalese influence as they are in close accord with the ways of certain jungle tribes of India. These peculiarities may now be considered at length, constituting as they do the chief interest of the present work.

The Vedda system of kinship resembles the Sinhalese so closely that it may well be borrowed therefrom. Special to themselves, however, is their division into non-totemic exogamous clans, called *varuge*, clan descent being matrilineal. These conditions, it must be allowed, do not

prevail universally, marriage within the clan being tolerated in certain districts. Some people, again, professed to have forgotten their clan altogether, though, as some clans were reckoned inferior to others, this lapse of memory was not improbably a matter of convenience. The clan-names possibly spring from place-names, and there is some reason to think that a territorial grouping of the clans may formerly have existed. The territorial unit at the present day appears rather to be the community or group, consisting of from one to five families. Thus the Hennebedda group owns one piece of country, and the Danigala group the piece adjoining, the boundary between the two lots being well marked and well guarded. Within each territory, however, a system of individual property is fully established. There is no Socialism. A cave, hill, pool, has its definite owner. This fact is well brought out by an institution resembling our "seisin," whereby the transfer of real property is accomplished. A stone or other object signifying such and such a place is handed over. In the case of a bequest this may be supplemented by a lock of hair from the head of the dying man. Such a mode of property-holding must make for the autonomy of the family.

A still more powerful influence, however, contributes to the same end. This is the system of cousin-marriage, whereby the children of a brother and a sister, but not those of two brothers or two sisters, are encouraged to marry—with what results to the breed we are not told. Thus marriage does little or nothing to enlarge the number of a man's connexions. It is no wonder that a Vedda cannot repeat the names of his relations of more than one generation older than himself, especially as there are no hereditary chieftainship, and no vendetta, to jog his memory.

To sum up, then, how do these facts relating to the social life bear out our authors' contention that the wild Veddas represent the immemorial tradition of their race? The kinship system is Sinhalese. The clans are in the last state of decay. The property-holding is unexpectedly individualistic. The cousin-marriage is just the sort of arrangement that would be forced on small and isolated communities. On the whole, then, we are, so far, left doubting.

In the matter of religion the Veddas appear to have preserved, or else developed, something unique in its way. Our authors deserve the greatest praise for the care and thoroughness with which they have examined the ceremonial dances and the accompanying invocations. Their full descriptions, supplemented by an excellent series of photographs, cannot fail to afford great assistance to the comparative study of primitive ritual. Now there is an extraordinary want of variety in the religious system of these Veddas. On analysis it reduces itself into a belief in the existence of beneficent spirits of the dead, and in the possibility of experts and others becoming possessed by them

when a dance in the presence of a ceremonial arrow or other material object has been duly performed, such possession *ipso facto* producing good hunting, a find of honey, the curing of a disease, or whatever may be the need of the worshippers. Dr. Seligmann, by the way, is convinced that the alleged possession is no sham, but normally involves a certain dissociation of the personality. Variations on this theme are naturally numerous, but in principle there is absolute uniformity. This conclusion is not reached by the theoretic device of excluding other practices of a superstitious kind from the category of religion, and classing them under the separate heading of magic; for of magic in any sense the Veddas appear to be almost wholly devoid.

Can we, then, declare for the primitiveness of the Veddas of the jungle on the strength of their religion of the arrow-dance type? It certainly looks as if we had here preserved a genuinely aboriginal *motif*. On the other hand, such preservation is perhaps not incompatible with a certain lapse from culture. How else is to be explained the woeful poverty of their magico-religious stock-in-trade? We find no folk-lore, no medley of odd superstitions. Religiously, as otherwise, this people strikes one as having no past. One simple type of ceremony suffices them. The accompanying invocations, on the other hand, are suspiciously complicated and flowery. Even if the Veddas have taken over the Sinhalese language, was there any necessity for cave-men who had never known civilization to introduce adjectives such as "jewelled" and "golden" into their sacred formulæ? For these reasons, then, we are inclined to impute to the Veddas of the wilds only a qualified primitiveness at most. So miserable a remnant has not the vitality to carry on a social tradition worthy of the name.

If, however, we suppose these wild Veddas to be but feeble ectypes of their forefathers of two thousand years ago, their wildness is none the less instructive. Very rarely in these latter days can the cave-dweller be interviewed at home. What would not the archæologist give for a glimpse of Mousterian or Magdalenian man crouching round his fire in some rock-shelter of Southern France? With the help of these photographs of Vedda habitations, imagination can almost reconstitute the life of the primal European. To assist the parallel there are even Vedda rock-drawings, of somewhat moderate merit. However, the man who lived through the great Ice Age was probably of sterner stuff than these votaries—one had almost said martyrs—of the simple life. With all their admirable qualities—their truthfulness, their much-misrepresented fund of cheerfulness, their respect for the honour of their women—they are an ineffective, and therefore a perishing, race. Thus it was well that this admirably contrived account of their life should have been put together before it was too late.

OUR LIBRARY TABLE.

The Herb-Garden. By Frances A. Bardswell. (A. & C. Black.)—It might seem at first sight difficult to devote a large volume to the herb-garden, and even if possible, it might be considered supererogatory. However, these are days of specialization, and it is impossible to set a limit to the demands and developments of gardening. Moreover, Mrs. Bardswell has produced a pleasant, entertaining, and instructive book, which we accept gratefully.

Her object has been to show readers how "to start and cultivate a herb-garden, to call to memory the half-forgotten uses of many herbs, to express the pleasure such a garden may give, and to set forth the difficulties (if any) that beset the collector of herbs." She does all this very well—so satisfactorily indeed that there is no excuse for any reader to fail in raising a good herb-garden if he or she follow the directions. The term, of course, is catholic, as the author sees. By herbs we may mean many things which appealed of necessity to our forefathers, but are not requisite, or even desirable, to-day. It is difficult to realize the difference which quick traction has made for us, so accustomed are we to the services of trains, motor-waggons, shipping, and the like. In other days folk in the country districts, and in London and the towns, were dependent upon their own private resources. The garden must create provision for its owners. Vegetables were few and inferior, and there was no chance of drawing upon exotic sources. Consequently the housewife learned to utilize not only the plants of her garden, but also the common plants of the fields, and the woods. Herbalists existed then to add to the demand for wild plants, and the old "herbals" are eloquent with names. Mrs. Bardswell appropriately quotes one of Mr. Kipling's latest verses which have been referred to already in *The Athenæum*: "Excellent herbs had our fathers of old." It is true. The names reproduced here follow and improve on Mr. Kipling—elecampane, valerian, rue, vervain, dittany, melilot—"almost singing themselves they run." Mrs. Bardswell has discovered no fewer than ten mints. We wonder how many of these are of use.

To do her justice, she does not demand utility always; she has an eye for colour and fragrance, and also for tradition. "Old-fashioned herbalists counsel the sowing of all seeds while the moon is waxing, not waning." Our author follows the advice, a proof of her attachment to tradition. In practice the gardener will find that the whole duty of the herbalist is comprised in one of these chapters, or at most two; but that will not prevent him from enjoying the author's discourse.

The pictures in colour by the Hon. Florence Amherst and Miss Isabelle Forrest are admirably illustrative.

Abnormal Psychology. By Isador H. Coriat. (Rider & Son.)—The early years of this century have seen a great development of psychological methods in the diagnosis and treatment of disease, especially in Germany, France, Austria, and America. In this country medical men have continued to ignore almost completely psychology and the mental aspect of disease, and have directed their efforts to the discovery of physical and chemical explanations of mental and nervous disorders. But the psych-medical studies of foreign physicians (which have been, in almost all cases, led up to by the practice of hypnotism) have shown

that mental influences play a great part in the production of disease, and that they may be made to play an equally great part in therapeutics, and will sometimes effect a cure where all physical measures are unavailing. This youngest and profoundly interesting department of medical science remains almost unknown in this country, where our leading physicians, a full generation behind those of other countries in this respect, are just now beginning to recognize the reality and importance of hypnosis, when their colleagues abroad are beginning to regard the hypnotic methods as largely superseded by other psycho-therapeutic procedures that have grown out of them.

This little volume by an American physician of large experience deserves, therefore, a warm welcome. It provides an introduction to and general survey of the field of psycho-therapeutics. It may be hoped that it will do something to stimulate our medical men to rescue this neglected branch of their science from the hands of quacks and charlatans. It is to be regretted that slovenly habits of thought and expression diminish the value of a well-designed book.

ETHER AS AN ANÆSTHETIC.

In your excellent review last week of Dr. Gorton's 'History of Medicine' you correctly insert the name of Dr. Morton of Boston, U.S., as the originator of ether as an anæsthetic. Few people are aware that we are indebted to the United States for its introduction to our own country by Dr. Morton. I can vouch for this fact, as I was the first person in England to inhale its vapour.

The use of it had been strongly opposed, especially by the renowned surgeon Robert Liston. In 1846 I was taken (as a young student) to hear a famous lecture by Sir Geo. Johnson at the Medico-Chirurgical Society, Berners Street. After the lecture Dr. Morton (or his agent), who had come over with his apparatus, found that the hospital patient was not able to be present; hence my offer to "inhale" was accepted. So successful was the experiment that Mr. Liston—a few days later—engaged Mr. P. Squire, Chemist, of Oxford Street, to fit up an apparatus with which he was able to carry out, painlessly, otherwise difficult operations at University College.

You draw attention to the introduction of chloroform, which was subsequently introduced by Sir James Simpson of Edinburgh. With both these agents operations are now performed which were never undertaken when I was a student, and happily with wonderful success.

M.D.LOND.

THE "DAYLIGHT SAVING" BILL.

Blackheath, May 8, 1911.

A MEETING was held at the Guildhall last week in support of the so-called "Daylight Saving" Bill, which should rather be called "A Bill to miscall the hours in the daytime during half the year." If it is desirable (which is perhaps doubtful) to alter the hours of work in offices and shops at different seasons of the year, this should be done in an open and straightforward manner, and not in the way proposed. To alter the clocks twice a year and make the interval at times two hours between two successive

clock-hours, and all other hours represent an interval from noon differing by an hour from that to which we have been accustomed, would cause great uncertainty and inconvenience; whilst to insist on its being universally done would lead to great expense, apparently for the sole object of saving the railway companies from having to reprint their time-tables to suit changed hours of work.

The Times, in an article on the subject which appeared on Friday, the 5th inst., finished with a sentence putting the whole matter in a nutshell: "If public opinion is ripe and eager for the change, no such Bill is necessary; if it is not, no such Bill ought to pass."

W. T. LYNN.

SOCIETIES.

ROYAL.—May 4.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'Motor Localization in the Brain of the Gibbon, correlated with a Histological Examination,' by Dr. F. W. Mott, Mr. Edgar Schuster, and Prof. C. S. Sherrington; 'Some Phenomena of Regeneration in Sycon, with a Note on the Structure of its Collar-cells,' by Mr. J. S. Huxley; 'Cancerous Ancestry and the Incidence of Cancer in Mice,' by Dr. J. A. Murray; 'Immunization by means of Bacterial Endotoxins,' by Dr. R. Tanner Hewlett; and 'On a Method of disintegrating Bacterial and other Organic Cells,' by Mr. J. E. Barnard and Dr. R. T. Hewlett.

GEOLOGICAL.—April 26.—Prof. W. W. Watts, V.P., in the chair.

The President referred to the death of Prof. Thomas Rupert Jones, one of the oldest members of the Society, and stated that it was proposed to form a Committee to consider the means of providing some memorial in aid of the widow and children of the late Professor.

The following communication was read: 'The Llandovery and Associated Rocks of North-Eastern Montgomeryshire,' by Mr. Arthur Wade. Dr. J. D. Falconer then gave an account of the geology of Northern Nigeria, illustrating his remarks by means of lantern-slides.

SOCIETY OF ANTIQUARIES.—May 4.—Dr. Philip Norman, Treasurer, in the chair.

Mr. Reginald Smith read a paper on specimens of a large series of flints exhibited by the Associated Portland Cement Manufacturers of Northfleet, Kent. For the last four years palæolithic implements and flakes, as well as remains of the Pleistocene fauna, have been found in the deposit capping the chalk in a corner of the Southfleet pit; and the flints are clearly separable into two classes. The first consists of flakes and cores of large size, unrolled, and in some cases unpatinated, indicating an extensive factory at this spot of implements of Le Moustier type, flaked mainly on one face. This constitutes about 99 per cent of several thousand specimens; and the remainder comprises implements of Chelles and St. Acheul types, mostly rolled and patinated, and evidently not *in situ*, but swept from the 90 ft. terrace-gravels above, and carried over the site of the factory by a torrent of sandy mud, that reached its present level (about 45 O.D.) over a frozen surface sloping gently to the river. The deposit on the chalk is pronounced by Mr. Clement Reid to resemble the Coombe Rock or Elephant bed of Brighton, in which only one implement has been found; but many specimens of Le Moustier period have been found in a corresponding deposit on the French side of the Channel, at Sangatte, near Calais. If the ground were frozen several feet deep and a sudden thaw set in accompanied by heavy rainfall, a tumultuous mass of mud and stones would pass from the high ground of the Downs towards the sea; and, in the opinion of Mr. E. T. Newton, the animal bones (mammoth, red-deer, horse, and rhinoceros) point, like the flints, to a date before the end of the Ice Age. Britain at that time had not been finally severed from the Continent, and the resemblance between the Northfleet and Sangatte deposits suggests that the Coombe Rock is not long subsequent to the beginning of the period named after Le Moustier.

Messrs. Whitaker, Clement Reid, Dale, and Garraway Rice took part in the discussion, the last-named exhibiting a series of large flakes with prominent bulbs of percussion found at Ospringe, near Faversham, and apparently belonging to the same culture.

LINNEAN.—May 4.—Dr. D. H. Scott, President, in the chair, afterwards Prof. Poulton, V.P.—Mr. Jules Augustin de Gaye and Mr. C. D. Soar were admitted Fellows.—Dr. Hans Driesch, Prof. Richard von Hertwig, Prof. Georg Klebs, Prof. Sergej Gawrilowitsch Nawaschin, Dr. Eugène Penard, Prof. Johann Wilhelm Spengel, and Prof. Edmund B. Wilson were elected Foreign Members.

The first paper was read by the Rev. T. R. R. Stebbing, 'On John Vaughan Thompson and his Polyzoa, and on Vaunthompsonia, a Genus of Sympoda.' In the discussion the following speakers took part: Mr. J. Hopkinson, Dr. S. F. Harmer (visitor), Prof. Dendy, Mr. A. W. Waters, and Prof. J. Stanley Gardiner.—The second paper was read by Dr. F. E. Fritsch, 'Freshwater Algae collected in the South Orkneys by Mr. R. N. Rudmose Brown,' and was illustrated by lantern-slides. Dr. O. Stapf and Prof. Dendy spoke on the subject.—Next followed a paper by Prof. Sydney J. Hickson, 'On Polytrema and some Allied Genera,' which in the absence of the author was read in abstract by the Secretary for Zoology.—Two other papers were read in title, the authors not being present: 'Observations on some New and Little-Known British Rhizopods,' by Mr. J. M. Brown, and 'The British Museum Collection of Blattidae enclosed in Amber,' by Mr. R. Shelford.

MICROSCOPICAL.—April 19.—Mr. H. G. Plimmer in the chair.—Mr. E. J. Spitta gave a demonstration of low-power photomicrography with special reference to colouring methods, in which he showed some 50 exquisitely coloured slides, which had been coloured by a friend by a new method. Mr. Spitta also communicated a report on Grayson's rulings presented by Mr. Conrad Beck to the Society, which embodied the results of many thousand observations.—Mr. E. J. Shepherd read a paper on 'The Reappearance of the Nucleolus in Mitosis,' which formed an addendum to his paper of April, 1909, on 'The Disappearance of the Nucleolus in Mitosis.' Mr. J. Murray communicated the second portion of a report from the Shackleton Antarctic Expedition of 1909 on the Canadian Rotifera.—A description of a new piece of apparatus for photomicrography, with the microscope in the inclined position, by Señor Domingo de Orueta, was read by the Secretary.

ROYAL INSTITUTION.—May 8.—Sir James Crichton-Browne, Treasurer and V.P., in the chair.—Mr. C. W. Ansdell, Lady Bell, Mr. S. Z. de Ferranti, Mr. H. Kahn, Mr. G. Manuel, Mr. C. E. Moulton, and Mr. A. Perks were elected Members.—It was announced that the following gentlemen had been nominated as Vice-Presidents for the ensuing year: Sir H. B. Buckley, Earl Cathcart, Dr. D. W. C. Hood, Mr. H. F. Makins, Sir F. Laking, Mr. A. Siemens, Sir J. Crichton-Browne (Treasurer), and Sir W. Crookes (Hon. Secretary).

ARISTOTELIAN.—May 1.—Dr. T. P. Nunn, Treasurer, in the chair.—The Secretary presented a report on the International Congress of Philosophy at Bologna, which he had attended as the delegate of the Society.

Dr. F. C. S. Schiller read a paper on 'Error.' In attempting to distinguish in thought between truth and error no help is obtainable from the existing logics. For these either (1) take up an *ideal* or (2) a *formal* standpoint, or (3) pass confusedly from one to the other; and from none of these standpoints is the problem of error visible. Error is either included in (formal) truth, or supposed to have been transcended. To discriminate between truth and error a new logic is required, which does not begin by depersonalizing judgment and abstracting from meaning. Such a logic will note that an "error" is always relative to the context and circumstances of an assertion, and that these are always personal and partial. Error, like truth, rests on a selection of the relevant, because without relevance there is no meaning. But the difference between a true and a false assertion is that the one furthers, and the other thwarts, a human purpose in cognitive activity. It is, in short, a difference in value. But neither valuation is absolute; absolute solutions of cognitive problems are both impracticable and scientifically unmeaning, which is why science is infinitely progressive. It follows that what in knowing we are concerned with is a number of cognitive states intermediate between absolute truth and error, such as lies, errors, methodological fiction, methodological assumptions, postulates, validated truths, axioms, and jokes. These should all be discriminated, and it is particularly worthy of note that, as both in the case of the "lie" and the "joke," the ostensible is not the real meaning of the assertion, and the latter requires a recognition of the maker's intention, any logic which

depersonalizes its subject incapacitates itself from distinguishing between falsity and lying and jest and earnest. Hence intellectualism as such is incapable of understanding a joke. Humanism, on the other hand, by making these distinctions, explains why it has always refused to "convert simply" the doctrine "All truths work." Yet this conversion continues to be falsely attributed to it.—The paper was followed by a discussion.

MEETINGS NEXT WEEK.

- MON. Society of Arts, 8.—'Rock Crystal: its Structure and Uses, Lecture III., Dr. A. E. H. Tutton. (Cantor Lectures.)
- TUES. Royal Institution, 3.—'The Brain and the Hand,' Lecture I., Prof. F. W. Mott.
 - Statistical, 5.—'On the Use of the "Normal Crop" as a Standard in Crop Reports,' Mr. H. D. Vigor; 'Seasonal Fluctuations in Employment in the Gas Industry,' Mr. F. Popplewell.
 - Anthropological Institute, 8.15.—'River Life and People in Upper India,' Mr. P. B. Bramley.
- WED. Meteorological, 4.—'On the Frequency and Grouping of Wet Days in London,' Dr. H. R. Mill and Mr. C. Salter; 'Report on the Phenological Observations for 1910,' Mr. E. Mawley.
 - Folk-lore, 8.—'Some Sudanese Beliefs,' Dr. Seligmann.
 - Microscopical, 8.—'A Method of disintegrating Bacteria and other Organic Cells,' Mr. J. E. Barnard; 'Structural Details of *Coccinodiscus asteromphalus*,' Mr. J. W. Butcher.
 - Society of Arts, 8.—'Les Basses Températures,' Prof. Raoul Pictet.
- THURS. Royal Institution, 3.—'Air and the Flying Machine,' Lecture I., Dr. W. N. Shaw.
 - Royal, 4.30.—'Inbreeding in a Simple Mendelian Stable Population with Special Reference to Cousin Marriage,' Mr. S. M. Jacob; 'The Properties of Colloidal Systems: II. On Adsorption as preliminary to Chemical Reaction,' Prof. W. M. Bayliss; 'On Distribution and Action of Soluble Substances in Frogs deprived of their Circulatory Apparatus,' Mr. S. J. Meltzer; and other Papers.
 - Geographical, 5.—'Principles of the Construction of Vegetation Maps,' Dr. C. E. Moss.
 - Royal Numismatic, 6.30.—'Notes on the Reign of William I.,' Mr. G. C. Brooke.
 - Institution of Electrical Engineers, 8.—'Automatic Telephone Exchange Systems,' Mr. W. Aitken.
 - Chemical, 8.30.—'The Course of Chemical Change in Quinol under the Action of Radiant Energy,' Messrs. W. N. Hartley and O. H. Little; 'A Method for the Accurate Volumetric Determination of the Oxygen in the Air,' Mr. H. E. Watson; and other Papers.
- FRI. Royal Institution, 9.—'Recent Experiments with Invisible Light,' Prof. R. W. Wood.
- SAT. Royal Institution, 3.—'Phases of Bird Life,' Lecture I., Mr. W. P. Pycraft.

Science Gossip.

MR. ROBERT SERVICE of Dumfries, one of the best-known ornithologists of Scotland, died this week in his 57th year. He supplied much information about the birds of the Solway area for Mr. H. S. Gladstone's 'Birds of Dumfriesshire,' and wrote a good deal himself on his favourite subjects, which included zoology, geology, and astronomy.

THE INSTITUTION OF CIVIL ENGINEERS have made arrangements to hold a Conference on the subject of the Education and Training of Engineers at the Institution on June 28th and 29th. The discussion will be divided into three sections, dealing with 'General Education,' 'Scientific Training,' and 'Practical Training.'

By the death of Prof. Thomas Rupert Jones the Geological Society has lost one of its oldest and most valued members. During his long life the Professor was an ardent geologist and palæontologist; he has left behind him nearly 200 separate papers, apart from his work as editor of several learned periodicals. Never in receipt of more than a very moderate income, he was unable to make any suitable provision for his family at his death, and he has left a widow, two daughters, and an invalid son very slenderly provided for. An effort is being made to assist them by a representative body of scientific men. Those who wish to help in so good a cause should send subscriptions to Prof. W. W. Watts, Hillside, Langley Park, Sutton, Surrey.

THE DANISH ROYAL GEOGRAPHICAL SOCIETY has planned an expedition to South-East Arabia with the object of mapping parts of Oman, and studying the ancient memorials and commercial prospects of the country.

WE note the publication of the following Parliamentary Papers: Scientific Investi-

gations, Fisheries Branch, Ireland, No. 7 (post free 1½d.); Notes from the Royal Botanic Garden, Edinburgh (post free 10d.); and National Physical Laboratory Report (post free 2d.).

THE first Saturday in June this year falling on the day before Whit Sunday, it has been arranged to hold the annual Visitation of the Royal Observatory, Greenwich, on the preceding day, the 2nd prox.

THREE more small planets were photographically discovered by Herr Helffrich at the Königstuhl Observatory, Heidelberg, on the 18th ult. Two others were found (stated to be the first discoveries of the kind made in the southern hemisphere) by Mr. Innes at the Transvaal Observatory, Johannesburg, on the 29th ult., whilst he was endeavouring to obtain a photograph of the eighth satellite of Jupiter.

WHEN searching for small planets, Herr Massinger came upon a star of 9.5 magnitude, which he observed on March 31st and April 3rd; in previous years it appears on photographs below the twelfth magnitude. In a general list it will be reckoned as var. 15, 1911, Virginis.

MADAME CERASKI has also detected another variable (16, 1911, Trianguli) whilst examining plates taken by M. Blazko at the Moscow Observatory. The brightness changes from 10½ to below 12½ magnitude, but the type cannot yet be ascertained.

THE Report of the Director (Mr. N. A. F. Moos) of the Bombay and Alibag Observatories for 1910 has been received. The astronomical work of this establishment has been restricted to the determination of time and its signalling for the purposes of navigation; but inquiries into the sciences of terrestrial magnetism, meteorology, and seismology have been steadily pursued with instruments specially adapted for the purpose. The rainfall for the year amounted to 67.86 inches, by far the largest part of which fell during the south-west monsoon, which began regularly on June 2nd, and ended on October 1st: 23.92 fell in June, 7.42 in July, 16.89 in August, and 18.84 in September. The mean temperature of the year was 79°1, which is only 0°3 below the normal. The highest mean daily temperature was 86°0 on May 29th, and the lowest 67°9 on January 17th. There were only two days of great magnetic disturbance.

FINE ARTS

OUR LIBRARY TABLE.

Meroë, the City of the Ethiopians. By John Garstang. (Oxford, Clarendon Press.)—This is the first instalment of Prof. Garstang's account of his excavations in Nubia, which are still in progress. An Introduction by Prof. Sayce, who was present during the greater part of the work, makes it fairly clear that this time the true site of the ancient Meroë has been discovered, and that it is different from Napata, "the first capital of the Sudan," which seems to have been at the foot of Gebel Barkal, and to have been razed to the ground by Petronius in B.C. 22 in reprisal for an attack upon Egypt by Candace, its queen. The Ethiopian empire appears to have been first established by the priesthood of Amen, who fled from Egypt when overthrown by the

Libyan leader of mercenaries whom the Bible calls Shishak, who returned thither later under Piankhi, and ruled until again driven south of the Cataracts by the Assyrians. Ethiopia received a great accession of force when the Egyptian garrisons under Psammetichus, disgusted at the favour shown by that Philhellene Pharaoh to his Greek soldiers, deserted Egypt and fled southwards. Meroë, which had fallen into decay, was rebuilt by two kings named Neteg-Amen and Neteg-Harkhuti, whose date is uncertain, and again by Ergamenes, about whose religious revolution and massacre of his priestly masters Diodorus tells an amusing story. It was finally destroyed, as Prof. Sayce has shown, by Ta-zēna, King of Axum, in the fifth century A.D.

The account by Prof. Garstang here given of his work on the site during the winter of 1909-10 is good and clear, and abundantly illustrated by plans and admirable photographs by Herr Schliephack, the photographer to the expedition. The objects found there were sufficiently noticed in our account of Prof. Garstang's exhibition held last summer at the Society of Antiquaries, and derive their chief value from the opportunity they afford us of appreciating the Ethiopian civilization, which differed in some respects from that of its parent, the Egyptian. This was particularly the case with its script, which was formed, according to Prof. Sayce, some time before the reign of Ergamenes, who was a contemporary of Ptolemy II. Philadelphus. Both he and Mr. Griffith contribute chapters to the present volume on its decipherment, which will be read with interest by philologists. Up to the present the decipherment does not seem to have progressed far enough for their readings to command universal confidence; but it may be conceded that Mr. Griffith's discovery that the Ethiopian or Meroitic inscriptions are to be read the reverse way to the Egyptian appears to be well founded. The volume is excellently produced.

IN *The Treasury of Ancient Egypt* (Blackwood) Mr. Arthur E. P. B. Weigall has reprinted three articles from *Maga*, one from *The Pall Mall Magazine*, and another from an American publication. He has added to them 'The Story of the Shipwrecked Sailor,' which has already been given to the world by Sir Gaston Maspero, and adorned the whole with a sprinkling of excellent photographs more or less connected with the text. The result is a handsome volume of some 300 pages, which will doubtless be read with pleasure by tourists and others anxious to renew their recollections of the Nile Valley, but which is, truth to tell, a little thin in places.

One of its most interesting chapters is that entitled 'The Flooding of Lower Nubia,' wherein he summarizes the reasons of the Department of Antiquities (in which he is an Inspector) for consenting to the construction of the Aswan Dam, and the steps it has taken to preserve the temples in the submerged area. According to Mr. Weigall, who refers on many occasions to his own official report on the subject which has been published separately, most of these are now in better case than ever they were before the engineers went there, the one exception being the Temple of Philæ, which will, he admits, lose much of its colouring, and may even have to be "entirely removed and set up elsewhere." As it is, the artistic beauty of the island is now all but gone, and, although this may not be too large a price to pay for the increased prosperity of the fellah, it is a pity it could not have been procured on cheaper terms.

The other new parts of Mr. Weigall's book mainly deal with the importance of archæology—by which he means Egyptian archæology—to the world in general, the difficulty of preventing thieving in his inspectorate, the greediness of curators of museums, and the advantage it is to these last to go out to Egypt and excavate for themselves. His views on all these subjects are both reasonable and well expressed, the tendency towards "fine writing" noticeable in some of his other works being here considerably reduced. He has evidently not yet shed the enthusiasm of youth, and, as it is plain that he enjoys both life in Egypt and his official position there, the effect is pleasing even to those readers who are not Egyptologists.

Some Old Devon Churches: their Rood Screens, Pulpits, Font, &c. By John Stabb. Vol II. (Simpkin, Marshall & Co.)—In this volume Mr. Stabb proceeds to illustrate upwards of a hundred old Devonshire churches in addition to those which have already come under his camera and pen. Lovers of Devonshire and ecclesiologists at large will be glad to add the book to their shelves, for the greater part of the photographic plates of church details and fittings are of objects not previously illustrated, and, on the whole, well reproduced. It is not possible, however, to endorse all the text. Mr. Stabb has not made a sufficient study of ecclesiology to be accepted as a trustworthy guide. Under Colebrook he makes mention of a "leper window," and describes a pair of bench-ends as an "old prie-dieu." The insufficiency of the descriptions is strikingly apparent in the account of the church of Branscombe. The considerable Saxon remains, the grand Norman tower, and the remarkable work of the thirteenth and two following centuries are all ignored, whilst the illustrative plates are not adequate.

EXHIBITIONS AT THE GOUPIL GALLERY.

HABITUAL relaxation of the stringency of any canons of criticism which press at all hardly on the natural bent of an artist makes this the day of the amateur. To paint for oneself—satisfying no demands but those of one's own individuality—is, in the eyes of many, the only duty of an artist, and for such critics it is in proportion as he is able thus to work in complete isolation, with no thought of a public for his picture, that a painter's condition approaches the ideal. We do not share this unsocial view of the functions of art, or subscribe without protest to the underlying implication that the influence of the public must needs be a vulgarizing one. On the contrary, it is inspiring to feel oneself a part of the body politic, and the brisk commercial demand for a man's work implies its prompt utilization as a spiritual force, and is a stimulus and a legitimate source of pride. None the less it is a melancholy fact that half the best painting of our day is produced with no such direct encouragement. We have grown accustomed to the fact, and almost expect work done under professional conditions to be commonplace, while our curiosity may be counted on for the production of the disinterested amateur absorbed in self-expression.

Much more with the general public is interest enlisted in advance if a picture be painted by a constable or a postman, or any one but a painter. There is then the

touch of biographical picturesqueness which we alluded to last week as the journalist's means for interesting his readers in an intrinsically dull subject. Our merely theoretical insight into the causes which disengage "the picture of the year" cannot be compared, however, with the confident grasp of the same principles which enabled the director of the Goupil Gallery to risk a considerable speculation on the work of Mr. Walter Greaves with, as any one can see after the event, the certainty of success. Mr. Greaves's painting has a great deal of merit. It has the modesty and sincerity of amateur work, yet it enjoys the advantage of contact, even though at second hand, with the sound professional training of the best period of the French art of the nineteenth century. No one, therefore, will grudge the painter his belated success, nor are we to be accounted ungenerous because our praise of him is based on appreciation of his quality as a painter, rather than on gratitude for the opportunity of developing the story of Whistler and his boatman as a pendant to that of Giotto and Cimabue, or to the familiar histories relating how artists from Velasquez downwards have nourished unsuspected genius in the person of the humble assistant who ground their colours.

Gratitude for good "copy" must surely, however, have tinged the estimates of some of our confrères of the press when dealing with Mr. Greaves's talent. This modest painter must be surprised to hear that he is "a great artist," that "his drawing of boats has never been surpassed," and more to the like purport. So unanimous a surrender to the claims of an art so long neglected may well seem strange to him.

The result is that the visitor who goes to see one of the magicians of paint will be a little disappointed. The palette of Corot, passed on by Whistler to the hands of a careful, rather over-conscientious painter, keeps some of its charm; while, even before his meeting with the man who moulded his art so completely, we may see in certain passages of his early picture, *Boat-Race Day, Hammer-smith Bridge*, that Mr. Greaves already possessed a definition and directness of handling—the habit of laying a normally satisfactory uniform coat of paint, thin, yet, covering, which dates from the time when painting was a trade with its own technical requirements. This initial endowment rises to its highest point under the influence of Whistler in that artist's earlier period as a member definitely of the French School, No. 34, *Cremorne Gardens, the Band Stand*, being a fine example reminding one of Courbet. Another *Cremorne Gardens* (29) is only a little less fine. When Whistler, in his London pictures developed the manner more peculiar to him, but not quite so fine as his earlier and more robust work, Mr. Greaves followed him with a closer imitation, which yet shows by comparison how great was Whistler's unifying power, even in the kind of painting in which he was least creative. The Nocturnes shown here are often amusingly like those of Whistler, but lack the glamour of the master. We can readily believe, however, that in this class of subject Mr. Greaves may have been the innovator, and that it may have been the sight of his work which led Whistler's lively and receptive mind to divine what might be made of the same themes. Nos. 41 and 71 are the best examples of the more typically Whistlerian treatment by Mr. Greaves of Whistlerian subjects.

Downstairs in the same galleries Mr. William Nicholson shows a collection of oil paintings, which, by comparison with the

work of Mr. Walter Greaves, have a little the look of having been painted for display. There can be no question, on the other hand, that Mr. Nicholson is the abler artist, with a confident grasp (too confident, perhaps) of the principles of design, whether in line or colour, much rarer than the tentative groping after beauty of the older man. Mr. Greaves in the Introduction to his Catalogue is quoted as referring to the "less conventional" version of 'Battersea Bridge' which Whistler based upon his own, No. 47. He doubtless meant only a modest self-effacement, and used "conventional" to mean "common-place"; but obviously Whistler's pictures were more conventional than those of his pupil, and therein was one of his main sources of strength. It is the same with Mr. Nicholson, the defiant force of whose painting cannot blind us to the admirably formal lines on which it is constructed. His postulates of an evenly divided sequence of tones and the grouping of colour-differences around a central monochrome are such as we are accustomed to grant, and there can be no doubt that his expression gains in force and intelligibility from being restricted within a relatively narrow field.

The advocate of naturalism as against convention will point to some of the portraits as instances of the limitations of Mr. Nicholson's method: No. 13, *The Brown Veil*, and in a lesser degree No. 17, *La belle Chauffeuse*, may be taken as examples. The heads, it may be urged, look a little empty and flat, wanting in the mystery of life. We admit the fault, but deny the soundness of the explanation. It is not intrinsically that the painting of these heads is insufficient, even though they are reduced to little more than three tones of the same brown. Of the anatomical machinery of facial expression Mr. Nicholson has considerable control—control far easier and more subtle than Mr. Greaves's. However, it is not entirely by the complexity with which anatomical forms are rendered that an impression of life is obtained; complex or simple, the variety set down must be the symbol of an infinite variety not to be positively rendered, and it is the relative complexity of form in the face and in the other portions of the picture which is one of the most important factors in producing such a result. Whereas the other passages of painting in a portrait will tend to form into groups of lines at similar angles—here tending to the perpendicular, there to the horizontal—the wealth of form in the human face is such as to make it a kind of clearing-house for the whole picture. Hardly any tilt of angle, hardly any kind of form in the composition, but finds here some hint at representation. The colour of flesh is of the same order, and has the same relation to the more positive colours by which it is surrounded. The violent contrasts of the outlying parts of the composition here blend and vanish.

It is this continuity of progression from the obvious to the supersubtle, from the visible to the invisible, which is the basis of Mr. Nicholson's art, and it is because in his still life he comes so near to achievement that in his portraits his failure is sometimes evident. In 'The Brown Veil' the accessories are slightly too complex, too fully rendered for the head. The forms in a face may be fully analyzed, and be found to include a great and varying range—square shapes and round, and slim ridges and peaked forms. On the other hand, it is equally permissible for the artist to restrain himself from too elaborate analysis, and deliver an intensely direct account of the general character of the face as a whole—in this instance a hard and slender elegance. If this simple external aspect of the model is

selected, however, it is evident that the other objects in the picture ought to be treated with a like stark simplicity. Mr. Nicholson's taste for still-life painting has, perhaps, lured him away from the wise conduct of his picture in this respect, so that a head admirably painted for a severer setting becomes a little bare and lacking in mystery.

MINIATURES IN THE SALTING BEQUEST.

IN the display of the Salting Bequest recently opened to public view at the Victoria and Albert Museum the miniatures are one of the most attractive features, to judge by the number of visitors who gather round the cases containing them. The collection, whilst by no means representative, is extremely interesting, and comprises examples by several delightful masters, nearly all of the English School.

Mr. Salting does not appear to have collected anything in the way of miniatures of a date subsequent to the death of Richard Cosway—in other words, later than the first quarter of the nineteenth century; the result is that limners like Ross and Thorburn are unrepresented here, nor will anything by Augustin, Dumont, Füger, Guérin, Hall, or Isabey be found in this collection. Thus the full range of the art of the miniature painter, whether at home or abroad, cannot be seen amongst the 130 examples which Mr. Salting has left the nation. Nevertheless there is much to enjoy in the contents of these floor-cases in Room 131, for that is where they will be found.

We may notice first some of the earliest pieces, remarkable if only for their rarity. Take the work, grouped together in Desk Case 5, of Simon Benninck and his daughter Levina, perhaps better known as Teerlinck, the name she acquired by marriage. She worked for the Tudor Court, we know, and her father was a famous illuminator of Bruges. A portrait of himself holding glasses in his hand, to assist his sight in his minute work, no doubt, and two of his missal-like landscape pictures, are shown.

By Levina are two demure little ladies, full of the sweet gravity with which children were painted in that age. They recall the two Brandon boys at Windsor, both of whom died the same day of the sweating sickness. Holbein is assumed to be the painter of these little sons of the Duke of Suffolk, as he is of the remarkable portrait of Anne of Cleves here shown, which, according to the Museum Guide, was painted for Henry VIII. in 1539 at Düren. It corresponds to the famous picture by the great Augsburg painter which, once in the collection of Louis XIV., is now at the Louvre, save that it shows only the head and bust. When we look at the insipid face here drawn with such skill, we can well believe that the English king soon tired of the lady whom Cromwell selected for him—the "Flanders mare," as Henry brutally called his fourth wife. It is a characteristic example of the artist, and in a perfect state of preservation, due to its having been kept in the original, turned ivory box which accompanies it. It seems a matter for regret that the valuable contents of this case are exposed to strong light: they are open to the large south windows of the gallery, only a few feet away, and must, it is to be feared, suffer in consequence. True, curtains are placed over the glass of the cases, which the policeman on duty replaces with exemplary assiduity; but the exposure is constantly and inevitably

made all the same. It may be worth consideration, in the interests of posterity, whether a darkened or screened-off room, fitted with electric light, might not be contrived for the display of such valuables. Unless some protection be devised, it being impossible in a public gallery to keep miniatures in their original ivory cases, the loss of much of the beauty of these treasures is only a question of time.

Nicholas Hilliard is exceptionally well represented here. The full-length of a young man in white hose, with a dark cloak, leaning against a tree, is much more of a picture than is usual with the artist. The head seems out of proportion, but otherwise the work is pleasing and of unusual importance, the accessories being painted with rare delicacy and skill. This favoured limner of Elizabeth is shown to the life in the animated portrait of himself with which many are familiar, it having been engraved in Dallaway's edition of Walpole's 'Anecdotes.' It came from Penshurst, and once belonged to Mr. Whitehead, who showed it, if I mistake not, at the Burlington Club Exhibition in 1888. It is interesting to mark the resemblance this portrait of N. Hilliard bears to that of his father which is placed beside it.

There is a group of six miniatures of James I. and his family, somewhat faded and rubbed, if originals at all. The Henry Prince of Wales has its counterpart at Windsor, and the James is a replica of one in the Rijks Museum, Amsterdam. The finest piece by that admirable painter Isaac Oliver here shown is the Earl of Pembroke, which is in excellent condition, due again, no doubt, to its preservation in the ivory box which may be seen at its side. Notice also in this case a quaint little full-length of Sir Christopher Hatton, with the Chancellor's mace on the table and his hand on the Great Seal. It is very minute. The Duke of Rutland owns one exactly like it.

The head of Lady Shirley, which is given to Hilliard, looks more like the work of one of the Olivers, both from its broader modelling of feature, and the tone of the accessories.

John Hoskins is not an inspiring artist, but he has left some honest work, and as master of the greatest miniature painter we have ever had, viz., Samuel Cooper, whose uncle he was, must be mentioned with respect. There are several portraits here by him, but we turn with interest to the nephew's presentment of his contemporaries.

The great "Van Dyck in little," as Walpole happily called him, fully maintains his reputation in this collection, although there is nothing by him so superlatively fine as examples to be found in the Duke of Portland's collection and elsewhere.

Among the best Coopers here I should rank that of Edward Montagu, Earl of Sandwich, to whom Samuel Pepys was secretary. The pages of the immortal Diary are full of references to this man, who was distinguished both by land and sea. Amongst other things, he was a boon companion of Charles II., and kept late hours, as the Diary shows; it does not record his tragic end, as it closes some three years before "My Lord's" ship the *Naseby*, surprised by the Dutch was blown up in Solebay. The body of the Admiral was found at Harwich, and rests in Westminster Abbey.

What purports to be Charles II. as a boy may be a portrait, but we hesitate to accept this bilious-looking youth as the work of Samuel Cooper. Moreover there are two counterparts of it known, and ascribed to Hoskins; they are in the collections of the Duke of Buccleuch and the Marquis of Exeter respectively. As the labels are

distinctly stated to be "under revision," no one can be exacting in the matter of attribution, and any remarks I have ventured to make are meant to assist in identification, if possible. The other Coopers comprise a masculine Col. Lilburne and the heavy, lymphatic face of Secretary Thurloe.

Admirable for character is the miniature (4636) now called Thomas May, poet and historian. In the illustrated Catalogue of the 1865 Exhibition in the Museum Library this portrait is called the Earl of Pembroke. It then belonged to Mr. Addington, and passed into the hands of Dr. Propert. It is dated 1653, by the way—three years after May died.

Challenging comparisons with these are several works by Flatman, barrister and limner; the handling recalls Cooper's, but there is a wide gap between the two men. The portrait called 'A Gentleman,' No. 4623 (or its counterpart), was styled James Butler, Duke of Ormond, when shown at Kensington in 1865. It then belonged to a Mr. C. W. Reynolds. It differs much from the Cooper called by the same name in the same case; the latter has a moustache, and is a younger man by, perhaps, 20 years.

Lawrence Cross and Nicholas Dixon both belong to this period. The former is well represented by a Viscount Maynard; the latter, whose work was unknown to Redgrave, seems to stand between Cooper and Cross in quality and style. The portrait of a lady called Anne Hyde is, at any rate, very different from the fine portrait of her at Hampton Court, and one which belies the statement Anthony Hamilton makes in the *De Grammont Memoirs*, viz., "cette Princesse avoit le grand air." Pepys says of her she was "not only the proudest woman in the world, but the most expensiveful."

A foreign artist who worked about the same period, especially in Denmark, but who is little known in this country, was P. Prieur; by him are Henri de Lorraine and Philip IV., and both will repay examination: the head of the latter is no larger than a little-finger nail, but is full of character. Lord Dartrey has two or three examples of this artist, who was an enameller. Except Petitot, other men who worked in the same way, such as Boit, Zinke, and Meyer, to say nothing of Hone and the Bones, are all absent from this collection.

No. 4675, a portrait of a lady, is given to Jean Petitot, who, it is known, was *facile princeps* in this difficult style of art, but water-colours by him (and this purports to be one) are very rare. The other foreigner represented in this case was a lady of European reputation in her day, Rosalba Carriera. She excelled in pastel, and the portrait of Robert, eldest son of Sir Robert Walpole, here shown, is strangely like a miniature crayon; it is much faded, but still pleasing.

Case 7 contains works by Cosway, Smart, and the two Plimers. There is nothing fresh to be said about these well-known men; the examples to be seen here of the last-named bear out the opinion that they are distinctly inferior artists, Nathaniel being especially poor and heavy in style. The prices obtained of late years for work by the Plimers have been preposterously high.

The specimens of Cosway are varied and unequal, several of them much faded. One called Princess Amelia, the delicate youngest daughter of George III., will, although the head is too large for the figure, be admired for its sweetness of expression; the background is somewhat dirty in tone. The lady in the straw hat should not be overlooked; the work is marked by beautiful drawing and the utmost delicacy of touch.

"Little John Smart" comes well out of the competition; in fact, three out of the six portraits here by him are as fine as anything can be in their way. No. 4574 shows that clever and versatile woman, Mrs. Cosway. It is mannered, it is true, but how good and solid, yet brilliant it is! and how admirable the modelling! The fair Maria could not paint like this herself. Even finer are the masculine portraits of Admiral Lorraine and Charles Savile: the finish in all three is superb. On the other side of the case hangs, amongst works by a number of eighteenth-century unknown men, a small piece which exemplifies how much art can be crowded into a few inches, at most, by an accomplished miniaturist. I refer to the portrait of a man seated and reading a letter, the Danish Governor of Trincomalee (4598). It is by John Bogle, a Scotch limner of whom Cunningham speaks as "a little lame man, very poor, very proud, and very singular." Bogle was, at any rate, a competent artist, and gives us here a complete picture, although on so minute a scale—sober in colour, but of extreme delicacy, finesse, and discrimination of character. Passing by examples of Downman, Ozias Humphrey, Jean (a Jersey man), Day, Horace Hone, and Shirreff (who was deaf and dumb), we may take as a "bonne bouche" the seven or eight examples of George Engleheart, miniature painter to George III. and one of the most brilliant and industrious workers of his day. His books show that he executed some 4,000 portraits.

These notes, imperfect as they are, indicate what a valuable contribution Mr. Salting's legacy would make to a National Collection of Miniatures, could it be separated from the other objects in the bequest. They suggest once more the consummation so devoutly to be wished, that we should possess a permanent, representative Gallery of Miniature Paintings showing adequate examples of an art in which British artists have excelled, and of which the historical value, the charm, and the beauty are at length fully recognized. J. J. FOSTER.

THE ABDY SALE.

THE notable collection of Old Masters belonging to the late Sir W. Neville Abdy was sold by Messrs. Christie on Friday, the 5th inst., a *Pietà* by Carpaccio realizing nearly 13,000*l.*, and a picture by Botticelli 11,340*l.* The most important prices were as under:—

A. Ramsay, Portrait of a Lady, in blue dress with yellow bows, white fichu and cap, in an oval, 330*l.* J. Fyt, A Dead Hare, Mallard, Partridge, and other Birds, 304*l.* Roger van der Weyden, A Triptych, the central panel representing the Crucifixion, on the left wing being the Madonna and the Magdalen, and on the right wing St. Veronica and St. Mary of Egypt, 945*l.* Lucas Cranach, The Virgin and Child, the Virgin, seated, holding the Child with both hands; He is in the act of putting some food into His mouth with His right hand, 682*l.* German School, Portrait of a Lady, in brown dress, with white lawn headdress, 210*l.* Jacopo Bassano, The Adoration of the Magi, 1,365*l.* Sandro Botticelli, The Nativity of the Saviour, in tempera, 2,047*l.*; A Scene from the Life of St. Zenobius, 11,340*l.* School of Sandro Botticelli, The Last Sacrament of St. Jerome, 588*l.* Canaletto, Northumberland House and Charing Cross; and Northumberland House, from the river (a pair), 840*l.* Vittore Carpaccio, A *Pietà*, in the centre the dead body of the Saviour, with white loin-cloth, reclines on a ruined marble throne bearing a Hebrew inscription; on a cartellino at the bottom on the left is the inscription "Andreas Martinea," to whom the picture was ascribed when exhibited at Burlington House in 1881, 12,915*l.* Cima da Conegliano, The Madonna and Child, the Madonna, seated, turned to the right, and holding the infant Saviour on her knee; landscape background,

1,575*l.*; The Madonna and Child, the Virgin, seated before a canopy, supporting the infant Saviour, who stands on her knee, holding some fruit: hilly background, 399*l.*; The Madonna and Child, the Madonna, seated behind a stone ledge, holding the infant Saviour on her knee; screen and landscape background, 336*l.* School of Piero di Cosimo, The Story of Perseus (a pair), 651*l.* Dello di Niccolo Delli, The Triumph of Time and Love (a pair), 724*l.* Dosso Dossi, Duc de Ferrara, three-quarter figure, life size, bare-headed, his right arm resting on the muzzle of a cannon, his left hand on the hilt of his sword, 1,102*l.* Piero della Francesca, Betrothal and Marriage Ceremonies (a pair of cassone fronts), 997*l.* Raffaellino del Garbo, The Madonna and Child Enthroned, the Madonna, holding the infant Saviour, who turns to the infant St. John below them, 336*l.* Domenico Ghirlandaio, The Annunciation, on the right the archangel Gabriel kneels on one knee: on the left the Virgin Mary kneels at a prie-dieu with uplifted hand, 1,575*l.* Ridolfo Ghirlandaio, The Madonna and Child with St. John, the Madonna, seated, holds the infant Saviour on her right knee; before them, on the right, kneels the infant St. John, holding his staff, and receiving a blessing from the infant Saviour, 2,152*l.* Giorgione, Malatesta di Rimini and his Mistress receiving the Pope's Legate, 2,572*l.*; Portrait of a Venetian Gentleman, in rich red brocade dress, with dark cloak drawn round his shoulders and clasped with his right hand; large black hat, 336*l.* Andrea Mantegna, Ridolpho Gonzaga, Prince of Mantua, in flowered yellow cloak over a dark dress; black cap, 336*l.* Masaccio, Christ disputing with the Doctors and the Presentation in the Temple (two in one frame, forming the predella of a picture), 514*l.* Matteo di Giovanni, The Wedding of Ludovico Sforza, 462*l.* Il Parmigiano, The Baptism of Christ, 304*l.* School of Pesellino, A Courtyard, with eight figures storing and selling grain, 220*l.* Bernardino Pinturicchio, The Madonna and Child with Saints, in the centre the Madonna, seated, holding the infant Saviour on her knee; on the left St. Anthony, holding a bell and a staff, and on the opposite side St. John the Baptist, holding a cross, 945*l.* Antonio Pollaiuolo, The Wanderings of Ulysses (a pair), 1,260*l.* Andrea da Solario, Giovanni Bentivoglio of Bologna, bust, three quarter profile to right; dark background, with open window on right, through which is seen a landscape, 4,200*l.* Cosimo Tura, Portrait of a Gentleman, bust to right, standing behind a balustrade, and holding a ring in his left hand, 1,890*l.* Venetian School, The Madonna and Child, the Virgin in red dress and blue robe, holding the infant Saviour on her lap, 420*l.* Bartolommeo Vivarini, The Adoration of the Magi, the Holy Family seated beneath the portico of the inn, 3,885*l.* A drawing of the School of Correggio, The Judgment of Paris, brought 110*l.* The total for 132 lots amounted to 61,196*l.* 13*s.*

At the conclusion of the sale of Sir W. N. Abdy's collection the Old Masters belonging to Florence, Lady Abdy, were sold, the following being the best prices: H. Holbein, Portrait of a Gentleman, head turned to the right, in dark cloak with fur trimming; square black cap, 220*l.* Gentile da Fabriano, The Adoration of the Magi, in elaborate shaped frame, with six heads of saints in circles, 3,832*l.*; The Visitation, The Nativity, The Adoration of the Magi, and The Flight into Egypt (a set of four panels, forming the predella of a picture), 892*l.* G. B. Moroni, Portrait of a Gentleman, half-figure, in black gown and cap, holding a book which lies on a ledge in front of him, 1,680*l.*

The 9 lots realized 6,868*l.* 1*s.*, making a total of 68,064*l.* 14*s.* for the entire sale.

Fine Art Gossip.

NEXT Saturday the show of the New English Art Club will be open to the press at the galleries of the Royal Society of British Artists in Suffolk Street.

At the Burlington Fine-Arts Club a collection of Venetian art of the eighteenth century is now on view.

THE Louvre authorities have just acquired the 'Apollo inspiring a Young Poet' by Nicolas Poussin, which was for many years in the Hope Collection.

M. ÉTIENNE JOANNON, a well-known member and exhibitor at the Salon of the Société des Artistes Français, died last week at the age of 53. He was a native of Lyons, and studied under Cabanel; he obtained medals at the Salon in 1892 and in 1900. He was connected with several of the municipal schools in Paris as Professor of Drawing.

THE first portion of the late Charles Butler's art collections will be sold by Messrs. Christie on the 22nd inst. and four following days. A short notice of Mr. Butler and his collections was published in our columns on July 2nd of last year, and the regret which we then expressed at the absence of a *catalogue raisonné* of his pictures by himself is considerably intensified in looking through the sale catalogue of the pictures. Some of the more important of the Italian pictures are without any indication as to provenance. The sale will be of unusual interest, and will occupy two days.

DR. BUCHHEIT, the Director of the National Museum at Munich, has identified a miniature in that collection as a portrait of Princess Sibylla of Jülich-Cleve (1557-1628). This is interesting, as it also proves the identity of a portrait of a lady in the Old Pinakothek, evidently the same person. This portrait was formerly ascribed to Adriaen Crabeth, but is now considered to be by Antoine Caron.

ANOTHER miniature in the National Museum, the portrait of a young man, once thought to represent Melanchthon, and afterwards—on account of the initials H. M.—said to be a portrait of Hans Mülch by himself, is considered by Dr. Buchheit to be undoubtedly by Hans Holbein the Younger.

STUDENTS of the Italian Seicento will find Dr. Geisenheimer's little book on Pietro da Cortona a valuable contribution to the subject. The painter's frescoes in the Pitti Palace are fully treated, and the documentary material bearing upon the life and work of the artist is brought together and carefully collated.

DR. FRIEDLÄNDER has just brought out (as the twelfth volume of the publications of the Graphische Gesellschaft) the Lübeck 'Dance of Death' of 1489. The woodcuts of the original (in the library of the Germanisches Museum, Nuremberg) are by the draughtsman who seven years later illustrated the celebrated Lübeck Bible.

THE *Kunstchronik* (March 31) reports that Dr. Graef, speaking at a meeting of the Kunstwissenschaftliche Gesellschaft at Munich, gave an account of the restoration and reconstruction of Burgkmair's altarpiece of St. John in Patmos, of 1518. The wings were long ago removed from the central panel, and their existence was forgotten. They have now been identified at Schleissheim and Burghausen; the repainting has been removed from all the panels, which have been carefully restored, and the whole altarpiece, when reconstructed, will be exhibited in the Pinakothek.

THE recently formed Society for the Promotion of Roman Studies held its first annual meeting on Thursday last, when Prof. Haverfield, the President, gave an inaugural address. Dr. Butler, the Master of Trinity, Cambridge; Sir Frederick Pollock; Dr. F. G. Kenyon; and Prof. Mackail also spoke.

THE "Cambridge Manuals of Science and Literature," now being published by the

University Press, will shortly include 'The Ground Plan of the English Parish Church' and 'The Historical Growth of the English Parish Church,' both by Mr. A. Hamilton Thompson.

MESSRS. KEGAN PAUL have made arrangements for a book on Mr. John Lavery and his work by Mr. Walter Shaw-Sparrow, as a companion volume to that writer's successful monograph on Mr. Frank Brangwyn. Mr. Cunningham Graham, an old friend of Mr. Lavery, will contribute a Preface.

THE same firm have in preparation a new edition of 'The Rose and the Ring,' with illustrations in colour and in black and white by Mr. J. R. Monsell.

EXHIBITIONS.

SAT. (May 13).—Miss Lilian Cheviot's Pictures of Animals, Mendoza Gallery.
— Mr. G. H. Christie's Collection of Cameron Etchings, Mr. R. Gutekunst's Gallery.
— 'Paris en route pour Longchamps,' a Panorama of Society by Sem and Rouville; and Drawings by other Artists, Fine-Art Society's Gallery.
MON. Chinese Paintings, Pottery, and Bronzes, Press View, Mr. W. B. Paterson's Gallery.

MUSIC

THE WEEK.

COVENT GARDEN.—*La Traviata. Carmen. La Bohème.*

'LA TRAVIATA,' which was performed yesterday week, is a work which now depends for success upon a singer who can render with effect the florid music assigned to Violetta. On this occasion it was Madame Tetrassini, who in this part is heard and seen at her best. Her voice was in fine order, and she was well supported by Mr. John McCormack and Signor Sammarco, as Alfredo and Germont respectively. The performance under the direction of Signor Campanini was very good.

'Carmen' was given on the following evening. Madame Kirkby Lunn has shown in many works, notably in 'Samson et Dalila,' her powers both as singer and actress, but Carmen is a part which does not suit her; her impersonation lacks life and temperament. She, however, sang the music in the second act extremely well. M. Dalmorès is an excellent Don José, but on this occasion was suffering from a cold. M. Ghasne's rendering of the Toreador song was tame.

Madame Melba made her *rentrée* on Wednesday evening in Puccini's 'La Bohème.' The part of Mimi is a great favourite with her, and it is one which she acts well, and in which she sings beautifully. She was in splendid voice. Mr. John McCormack as Rodolfo sang with skill and effect; while Signor Sammarco, M. Marcoux, and Signor Malatesta, as Marcello, Colline, and Schaunard respectively, contributed to the success of the evening. Mlle. Borzy, the new Musetta, was disappointing. Signor Campanini conducted.

BECHSTEIN HALL.—*Herr van Dyck's Recital.*

HERR ERNEST VAN DYCK, the great Wagner singer who has often been heard at Covent Garden, appeared last Saturday afternoon at Bechstein Hall as an interpreter of German *Lieder* and French songs. It was, in fact, his first recital in London. He is a powerful actor, while his style of singing, even on the concert platform, is thoroughly dramatic. His strikingly clear diction deserves special mention. The programme included a group of Schubert's songs. One of these was 'Der Doppelgänger,' and of it a forcible, highly impassioned rendering was given. Here the singer's dramatic gift served him to good purpose, though the hall was not large enough for such an intense delivery of the music. 'Hark, hark, the Lark,' which immediately followed, requires gentler treatment than was accorded to it by Herr van Dyck. There was not sufficient restraint. In some other songs the line between lyrical and dramatic was not sufficiently observed, but this we set down to the singer's extreme earnestness, and not to carelessness.

Mr. Gerald Maas, a new 'cellist, with the assistance of Herr Coenraad van Bos, gave an excellent rendering of Strauss's Sonata for 'cello and pianoforte, Op. 6. When the composer wrote it he followed the forms and phraseology of the classical period. Except for one or two touches in the slow movement, there was nothing to remind one of the Strauss of to-day.

QUEEN'S HALL.—*Dr. Serge Barjansky's Concert.*

A SEASON or two ago the 'cellist Dr. Serge Barjansky (Ainé) appeared at the new St. James's Hall, and his clever and brilliant playing won him a legitimate success. On Monday afternoon he gave a concert with the assistance of the London Symphony Orchestra under the able direction of Prof. Müller-Reuter. Again he proved himself a sound musician, and possessed of excellent technique, yet he did not create quite such a strong impression as on the previous occasion. The tone he produced was not so clear and bright; he may have been playing on a different instrument. Then his programme was not over-exciting. Violinists have certainly been more favoured than 'cellists in the matter of concertos. The first he performed was Haydn's in D, which sounded rather mild after Beethoven's great 'Leonore' Overture, No. 3, of which a very fine rendering was given, although the Introduction was taken at a slower rate than usual, and not altogether to the advantage of the music. The second concerto was Lalo's in D, which is not one of the French composer's most taking works. Last came the first performance in London of a Concerto in E minor and major by Friedrich Gernsheim, a well-written and pleas-

ing, though conventional work, and this was effectively played by the concert-giver.

QUEEN'S HALL.—*Mr. J. Wertheim's Orchestral Concert.*

ON Tuesday evening Mr. Jules Wertheim gave an orchestral concert, the whole programme being devoted to his own compositions. First came a Symphony in E minor, finely performed by the London Symphony Orchestra under the direction of Mr. Hamilton Harty. The middle movement, a light and engaging Scherzo, could be listened to as abstract music, but in the first and last sections of the work there were many features which plainly showed that the composer had worked with some dramatic programme in mind, though he was unwilling to reveal it. This was unfortunate, for we found it impossible to understand the meaning of much that proved difficult. Mr. Wertheim played, and with no little skill, six Preludes, in which there were good ideas, weakened, however, by undue repetition of phrase or figure. These were followed by Variations on a Theme, more remarkable for originality than for interest.

Musical Gossip.

SIR HENRY J. WOOD, after considering the invitation recently made to him to conduct the Philharmonic Orchestra of New York, has decided not to leave England. His Symphony and Promenade Concerts, his festival engagements at Birmingham, Norwich, and Sheffield, are all ties which bind him to his own land. The American proposal was tempting and flattering, and the news that it has been declined will be received with general satisfaction.

MR. J. A. FULLER MAITLAND, who is retiring from the post of musical critic of *The Times*, will be entertained on June 14th at a dinner arranged by the Concert-Goers' Club in conjunction with the Playgoers' Club. The Lord Chief Justice will take the chair.

M. RACHMANINOFF will appear at the first concert of the hundredth season of the Philharmonic Society, and at a later one the boy-violinist Sigmund Feuermann will make his first appearance in England.

THE COVENT GARDEN SYNDICATE has decided to produce Wolf-Ferrari's one-act opera 'Il Segreto di Susannah,' which has recently been given at the Metropolitan Opera-House, New York, with marked success.

SIGNOR PUCCINI is in London, superintending the final rehearsals of 'The Girl of the Golden West,' the first performance of which will be shortly announced.

THE annual Feis Ceoil was held in Dublin this week, and attracted large numbers of competitors from all parts of Ireland. A new feature of the programme was the "Esposito" prize for advanced piano-playing, which was won by Miss Edith French.

THE revision by Dr. Hugo Riemann of Thayer's third volume of 'Beethovens Leben' has just been published by Messrs. Breitkopf & Härtel. This completes the revision of Thayer's volumes, the first of which appeared forty-five years ago.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Royal Albert Hall.
—	National Sunday League Concert, 3.30, Queen's Hall.
MON.—SAT.	Royal Opera, Covent Garden.
MON.	Madame Clara Butt and Mr. Kennerley Rumford's Vocal Recital, 3, Queen's Hall.
—	Herr Ernest van Dyck's <i>Lieder</i> Recital, 3, Bechstein Hall.
—	Mr. Hubert Bromilow's Vocal Recital, 3.15, Eolian Hall.
—	Harold Bruer and Achille Rivarde's Sonata Recital, 8, Bechstein Hall.
—	London Symphony Orchestra, 8, Queen's Hall.
—	Miss Eugénie Ritté and Miss Phyllis Emanuel's Vocal and Pianoforte Recital, 8.15, Eolian Hall.
TUES.	Miss Anna Mather's Recital, 8.30, Steinway Hall.
—	Miss Elise Grosholz's Song Recital, 3.15, Eolian Hall.
—	Prof. Petschikoff's Violin Recital, 3.15, Bechstein Hall.
—	Madame Gerhardt's Vocal Recital, 8.15, Eolian Hall.
—	Miss May Levy's Pianoforte Recital, 8.15, Eolian Hall.
WED.	Wilhelm Sachse's Orchestral Concert, 8.15, Queen's Hall.
—	Herr Kreisler's Violin Recital, 3, Queen's Hall.
—	Mr. Albert Spalding's Violin Recital, 3, Bechstein Hall.
—	Olga de la Bruyère's Vocal Recital, 8.15, Bechstein Hall.
—	Miss Winifred Ponder and Miss Adela Hamaton's Vocal Recital, 8.15, Eolian Hall.
THURS.	Madame Gertrude Hubbard's Vocal Recital, 3.15, Bechstein Hall.
—	Mr. Ernest Schelling's Pianoforte Recital, 3.15, Queen's Hall.
—	Miss Maggie Teyte's Vocal Recital, 3.15, Eolian Hall.
—	Philharmonic Concert, 8, Queen's Hall.
—	Miss Marion Phillips's Pianoforte Recital, 8.15, Eolian Hall.
FRI.	Mr. Paul Reimers's Vocal Recital, 3, Bechstein Hall.
—	Mr. Ernest W. Gilchrist's <i>Matinée Musicale</i> , 3.15, Eolian Hall.
—	Mr. Harold Bauer and Mr. Achille Rivarde's Sonata Recital, 8, Bechstein Hall.
—	Signor Emilio Pente's Concert of Eighteenth-Century Italian Music, 8.15, Eolian Hall.
SAT.	Godowsky's Chopin Recital, 3, Queen's Hall.
—	Dorothea Walwyn and Percival Garratt's Violin and Pianoforte Recital, 3, Eolian Hall.
—	Madame Julia Culp's Song Recital, 3.15, Bechstein Hall.
—	Folk-Song Quartet, 8.15, Eolian Hall.
—	Miss Lily Rendle's Concert, 8.15, Bechstein Hall.

DRAMA

THE WEEK.

CORONET.—*Much Ado about Nothing.*

THE SHAKESPEARE FESTIVAL at the Coronet has now come to the end of its second week, and 'As You Like It' has been replaced in the bill by 'Much Ado about Nothing.' The qualities of acting which made the revival of the former play so delightful have been no less evident in the second production. Youthfulness and the high spirits which should accompany youth are once more prominent in Mr. Robert Arthur's stock company, and in consequence the play goes with welcome swing and pace, and the actors seem to take a keen enjoyment in their game of make-believe.

Miss Alice Crawford seems even more at home in the luxurious surroundings and gay moods of Beatrice than in the masquerade of Arden. She wears the rich gowns of that favourite of fortune, and the sunny gaiety of Beatrice's temper evokes a response which seems refreshingly natural and free from artifice. This "Lady Disdain" dances her way, as it were, through her scenes till the moment of seeming tragedy arrives, and then her anger is startling in its impressiveness. The passion of her "Kill Claudio!" produces a thrill which no other Beatrice of our time has been able to effect, and the whole tirade that follows the outburst is given with a dignity and a vehemence other Beatrices have usually missed.

There are faults in Miss Crawford's reading of the character: she is at times too boisterous in her methods, too arch with her smiles, and not sufficiently tender in the love-scenes; but who cannot grant indulgence to the ardour of youth?

Hardly less surprisingly good is the Benedick of Mr. Frederic Worlock, surely one of the youngest Benedicks ever seen. His acting is pitched in a quieter key than that of Beatrice; he is at his best listening in the arbour to that talk which converts the soldier and the wit into a puzzled lover, or in rallying his sweetheart after marriage or his insistence upon the dance which brings the right note of frolic at the end. Here is shown a ripeness of humour unusual in an actor of Mr. Worlock's years, and throughout he gives evidence of thinking out his part for himself. The Hero of Miss Dorothy Green is charmingly girlish, and pathetic in the slandered bride's appeal to her father; Mr. Sargent's Claudio is manly enough; Mr. Owen Roughwood as Don Pedro and Mr. Clifton Alderson as Leonato are alike admirable; and there is freshness about Mr. Ben Field's treatment of Dogberry.

The setting and stage-management are first rate; especially commendable is the arrangement of the church scene, in which spectacle and business are duly looked after, but never permitted to interfere with the development of a fine dramatic climax. Somehow the conventionality of the Hero and Claudio episodes seems less glaring at the Coronet than in previous revivals of 'Much Ado'—perhaps because the bulk of the performers are so young and so much in earnest.

Dramatic Gossip.

MR. LAURENCE IRVING will produce next Saturday at the Duke of York's Theatre a new play entitled 'The Life and Adventures of Margaret Catchpole.'

THE Irish company from the National Theatre Society of the Abbey Theatre, Dublin, will be seen at the Court Theatre in a repertory of their most popular pieces. Their season opens on June 5th, and will last four weeks.

MR. HEINEMANN is publishing for Mr. Daniel Frohman, who has exercised a commanding influence on the modern stage, 'Memories of a Manager.' Incidentally the book is, we learn, to explain why plays fail and succeed.

AN interesting article by Mr. Bram Stoker in the current *Nineteenth Century*, on 'Irving and Stage Lighting,' shows how much Sir Henry did by his personal care and skill to improve methods of illumination in the theatre.

IN *The National Review* for this month an anonymous writer is severe on the views managers hold concerning criticism—views which have led him after five years to give up noticing plays in the press.

THE SHAKESPEARE COMMEMORATION LEAGUE held one of its meetings last Saturday evening in Crosby Hall, now removed to

Chelsea Embankment. The entertainment consisted of morris dances, children's singing and dancing games which have come down from the time of Shakespeare, and folk-lore stories and songs. Lady Gomme had arranged the proceedings; but each of the departments was presided over by its special superintendent. The Morris dances of the students of the School of Physical Culture were much admired; and Miss Sheddock's story-telling to the children was most effective. Among the guests of the League were Lady Gregory and Mr. Yeats, fresh from the performances of their Irish plays at Stratford.

THE LEAGUE also held on Monday a Symposium in remembrance of Dr. Furnivall, late President. Owing to difficulties connected with the holidays, the Secretary could not get the notices printed as early as usual, and the audience was comparatively small. Many distinguished scholars, however, sent letters regretting their inability to be present, and expressing their keen appreciation of Dr. Furnivall. Sir Edward Brabrook took the chair, and among the speakers were Mr. Ordish, Mr. Poel, Mr. De Courcy Laffan, Mr. Ernest Law, Miss Fox, Miss Spurgeon, Mrs. Stopes, and Prof. Boas.

MESSRS. BELL'S BOOKS.

NOW READY, 2l. 2s. net.

ENGLISH PASTELS

(1750-1830).

By R. R. M. SEE.

A critical and biographical study of upwards of one hundred artists who painted in coloured chalks during the second half of the eighteenth and the beginning of the nineteenth centuries.

LIMITED EDITION OF 750 COPIES.

4to, bound in white forel. Containing 20 Full-Page Plates in Colour and 40 in Black and White.

NOW READY, post 8vo, 6s. net.

GOTHIC ARCHITECTURE IN ENGLAND AND FRANCE.

By GEORGE HERBERT WEST, D.D. A.R.I.B.A.

Vicar of Selsley, Gloucester,
late Head Master of St. Christopher's School, Eastbourne.

With about 250 Illustrations from Photographs by the Author and others.

NOW READY, post 8vo, 6s. net.

HOW TO UNDERSTAND SCULPTURE.

A Handbook for the Amateur.

By MARGARET THOMAS.

With 40 Full-Page Illustrations and Photogravure Frontispiece.

(Uniform with 'How to Look at Pictures.')

Illustrated. Medium 8vo, xii-632 pages, 16s. net.

WILLIAM PITT AND NATIONAL REVIVAL.

"Dr. J. Holland Rose has an acknowledged place among the very first of living historians, and this splendid volume—a really remarkable addition to historical biography—may perhaps be regarded as his finest achievement....The careful scholarship and literary charm of this fine work should delight many readers, and make them look forward with interest to Dr. Rose's promised study of 'William Pitt and the Great War.'"*Daily Telegraph*.

"It is the most complete study of the first half of Pitt's divided career which has been published. Dr. Rose is saturated with his subject. It is enthralling to read the very names of the events of that age when Pitt was restoring the crumbled designs of his great father, and Dr. Rose, who handles history with a confident yet scrupulous touch, adds to the fascination."*Spectator*.

NOW READY, crown 8vo, 2s. 6d. net.

PATRIOTISM.

A Biological Study.

By H. G. F. SPURRELL, M.A.

In this volume the author has set himself to explain the natural history of patriotism, making an attempt at scientific investigation of a subject which usually receives purely emotional treatment.

NOW READY, post 8vo, 4s. net.

LITERATURE

Revolutionary Ireland and its Settlement.
By the Rev. Robert H. Murray. With an Introduction by the Rev. J. P. Mahaffy. (Macmillan & Co.)

THIS volume deals with an important chapter in Irish and English, and indeed European, history. It tells the story of the "Revolution" in Ireland—the stand which the Irish made in favour of James II. against William of Orange, the failure of the movement, and the after-fruits of that failure in the penal laws. Be it said at once that the value of the book lies in the specialization of its scholarship and the development of detail. It is necessary to state this because the author seems to claim much more for it, and Prof. Bury's letter of courteous approval which follows an interesting "Introduction" by Prof. Mahaffy might tend to give the same impression.

The fact that Ireland was used as a pawn in the game of Louis XIV.'s diplomacy is surely now well-known in classrooms. Dr. Murray seems to contend that he was first among scholars to realize the issues at stake. These are excellently summarized by Prof. Mahaffy: "It was a conflict between liberty and despotism, between Protestantism and Popery, nay, even between Gallicanism and Vaticanism, as Dr. Murray amply shows." Dr. Murray supplies a detailed study of the subject, emphasizing throughout his "European Thesis"; and the note of triumph which

ushers in the volume should not discourage the fastidious reader, who will admire the thorough handling of the theme and the sound scholarship of the work.

Dr. Murray takes us at every step to the bedrock of manuscript and contemporary sources. His diligence in consulting these has been remarkable, and it is a pity that he has not furnished in his Bibliography a critical appraisal of their relative values. It is a pity, too, that the "authorities" obtrude so much on the text. We get long quotations where a statement of fact, with a foot-note to indicate the authority, would have been as effective and much more pleasing. It is tiresome to find statements on matters of fact which no one would question quoted at length from Klopp's 'Der Fall des Hauses Stuart.'

This is the more regrettable as it gives an impression of dependence which the author's realization of his subject belies. Not only does he appreciate keenly men and motives, the cynical half-heartedness of Louis in the Jacobite cause, the almost equally cynical support which the Irish Catholics gave to James (for neither French nor Irish desired his restoration to the English throne, but used him for their own ends); but he has also an excellent appreciation of the larger forces at work in the Europe of that period, and the ability to make situations clear. We may mention his account of the revival of Catholicism at the end of the seventeenth century, when "Leopold in Hungary, Louis in France, and James in England" attempted to create a second Counter-Reformation. The difference between the orthodoxy of Leopold and the Gallicism of Louis and of James is admirably brought out. In fact, the whole of the first chapter on 'The European Aspect' is excellent reading.

The narrative of the preparation for war and the accounts of the actual engagements are vivid, though the illustrative plans of battles are not very helpful. It is only when its history is treated thus in detail that a clear idea can be gained of the poverty of the Ireland of the time. Tyrconnel met with heartbreaking difficulties in arming men. It is interesting to hear out of the mouths of Irishmen of both parties the harm which the war worked in a country just beginning to prosper under a rule which had, however, not been sufficiently long established to withstand a period of upheaval. Illustration of this sort Dr. Murray provides in abundance. "From the most improved and improving spot of earth in Europe; from stately herds and flocks; from plenty of money at seven or eight per cent" (he quotes from Chief Justice Keating), Ireland had fallen "to the saddest and most disconsolate condition of any kingdom or country in Europe."

The history of Ireland after the defeat of James is the history of the penal laws, and Dr. Murray is concerned, perhaps over-anxiously, to show how these too were born of the European situation, and were the direct outcome of the French peril;

for long after Ireland had ceased to support in any serious sense the cause of James, Louis sought by privateering and other methods to hamper William at home, and so divert his attention from the French aggressions in Europe. That the penal code was not, as Irishmen have said, purely an outcome of religious bigotry may be granted; but we doubt if Dr. Murray's view of it as a mere method of political defence will bear examination. The motives which produce such codes are subtle and complex, but we may be sure that the men who passed these laws were moved by the whole-hearted hatred of Rome and all its works which was for so long characteristic of English Protestantism, as well as by fear of the political pretention of Rome, which was to them but one manifestation of a system wholly corrupt. It has yet to be proved that the penal code was mere "panic legislation," though it is indisputable, as Dr. Murray claims, that the law was not enforced to the letter, a fact sometimes ignored by earlier historians.

It is in the discussion of questions of this sort and in his references to general history that Dr. Murray seems to us least happy. In the first place, he digresses too often and too lengthily. Even if it be granted that the penal laws in Ireland were modelled on the French legislation against the Huguenots, there was surely no need of three pages of description of the sufferings of these people, followed by two pages of quotation from contemporary lamentation on the subject.

Again, it seems absurd to bring the actions of James II., the most limited of men, to the touchstone of a saying of Newman that "he found it difficult to make an Englishman take a dogmatic position"; and Charlotte Corday's ejaculation, "O Liberty, what crimes are committed in thy name!" does not appear particularly apt as a comment on Louis XIV.'s pleas of religious motives in the furtherance of his political ambitions.

We do not look in a volume of this quality for moral reflections such as "Lost opportunities do not recur," or expect a verse from Macaulay (with the inevitable "The poet sings") to emphasize the contrast between Ireland's neglect of her heroes, as of the brave twenty-two at the siege of Athlone, and the pride of patriotism which inspired the Romans of old.

These questions of judgment illustrate a certain diffuseness of treatment throughout the book, and there are awkwardnesses and ambiguities which mar the style. The name "Williamite" to describe the supporters of William is unpleasing. To the fact that James was regarded as a mere pawn in the game by Louis Dr. Murray thinks it worth while to add the reflection: "If pawn and piece could move of themselves as well as be moved, how complicated the game of chess would be!" It would require more than the quotation of a reputable modern authority to convince us that "we must never imagine that in mediæval times the question of the relations between

the Church and the State arose," but merely the question of the relations between the temporal and spiritual powers. Nor can we agree with the statement (again supported by authority) that "the judicious use of the veto resting in the four Roman Catholic powers effectually succeeded in hindering any great personality sitting on the throne of St. Peter from 1644 to 1750." It is certain that the period saw no Hildebrands or Innocents, but surely Benedict XIII. made his mark on history, as on Rome; and why choose the arbitrary date of 1750 as the end of the period, when this was the mid-point of the papacy of Benedict XIV.?

In his treatment, however, of the real theme of the book, the author is sure and accurate, and he is to be congratulated on having produced a solid contribution to the history of his country.

The Pursuit of Reason. By Charles Francis Keary. (Cambridge University Press.)

THERE is a great deal that is profound and attractive in Mr. Keary's book, and it deserves special consideration by reason of the breadth of his philosophical and practical interests. There can, we think, be no doubt that the First Book ('Pure Reason') is the most important part. In this Mr. Keary has developed an argument which, though in essentials not original, and in detail a little cursory, nevertheless impresses us by its freshness and clarity. The whole book, indeed, reflects the spirit of its title, and there is no other half so readable in which the necessary work of the "watchdog of the sciences" has been performed for the non-technical reader.

Mr. Keary's main thesis is that the explanation which science yields is limited to such things as are measurable, and that there remain outside of its furthest range matters which are not subject to scientific "proof," but to which its methods have nevertheless been frequently applied in despite of reason. "Neo-Darwinism," "Evolution misunderstood," the theories about science and its scope which are to be found in the writings of Herbert Spencer, W. K. Clifford, or Prof. Karl Pearson, provide Mr. Keary with a large target. He hits, however, very near the centre, and scores well.

The distinction between "demonstrable" and "undemonstrable" reason is the crux of the argument. Language, for obvious historical reasons, is much more precise as regards objects of sensation than as regards things of the mind, and this fact makes science more demonstrable, but does not confer upon it more of reasonableness or a nearer approach to truth. To prove that Shakespeare is a greater poet than Longfellow would obviously be a task hard almost to impossibility; yet it is as true as that water is composed of oxygen and hydrogen. The "artistic reason"—the *φρόνησις* of Aristotle—has as great

a claim to be accounted "reason" as the method of science. What is the nature of reasoning in science? If we turn from Spencer, Lewes, or Prof. Pearson to the writings of M. Poincaré, we find that arithmetic itself—the basis of measurement, which is the basis of science—depends upon the "principle of recurrence"—upon abstraction. Mathematics is the ideal form of logic, but only because we can reason on mathematical forms independently of real content. It is only because Napoleon's knowledge of what the Archduke Charles would do cannot be so set forth that it is not explicable by "science." To take measurement as the test of truth is, then, a patent fallacy, and the pursuit of reason is not to be abandoned merely because measurement has its limits.

It will be seen from the above that Mr. Keary has put forward a distinction which involves a system of logic. We cannot pretend that he has followed up his argument by a satisfactory account of "artistic reason" or of its canons, if it has any. Dr. Ward, in his Gifford Lectures, cut more deeply into the principles of science; and the critical attitude adopted by Mr. Keary towards the "demonstrable reason" seems to us to require some further justification than he has given—some statement of the problems which the "artistic reason" is required to solve, and the connexion between the reason and these problems. We cannot regard the Second Book as in any way filling the gap. That it is as interesting as it is discursive, containing much sound commentary on the State, the Church, and on men and manners, is undeniable. But it is notably unsystematic; it rests far too much upon the well-known distinction between judgments of existence and judgments of content; and it deserves the title of 'Applied Reason' no more and no less than any other reasonable work on theology, politics, or metaphysics. The application sheds no light upon the author's theory of reason. It gives no hint which might enable the reader to carry further the distinction between demonstration and reason, or to guess at the chances of relating the reason in the one to the reason in the other, or to relate either to a coherent philosophy in which truth in its different aspects or degrees might be exhibited as one.

My Balkan Tour. By Roy Trevor. (John Lane.)

Two friends married each other's sister, and all four, becoming bored (like Ouida's hero and heroine) with a rainy June in England, suddenly resolved to bring out Mercédès from her shed and go motoring in the Balkans. In five days they were off, and this book is the record of their experiences. Without wearying us with their traverse across Europe, they begin in Croatia, and carry us into Bosnia as

soon as possible, and that with a 70 h.p. Mercédès is very soon indeed. The book is addressed primarily, though not ostensibly, to the motorist; but it has a wider appeal. The adventurous motorist, however—and none who is not adventurous and also more than commonly resourceful and cool-headed should face the difficulties of the Balkan roads, as the author points out in some serious words of advice at the end of his book—could not do better than make Mr. Trevor his guide for a tour in Bosnia, Herzegovina, Montenegro, and Dalmatia.

It was not the author's first drive there, and his cumulative experience enables him to indicate the best roads, of which there are not too many, by happy comparison with the worst, in which he had more than his share of "incidents." We do not refer to mere explosions of tyres though to ruin all four in one short stage was sufficiently vexatious, or occasional agonies of petrol-drought, or the almost universal absence of garages; but we allude to the obstacles of the road, which in a land where motors are unknown—or were till Mr. Trevor made his pioneer excursion—are constant and perilous. We must quote one or two of these "incidents," lest the inexperienced should too greatly dare. The first occurred near Gospeć in Croatia:—

"There is an elbow bend. The whole road is quite visible.... As we were descending we saw upon the bend three pair-horse carts, each carrying a heavy barrel probably containing water, as that liquid is somewhat scarce in the hill villages. We arrived together at the spot where the old road cuts the bend, that is about eighty yards from the elbow. The carts drove on to the grass off the road, and we pulled well to one side and stopped Mercédès. There is no doubt if the first driver, a heavy powerful Slav in long sheepskins, had taken care he could have got his animals past as did his two companions. But he was careless, trying to bluster them along and taking no heed of their danger signals. Rodgers and Ken were jumping down to seize the horses' heads, when the animals reared high upon their hind legs, and swinging round to the right bolted down the old track, the cart swaying and bumping against the rocks.

"The man may have been a fool, but he was no coward. With a leap as quick as theirs, he had the near horse by the bit, and tore down the rough slope hanging gamely on. Like a flash they crossed the road below; the cart, catching a stone, threw the barrel into the air (it must have contained three-quarters of a ton of water), which, falling to the ground, went down the slope in great bounds straight for the precipice edge. If once it had reached this edge, it must have dropped five hundred feet on to a village nestled beneath [where they afterwards saw children playing about the doors]; by a miraculous intervention of Providence it struck a boulder and flew to pieces, sending a sheet of water into the air. At the same time the cart hit another boulder and fell upon its side. The man, letting go his hold, rolled clear, thank Heaven, and the horses, checked by his pluck, stopped not a hundred yards from the edge. That was a bad minute, for, though in actual time it occupied no more,

to us, sitting in Mercédès, it seemed an eternity....I know that my hair was wringing wet when I took off my hat."

The other "incident" that chiefly struck us was on the road to Jajce, when a party of six Austrian soldiers, driving a heavy pair-horse wagon, got into difficulties. The horses displayed their usual danger signals, and then

"one 'Tommy' jumped out, and seized the near horse by the bridle, endeavouring to lead it past; he was thus between the horses and the jagged wall of rock, and as we clearly foresaw the results we tried to explain in German. Taking no notice whatever, the soldier who was driving stood up in the cart and savagely lashed the horses about the head. Rearing and prancing in fright, the horses drew level with Mercédès' bonnet; then they plunged forward, at the same time shying violently into the great wall of rock, jamming the soldier between them. We saw the heavy waggon apparently smash right into him, with a grinding noise pierced by his shrill scream. Ken, Rodgers, and I were out upon the road the next moment, and witnessed a scene unique in my motoring experience. The driver still clung to the reins; three of the soldiers had been flung to the floor of the waggon, while the sixth, he who had been sitting alongside the driver, had been thrown over the dash-board; his feet had caught in something, and there he hung, head downwards, dangling between the horses' hoofs. While we watched, the hold of his legs gave way, and he fell upon his face headlong between the now galloping horses. Instantly the front wheel passed over his back from his left armpit to his neck, but ere the back wheel could reach him he wriggled madly aside and avoided it; then lay inert upon the road. Instead of stopping, the driver continued to lash away at the horses, and Ken and I, our hearts sick with what we had seen, rushed forward to render what assistance lay in our power and gather up the remains. The man whom we imagined ground to pulp against the rock recovered immediately, and bolted down the road for his very life; and ere we could reach the man who had been run over, the huddled figure on the dusty road gathered itself together and made tracks after his companions. Meanwhile the cart, urged on by the frantic driver, had disappeared round the corner, and a minute later the two soldiers reached the turn, and, without even looking back, vanished for ever from our sight."

The ladies of the party must have possessed amazing nerve, for it was not always only the traffic that was the danger: there were fearful climbs over the Semeč range, where Mr. Trevor records "gradients of twenty-five and thirty per cent"; and the mountain roads east of Višegrad (where his was the first English car to arrive) were even more appalling; to say nothing of unknown, unmapped, cart-tracks, with perpetual zigzags, when he tried short cuts. It is clear that his passengers had full confidence in Mr. Trevor's driving, and, to judge by his triumph over almost incredible obstacles, he fully deserved it.

But the book is much more than a chronicle of motoring hazards. It gives an admirable description of the scenery and the people. The travellers stopped

for days together at various towns, and were thus able to gather many impressions to add to their earlier experience. Mr. Trevor's opinion of Austrian rule in the now annexed provinces is highly appreciative. In spite of the prediction of a Roman Catholic bias, he says,

"without preference, she has given absolute equality to every creed and race, Moslem, Jew, Roman, and Orthodox; there is no favouring one at the expense of the other.... Austria has undoubtedly done wonders for these countries, built roads and railways, schools and courts of justice, placed all creeds upon a perfect equality,—in other words, has given them civilisation."

Best of all, perhaps, is Mr. Trevor's account of Montenegro, his just admiration for the firm and wise rule of King Nikolas, and his shrewd judgment of the modern Montenegrins, whose one profession of arms is at a discount, and who have contentedly resigned themselves to idleness and cigarettes. He penetrated into regions of the Black Mountain where few travellers have been before, and he was indulged with unusual privileges of photography, &c., thanks largely to the friendly countenance of the Montenegrin Minister for Foreign Affairs, M. Ramadamavitch. The photographs which illustrate a text (in itself vividly descriptive) are superb.

The book is written in an easy, undistinguished, narrative style, agreeable to read. We would advise the author to avoid the frequent repetition of the adjective "weird," and not to use "transgress" for "digress," or "ostensible" for "ostentatious." Muezzins, by the way, are not "priests," nor does "the muezzin ring out." "Allah la-Allah" is unwittingly a profession of atheism, but the author has it better transcribed in another place.

A Woman of the Revolution: Théroigne de Méricourt. By Frank Hamel. (Stanley Paul & Co.)

THE author has not anything like so good a subject in the present work as she had in her last book; and the "inequalities" which she confesses to in her Preface are certainly to be found in the text. Still, Frank Hamel has done the best she could with somewhat scanty material, and striven hard to discriminate between fact and fiction.

It is clear that the part played in the Revolution by the so-called Théroigne de Méricourt—her real name was Anne Josèphe Terwagne, and her native place Marcourt in Luxemburg—has been much exaggerated and her character unduly blackened. None the less certain it is that she was credited by her royalist contemporaries with such influence that it was thought desirable to have her kidnapped, shut up for nearly a year in an Austrian fortress, and examined in person both by Kaunitz and the Emperor

Leopold II. himself at Vienna, as well as by a magistrate at Kufstein. The kidnapping was carried out by two French *émigrés*, but it appears to have been authorized by the Comte de Mercy-Argenteau, Governor of the Austrian Netherlands, from which territory Théroigne was taken first to Freiburg in Breisgau, and thence to Kufstein in Tyrol. The French credited the prisoner with the chief part in the march of the women to Versailles and the invasion of the château on October 5th and 6th, 1789, and even with an attempt to assassinate Marie Antoinette; whilst the Austrians seemed to have suspected her of being a revolutionary agent employed by the Parisians to stir up Brabant a year later. It appears probable that one of her reasons for leaving Paris in the autumn of 1790 was fear of arrest for the doings of October; but the Austrian authorities ordered her release at the end of 1791, apparently satisfied with her denials of political activity in their territory, and at any rate unable to find any definite evidence of it.

Such knowledge as we have of the early life of Théroigne (who was arrested as "Madame Théobald," and designated "Madame Lahaye" in Vienna) is based almost entirely upon her "confessions" to the examining magistrate at Kufstein. Their apparent artlessness is somewhat suspect. It may be gathered, however, that the peasant girl had but little education, left her home early, had amatory adventures and musical ambitions; acquired some sort of fixed income, probably from no very creditable source; lived for some time in England, and went with Tenducci on a musical tour to Italy; and, after being cheated by him in a fraudulent contract, returned to France on the eve of the Revolution. Despite her assumption of innocence, it is pretty clear that the Marquis de Persan was Théroigne's protector, and a very long-suffering one, who allowed extraordinary latitude to the "demon of music" and other more material rivals. Another fact which emerges is that the revolutionary Amazon had strong family affections, and solicitously pushed the fortunes of her somewhat ungrateful brothers. What part her personal magnetism exercised over her judge and jailer, who allowed her a piano and a certain amount of forbidden correspondence, it is difficult to estimate; it is manifest at least that they thought their prisoner no virago.

Undoubtedly Théroigne's revolutionary activities have been antedated. So far was she from having taken a leading part in the capture of the Bastille that her name even is not inscribed among the six thousand "citoyens vainqueurs"; and she does not emerge prominently till three days later, when, "dressed in a white riding habit and a neat round hat," she marched with the soldiers to meet the King.

Her doings during the October days have been at least exaggerated. She appears to have been at Versailles when the women

started from Paris ; during the night of the 5th, when she was accused of breaking into the palace, she declares that she slept. In the Châtelet inquiry, on the report of which a warrant for Théroigne's arrest was issued in August, 1790, few depositions related to her directly ; and, as the author says, "the accounts vary so much, and are so vague, that very little weight can be attached to them." Yet there must have been some fire to account for all the smoke which surrounds this woman not only in royalist pamphlets, but also in the accounts of Lamartine, Carlyle, Michelet, and the rest : at "a civic banquet" held in March, 1793, we hear of her swearing by "my deeds of October 6th."

Such little success as Théroigne attained as a revolutionist she won as an orator. The club of which she and Gilbert Romme were the moving spirits, and of which Maret (the future Duc de Bassano) was a member, was a failure. Its objects were too ambitious, and it was mercilessly ridiculed by the satirists of the *Actes des Apôtres*. She herself admitted that she had not enough talent or experience to carry it on. Nor was her attempt to organize in Paris a battalion of women warriors analogous to those which had been raised in the departments more successful. Whilst recruiting in the Faubourg St. Antoine she was threatened with violence, and had to retire under escort of the National Guard, after giving a promise not to return. Théroigne, it seems, was not popular with her own sex, and soon began to be suspected of "moderation." She was never, as the Royalists represented, one of Robespierre's *tricoteuses*, though an assiduous attendant in the galleries of the Assembly.

Théroigne, however, belonged to some of the Sociétés Fraternelles des deux Sexes, and was an active member of the Société Fraternelle des Minimes, of which Tallien was president. Frank Hamel thinks her heroine understood men better than women, "and was perhaps not tolerant enough of feminine scruples nor faithful enough to the laws of social convention." Some curious particulars of the associations of "girl patriots" which were formed during the Revolution are given in the book. Some of these young women held meetings and harangued their mothers. The "generosity" which, we are told, was "a prevalent quality" among the patriotic women, seems sometimes to have been at the men's expense, to judge by the female fury which followed a certain mayor's refusal to offer his watch upon the altar of the country.

Amongst other accusations against Théroigne which may be classed as calumnies is the story of her taking the lead in the pillaging of Bellevue, the residence of the King's aunts, on February 19th, 1791. At that time she was not in France. Nor is there really any substantial reason to suppose that she was concerned in the invasion of the Tuileries by the mob on June 20th, 1792, though her friend Mayor Pétion was much in evidence that day.

She was certainly, however, conspicuous on the 10th of August, when the monarchy was destroyed. She cannot be acquitted of participation in the death of Suleau on that day, although there may be nothing in the legend of a grievance more personal than vilification in the press. "In her normal state," the author assures us, Théroigne was not cruel ; but "the best evidence" of her innocence of participation in the September massacres is, perhaps, her attachment to Brissot and the moderate party.

After August 10th, 1792, until the following May, we virtually lose sight of this woman of the Revolution. At the latter period she issued an appeal for unity to the Forty-Eight Sections of Paris—an appeal which was her swan-song. The central idea in this document was that in each section there should be chosen "six of the most virtuous citizenesses, the gravest for their age, to conciliate and reunite the citizens, to remind them of the dangers by which the country is threatened." These ladies were to wear a wide sash, inscribed with the threefold revolutionary watchword, and were to call to order "every citizen who stands aside and does not respect the liberty of opinions." The reward, be it noted, was to be "a special place at our national fêtes," and the superintendence of "educational institutions consecrated to our sex." But the author of the proposal was now definitely associated with the Girondists, and the next we hear of her is as being mobbed as a Brissotin by Montagnard women in the Tuileries gardens, and rescued from them only by Marat himself.

Two years before, when she was in her Austrian prison, a medical expert had detected signs of incipient madness ; in the autumn of 1793 she began to give manifestations of mental aberration ; and from the July of 1794 till the end of her life in May, 1817, she was under restraint, chiefly at the Salpêtrière. The only one of the once beautiful revolutionary courtesan's portraits which is undoubtedly authentic is the drawing made by Gabriel of her in the madhouse a year before her death.

Perhaps the most trustworthy description of her is that given by George Forster, of the University of Mayence, who saw her just after her rough handling by the revolutionary furies. He declares that Théroigne still retained some of her earlier beauty, and had "a simple, steadfast character full of spirit and enthusiasm." There was "something gentle in eye and mouth." Her French was fluent and energetic, though not altogether correct ; "her whole being was wrapped up in her love of liberty." Forster also praises her knowledge of Austrian affairs, and attributes to her "a strong thirst for instruction" and a wish "to supply the deficiencies of her education." Her account of herself was that she was no more than a peasant girl, but had a taste for learning.

Some revolutionary bias on the part of the author seems discernible in one or two passages, particularly that in which (p. 114) moderate royalists are described as "friends to despotism under the mask of moderation." The last paragraph of the book reads as though it were meant to convey the idea that Théroigne and Napoleon died in the same year. There are several misprints, notably that of the name of a Girondin leader.

NEW NOVELS.

Drender's Daughter. By Netta Syrett. (Chatto & Windus.)

To review Miss Syrett's novels is generally a pleasant task, for they nearly always testify to a steady development as regards both scope and treatment. She has achieved a striking creation in Nancy Drender, the peasant child with an inheritance of artistic genius, selected, through a singular misconception, as the subject of an experiment in wife-training after the example of the lamented Mr. Day, and incidentally doomed to the dreary futilities of education under "a good old-fashioned governess." A spontaneous and not altogether expected vein of humour marks the presentation of her character ; and the same is true of the philanthropic faddist her husband, who complicates his eugenic ideal of wifehood by fostering reactionary theories on female education. We admire the author's insight in realizing that natural inclination would rather have prompted this prig of the purest water to mate with a woman of his own mental calibre ; and in the end he finds a congenial partner, perhaps a little too good for him, while Nancy is left free to marry the man of her heart. The present reviewer is not sufficiently modern to welcome the expedient employed to effect this desirable reshuffling of the matrimonial cards, and treated by Miss Syrett as a matter of course, scarcely needing apology.

The One Way Trail. By Ridgwell Cullum. (Chapman & Hall.)

THIS story is rich in that "human interest" which makes for large sales. It is very long, full of incident and movement, and concerned throughout with passions and emotions which are common to all mankind. The scene is laid in a "city" in Montana, a tiny township actually, which serves as the centre and emporium of a wide stretch of cattle ranges. It is significant that, at the end, the principal characters are shown "hitting the trail" for Edmonton, in Canada—the country which is just now attracting so many thousands of settlers from the Western States of the American Union. The author handles primitive life with a practised and masterly hand. It is Bret Harte with a difference. There is a good

deal of sentiment; but we are not asked to suppose that cattle-men and prospectors are habitually courtly and chivalrous in their poker-playing, or graceful and picturesque over their drinking bouts. The drunkard and the loafer are here openly despicable and unpleasant. It is a wholesome narrative, a little disfigured, perhaps, by one character, a cripple boy.

Winding Paths. By Gertrude Page. (Hurst & Blackett.)

THE author of 'Winding Paths' writes from an inside view of things in two senses: on every page there is the touch that comes from knowledge; there is also the continual suggestion that the writer accepts life in much the same way as her characters, any of whom would "simply revel" in a story of this sort. It begins with two girls at a school where "growing girls are turned into presentable young women," and it follows them with an engaging intimacy through somewhat strenuous careers. Hal Pritchard, a hoyden, becomes a journalist, much against her guardian's wishes; and Lorraine Vivian, the beautiful and gifted daughter of a deplorable mother, marries an unprincipled rich man who is able to procure for his wife her rightful position as one of London's leading actresses. These incidents merely begin the story, which is very long, and told with considerable skill. Of its kind the book is as good as can be.

Suffragette Sally. By G. Colmore. (Stanley Paul & Co.)

THIS book, though it ranks as a novel, is more like a chronicle of the militant Suffragist movement, which, allowance being made for formal changes in names and such personal details, is reproduced with almost photographic accuracy. The standpoint adopted is frankly that of a partisan, qualified, however, by an obvious desire to deal fairly with policemen and other officials placed, as it is admitted, in a position of great difficulty; and the author's apologia for the "hunger-strike" and prison tactics generally deserves consideration, though it may not carry conviction. Sally herself, with her heart of gold and her touch of Cockney humour, is a charming character, and takes a strong hold on our affections.

The Garden of Resurrection. By E. Temple Thurston. (Chapman & Hall.)

IN his latest novel Mr. Temple Thurston has evidently set forth with a steadfast resolve to be whimsical and fantastic at all hazards. Probability is thrown to the winds, and the result, as Meredith might have said, is not "a revel of rough truth," but a veritable banquet of extravagance. The hero, who is disfigured by smallpox so greatly that women turn

from him with aversion, out-quixotes Quixote in his pursuit and championship of a girl of remotely negroid ancestry, whose name and circumstances are revealed to him by a conversation overheard by chance in a restaurant. When, betrayed and destitute, she eventually seeks him out, in spite of her previous prejudice against him, he tends and finally espouses her. It is a rather preposterous story told with some charm and agility, together with a certain firmness of touch that reminds us of the author's earlier and less sentimental work. His secession from the real to the aggressively pretty does not please us, although it may make for an increase in general popularity.

The Happy Vanners. By Keble Howard. (Cassell & Co.)

THE idea of a duchess adorned with high-heeled shoes, white kid gloves, and a lace parasol, setting out on a caravan tour in the rough and muddy lanes of Warwickshire is happy; and the presence of her husband provides ample opportunities for the display of "domestic humour." Her unmarried sister is cast for the heroine, and the narrator's self-constituted part is that of hero; but the matrimonial element is not emphasized too strongly. An artist who angers the natives by caricaturing them completes the party, and the tale of their adventures goes with a swing. The book as a whole is likely to amuse, but the author's occasional lapses into seriousness do not seem well-timed, and are therefore rather irritating.

The Marriage of Quixote. By Donald Armstrong. (Martin Secker.)

AN analysis of this novel discloses a number of cleverly contrasted elements. Against the hero, an impetuous poet, is placed Wilfrid Errington, of "the type that Oxford sends every year into... the public service," a young man who dares to hope that he may be remembered as the man who tied the best cravat in London; against the wise and tolerant guardian of this youth is set the intolerant father of the heroine; against the heroine the vicious character of a notorious actress, who lures the sedate Wilfrid far out of his proper path. And there are still subtler oppositions, the total result being to produce an excellent effect. The narrative deals mainly with the vicissitudes of the poet in the course of his high-spirited career in London. He has genius and a number of delightful friends (he is, himself, a delightful person), but no money. The young woman with whom he falls in love exercises a material influence upon his literary development. The vigour of the writing and the precision of the characterization raise this work far above the ordinary level, though it is somewhat affected in style.

Ruth Werdress, Father O'Haran, and some New Christians: an Anglo-Irish Tale. By John Godwin Fitzgerald. (Blackwood & Sons.)

IT is, no doubt, the case that a marriage is not in English law invalidated by previous vows of celibacy, but it surely could not be legal if celebrated at an unauthorized hour and without banns or licence. On the principle, however, preliminarily invoked by Mr. Fitzgerald, that truth is much stranger than fiction, we are willing to admit that his extraordinary tale may have a basis in fact, though we scarcely feel him to be proficient in the novelist's art of presenting improbabilities convincingly. Yet he certainly shows an intimate acquaintance with at least one phase of Irish life seldom represented in novels—the passion for lay preaching, which is, or was, a phenomenon of frequent occurrence among the Protestant aristocracy; and the methods of American "evangelists" and Roman Catholic ecclesiastics are described with many vivid touches.

SPORTS AND PASTIMES.

AGE does not stale Mr. P. F. Warner's enthusiasm for cricket; but with years he improves both as a batsman and a writer. In *The Book of Cricket* (Dent) he has produced a valuable and interesting analysis of the modern game, spiced with enough personal reminiscence to please those readers who are not absorbed in debating the old and new theories of batting and bowling. The present reviewer regards the best cricket of the present day as superior to that of former years, and therefore is glad to find that Mr. Warner is essentially a *laudator temporis sui*. At any rate, so long as the game continues to be played in the spirit in which Mr. Warner both writes of it and plays it, it will be well worth playing.

It is one of the great charms of cricket for those who play it, and one of the great difficulties for those who are merely, by force of time or temperament, pavilion critics, that the game is always developing, sometimes by subtle, unconscious changes, sometimes by startling and almost incredible revolutions. Mr. Warner throughout this book shows himself as keenly alive to these developments as those who have watched his own evolution as a batsman might expect. He is not too much given to theory. Alive to all developments and eager to discuss them, he yet does so always with the main object steadily kept in view, which is, to make runs or to get wickets. He applies to all the theories the one great test of experience. He is, indeed, even inclined to condone the little superstitious fads of some players, on the ground that, if a man really believes that he can bat better in a Harlequin cap or in a particular place in the order of going in, he probably will bat better so. Thus those who wish either to teach themselves or to teach others will find in this book the latest views on the theory of the game analyzed with a sane appreciation of the importance of subordinating the means to the end.

Nothing, apart from K. S. Ranjitsinhji's genius as a player and Mr. C. B. Fry's critical reasonings on the game, has done more towards developing modern cricket

than Mr. Beldam's brilliant photographs. He has caught all the greatest players in the actual moment of their most characteristic strokes, and many of his pictures are stored up in this book, as an example to the young cricketer for ever. It is a fact brought out by these photographs that a correct relation of feet to body and striking instrument and a full swing are as important in cricket as in golf. We do not know that this fact is fully realized. How complete the swing of the bat is in a well-made drive may be gathered either by looking at the photographs of Messrs. Trumper, Armstrong, and Foster facing pp. 49, 52, 194, or by playing the stroke in a net or on a deck with a low roof to it. The player will be astonished to find his bat in contact with the ceiling above his head.

The developments of cricket have been many and far-reaching, even since the publication of so recent a volume as the "Badminton Library" book. Apart from Mr. Bosanquet's invention of the "googlie" and Mr. Simpson-Hayward's introduction of a new kind of lob bowling, the development of on-side play, and of forcing strokes that have taken the place of the leg-hit, and the introduction of the "hook" stroke in defiance of the veto of those who regarded a pull as not only wrong, but even absolutely immoral, have brought about a revolution in the placing of the field. The development of the art of swerving again has made batting more difficult, and may lead to a still further revolution; for, when a bowler can swerve a ball from the off as well as from the leg at will, the triumph of the bat will be reduced, for a while at least.

There are many points one would like to discuss in a book at once so reasonable and so up-to-date as this; but such discussion would require too large a space. We find ourselves, for instance, in disagreement with Mr. Warner when he dismisses the idea that the "googlie" comes off the wicket faster than the ordinary leg-break bowled by the same bowler. The present writer has both kept wicket to and batted against all the chief "googlie" bowlers from the inventor, Mr. Bosanquet, to Mr. Carr, from Mr. Schwarz to Mr. Vogler, and he is firmly convinced that—apart from the deceptiveness of an off-break being bowled with a leg-break action, which is its essential characteristic—the chief difficulty of the "googlie," both for the wicket-keeper and the batsman, is that it comes off the ground perceptibly quicker than an ordinary off-break ball. It appears to have exactly the same quality of onward spin which distinguishes the off-breaks of Mr. Simpson-Hayward's peculiar lob from those of similar bowlers. His off-breaks, like those of the "googlie," come off the wicket noticeably faster than the leg-breaks. This view is borne out by what Mr. Warner himself has to say about Mr. Vogler's bowling on p. 72: "Every now and again he will bowl with the same action as for a leg-break an off-break, which comes off the pitch at a wonderful pace." It is this quality of coming fast off the wicket which, in our opinion, is the supreme excellence in a bowler. We notice that Mr. Warner confirms our own impression that, among the fast bowlers, Mr. Kortright was faster even than Mr. Kotze or the Australian, Mr. E. Jones, through the air. But, on the other hand, we do not believe that he had the important quality of coming fast off the wicket to the same extent as Richardson or, still more, Lockwood had. These men, already, are heroes of the past; but Mr. Warner is equally interesting and informing when discussing newly risen stars, such as Hobbs, or "Razor" Smith, or Mr. Savile,

and their methods. Articles on Ranjitsinhji by Mr. C. B. Fry, and on wicket-keeping by Lilley, add to the value of the volume. The index is not beyond reproach. The entries under Mason, for instance, need revision.

It would not perhaps be easy to say off-hand what quality it is which tends to make the records of fishing expeditions more uniformly agreeable reading than almost any other kind of sporting reminiscences; but so it generally is. Perhaps the angler's art attunes a man's mind more harmoniously than other forms of sport to discursive thought, and the sort of good humour required for readable reminiscence. Mr. F. G. Aflalo is a fisherman who has carried his rods and lines to many seas and rivers, from Palestine to the Pacific, and Hampshire to Nova Scotia. The tour dealt with in *A Fisherman's Summer in Canada* (Witherby & Co.) was planned to embrace:—1. A canoe trip down the S.W. Miramichi, from the Forks to Boiestown, with salmon and grilse fishing. 2. A few days on the Restigouche and Matapedia. 3. A month on Cape Breton Island, with a view to landing one of the big tuna. 4. Three days' muskallonge and black bass fishing in Georgian Bay. For the whole programme the author was to be absent from England but three short months. The disastrous fire at Campbelltown in Nova Scotia last year prevented the Restigouche trip; but, for the rest, the author stuck to his itinerary, and left maritime Canada convinced that it is "the finest playground in the world," and likely to remain so, at all events for another generation.

The primary aim of the trip appears to have been the pursuit of that giant mackerel the tuna, which whilst approaching the shark in point of size is singularly unlike that voracious creature in its extreme coyness where baits are concerned.

Mr. Aflalo is clearly a truthful fisherman. He admits frankly that he failed to land a tuna, and that nothing but failure rewarded his three previous expeditions—to Madeira, Santa Catalina, and the Bosphorus—after the same elusive monster. He adds that only half-a-dozen tuna were hooked on the shores of Cape Breton all last summer, and that every one of them got away. So the honour of landing a tuna off Cape Breton still awaits the sportsman of enterprise and ambition; and by way of preparation he could hardly do better than devote some hours to careful study of Mr. Aflalo's experiences, which are set forth in the manner best calculated to make them of use as a guide to others. Such an expedition as the author's can be managed with every comfort for about 100*l.*, and a more interesting and health-giving summer it would be hard to conceive. "The Lands of To-morrow," says Mr. Aflalo, "may lack the picturesqueness of the Lands of Yesterday"; but, as he goes on to show, they can some of them furnish better sport for the angler and the hunter, and more, too, of novelty and interest, with at least as much of remoteness from the turmoil of cities.

The volume is interestingly illustrated from photographs by the author.

Incidentally, Halifax people will hardly appreciate the author's comparison of their city with the capital of New Brunswick. St. John is a busy town, and prosperous, but Mr. Aflalo is mistaken in calling Halifax "a town without trade." A glance at any recent Canadian book of statistics would serve to correct so curious a misapprehension.

Mr. Harold Russell has brought together in book-form a number of agreeable and well-written articles under the title *Chalkstream and Moorland: Thoughts on Trout-fishing* (Smith & Elder). The little book appears seasonably, and will be welcomed by anglers who, either by too fine or too foul weather, are prevented from pursuing their favourite sport. Moreover, though no pretence is made of instructing professors of the art, they and others may profit greatly by consideration of the sound common sense which underlies the sentiments put forward, and the attractive modesty with which the author urges his views, and relates his triumphs and disappointments. An angler's sorrows and evil fortune are perhaps too often forgotten in the joy of relating the triumphs, but it is not so with Mr. Russell. Nowhere is he more convincing or more sure of sympathy than when he chronicles the persecution of bad luck. On a perfect day he sees a rising fish, makes a tolerable cast, and the fly floats over the trout:—

"Twice he must have seen the fly, yet did not come at it. The third time he saw only too well, and vanished with the swiftness of an arrow. Some yards above was another fish, large and dark, balanced a little below the surface with expectant demeanour and hungry-looking mouth.....I whisked the fly until it was dry and cast over him. He did not wait. The flash of the rod in the sunshine was enough; and the instant the fly alighted on the water the trout was gone into the nearest weed-bed."

More trout were found; some were raised, but none was landed.

"Below the mill a fish or two rose occasionally. I will not dwell upon the increasing anxiety with which I offered my fly to each in turn, nor the successive disappointments. Soon after six it was too dark to see, and the fish gave up rising. I took my rod to pieces and slipped each one into the partitions of the bag, reflecting that, incomparable as the Test was as a trout stream, a blank day as the last of the season was a sad conclusion."

There are sensible remarks on both dry-fly and wet-fly fishing, showing that the author has grasped the fact, which generally is missed by controversialists, that the skilful use of the fly in upstream fishing is closely allied to the most refined form of dry-fly work. Loch-fishing in Scotland and Ireland is described, and sea-trout are not forgotten; there is also a chapter on the sense-organs of trout.

Vol. II. of *The Encyclopædia of Sport* (Heinemann) confirms the favourable opinion we expressed concerning the first instalment. The range of the book is wide, and the articles are contributed by writers who are well qualified to speak on their special subjects, while the illustrations are numerous. The addition of Bibliographies at the end of the articles is an important feature.

A good specimen of the adequacy of the book is the section on 'Driving,' which occupies pp. 121 to 155, and includes a glossary of special terms, as well as the experiences of an old coachman some hundred years ago.

There is about *The Adventures of James Capen Adams, Mountaineer and Grizzly Bear Hunter of California*, by Theodore H. Hittell (Werner Laurie), a curious old-world atmosphere, not only in the pictures, which are strangely out-of-date, crude woodcuts, but also in the writing itself and its general significance. The explanation is afforded in the Introduction, where it appears that this is really a product of the past—a product of so distant a time as 1860, when

the author, who reintroduces his work to-day, first published these adventures. Mr. Hittell came across Adams in 1856 in San Francisco, where the latter was showing in the "Mountaineer Museum" wild animals which included "Samson, the largest grizzly bear ever caught, weighing over 1,500 pounds; Lady Washington (with her cub), weighing 1,000 pounds; and Benjamin Franklin, King of the Forest."

Mr. Hittell's account of his discovery is as interesting as any of the adventures subsequently narrated to him by the hunter, and here set forth. Adams and his bears must have struck the imagination of Mr. Hittell. The mountaineer lived with his animals and wore buckskin, and seemed himself a part of the savage wilderness from which they had sprung. This narrative is most interesting when it deals with Ben and Lady Washington and their strangely human services to their captor and master. It was the substance of many conversations during two years, and the publication in 1860 only failed because of the outbreak of the Civil War. It is now given to the world again, with the addition only of Introduction and Postscript, and we are glad to see the author's name appended as in December, 1910.

Adams was born in 1807, and died from the effects of an injury received during a struggle with a bear in 1860. He was bred to shoemaking, but very soon broke away and took to the wild woods among animals. An attack on him by a tiger in a cage sent him back to his craft, and he made money at it until an unlucky speculation dissipated his earnings. At the age of 42 he sought California, where the gold rush had taken place, and, after experiencing varying fortunes, decided to take to the mountains. There he lived for some years in a rude camp among friendly Indians, about whom he has much to say, and in a sportsman's paradise. His object, however, was the capture rather than the destruction of wild animals, and his stories of many exciting adventures are graphic and pleasant reading for any one who retains the traces of his boyhood. Adams lived like a primitive man, in healthy conditions, killing the food he ate, drinking the mountain water, and sleeping under the stars. His account of the grizzlies is of peculiar interest, and we should say that what he did not know of woodcraft was not worth learning. It is a capital book for boys, and should stir old emotions and ambitions anew in the hearts of adults.

OUR LIBRARY TABLE.

MUCH intellectual vigour has been put into *Ancient Lights, and Certain New Reflections*, by Ford Madox Hueffer (Chapman & Hall). There is a Mid-Victorian ring about its generous enthusiasms and fierce denunciations. In fact, we have not of recent years come across a book written with quite so much combative eloquence as Mr. Hueffer's. His "ancient lights" are, of course, the Pre-Raphaelites, of whom, as the grandson of Ford Madox Brown and a kinsman of the Rossettis, he is well qualified to be the eulogist. In his brilliant, challenging way he brings before us their devotion to their art, their scorn of lucre, their heroic endurance, in several instances, of privation, their violence of language, and their terrific quarrels, which invariably ended in hearty reconciliations. The devotion of Frederick Shields to Madox Brown, in particular, is well brought out; and Mr. Hueffer tells

with spirit the stories of the choleric artist being persuaded by his patient friend to undertake the painting of a picture for the National Gallery—unhappily, an unfinished attempt—and of Shields's acceptance of a commission to paint six of the panels in the great hall at Manchester, a commission which he never tried to execute, so that the whole honour might fall to Madox Brown. We get, too, an interesting reading of the character of Christina Rossetti, though it is not the only one possible, and though Mr. Hueffer was, perhaps, too young at the time to understand her thoroughly. The weak point about these impressions is that they are merely impressions, since, as Mr. Hueffer tells us in his Olympian manner, he cannot be troubled with facts. We only get, therefore, the general spirit of the Pre-Raphaelite movement, and, while many of the anecdotes are old, a few appear to lack authenticity.

Mr. Hueffer's "new reflections," we will venture with all submission to say, are not particularly original, and they are put forth with an unnecessary amount of repetition. Others before him have discovered that this is an age of rattle and hurry; that the great and independent editor is becoming, or has become, a being of the past in daily journalism; that both journalists and authors are succumbing to commercialism, and so forth. Mr. Hueffer dates the degradation of journalism and letters from the South African War. We, on the contrary, consider that the decline, which he much exaggerates, began several years before the war, when, during a period of general depression in trade, advertisers discovered their power, and exercised it accordingly. That, however, is a fact, and Mr. Hueffer will not be bothered by facts. We will take leave of him, therefore, by complimenting him on a lively book which he has evidently enjoyed writing, and which we have enjoyed reading, though it is exasperating here and there. "The world," he declares, "is a good place, but the letters I try to stand up for are about to die." Let him take courage. He is under forty, and by the time that he reaches sixty, or even fifty, things may change for the better.

An Eastern Miscellany. By the Earl of Ronaldshay. (Blackwood & Sons.)—Lord Ronaldshay, if he is a devious wanderer, is also a cunning writer. He knows that readers are apt to shy at reprinted essays and addresses, especially if they abound in statistics, so he gives us a light and (to tell the truth) rather thin address to the Author's Club on 'The Call of the East,' which does not really analyze the "call" in the least, and a digression on modes of travelling, and a "Siberian" mystery, in order to lure us on to face his heavier fare.

The Siberian mystery is the story—firmly believed at Tomsk—that the Tsar Alexander I., instead of dying, as reported, at Taganrog in 1825, lived on secretly as an ascetic at Tomsk till 1864, and was visited with veneration by his imperial successors. The story, which is not incredible, was related in detail by M. Gasiorovski in the book which the Vicomte de Busancy translated in 1908. Apparently Lord Ronaldshay's article was written before that date, but the book should have been referred to when the article was included in this volume.

'Across the Himalayas in Mid-Winter' describes an arduous journey in 1900 from Bundi, near Gilgit, to Srinagar in Kashmir, which involved considerable risk and many hardships; but it is not told very vividly, and involved sentences of from twelve to twenty lines are apt to drag.

The essays have not been so rigorously revised as they should have been. This is especially noticeable in the political articles on Middle Asia, where the author's criticisms of Russian policy in Persia are not modified by foot-notes stating that the Anglo-Russian Agreement has changed the situation; whilst Lord Ronaldshay's speech in the House of Commons on February 17th, 1908, here reprinted, shows that he considers that the situation has changed only for the worse.

The articles which seem to us really valuable, apart from political views, are the two dealing with the 'Nushki-Sistan Route' and 'Sistan and Khorasan.' The latter province, so far from appearing the land of milk and honey which poets would have us believe, consists of "flat and inconceivably monotonous plains, alternated by jagged lines of hills.... a thirsty and waterless land draped in an eternal garb of drab." The articles on 'Indian Political Reforms,' 'Indian Unrest,' and 'India and Imperial Reciprocity,' which are outside our province, may at least be said to show considerable knowledge, study, and thought. One striking remark may be quoted concerning Indian unrest: "The 18,000 students at college [in India] provide an annual output of little more than 1,900 B.A.'s. What becomes of the thousands that fall out by the way?" Apparently they "fall out" with the Government.

Lord Ronaldshay, however, though we like him better when he writes a book of travels instead of putting together papers read before various societies or contributed to magazines, is a serious student of the problems of Asia, including Japan and China, and what he has to say on these subjects is dictated by a sense of responsibility, and urged by arrays of statistics. There is a melancholy touch of a vanished hand in his frequent citation of verses by Sir Alfred Lyall.

Controversial Issues in Scottish History: a Contrast of the Early Chronicles with the Works of Modern Historians. By William H. Gregg. (Putnam's Sons.)—The only issue put before us here is one that has long ceased from troubling—whether the student who applies himself to the early history of Scotland is justified in doubting the credibility of the mediæval chronicles. Against this sceptical spirit, which he calls "Anti-Celticism," and its principal exponent, Skene, Mr. Gregg inveighs; and he is particularly indignant with writers of this school when, not content with rejecting all that does not "meet their own modern sophistical views," they try to fill the void "by deductions and approximations." "A history," we are told, "must either be true or it must be false." It has not, apparently, occurred to Mr. Gregg that history may be neither wholly true nor wholly false, and that falsehood may have been as profitable as it was easy to the monkish annalists who wrote several centuries later than the events they record. Not a chapter, and scarcely even a page, is without some mention of Cyrie or Girig or Grig, who was king of the Piets and Scots towards the end of the ninth century, and furnished Buchanan with some hints for his finished portrait of Gregorius Magnus. From him the author deduces "the royal descent" of all Gregs and Mac-Gregors; and Skene is denounced as "the arch historical enemy of the entire Mac-Gregor clan and name," because he regards this potentate as a usurper of unknown descent who had "intruded upon the line of Scottish

kings," and suggests that the MacGregors were content with Kenneth MacAlpin as "their supposed progenitor" till the monks made a still greater hero of Grig. According to Skene, Kenneth's descent is also unknown; but Mr. Gregg refers us to "a most explicit genealogy of Kenneth," and appears to agree with Fordun in tracing it to Neah. On p. 102 Skene is quoted as admitting that "Gregory the Great was solemnly crowned at Scone and was one of the most powerful of the early Scottish kings." This puzzled us till we looked up the passage and found it introduced as "artificial history."

Nights with an Old Lag. Recorded by W. J. Wintle. (Ouseley.)—The chapter in this volume which earns our unreserved approval is the twenty-eighth—the last in the book. Its title is 'How to Guard against Burglary,' and it contains some useful and practical hints, though some of its advice will strike the average man as being hardly worth following, because he would rather take his chance of being robbed than face the certain unpleasantness of barring and bolting windows before dinner-time, and having doors lined with sheet iron. But there are some good suggestions in this chapter none the less, such as the wedge plan of preventing a door being opened. For the rest, we are uncertain whether the refined Newgate Calendar element in fiction still enjoys the vogue it had some little time back. If it does, this work should obtain wide popularity, for two hundred and seventy out of its three hundred pages are devoted exclusively to details of burglaries and a burglar's experiences in prison. They may be the genuine experiences of an old "Lag": a rather portentous preface assures us they are. So are the cases of crime reported in newspapers. These only appeal to us, however, where they illuminate curious developments of character and what is called "human interest"—features somewhat lacking in this book. As a document, if accepted as such, it may interest the curious. It is to be noted that the central figure, though accounted exceptionally clever in his calling, is said to have spent some thirty years in different prisons.

Giosuè Carducci, l'Homme et le Poète, by A. Jeanroy (Paris, Honoré Champion.), is the most important work upon Carducci that has appeared since Chiarini's *Life*. The author, realizing that Chiarini has told us most of what we wish to know about Carducci the man, devotes his attention almost entirely to Carducci the poet, and his book is a valuable critical study of the subject.

Carducci was extraordinarily cultivated. His indebtedness to the classics, and especially to Horace, is well known, but M. Jeanroy devotes some excellent pages to a discussion of his borrowings from the great modern European poets. Always an anti-clerical, Carducci was, for several of the principal years of his life, an ardent Republican, and fully shared Hugo's hatred of the Empire and the Vatican. In the 'Decennali,' afterwards incorporated with the 'Giambi ed Epodi,' he shows himself to have been completely impregnated with the 'Châtiments' and "les vers de Victor Hugo lui sortaient par tous les pores," as our author amply proves. Even greater is his debt to Heine, who first revealed to him the secret of personal poetry. It also appears that in 'Ça Ira' he owes Carlyle more than "the inspiration in the humblest sense of the word" which he acknowledged, for all the events he mentions are to be found in the same order in ten pages of 'The French Revolution.'

It is this that makes M. Jeanroy doubt whether future generations will rank Carducci quite so high as he is ranked to-day. The critic admits that Carducci probably possessed the originality of a really great poet, but he was "trop savant et trop adroit, il a eu trop de modèles, et il les a trop fidèlement [sic] reproduits pour que cette originalité n'en soit pas amoindrie." It is true that Carducci drew his inspiration from literature, and above all from history.

Sol nel passato è il bello, sol ne la morte è il vero, he declares. But there is nothing Arcadian, as he would have called it, in his work, which is firmly based on life itself; and in his best and later poems—the 'Odi barbare,' for instance—he has made what he borrows so completely his own that it is impossible to call him a plagiarist. He is too highly cultivated ever to be a popular poet. During his later years he even seems to have shared the doubts expressed as to the success of his revival of metrical poetry, calling his efforts "delicta juventutis meæ." M. Jeanroy holds an interesting inquiry into the question, to which we have only space to refer. Surely in the last line but one of p. 212 "alcaïque" is a slip for "saphique." M. Jeanroy may be right in his opinion as to Carducci's ultimate position, but when we think of 'Alle fonti del Clitumno,' 'Davanti San Guido,' the 'Canto d'amore,' the ode on Shelley's tomb, and the splendid series of historical odes, we cannot believe that he will ever cease to rank as one of Italy's greatest poets.

The Leaning Spire, by George A. B. Dewar (Alston Rivers), is a pleasant bundle of papers, nineteen in number, and diversified in range. They appear to be a tentative effort of the author after fiction. He is well and favourably known in another region, and we are always delighted to read a writer with style and a sense of English and an agreeable knowledge of nature. This constitutes Mr. Dewar at his best. 'The Leaning Spire' is not of his best, because it is hardly his medium; yet many of the traits which go to compose his value as a writer on nature are here. We find, however, a certain aloofness, an indefiniteness, which seems to remove him eventually from mere writers of fiction. That is of no consequence. Richard Jefferies could not write a novel. And, after all, Mr. Dewar does not attempt anything so ambitious as novel-writing. These are mere sketches, all with a point and all with an atmosphere. Some are of the slightest, but all have feeling and style. Perhaps it was not essential to republish such sketches as 'Dora,' but if one has not come upon them before, one reads them with a little more than indulgence. Yet it is impossible to deny that Mr. Dewar's work on nature possesses a grip, an insistence, a firmness of knowledge, and a surety which are not represented here. These may rank as *obiter scripta*, the other is the real thing.

MESSRS. LONGMAN'S *Classified Catalogue* just issued is more than an ordinary catalogue of titles, as it contains information about the contents of the books themselves. It will be very useful for reference. We are glad to observe that the expression "edition" does not mean merely a new title-page, but is used only when the matter has undergone some change, or when the type has been reset. Among the works of reference is 'The Annual Register,' now a veteran of a hundred and fifty-two years. The title-page, we notice, mentions besides Paternoster Row houses in New York, Boston, Chicago, Bombay, and Calcutta.

MR. JOHN LONG'S series of sixpenny novels in cloth is certainly remarkable at the price. *Father Anthony*, *Delilah of the Snows*, and *Only Betty* are out in this form, and should have a large sale.

'OUR MUTUAL FRIEND.'

I WAS one of the original subscribers to 'Our Mutual Friend' on its first appearance in May, 1864, and still possess the monthly numbers unbound, "with all the wrappers and advertisements," as the second-hand book-sellers have it. The fly-note mentioned by Mr. J. D. Hamilton is printed on a narrow slip sewn in between the plates and the first page of No. 1. It runs as follows:—

*** The Reader will understand the use of the popular phrase OUR MUTUAL FRIEND, as the title of this book, on arriving at the Ninth Chapter (page 84).

On turning to p. 84 in No. 3, we find the following bit of dialogue:—

"By the bye, ma'am," said Mr. Boffin, turning back as he was going, "you have a lodger?"

"A gentleman," Mrs. Wilfer answered, qualifying the low expression, "undoubtedly occupies our first floor."

"I may call him Our Mutual Friend," said Mr. Boffin. "What sort of a fellow is Our Mutual Friend, now? Do you like him?"

"Mr. Rokesmith is very punctual, very quiet, a very eligible inmate."

"Because," Mr. Boffin explained, "you must know that I'm not particularly well acquainted with Our Mutual Friend, for I have only seen him once," &c.

It is clear from this passage that, though the story appeared in monthly numbers, a considerable portion was printed in advance.

While on the subject of Dickens, may I be permitted to say, since the number of those who have seen the great novelist face to face is rapidly diminishing, that I was present at the famous reading of 'Sikes and Nancy,' which was commemorated by Edmund Yates in *Tinsley's Magazine* for February, 1869? Mr. Yates describes vividly the emotions aroused in the minds of the audience—"permitted for once in a lifetime to be natural, forgetting to be British and cynical and unimpassioned"—by this great performance, but strange to say, the impression that lingers longest in my own memory is not of the wonderful Sikes and Fagin, but of Dickens himself in his immaculate evening dress, glancing down at his button-hole and seeing the flower was a little faded, and after the interval returning with a fresher bloom. It is possible that the actions of the natural man impress us more than the greatest efforts of dramatic art, but this trivial incident seemed to throw a new light upon the character of the weather-beaten, sailor-like man who had just enthralled us by the vigour of his acting, and is perhaps worth recording.

W. F. PRIDEAUX.

MARY TUDOR, PRINCESS OF WALES.

Castle Gates, Shrewsbury.

I SHOULD like to point out, in connexion with Mr. Gairdner's letter in *The Athenæum* of April 22, that Thomas Wright in his 'History of Ludlow' states that Mary Tudor was created *Princess of Wales*, but brings forward no evidence save the fact that she is referred to as "my Ladie Prince's Grace"

in documents connected with the Welsh Marches. Not long ago I was reading some of those documents (chiefly in Collins's 'Sidney Letters'), and constantly observed the words "my Ladie Princes" in the nominative as well as the possessive case, but never with an apostrophe. In the same way "my Lord Prince Council" and "my Lord Prince Grace" occasionally occur. It is evident that the idea of Mary being created *Prince* of Wales is founded on the interpolated apostrophe.

MAUD M. STAWELL.

OFFER OF BOOKS.

THE COMMITTEE OF THE EASTERN CHURCH ASSOCIATION wishes to be allowed to use your columns to make known an offer of books. The Committee is prepared to give to the library of any college, public institution or religious body copies of the following books published by the Association, viz. :—

1. East Syrian Daily Offices, translated from the Syrian, with Introduction, &c., by Dr. A. J. Maclean.

2. Russia and the English Church. Correspondence between Wm. Palmer and M. Khomiakoff. Edited by W. J. Birkbeck.

3. Greek Manuals of Church Doctrine.

4. The Orthodox Church in Austria-Hungary.

The books are in sheets, unbound. Applications should be made to the Rev. M. R. Swabey, Hon. Sec. Eastern Church Association, The Vicarage, Bromley Common, Kent.

MARK R. SWABEY.

A BIBLIOGRAPHY OF SHAKESPEARE.

THERE recently came under my notice announcements of a Bibliography of Shakespeare purporting to be published "at the Shakespeare Press," Stratford-on-Avon. I naturally assumed that the publication issued from the well-known Shakespeare Head Press of Mr. A. H. Bullen, and credited the work with the importance attached to the products of this press. I find, however, upon inquiry, that the book is not printed at Stratford, and that its slender connexion with that Mecca consists of a technical publication at a second-hand bookshop dignified by the title of "The Shakespeare Press."

I think that a protest should be made against these misleading methods. A bibliography, of all books, should be fully and accurately described, and a librarian, as one primarily interested in bibliography, is entitled to the protest.

FRANK PACY,

Librarian, Westminster Public Libraries.

SALE.

AMONG the books in Messrs. Sotheby's sale of the 8th-10th inst. were the following: Nichols, History of Leicester, large paper, 7 vols., 1795-1815, 45s. Alken, National Sports of Great Britain, 1825, 18s. 5s. Ben Jonson, Works, Vol. II., 1640, 15s. 15s. Barrett, Lepidoptera of the British Islands, &c., 12 vols., 1892-1907, 20s. 10s. Minutes of Proceedings of the Institution of Civil Engineers, 190 vols., 1837-1910, 33s.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Bible, Interlinear, Revised Version, 7/6 net; India Paper, 12/6 net.

Bible, Revised Version, now for the First Time divided into Verses, with References, 6/ net; India Paper, 10/6 net; Without References, 2/6 net.

Catholic Encyclopedia: Vol. X. Mass-Newman. Cobbold (Rev. George A.), This Church of England, a Course of Addresses, 1/6 net.

With a preface by the Right Rev. Charles C. Grafton, Bishop of Fond du Lac, U.S.A.

Coronation Prayer Book.

Issued in excellent style at various prices.

Isaiah, 10/6 net.

With introduction and notes by G. W. Wade.

One of the Westminster Commentaries.

Johnston (Rev. R. E.), The Church and the Children, a Handbook of the Graded Sunday School and the Catechism, 6d. net; cloth, 1/6 net.

Introductory to the Marden Manuals of Graded Lesson Courses.

Miller (Rev. Joseph), Essentials of the Christian Religion: Sermons Doctrinal and Critical, First Series, 3/ net.

Cheap reissue.

Miller (Rev. Joseph), Fundamentals of Unity: Sermons Literary and Scientific, Second Series, 3/ net.

Cheap reissue.

Ranken (Rev. Henry), Saint Athanasius, 1/ net.

St. Luke, 2/ net.

With introduction and notes by Alfred E. Garvie, the general editor of the Westminster New Testament, of which this volume forms part.

Law.

Kropveld (D. C. J. H.), The Laws of Netherland East India relating to Land, 5/ net.

Fine Art and Archaeology.

Beautiful England: Dickens-Land, described by J. A. Nicklin; The Cornish Riviera, described by Sidney Heath; and The Peak District, Text by R. Murray Gilchrist, 2/ net each.

All pictured by E. W. Haslehurst.

Berks, Bucks, and Oxon Archaeological Journal, April, 1/6

Harvey (Alfred), The Castles and Walled Towns of England, 7/6 net.

Written from the point of view of residence and defence rather than that of historical interest. The writer does not limit himself to description of those ruins which are still standing. The volume has 46 illustrations, and forms one of the Antiquary's Books.

Hieroglyphic Texts from Egyptian Stelæ, &c., in the British Museum, Part I. (56 plates), 7/6

Hourticq (Louis), Art in France, 6/ net.

This study of the evolution of French art is intended to show that, in spite of its obvious variations, an essential unity nevertheless governs it. The book, which contains numerous illustrations, forms part of a series called *Ars Una: Species Mille*.

Johnson (Harold), The House of Life: Interpretations of the Symbolical Pictures of the late G. F. Watts, 2/6 net.

With 22 reproductions.

Lytton (Neville), Water-Colour, 2/6 net.

With 16 illustrations.

Richardson (Rufus B.), A History of Greek Sculpture.

In the Greek Series for Colleges and Schools.

West (George Herbert), Gothic Architecture in England and France, 6/ net.

With numerous illustrations, and a useful chronological table of contemporary buildings in France and England.

Poetry and Drama.

Æschylus, Agamemnon, 2/6 net.

Freely translated by Arthur Platt.

Legge (Arthur E. J.), The Silver Age, a Dramatic Poem, 3/6 net.

Stephens (A. G.), The Pearl and the Octopus, and other Exercises in Prose and Verse, 3/6

Music.

Royal Opera and Imperial Russian Ballet, containing the Plots of the Operas and Ballets, and Biographical Sketches with Portraits of the Singers and Dancers: Coronation Season, Covent Garden, 1/ net.

Letterpress by H. Saxe Wyndham.

Bibliography.

Bromley Public Library, Fifteenth Report, 1910-1911.

Reader's Index: The Coronation, 1d.

The bi-monthly magazine of the Croydon Public Libraries.

Philosophy.

Blundell (Alice), Idealism, Possible and Impossible, 2/6 net.

Jones (E. E. Constance), A New Law of Thought and its Logical Bearings, 2/ net.

With a preface by Prof. Stout. Forms Vol. IV. of the Girton College Studies.

Political Economy.

International Labour Office: First Comparative Report on the Administration of Labour Laws: Inspection in Europe, 4/ net.

History and Biography.

Blake (Mrs. Warrenne), An Irish Beauty of the Regency, compiled from 'Mes Souvenirs,' the Unpublished Journals of the Hon. Mrs. Calvert, 1789-1822, 16/ net.

With frontispiece in photogravure and 32 other illustrations.

Brewer (Jeanie Rose), The Life-Story of our Gracious Queen Mary, 2/6 net.

With a photogravure frontispiece and 16 other plates.

Burke (Edmund), Selections from his Political Writings and Speeches.

One of Nelson's Sixpenny Classics.

Carlyle's Birthplace, The Arched House, Ecclefechan: Illustrated Catalogue, with a History of the House, 6d.

Earle (Mrs. C. W.), Memoirs and Memories, 10/6 net.

With 4 portraits.

Jarvis (F. R. A.), A Synopsis of those Movements in Modern History which have been most influential in the Development of the British Empire, 2/

Includes such themes as the Renaissance, the Reformation, Parliamentary government, the party system, and the rise of the democracy.

Louisiana under the Rule of Spain, France, and the United States, 1785-1807: Social, Economic, and Political Conditions of the Territory represented in the Louisiana Purchase as portrayed in Hitherto Unpublished Contemporary Accounts. Edited with Bibliography and Index by James Alexander Robertson, 2 vols., \$10 net.

The volumes are illustrated with reproductions of rare contemporary maps and plans.

Ollard (S. L.), The Six Students of St. Edmund Hall expelled from the University of Oxford in 1768, with a Note on the Authorities for their Story, 2/ net.

With 3 illustrations.

Sandeman (G. A. C.), Metternich, 10/6 net.

An account of the domestic as well as the political life of the great statesman. The book has 10 illustrations.

Wilkinson (Clement John), James John Garth Wilkinson: a Memoir of his Life, with a Selection from his Letters, 10/ net.

Philology.

Classical Review, May, 1/ net.

Deinhardt - Schloman Technical Dictionaries:

Vol. II.—Metallurgy of Iron, 10/ net.

Compiled by M. Venator and C. Ross.

Ellis (Robinson), The Tenth Declamation of (Pseudo) Quintilian, 1/ net.

A lecture delivered in the Hall of Corpus Christi College on May 11.

Lees (John), The Anacreontic Poetry of Germany in the Eighteenth Century, its Relation to French and Classical Poetry, 3/

Nevada University Studies, Vol. III. No. 1.

Includes articles on Virgil and Martial.

School-Books.

Arnold's Shilling English Composition by Ernest J. Kenny.

Belcher (Ernest A.), Précis Writing, 2/6

Chateaubriand, Voyage en Grèce, 1/

Part of Siepmann's French Series for Rapid Reading.

Meyer (Konrad Ferdinand), Jürg Jenatsch, eine alte Bündnergeschichte, 2/6

Authorized edition, adapted and edited by

W. Ahrens for Siepmann's Advanced German Series.

Reynolds (J. B.), Europe and the Mediterranean Region, 1/4

Written to suit the needs of children in the upper classes of elementary schools and the lower classes of secondary schools. The book contains 76 illustrations, maps, and diagrams, and forms part of the Elementary Regional Geography.

Scipio, Somnium, 3d.

One of the Oxford Plain Texts.

Smith (G. B.), *Scenes from European History*, 2/6
A companion to 'English History for the Middle Forms of Schools.'

Geography and Travel.

Charcot (Dr. Jean), *The Voyage of the "Why Not?" in the Antarctic: the Journal of the Second French South Polar Expedition, 1908-10*, 20/ net.

English version by Philip Walsh, with numerous illustrations from photographs.

Colville (Mrs. Arthur), *1,000 Miles in a Machilla: Travel and Sport in Nyasaland, Angoniland, and Rhodesia, with some Account of the Resources of these Countries; and a Chapter on Sport by Col. Colville*, 10/ net.

With many illustrations.

Kassner (Theo), *My Journey from Rhodesia to Egypt, including an Ascent of Ruwenzori and a Short Account of the Route from Cape Town to Broken Hill, and Lado to Alexandria*, 12/6 net.

A contribution to social economy, Mr. Kassner's first object being to find out those parts of the interior suitable for white inhabitants. There are 107 illustrations from photographs and 3 maps.

Konody (P. G.), *Through the Alps to the Appennines*, 12/6 net.

Useful hints are given as to the shortest route, but the author discourages systematic sightseeing. The volume has 93 illustrations from photographs and from pencil sketches by E. A. Rickards, and a frontispiece in colour from a drawing by Robert Little.

Palmer (Frederick), *Central America and its Problems: an Account of a Journey from the Rio Grande to Panama, with Introductory Chapters on Mexico and her Relations to her Neighbours*, 10/6 net.

With many illustrations.

Rolfe (W. J.), *A Satchel Guide for the Vacation Tourist in Europe, 1911*, 6/ net.

Sprague (Roger), *From Western China to the Golden Gate*.

The experiences of an American university graduate in the Orient, with 30 illustrations.

Sports and Pastimes.

Barton (Frank Townend), *Ponies and all about them*, 7/6 net.

With 28 illustrations, principally from photographs by Gilbert H. Parsons.

Jefferies (Richard), *The Amateur Poacher*.

In Nelson's Shilling Library.

Science.

Annals of Mathematics, April, 2/ net.

Biles (John Harvard), *The Design and Construction of Ships: Vol. II. Stability, Resistance, Propulsion, &c.*, 25/ net.

Bright (Charles), *Imperial Telegraphic Communication*, 3/6 net.

Cockayne (L.), *New Zealand Plants and their Story*, 4/ net.

Illustrated.

Corbin (Thomas W.), *Astronomy for Boy Scouts and Others*, 1/ net.

Contains 8 plates and many diagrams.

Dixon (Charles), *The Ross Bird-Stalker: a Report on the Advantages, Possibilities, and Use of the Ross Stereo-Prism Binocular as applied to Field Natural History*.

With numerous illustrations.

Edwardes (Tickner), *The Lore of the Honey Bee*, 1/ net.

New edition of this attractive book.

Gillies (H. Cameron), *Regimen Sanitatis, the Rule of Health: a Gaelic Medical Manuscript of the Early Sixteenth Century or perhaps Older, from the Vade Mecum of the Famous Macbeaths, Physicians to the Lords of the Isles and the Kings of Scotland for Several Centuries*.

Mercer (J.), *Sturm-Liouville Series of Normal Functions in the Theory of Integral Equations*, 4/ net.

National Physical Laboratory, *Report for the Year 1910*.

Nunn (Arthur W.), *Materia Medica Step by Step*, 3/6 net.

Fiction.

Brame (Charlotte), *Claribel's Love Story; or Love's Hidden Depths*.

One of Stanley Paul's Clear Type Sixpenny Novels.

Craven (Priscilla), *The School of Love*, 6/

The story of a will with conditions. The scene is at first laid in America, but afterwards in England.

Foxe (Gertrude M.), *The Russian Wife*, 6/

The book follows Tolstoy in its presentation of the common infidelity of the Russian husband, and some readers may be of opinion that it depends too much upon the introduction of the supernatural. The personality of the woman whose love appears to be nourished by the backslidings of her husband is arresting, if hardly convincing.

Gay's Shilling Library: *A Frontiersman*, by Roger Pocock; and *Rebecca of Sunnybrook Farm*, by Kate Douglas Wiggin.

New editions.

Gibbs (Philip), *Oliver's Kind Women*, 6/

Deals with a City clerk and the women who touch his life.

Horn (Kate), *The White Owl*, 6/

The story of a famous writer who, on the death of her husband, hands her daughter over to an aunt and takes up her residence in Sicily to devote herself exclusively to her art. Her daughter, who becomes engaged to a rich baronet, fails in health, and retires to a farm for open-air treatment. She recovers, and love complications arise. In the end each marries the right person.

Hume (Fergus), *The Jew's House*, 6/

A narrative which is largely concerned with adventure, crime, and mystery.

Lethbridge (Olive) and Fitzgerald (Gerald), *The Marriage Maze: a Study in Temperament*, 6/

Contrasts the temperaments of a husband and a wife.

Macnaughtan (S.), *The Gift*, 7d. net.

New edition.

Minnett (Cora), *The Model Millionaire*, 6/

The story of an Australian millionaire's visit to the Old Country, and the eventual devotion of his money to the uplifting of men and women who have "gone under" in the storm and stress of life.

Mortimer (Leslie), *The Torch of Venus*, 6/

The tale is concerned with a jewel stolen from an Indian idol.

Philips (Austin), *A Budget of Tares*, 6/

A collection of Post Office and other stories, originally published in various magazines.

Ray (Anna Chapin), *A Woman with a Purpose*, 6/

The story of a woman who wrote novels, and her estrangement from her husband who treated her as a plaything.

Rivers (Ruth), *She was a Widow*, 3/6

The tale of a widow's quest for the ideal husband.

Scott's Guy Mannering, 2/

Edited, with introduction, notes, and glossary, by A. D. Innes.

Shute (Mrs. Cameron), *The Unconscious Bigamist*, 6/

South Africa is the scene. The heroine is unhappily married, and takes a second husband after hearing that her husband has been killed in the Boer War.

Steel (Flora Annie), *The Gift of the Gods*, 2/ net.

The scene is laid in a small proprietary island in the Hebrides.

Storey (Harold), *The Ascent of the Bostocks*, 6/

A story of English provincial middle-class life.

Vynne (Nora), *The Pieces of Silver*, 6/

A political novel, written from the individualist point of view.

Ward (Mrs. Wilfrid), *The Job Secretary*, 4/6

Relates how a secretary, casually brought in to assist an author, causes him to reconstruct his work, and the consequences of his so doing.

Williams (J. Evans), *Aberafon*, 6/

A story of two brothers, both landowners, who disagree.

General Literature.

Army Annual and Year-Book, 1911, 7/6 net.

Edited by Lieut.-Col. H. M. E. Brunker.

Benson (Arthur Christopher), *From a College Window*, 3/6 net.

Fourth edition. For review see *Athen.*, May 19, 1906, p. 606.

Forbes (Nevill), *Polish Literature*, 1/ net.

A lecture by the Reader in Russian in the University of Oxford.

Manchester Quarterly, April, 6d. net.

Marine Magazine, Vol. I. No. 2, 1d.

A new periodical relating to the work of the Marine Society. Sir Harry Poland is contributing to the magazine a series of articles on famous British admirals. The present number contains his account and criticisms of the court martial and execution of Admiral Byng.

Scott (W. Stanley), *The Man in the Street: Essays*, 2/6 net.

It is the opinion of the writer of these "popular" essays that we are approaching a new and more glorious age in the world of politics.

Thomas (Edward), *Light and Twilight*, 2/6 net.

A collection of papers, most of which have appeared in periodicals.

Woman's Book, 3/8 net.

Contains chapters on household management, cookery, children, home doctor, business, dress, society, careers, citizenship, &c. Edited by Florence B. Jack and Rita Strauss, assisted by many contributors. The book has many illustrations.

Pamphlets.

Grey (Sir Edward), on Union for World Peace, from his Speech in the House of Commons on March 13.

Issued by the World Peace Foundation.

Mead (Edwin D.), *The International Duty of the United States and Great Britain*.

Issued by the American Association for International Conciliation.

Memorandum on the Supply of Teachers for Elementary Schools, with Special Reference to the West Riding of Yorkshire.

Summer Trips on the River Thames, Oxford and Kingston Steamers, May and June, 1d.

Illustrated time-table and guide.

FOREIGN.

Theology.

Goethals (A.), *Jean Précurseur de Jésus*, 1fr. 50.

Part II. of *Mélanges d'Histoire du Christianisme*.

No. 84 of *Studier fra Sprog- og Oldtidsforskning*.

* * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

'TWO CENTURIES OF THE ENGLISH NOVEL,' by Mr. Harold Williams, which Messrs. Smith & Elder will publish next Thursday, provides a survey of English novel-writing from Defoe to Mr. Thomas Hardy. The book thus differs in scope and aim from preceding histories and studies of the novel. It is not an exposition of method or theory; it traces in chronological order the significance and value of the chief tendencies and ideals of English prose fiction throughout two centuries. The greater names have separate chapters assigned to them, and the lesser are grouped.

MRS. MARGARET L. WOODS has collected her 'Pastels' under the Southern Cross into a book which will be published by

the same firm in the early autumn. Additional material has been gathered since the appearance of the series in *The Cornhill Magazine*.

MESSRS. MACMILLAN will publish next Tuesday the third volume of 'Lollardy and the Reformation,' by Dr. James Gairdner, and Mr. Warde Fowler's Gifford Lectures on 'The Religious Experience of the Roman People from the Earliest Times to the Age of Augustus.'

THE same firm will publish on June 2nd, in two volumes, Mr. Alfred Austin's Autobiography and Mr. Owen Wister's new volume of tales of Western America, 'Members of the Family.'

SIR ISAAC PITMAN & SONS will add immediately to their "All Red Series" of books on the Empire a volume entitled 'The Dominion of Canada.' The author, Mr. W. L. Griffith, is Secretary to the Office of the High Commissioner for Canada.

MESSRS. NISBET & Co. will publish early in June 'The King's Serjeants and Officers of State with their Coronation Services' by Dr. J. H. Round, who has brought his erudition to bear on services the existence of which can in some cases be traced back to the days of the Norman dynasty.

THE leading feature of *Harper's Magazine* for June is a newly found article, entitled 'Cockney Travels,' by Thackeray. Prof. Ellsworth Huntington describes a desert in Southern Arizona which is full of bushes and trees. The story of Miss Van Lew, a Southern woman spy, who served the North, is told from various documents; and Louise Closser Hale writes on a motor tour undertaken in Germany 'Without Benefit of German.' Among the contributors of short stories are Mr. A. Sherburne Hardy, Mrs. Dudeney, and Mr. Le Gallienne.

MR. FREDERIC HARRISON will contribute to *The Positivist Review* a series of papers on the social aspects of various forms of religion. The first of these—on 'Nature Worship'—will appear in the June number. The same number will contain an article, 'Impressions of the Portuguese Republic,' by the editor, Mr. S. H. Swinny, who has recently visited Portugal.

AMONGST the articles in *Chambers's Journal* for June are 'A Hobby of Kings,' by Mr. Edward Vivian; 'Of Scotch Ministers and their Flocks,' by Sir Henry Smith; 'Is Esperanto Dead?' by Mr. Harrison Hill; 'The Wild Deer of Devon'; 'Vicissitudes of the Crown Jewels'; and a poem, 'Rex Coronatur,' by Mrs. Edward Starkey.

FASCICULE III. of the hitherto unpublished works of Roger Bacon, edited by Mr. Robert Steele, will be ready for issue next week. It contains a further instalment of the 'Communia Naturalium.'

DR. HENRY BRADLEY writes:

"I see your reviewer says that 'secondine' is omitted in the 'Dictionary.' There is a cross reference, 'Secondine, obs. form of Secundine,' and the example from Browne, which the reviewer mentions, is given. Perhaps the existence of the word in French ought to have been mentioned, but otherwise the treatment seems adequate. It is not certain that the spelling with *o* is due to acquaintance with the French form."

MR. LUCIEN PISSARRO has in the Eragny Press at Hammersmith an album of selections from Madame Judith Gautier's 'Livre de Jade,' with seven woodcut illustrations printed in gold and colour, and twelve coloured ornaments. The book will be printed in red and grey on Japanese vellum. Mr. Pissarro's recent work in this direction has been taken up by private book-clubs in France. Subscribers' names will be printed in their copies, if desired.

WE mention once again the scheme for the publication of the complete works of William Penn, as the American scholar who is gathering and editing materials, Mr. Albert Cook Myers, is now in London. Over 1,100 letters have, he tells us, already been located, of which not half have been printed, and Mr. Myers now asks for further correspondence or biographical information which is likely to be unknown. His address for some months will be Devonshire House, Bishopsgate.

As the fullest edition extant of Penn's works appeared in 1726, the later ones being merely selections from this, it is clear that there is an abundant field for fresh investigation. The undertaking is backed by the Historical Society of Pennsylvania and the Friends' Historical Society in this country.

BIBLIOGRAPHY in the Scottish Exhibition requires more than a mere word of supplement to the notice we gave last week. Mr. W. K. Dickson, Mr. F. T. Barrett and Mr. James MacLehose have happily displayed the arts of printing and book-production in a select chronological series of works beginning with superb incunabula. After fully illustrating the course of native printing, especially in Edinburgh and Glasgow (including the Edinburgh invention of stereotype), the list closes with masterpieces from the Foulis press.

PROF. SMART AND DR. W. R. SCOTT, by an arrangement of books and tractates on such themes as the Darien enterprise, contrive to produce an instructive story in outline. The Rev. W. J. Couper's assortment of journals and magazines equally speaks for itself; and Mr. Eccles essays a still wider task in bookcases, the contents of which form a chart of the zigzag of Scottish ecclesiastical opinion.

MESSRS. SOTHEY will sell the second portion of the extensive library of the late Charles Butler on the 29th inst. and three following days. Like the first, it is

notable for its books in fine bindings. We notice a series of early editions of Boccaccio; some rare early editions of Dante; a fine copy of Jenson's Pliny, 1472; a First Folio Shakespeare, in which all the preliminaries of the last leaf are in facsimile, and a Second Folio, which has minor defects.

SEVERAL interesting volumes from the collection of Bishop Tanner, bearing either his autograph or having notes in his hand, are included in the library which Messrs. Hodgson will sell on Tuesday next. The most important is a perfect copy of the 'Mirror of our Lady,' printed by R. Faques in 1530, which was owned by Humfrey Wanley before passing into Tanner's hands. Fortunately this volume, unlike many of the others, has not suffered from the immersion which it doubtless underwent in 1731, when Tanner's books sank in a barge near Wallingford, on their way from Norwich to Oxford. A copy of the 'Notitia Anglicana' of 1744 is profusely annotated by John Tanner, who edited the second edition of his brother's work.

MESSRS. DODD & LIVINGSTON of New York have just issued an elaborately annotated catalogue of 'Early English Literature,' for the most part consisting of rare books formerly in the Rowfant Library.

FROM *The Lincolnshire Echo* we gather that the work of restoring Somersby Church in memory of Tennyson is nearing completion. It is hoped that the Church will be reopened on Sunday, August 6th, Tennyson's birthday, and that a further open-air celebration will be arranged on Monday.

THE death is announced at Croydon of Mr. Robert Wilson Johnston, who for 40 years was in the service of the Post Office, and was a practised journalist, contributing to *The Scotsman*, *Chambers's Journal*, and many London journals.

M. ROGER ALLON, who died in Paris a few days ago at the age of 55, was an *avocat* and *maire* of the 18th Arrondissement, and was the author of many books, notably a study (written in collaboration with M. Chenu) of 'Les grands Avocats du Siècle,' which was "crowned" by the Académie Française. He was also an artist, and exhibited at the Salon from 1881 to 1884.

WE notice the death at the end of last week of Karl Baedeker, who had retired from the headship of the famous firm of makers of guide-books. It was his father who made Baedeker a household word.

RECENT Parliamentary Papers of general interest are: Statute for Worcester College, Oxford (post free 1d.); Education, Scotland, Northern and Higher Divisions Report (post free 3d.); Southern Division Report, (post free 4d.); and Scottish Museum Report (post free 2½d.).

SCIENCE

OUR LIBRARY TABLE.

Studies of Trees and Flowers. By M. Wrigley. With Descriptions by Annie Lorrain Smith. (Methuen & Co.)—Never a month passes without some contribution to the worship of nature or the garden in the sphere of letters. There seems an insatiable demand for such books, which is, when you consider it, a gratifying feature of modern taste. If bridge and golf flourish exceedingly, and if this is the day of motor-cars, the garden also has its increasing number of votaries.

It is apparent that Mr. Wrigley has taken personal pleasure in making these photographic studies of trees and flowers. They are admirable in technical skill, and, if chosen rather at random, cover a goodly range. The subjects, the Preface says, "were usually chosen for some grace of form, or for some perfection of development that specially appealed to the sense of beauty; but occasionally it is some peculiarity of growth that has been recorded by the camera." So far as line and form go, the plates could hardly be improved, but, of course, the final perfection of colour is lacking. In some recent works it has been found possible to combine colour with photography, and the result has been very successful. The flat blankness of the ordinary photograph is tame beside the natural richness of the coloured. It will, we fear, be still some time before science discovers the proper secrets of colour photography.

The descriptions of the plates, written by Miss Lorrain Smith, are adequate, and judicious. The book itself should serve to introduce readers to many plants with which they are unfamiliar; but a large proportion of the plates depict familiar species, and hence can only be considered useful as reminders.

The Geology and Geography of Northern Nigeria. By J. D. Falconer. (Macmillan & Co.)—As our knowledge of the geology of Northern Nigeria has hitherto been scanty, Dr Falconer's work, which gives a general account of the structure of the Protectorate, forms an acceptable contribution to geological literature. Fortunately, too, it comes at a time when much attention is being directed to the Nigerian tin deposits. In the last seven years the author has visited the country on five occasions in charge of exploring parties officially engaged in investigating its mineral resources and geological character. From the detached notes made by himself and his colleagues during these journeys, Dr. Falconer has managed to reconstruct, with a fullness greater than might have been expected in the circumstances, the successive events in the geological history of this great territory, and to produce a geological map which, though obviously open to much correction as our knowledge becomes more detailed, is still a notable achievement.

Throughout the Protectorate the fundamental rocks are granite, gneiss, and crystalline schists, exposed superficially over about half the area of the country. Two series of these crystalline rocks are distinguished—an older group of well-foliated gneissose rocks of Archæan type, and a

younger group of softer less-metamorphosed rocks. Through both series granitic and other igneous rocks have been intruded, probably at two distinct periods. Upper Cretaceous deposits, consisting of sandstones and grits, limestones and shales, which have suffered from folding and faulting, are locally developed. Some of these beds are salt-bearing, whilst others yield fossils of Turoonian age. The fossils have been studied by Mr. H. Woods of Cambridge, and many of them are here beautifully figured. Unconformably over the Cretaceous deposits and the crystalline floor there are sandstones, clays, limestones, and ironstones, referable to the Middle Eocene period. It is interesting to note the occurrence of nummulitic limestone in this part of Africa.

Relics of volcanic activity at various localities in Northern Nigeria show that cones were formed and lava poured forth during the Middle Eocene era. Then a long period of quiescence must have followed. But in late Pliocene times, extending perhaps into the early part of the Pleistocene period, volcanic outbursts again occurred, with formation of fresh puys and extrusion of more basaltic lava. Of this later phase evidence is presented by many well-preserved craters.

Spread over much of the surface in Northern Nigeria are accumulations of unconsolidated material, and in places these superficial deposits pass into dark soils, rich in organic matter, known as firki. Iron ores are widely distributed, and the natives are skilful in extracting the metal. Gold is known to occur sparingly in many parts of the Protectorate, but the most valuable economic mineral yet discovered in workable quantity is tin-stone—a mineral which seems likely to play a conspicuous part in the future development of the country.

History of Geology. By Horace B. Woodward. (Watts & Co.)—In this little work belonging to "The History of Science Series," Mr. Woodward has sketched with an able and discreet hand the rise and development of geology from the early days of the science to the present time. Detailed treatment of any part of the subject was forbidden by the slenderness of the volume, yet a great amount of trustworthy information has been compressed into its 150 pages. With the history of British geology and the lives of geologists the author is exceptionally familiar. The volume on the history of the Geological Society of London, issued officially at the celebration of its centenary, was from his pen; and to the new 'Encyclopædia Britannica' he has contributed many excellent biographical articles.

In the present work Mr. Woodward has treated his subject partly chronologically, and partly according to special subjects: thus in one place we trace the history of geology in general during the early part of the nineteenth century, in another we read the history of opinion on the older geological systems. An interesting chapter deals with the geological surveys undertaken by the Government in different States. Those who learnt their early geology when Lyell's 'Principles' was the standard textbook, something like half a century ago, will hardly have forgotten the interesting chapters at the beginning of the famous work, with the heading 'Historical Sketch of the Progress of Geology.' The modern textbook, however, finds no room for similar information. Yet the student would undoubtedly be benefited by knowing something of the history of the subject which is engaging

his attention; and to him as well as to the general reader Mr. Woodward's pages may be cordially commended. The work is illustrated with several portraits, and is furnished not only with a good Index, but also with a useful Bibliography.

THE ROYAL SOCIETY'S CONVERSAZIONE.

THE Annual Conversazione of the Royal Society was held at Burlington House on the evening of the 10th inst., and was, as usual, crowded. Several well-known faces, such as those of Sir William Ramsay, Sir E. Ray Lankester, and Sir James Dewar, were absent; but nearly every one else of note in the scientific world was there, including, besides the exhibitors, Lord Rayleigh, Sir Henry Howorth from the Archaeological Institute, Dr. Tutton from the Board of Education, Dr. C. H. Read from the Society of Antiquaries, Mr. H. A. Grueber from the Royal Numismatic Society, and Mr. Henry Balfour from the Pitt-Rivers Museum. The Royal Institution was particularly well represented, its President the Duke of Northumberland, Earl Cathcart and most of the other members of the Council, and its Hon. Secretary Sir William Crookes being all present.

Of the two demonstrations given in the Meeting-Room during the evening, the first, by Mr. Robert Strutt, was virtually a repetition of his paper in the Physical Society's *Proceedings* showing that the afterglow of Geissler tubes was due to actual combustion of a small portion of the gas therein. The second, by Mr. Barcroft, on Mountain Sickness, consisted mainly of diagrams from observations taken on the Peak of Teneriffe, showing the alterations produced in the blood pressure and the like by high altitudes. The general result appeared to be that in this highly rarefied atmosphere less and not more oxygen than at lower levels was consumed by the animal organism.

In Astronomy an unusually important series of exhibits were shown. The Astronomer Royal sent a model of the orbit of the recently discovered eighth satellite of Jupiter, together with a celestial globe demonstrating in a lucid way the existence of the twin drifts or star-streams discovered by Prof. Kapteyn, and frequently mentioned in our Research Notes. In addition there were photographs of Halley's Comet from the Helwan and Lowell Observatories, with "spectrograms," or photographs of spectra, from which the American observers deduce that the heads of comets have perfectly different components from their tails, and that the knots in the gaseous contents of the latter which show accelerated velocity "away from the head" are molecules repelled by the sun's action. Mr. Fowler's exhibit showing that these gases were in most cases carbon monoxide, with, in the case of comet Morehouse, nitrogen, was also extremely interesting.

In Physics the chief interest seemed to centre round improvements in instruments, foremost among which was the micro-balance exhibited by Sir William Ramsay and Dr. Gray. It was only a model of that recently set up at University College, London, and registers the twenty-thousandth part of a milligram, the one permanently installed at Gower Street being sensitive to a weight ten times less than this. To avoid the apparently insuperable difficulty of adding small weights to an instrument

so delicate, its exhibitors hit on the ingenious expedient of altering the apparent weight of the air in the sealed quartz bulb which forms the counterpoise by altering the pressure of air in the exhausted glass case of the balance. Silica fibre plays the chief part in the construction of the instrument, which has been lately used by Sir William Ramsay to determine the density of radium emanation or "niton."

The "Anschütz gyro-compass" exhibited by Messrs. Elliott Brothers also attracted much attention. In the model shown it works with one gyrostat only, and thus did not seem to require rotation at any very high speed. The demonstration by the exhibitor, by means of a skeleton globe, that the apparatus can be trusted to arrange itself at right angles to the earth's equator, was satisfying, and tended to show that it is the North Pole, and not the magnetic north, to which the needle of the compass points.

Sir James Dewar exhibited a radiometer which rotated by the pressure of mercury vapour at about one fifty-millionth of an atmosphere. It was made with mica vanes blackened on one side, as in Sir William Crookes's original instrument, and revolved rapidly under a beam of light from an electric arc-light focussed upon it. When the vacuum was increased by the cooling of a bulb filled with charcoal in liquid air, the rotation stopped, but was started again by the admission into the radiometer bulb of the vapour spontaneously given off by liquid mercury. A collection of the original radiometers constructed by Sir William Crookes in his researches extending over the three years from 1875 to 1878, when his invention was made public, was of much historical interest.

A curious point in the phenomena of heat was demonstrated by Prof. A. W. Porter in the "lagging" of wires and pipes. A platinum wire was heated by an electric current to a temperature of 1000° C., parts of it being covered at regular intervals with glass tubing. Although glass is a very bad conductor of heat, the covered parts remained fairly cool, and not above the temperature of boiling water, therefore showing that the "lagging" in such cases facilitates rather than retards the escape of heat. Similar effects were shown with steam-pipes lagged in the usual way with asbestos packing, the point made being that this is ineffectual except with pipes above a certain diameter.

Prof. Norman Collie's experiments with neon tubes also received much attention. One tube containing almost pure neon emitted such a brilliant light as to be painful to the eyes, and the usefulness of neon tubes as a means of observing the canal-rays was convincingly shown, our recent description of this in Research Notes making it unnecessary to dwell further upon it. One phenomenon demonstrated by Prof. Collie was that, when an electric discharge was taken through neon in a bulb, one of the electrodes of which consisted of a large pool of mercury, the columns of light formed by the elongation of the spark approached the centre of the bulb, and thus took the shortest path. When the direction of the current was reversed, they were repelled from the centre and curved outwards, so as to cling to the interior wall of the tube. No explanation was given of this by the exhibitor; but it may be judged from this, coupled with the canal-ray experiment, that neon, which is as a conductor of electricity greatly superior to any other known gas, shows a preference for positive electricity rather than negative.

In this connexion it may be mentioned that Mr. C. W. Raffety exhibited two more

of his interesting photographs of electric sparks. The pair shown were those of the "brush" discharge from points in air at low pressure. The photograph of the positive brush, though greatly enlarged, did not exhibit any great difference from its appearance to the naked eye; but the negative point, which in air at atmospheric pressure appears as a star, was here shown to consist also of a "brush," the bristles of which were curled into spiral forms somewhat after the manner of the tendrils of the vine.

A considerable quantity of radium from the Cornish mine of Trenwith was also exhibited, and seemed to suggest that in future it will not be necessary to depend on the courtesy of the Austrian Government for the supply necessary for both medical and experimental purposes. It was extracted from pitchblende by the British Radium Corporation, and exhibited by Mr. Francis Fox. One tube contained fifty-seven milligrams of perfectly pure crystallized bromide of radium, and the value of the quantity exhibited was at current prices considerably over 5,000*l*. The blue phosphorescence of the salt on first cooling after heating in a silica crucible was brilliant.

In Biology there were several novelties, including a very pretty experiment by Prof. W. M. Thornton showing a difference between the electric polarity of animal and vegetable cells. A weak emulsion of blood corpuscles and yeast cells was placed in an electric field, when the animal cells were driven towards the positive pole, and the vegetable ones to the negative. This effect was easily seen with the help of a microscope, and was reversed with the direction of the current. It points to a difference between animal and vegetable life hitherto unsuspected, and might possibly be practically applied to the identification of blood-stains. It should be noted, however, that the vegetable—but apparently not the animal—cells lose their polarity quickly, and need to be prepared from recent growths for the effect to be manifested.

Mr. Henry Crookes also exhibited some interesting results in the action of different metals on bacteria. *Bacillus phosphorescens* was chosen for this purpose, although *Bacillus coli communis* and *Bacillus prodigiosus* are said to produce the same effect. A culture-jelly is poured into dishes each containing a small square of metal, and inoculated with the bacillus in question. After 24 hours the bacteria grow and give out phosphorescence, except immediately round the metal, where the death zone varies in size according to the germicidal properties of the metal. Silver, mercury, cobalt, antimony, and arsenic seem the most effective in this respect; iron, copper, lead, and zinc less so; while gold, platinum, and tin of the other better-known metals have apparently no effect on the bacteria whatever. It is curious that a very small dose of the metal appears to have a stimulating effect on the bacteria, and this is especially marked in the case of sulphur, which seems to have been the only non-metallic substance experimented with. On the whole, it would appear that the rich Hindus are well advised in using silver cooking-vessels.

Prof. Henry Armstrong and Dr. E. F. Armstrong exhibited in several jars the action of hormones, or substances having little direct action of their own, but endowed with the property of stimulating enzymes or ferments to increased activity. This was demonstrated by the blackening of leaves placed over jars containing solutions giving off vapour, such as weak acids, ammonia, and bichloride of mercury. Another proof of the decomposition caused by the

enzymes was afforded by the employment of leaves of the common laurel, which under their influence gave off hydrocyanic acid gas. The "bactericidal"—why not "bactericidal"?—action of the Cooper-Hewitt or mercury-vapour lamp was also shown by Prof. R. T. Hewlett and Mr. J. E. Barnard, and its economy in the sterilization of water and other substances was demonstrated.

A gigantic model of the flea which is supposed to act as a carrier of the bubonic plague was exhibited by Mr. N. C. Rothschild; and the growth of the artificial plants produced from mineral solutions, first discovered by M. Stéphane Leduc of Nantes, was convincingly demonstrated by Dr. Deane Butcher, most of his "artefacts" three or four inches long being grown in the room during the evening. He attributes their formation to osmotic growth, which is not, perhaps, the opinion of everybody.

RESEARCH NOTES.

In *The Philosophical Magazine* for this month Prof. Rutherford has a paper on 'The Scattering of Alpha and Beta Particles by Matter,' in which he comes to some very promising conclusions as to the structure of the atom. Assuming that the atom consists of a central charge supposed to be concentrated at one point, and that the large "single deflexions" of the Alpha and Beta particles are for the most part due to their passage through the strong central field, he goes on to say that everything seems to point to the value of this central charge for the atoms of different elements being roughly proportional to their atomic weights, "at any rate for atoms heavier than aluminium." He quotes with approval the conclusion arrived at on mathematical grounds by Prof. Nagaoka (of Tokyo), that what the Japanese scholar calls a "Saturnian" atom—i.e., a central attracting mass surrounded by rings of rotating electrons—would be stable if the attracting force were large; and he declares that the value found for the central charge of the atom of gold is about that to be expected if such atom consists of forty-nine atoms of helium, each carrying a double unit-charge of electricity. Although he does not commit himself to the fact being more than a coincidence, he reminds us that the Alpha particles expelled by highly radio-active substances do carry this double unit-charge, but apparently shrink from drawing the conclusion that a doubly charged atom of helium is a constituent of all heavy metals. He says further that it is not yet possible to determine whether the central charge is positive or negative; but that, if it be positive, the high velocity acquired by the expulsion of a positively charged mass, such as the Alpha particle, from the centre of a heavy atom is accounted for, without it being necessary to consider such particles as in rapid motion within the atom. Altogether it is a very thoughtful and well-reasoned paper, which goes far to clarify ideas on the subject.

Profs. P. Lenard and C. Ramsauer announce the discovery of a new radiation having some singular properties. Until now the ultra-violet rays discovered by Schumann and extended by Lyman, which are no longer than 100 micro-microns or millionths of a millimetre, formed the limit of our researches into that end of the scale of ether-waves. As even the Schumann rays with a wave-length of from 180 to 120 micro-microns were stopped by all substances

except perfectly clear fluorine, it seemed improbable that we should ever get any further. Profs. Lenard and Ramsauer, however, availing themselves of the power of expelling electrons from the bodies on which they fall exercised by the ultra-violet rays, have succeeded in showing that there exist radiations of even shorter wave-lengths than those of Lyman. To produce these, they employ an induction coil, or rather a specially wound transformer, with an electrolytic break which can work up to 90 ampères. They also add a battery of condensers of great capacity to the secondary circuit, with the result that the average power consumed in the spark taken between two electrodes of aluminium is not less than one kilowatt. This enormous concentration of energy gives a radiation which ionizes all gases freely; but the extraordinary thing about it is that, unlike the radiation of Schumann, it will traverse without much absorption considerable thicknesses both of air and of quartz. Prof. Lenard has tried to measure the wave-length of the new ray by means of a lens of fluorine, but has not yet succeeded in doing so with any great accuracy. The general result is that the opacity of quartz for ultra-violet rays of lesser wave-length than those now announced must be due to some other cause than absorption. The discovery of Prof. Lenard and Ramsauer was first published in the *Annalen der Physik*, but a clear summary (apparently from the pen of M. Léon Bloch) appears in the *Revue Scientifique* for the 29th of last month.

An excursion into the hitherto unknown regions at the other end of the visible spectrum is described by Profs. H. Rubens and O. von Beyer in the number of *The Philosophical Magazine* above quoted. They have discovered a radiation from the mercury-vapour quartz lamp which appears to them to be equivalent to infra-red or heat-waves of relatively long wave-length, or in other words to vibrations in the ether of not more than 0.3 millimetre. The discoverers found that sparks between electrodes of zinc, cadmium, aluminium, iron, platinum, and bismuth gave no effect. The new radiation was only discovered by using a train of quartz lenses in the manner set forth in a previous paper by Prof. Rubens and Prof. R. W. Wood (of Baltimore), the process being based on the fact that the "extreme difference" of the index of refraction for heat-rays on both sides of the region of absorption in quartz (1.30 to 2.14 mm.) can be so adjusted as to concentrate the long-waved radiation emitted on a given diagram, while the ordinary heat-waves are dispersed. As a control experiment, a piece of amorphous quartz was heated by a Bunsen burner, but gave waves of a much shorter length, thereby indicating that the radiation was from the luminous mercury vapour within the lamp. The authors of the paper point out, however, that it is not quite beyond "the range of possibility" that the active radiation may consist of relatively very short Hertzian waves; but this seems to be largely a matter of names. They estimate that by this research they have reduced the unexplored region on the infra-red side of the visible spectrum by one and a half octaves.

Prof. Svante Arrhenius, who seems to have become extraordinarily prolific since his appointment as Director of the Nobel Institute at Stockholm, has lately delivered a lecture at the Sorbonne, which is printed in the *Revue Scientifique* for the 15th of last month, on the phenomena of adsorption. This is the name recently given to the pro-

perty possessed by certain colloids (including therein amorphous silicic acid) of forming themselves into a sort of network containing within their component cells a quantity of water. But the name is also applied to the phenomena of occlusion exhibited by substances like charcoal, spongy platinum, clay, meerschaum, asbestos, and even cotton and woollen fibres, of retaining within their interstices quantities of gas and some other forms of matter. Prof. Arrhenius examines this property more particularly with regard to gas, and deduces from his investigation that the forces which produce adsorption are of the same order and nature as those which cause the mutual attraction of the molecules of the gas. He finds that such substances as wool, cotton, and the like follow the same law as carbon, not only in the extent of the adsorption, but also in the order in which they are adsorbed; and he shows that there is a certain analogy between the phenomena adsorption and the compressibility of fluids.

Prof. Wegener in the *Physikalische Zeitschrift* for last month describes his researches into the upper strata of the earth's atmosphere, which, he thinks, changes as we go upward until, at a height of from 60 to 80 km., it consists principally of nitrogen. A further rise would take us into a layer of almost pure hydrogen, which is in his view the zone in which the principal meteors become visible. Above this again, at about 200 km., we come to the region of the aurora borealis, where he imagines that the presence of hydrogen almost entirely ceases, it being replaced by a new and still lighter gas, which he wishes to call geo-coronium. According to him, this is so thin—not more than 0.4 in atomic weight—that meteors can traverse it without incandescence, and it is the seat of the zodiacal light; while he hints at the probability that it extends up to and touches the solar atmosphere. For all this he gives reasons, which, whether sufficient or not, show that the suggestions made do not depend merely on the scientific imagination; and he draws some curious conclusions as to the occurrence of alternate zones of noise and silence which deserve consideration. He does not appear to notice that, if he could detect the widespread presence of this geo-coronium in the lower strata of the atmosphere in which we live, he would be enunciating afresh the chemical conception of the ether formed by Mendeléeff.

Dr. C. Gagel has recently published a study of the geological features of the Canaries, the Azores, and other islands in the Western Atlantic under the title 'Die Mittelatlantischen Vulkaninseln.' He here points out that, although all these islands are of volcanic origin, on three of the Cape Verd and on three of the Canary Islands there is to be found under the lava beds a substratum of older formations which are the same as those met with on the nearest mainland. Among these are both metamorphic and sedimentary rocks; and, coupling this with the fact that between the Cape Verd Islands the sea is comparatively shallow, he thinks it affords proof of the existence of a continent in Mid-Atlantic submerged in fairly recent times. Nothing, unfortunately, has yet been found which would enable us to fix even approximately the date of the submergence; but it may be noted that the flora shows some analogy with the Mediterranean flora of the Pliocene age. It is suggested that a prolonged and detailed study of all the islands might lead to a different result.

One of the most interesting of scientific lectures was delivered at the Polyclinique

Henri de Rothschild at the end of March by Prof. S. Pozzi, and has just been printed at length in the *Revue Scientifique*. It described a visit lately paid by the lecturer to the Instituto Serumtherapico of Butantan, near to Sao Paulo in Brazil, where the cure of snake-bites by a serum taken from horses and asses made immune by injections of snake poison is practised. One of the unexpected effects noticed was that the horse towards the end of the treatment became much heavier in weight, but lost this increase when the daily dose of attenuated virus was stopped.

Prof. Pozzi described in the course of his lecture a battle that he there witnessed between a huge harmless snake, *Rachidelus brasili*, and an extremely venomous one, *Lachesis lanceolatus*, which he poetically compares to the combat between Ormuzd and Ahriman. Although *Rachidelus* was bitten more than once in the course of the fight, it seemed to have no effect upon him; and when he had paralyzed his poisonous adversary, he proceeded calmly first to dislocate his cervical vertebrae, and then to swallow him head first.

In the *Compte Rendu* of the Académie des Sciences for last month is a study by MM. René Cruchet and Moulinier on 'Le Mal des Aviateurs,' in which the authors give a formidable list of the inconveniences suffered by aeroplanists both in going up and coming down. Difficulty of breathing, palpitations, violent headache, and excessive micturition seem common to both the ascent and the descent; but the latter is also characterized by congestion of the external bloodvessels of the face and intense desire for sleep. After landing, vertigo, a sort of muscular paralysis or disinclination to use the muscles, and cyanosis of the extremities begin to manifest themselves; while the arterial pressure is shown to be much greater than before flight. The authors point out that some of these symptoms are quite different from those present in mountain sickness, and suggest that they are caused by the rapidity of motion only.

The question of the determination of sex has again cropped up, this time in a communication to a contemporary by Dr. A. Russo of Catania, who claims from experiments on both men and animals that female offspring can always be produced by an injection of lecithine, a substance found in the yolk of eggs and elsewhere in the organism, applied to both parents. Not unconnected with this may be the announcement lately made by Mr. Guyer in the *Biological Bulletin* that the number of chromosomes in certain cells is greater with women than with men to the extent of something like one in six. Most of these statements, however, have yet to be proved. F. L.

SOCIETIES.

ROYAL.—May 11.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'On a Method of making visible the Paths of Ionizing Particles through a Gas,' by Mr. C. T. R. Wilson,—'The Vertical Temperature Distribution in the Atmosphere over England, and some Remarks on the General and Local Circulation,' by Mr. W. H. Dines,—'On some Mineral Constituents of a Dusty Atmosphere,' by Prof. W. N. Hartley,—'The Path of an Electron in Combined Radial Magnetic and Electric Fields,' by Dr. H. Stanley Allen,—'On the Absolute Measurement of Light: a Proposal for an Ultimate Light Standard,' by Dr. R. A. Houstoun,—and 'On Harmonic Expansions,' by Prof. A. C. Dixon.

SOCIETY OF ANTIQUARIES.—May 11.—Dr. C. H. Read, President, in the chair.

Mr. W. H. St. John Hope read a paper on the discovery of the remains of King Henry VI. in St George's Chapel, Windsor Castle, on November 4th, 1910. When the quire aisles were repaved in 1789, several graves were discovered, including that of King Edward IV., which was opened and examined. That which tradition had always pointed out as King Henry VI.'s was also found, under the second arch on the south side, but not allowed to be opened. As there had long been a doubt as to where King Henry's remains had actually been buried on their removal in 1484 by King Richard III. from their first resting-place in Chertsey Abbey, the traditional site at Windsor has lately been examined, with the approval of the King, in the presence of representatives of the Dean and Chapter, the Provosts of King's and Eton, and others. Under the second arch in the south aisle there was found a small leaden chest, 3½ ft. long, in a full-sized brick vault, with the iron bands and other remains of a large wooden coffin in which it had been placed and buried. On the leaden chest being opened, a wooden box with a sliding lid was found within, which contained the remains of a human body with traces of silk wrappings. These remains have been examined by Prof. Macalister, and pronounced to be those of a fairly strong man, between 45 and 55 years old, and at least 5 ft. 9 in. high. The bones of the head were much broken, but belonged to a skull well formed, but small in proportion to the stature. Nearly all the bones of the trunk remained, also those of both legs and of the left arm, but no part of the right arm (perhaps because it had been retained at Chertsey as a relic). The body had evidently been dismembered when put in the box, and had every appearance of having been buried in the earth for some time, which in King Henry's case was thirteen years, and then exhumed. The state of the bones was too unsatisfactory to allow of any trustworthy measurements being taken. After the remains had been completely examined they were again closed up in the leaden chest, and replaced, with everything found with them, in the grave, which was then filled up as before with dry rubbish.

Mr. Hope quoted various historical and documentary notices of the King's burial at Chertsey, the exhumation and removal of his remains to Windsor, and the abortive efforts to translate them to Westminster; and despite the fact that nothing was found in the grave to indicate their identity specifically, he claimed that there was no other person than King Henry VI. recorded or known to have been buried in St. George's Chapel to whom remains enclosed in so remarkable a way could possibly belong.

The Rev. H. G. O. Kendall read a paper on 'Palæolithic Periods at Knowle Farm Pit.' The earlier Palæolithic periods determined by Prof. Commont at St. Acheul are the pre-Chellean and Chellean of the lower gravel, and the Lower and Upper Acheulian, in the middle gravel and red sandy clay respectively. The much-involved gravels at Knowle Farm Pit lie at the top of the bank of a dry river valley connecting with the Kennet. Palæolithic implements have been found at all depths, small in size on the average, and, in condition, varying from those rolled almost into pebbles, to sharp unabraded specimens. The oldest, of a thick type, and much rolled, are referable to Prof. Commont's pre-Chellean or Strépyian period. They show re-chippings by man in the same condition as the abraded implements ("coups de poings") of the Chellean period. The former are much striated, the latter less so.

The next series to the Chellean, but little abraded, finely chipped and sometimes flat and ovate, are comparable to the Lower Acheulian "limandes." Some, like the French specimens, are of a reddish colour. They seem to occur in the lower stratified gravel, in which the earlier implements are also found. Some unabraded blue-grey implements may have come from the red-clayey gravel which overlies the lower gravel, and is, in places, clearly distinguishable from it. They seem to be referable either to the end of the Lower Acheulian or the beginning of the Upper Acheulian period.

Fine river silt surmounts the middle gravel. Immense quantities of implements have been dug from it in the past, some having been torn from lower beds and deposited in it. The unabraded specimens are sometimes very finely wrought, and of the small lanceolate type which helps to mark them out as Upper Acheulian. The river silt thins out towards the back of the pit, away from the old river bank. The unabraded implements of natural flint colour are now, therefore, comparatively rare, the few that are found being often stained and abraded.

SOCIETY OF BIBLICAL ARCHÆOLOGY.—May 10.—The Rev. W. T. Piltner in the chair.

Mr. F. Legge read a paper on 'The Legend of Osiris and Recent Discoveries,' in which he showed that the myth as handed down to us by Plutarch consisted of two strata or layers of tradition. One of these was the war between Horus and Set, ending in a compromise and the partition of Egypt. This he suggested referred to the historical events surrounding the reigns of Perabsen, his predecessor Sekhem-ab, and his successor Khasekhemui, who is described on a seal as "He who makes the two gods to be at peace." The other part of the legend was, he said, the myth of Osiris, who was, to his thinking, the effeminate or sometimes bi-sexual god worshipped in all the countries bordering on the Eastern Mediterranean under the different names of Zagreus, Dionysus, Adonis, Attis, and Thamus. This last seemed to him to be first in point of time, and he quoted from the Sumerian hymns in the Manchester Museum some singular epithets showing the double nature and the fondness for music of the Sumerian as well as of the Mediterranean god.—The Honorary Secretary, Mrs. Purdon, and the Chairman also spoke.

MATHEMATICAL.—May 11.—Dr. H. F. Baker, President, in the chair.—Mr. J. H. Dibb was elected a Member.—The following papers were communicated: 'The Kinematical and Geometrical Theory of a Deformable Octahedron,' by Mr. G. T. Bennett, and 'The Scattering of Light by a Large Conducting Sphere (Second Paper),' by Mr. J. W. Nicholson.

HUGUENOT.—May 10.—Annual Meeting.—Sir William W. Portal, President, in the chair.—The Report of Council was read, showing a net gain during the past year of nine Fellows. Mr. R. St. A. Roumieu, who had served the Society as Treasurer since its foundation in 1885, had expressed his wish to retire from that office, and the Council, in consideration of his distinguished services, had nominated him for election as President, Sir W. Portal being now required by the by-laws to resign that position. The Society had published during the year the second number of the ninth volume of *Proceedings*, and Dr. W. A. Shaw's lists of Denizations and Naturalizations from 1603 to 1700. The transcripts of the registers of the French Churches of Bristol, Plymouth, and Stonehouse had been completed, and were being edited for the press by Mr. C. E. Lart. Arrangements had also been made for the transcription of the concluding volumes of the Threadneedle Street Church registers; and Dr. Shaw had in hand a second volume of Naturalizations for the period from 1701 to 1800.

The President read his annual address, in which he briefly reviewed the state of the Society and gave some account of those Fellows who had died during the past session. These included Mrs. Thomas (who passed away at the age of 101 in February last), Lieut.-General Stephen H. E. Chamier, Dr. G. de Gorrequer Griffith, Mr. P. M. Martineau, General Hubert Le Cocq, and Mr. Alfred Lafone. Other matters dealt with in the address were the death of the Boer general Piet Cronje, a man of Huguenot descent, the reception by the King of the address from the Canterbury French Church, and the proposed memorial to be erected in the Huguenot burying-ground at Wandsworth.

The ballot for the election of Officers and Council for the ensuing session was held. Mr. Roumieu was elected President, Col. D. G. Pitcher Hon. Secretary, and Mr. A. Hervé Browning Treasurer. Ten new Fellows were elected.

FARADAY.—May 2.—Mr. James Swinburne, President, in the chair.—Mr. A. Scott-Hansen of Christiania read a paper on 'Hydro-electric Plants in Norway and their Application to Electrochemical Industry.'—A paper communicated by Mr. Edgar Stansfield described 'Two Simple Forms of Gas-Pressure Regulators.'

A paper by Dr. W. C. McC. Lewis, entitled 'Internal, Molecular, or Intrinsic Pressure: a Survey of the Various Expressions proposed for its Determination,' was laid before the meeting and taken as read.

MEETINGS NEXT WEEK.

- Mos. Geographical, 3.—Annual Meeting.
— Institute of British Architects, 8.—'Painted Relief,' Mr. R. A. N. Bell.
— Society of Arts, 8.—'Rock Crystal: its Structure and Uses,' Lecture IV., Dr. A. E. H. Tutton. (Cantor Lectures.)
Tues. Royal Institution, 3.—'The Brain and the Hand,' Lecture II., Prof. F. W. Mott.
— Faraday, 8.—'Recent Advances in Gas Thermometry,' Mr. A. L. Day; 'The High-Temperature Equipment at the National Physical Laboratory,' Mr. J. A. Barker; 'The Boiling-Point of Metals,' Mr. H. C. Greenwood; and other Papers.

- Tues. Anthropological Institute, 8.15.—'The Classification of the Prehistoric Remains of Eastern Essex,' Mr. S. Hazzledine Warren; 'On a Prehistoric Skeleton from Walton-on-Naze,' Dr. A. Keith.
— Zoological, 8.30.—'The Alcyonaria of the Cape of Good Hope and Natal,' Dr. J. Stuart Thomson; 'Tooth Germs in a Kangaroo,' Dr. H. W. Marett Tims, and Mr. A. Hopewell Smith; 'On the Structure of the Skull in Cynodont Reptiles,' Dr. R. Broom; 'On the Sphingidæ of Peru,' Rev. A. Miles Moss.
Wed. Linnean, 3.—Annual Meeting.
— Society of Literature, 5.—'The Apostles of Moravia and Bohemia,' Count Litzow.
— British Numismatic, 8.—'The Coinage of Mary Tudor,' Mr. H. Symonds.
— Geological, 8.—'On the Geology of Antigua and other West Indian Islands,' Mr. R. J. Lechmere Guppy.
— Society of Arts, 8.—'Architecture in America,' Mr. F. M. Andrews.
Thurs. Royal Institution, 3.—'Air and the Flying Machine,' Lecture II., Dr. W. N. Shaw.
— Royal, 4.30.—'Experiments on the Compression of Liquids at High Pressures,' Hon. C. A. Parsons and Mr. S. S. Cook; 'An Optical Method of Measuring Vapour Pressures; Vapour Pressure and Apparent Superheating of Solid Bromine,' Mr. C. Cuthbertson and Mrs. M. Cuthbertson; 'The Vacuum-Tube Spectra of Mercury,' Dr. F. Horton; 'The Production of Characteristic X-ray Radiations,' Mr. R. Whiddington.
— Society of Arts, 4.30.—'The N. W. F. Province of India,' Mr. W. R. H. Merk. (Indian Section.)
— Institution of Electrical Engineers, 8.
— Society of Antiquaries, 8.30.
Fri. Royal Institution, 9.—'The Greek Chorus as an Art Form,' Prof. Gilbert Murray.
Sat. Royal Institution, 3.—'Phases of Bird Life,' Lecture II., Mr. W. P. Pyecraft.

Science Gossip.

THE June issue of *The Edinburgh Medical Journal* will be a Simpson number, celebrating the centenary of the introducer of chloroform as an anæsthetic. Amongst the contributors will be his daughter, Miss Eve Blantyre Simpson, and a nephew, Sir Alexander Russell Simpson, who held the Edinburgh Midwifery Chair (1870-95).

PROF. E. C. PICKERING, Director, has issued the Sixty-Fifth Annual Report of the Astronomical Observatory of Harvard College, which shows the continuation of the activity of that now famous establishment, chiefly on former lines of work. It is regretted that the diminution in the funds at disposal has made it necessary to abandon part of the operations at Arequipa. A meeting of the Astronomical and Astrophysical Society of America was held at the Observatory in August, which was attended by several eminent European astronomers, who were also present at the triennial meeting of the International Solar Union, held at Pasadena. The observations with the 15-inch east equatorial were under the charge of Prof. Wendell, and nearly thirteen thousand photometric comparisons were obtained, chiefly with the polarizing photometer and achromatic prisms. An extensive series of photometric measures of the nucleus of Halley's comet was made; also nearly a thousand measures of double stars with a second photometer. The Draper and Bruce telescopes have been largely used in photographic and spectroscopic work. Great attention has been devoted to visual observations of variable stars. Mr. Metcalf's 16-inch telescope has now been mounted in the grounds of the Observatory: it is a remarkable instrument in many respects. An expedition has been sent to Hanover, in South Africa, and has yielded valuable results, chiefly in variable star work; but on the whole it is not thought that a better position than Arequipa can be found in that region.

We have received *Bulletin XXIII.* of the Kodakikan Observatory, containing a list of solar prominences, with notes on the most remarkable, which were seen during the first half of last year.

We have also received the Annual Report of the Director of the Kodakikan and Madras Observatories for 1910, which is the last under Prof. Michie Smith, who resigned at the end of the year, and was succeeded by the Vice-Director, Mr. Evershed. As in previous

years, the principal subject of observation at the former observatory has been that of solar physics, of which a short abstract is given below. Though the year was one of heavy rainfall during the summer months, it was not unfavourable for work on solar physics in the morning hours, and there were only ten days on which no observations could be obtained. Photographs of the sun were taken with the Dallmeyer photoheliograph on 345 days, as against 332 in 1909. The sun was examined for spots and faculæ every morning when the weather permitted; and the sunspot spectra were regularly examined, both visually and photographically, in accordance with the suggestions issued by the Committee of the International Union for Solar Research.

SPECIAL attention has been paid to the radial movement of the gases over sunspots. Observations were made continuously with the spectroheliograph, and some were obtained of solar radiation with the pyrheliometer. A photometer is under construction for the measurement of the plates. A great decline in solar activity during 1910 was shown by the number of days on which the surface was free from spots. The proportion of southern spots to northern, which had been increasing since 1906, was greatest in 1910; the highest latitudes were 18° in the northern hemisphere in March, and 20° in the southern in February. The most remarkable solar prominences were a series of connected ones on May 25th, a very tall one on June 20th, and a large eruptive one on July 11th.

THE principal other astronomical observations were of the first comet of 1910, and Halley's, which made a magnificent display during the second and third weeks of May.

METEOROLOGY AND SEISMOLOGY were duly pursued. The highest shade temperature recorded was $75^{\circ}4$ on April 1st, and the lowest $40^{\circ}8$ on February 8th and December 17th. (The great elevation of the observatory must be remembered.) The rainfall for the year (12.25 inches) was largely above the normal. Earthquakes, 81 in number, and many of them large, were recorded.

THE MADRAS OBSERVATORY was, as before, under the immediate superintendence of Mr. R. L. Jones, during whose temporary absence Prof. E. B. Ross took charge of it. The only astronomical work was for the time service. Meteorological observations showed that the rainfall was 44.47 inches, which is 4.55 below the average; the heaviest fall was 5.47 inches on November 5th. The highest shade temperature was $112^{\circ}9$ on May 20th, and the lowest $62^{\circ}3$ on December 18th. Heavy storms passed over Madras on July 22nd and November 5th. The general movement of the air was below the average; so also was the percentage of bright sunshine.

FINE ARTS

THE GREAT GAMES OF GREECE.

ON Tuesday, the 9th inst., Prof. Ridgeway read to the Hellenic Society a paper on 'The Origin of the Great Games of Greece,' developing the theory of his Cambridge lecture reported by us (March 4th) that they arose out of the worship of dead heroes. The general view is that they originated in

the worship of the great divinities with which they were connected in the age best known to us. Others hold that the Olympic festival sprang from a vegetation cult, while Prof. Frazer thinks it had an astronomical element.

Homer mentions not only the funeral games of Patroclus and Ædipus, but in a simile shows that the ordinary occasion of such contests was a funeral. Hesiod mentions the funeral games of Amphidamas, whilst such games were instituted to honour the dead right down into the classical period, e.g., for the Phocæans at Agylla, and for Brasidas at Amphipolis (B.C. 422).

Taking simple cases first, Prof. Ridgeway referred to the Iolæa at Thebes, and to the case of Trophonius and Amphiaraus, who were mentioned in his earlier lecture as acquiring the addition of Heracles and Zeus respectively.

There were in Ægina Æaceia, in honour of Æacus and by his grave; in Rhodes there were the Tlepolemeia in honour of Tlepolemus, who brought a colony from Greece. Pindar sings the glories of Rhodes and the Sun-god (Ol. vii.), but knows of no Heliæa, though later the name of Helios was added to the Tlepolemeia. At Amyclæ were the Hyacinthia, which, though Apollo shared them, never ceased to bear the name of the hero Hyacinthus. The hero must have been prior in date, for his name could not have displaced that of Apollo. The first day of the Hyacinthia was a day of honouring the dead, the contests being held on the second day. The Professor then referred again to the honouring of Opheltes in the Nemean Games, of Palæmon in the Isthmian, and Pelops in the Olympian.

The astronomical element was late, whilst the vegetation theory of Mr. A. B. Cook and Mr. F. M. Cornford was based on a myth of the Idæan Dactyls, which Pausanias himself rejected. He had to say a word about method. In these studies no regard was paid to historical perspective; early and good authorities were pushed aside, and some late myth, often post-Christian, was taken as a starting-point. No progress could be made unless strictly scientific method was followed. At Delphi Neoptolemus played a leading part in tradition; there was an annual sacrifice to him, and paintings of Polygnotus in the Lesche were executed in his honour, not in that of Apollo. The Pythian games had only begun in B.C. 685, after the first Sacred War and the dedication of the Crisæan plain to Apollo, when the Amphictiones first took charge of the games. A beehive tomb had been found at Delphi, and an important grave like the Pelopium at Olympia, whilst certainly in late times, at the Pythean festival, horsemen and others came from Thessaly with 100 black oxen to sacrifice to the hero. The Panathenaic Games, earlier termed Athenaic, were in honour of Athena and Erechtheus, the ancient king who shared them with Athena and gave his name to the oldest temple at Athens. The name of a hero would hardly, as already argued, have been added to the games of a great divinity, the converse being far more probable (cf. Hyacinthia, Tlepolemeia).

Eleusis is the inner keep of the vegetation spirit theory from Mannhardt, Demeter being the corn-mother, and Persephone the young blade, whilst Prof. Frazer had followed Miss Harrison in thinking that the chief sacred drama was the marriage of Zeus, the sky god, and Demeter, a view based entirely on post-Christian writers, but at variance with a famous inscription of the fifth century B.C. In this, though

the personages to whom sacrifice is to be made are recited, Zeus does not appear. The Homeric Hymn to Demeter, our oldest literary evidence, says not a word about Demeter giving corn to Triptolemus; on the contrary, it assumes barley growing at Eleusis before ever Demeter came. The sacred threshing-floor at Eleusis was called after Triptolemus, not Demeter; Triptolemus is named next after the two goddesses in the inscription. Of the two priestly families, the Eumolpidæ traced their descent from the Thracian Eumolpus, who had brought in certain rites; the other from Triptolemus. Triptolemus had a *naos*, but it has never been found, neither has the *naos* of Demeter been identified. The explanation might be that the *naos* of Demeter and of Triptolemus, the *Anakteron*, the *Megaron*, and the *Telesterion* were only different names for the one building, known as the Hall of Initiation in later times. Thus as Athena shared "the strong house of Erechtheus," the Erechtheum at Athens, so Demeter occupied the Palace of Triptolemus at Eleusis. The *Agones* at Eleusis were almost certainly the oldest part of the celebrations there, and these were the games once held in honour of Triptolemus, to which the name of Demeter was given in later times, as that of Heracles was added to the Iolæa, Helios to the Tlepolemeia, and those of Zeus and Apollo to Olympic and Pythian festivals.

Scholars had begun at the wrong end, taking as primary the phenomena of vegetation spirits, totemism, &c., which really were but secondary, arising almost wholly from the primary element, the belief in the existence of the soul after the death of the body. As prayer, religion proper, was made to the dead, religion must be considered antecedent to magic, which is especially connected with the secondary elements.

Dr. Frazer contended that totemism, the worship of the dead, and the phenomena of vegetation spirits should be considered as independent factors, and that none of the three should be held to be the origin of the others. He quoted sundry details of athletic festivals, particularly the fact that many were held in an astronomical cycle, which would be hard to reconcile with their funerary origin. Incidentally Dr. Frazer claimed that the main contention of Dr. Ridgeway's paper had been made in his edition of Pausanias published in 1898.

Dr. L. R. Farnell thought that caution should be used in any attempt to refer all the athletic festivals of Hellas to one origin. Were he to select any one of many causes, he should be inclined to name the instinctive love of the Greek people for outdoor games.

Miss Jane Harrison pointed out that much depended on the precise significance attached to the word "hero."
